(2:24:13) obviously weird as hell uh has to do with Prof professional incentives and the political economy of um of institutional membership and you'll notice that Neil's having a lot of trouble at the moment remembering that sex is determined by gam size and motility uh because the institutional world is going crazy it's dragging a lot of our um favorite commentators along with it and I think you have to look at it as an Institutional effect that if your bread is buttered by the Hayden planetarium uh you're probably under a

(2:24:46) lot of pressure it would be great if he would resign his post and say I don't I don't want to um come under that pressure and then they'd be forced to rehire him but just consider that uh you just had the president of Harvard resign as an obviously incapable person to hold that office um institutions have gone quite mad and I do not want mad institutions getting the idea that they can remove phds I guarantee that they'll come for mine and they can pry it for my cold dead fingers if they want to try

(2:25:17) that so uh I think I think Gary was speaking hyperbolically I love Gary uh that was not his favorite moment I understand his my favorite moment of his I understand his frustration Eric how do we get how do we get institutions that are mad in a good way or accept good Madness you've talked about Jim Watson I think about Claude Shannon riding a unicycle and juggling and I think there's even a letter well that's MIT everybody MIT gets around C that way well but but seriously how do we um I don't know there's a there's a part of

(2:25:54) me that and we've had this discussion a lot but like I I think in some ways Academia is just too far gone and like there it's they're just they have the prestige and but that's like the only

thing they have left and then there's sort of very little Vitality left they're stuck in these really wrong Frameworks and they're so far down these cul-de-sacs and um they don't generally don't have kind of you know a top of the pyramid interdisciplinary View and uh yeah I mean I I I don't want to throw

(2:26:29) them out entirely but like is there any going back or do you need an entirely new structure wholesale it's a beautiful question uh I just asked ChatGPT to describe the exemptions from the 1964 Civil Rights Act um my guess is that a lot of what's attenuating um our institutional Vitality is the unintended consequences of trying to get rid of American bigotry uh and backwardness with federal law that ham-fistedly um created this sort of democratic environment uh where Merit is quite honestly anything but a democratic

(2:27:13) environment it's completely unfair uh and if you really believe in a meritocracy uh the thick right tale that juicy curdosis in human ability um is going to be fought tooth and nail by every mediocre person who can get access to an administrator position in the University one of the things that you can do is you can create a religious institution so it would be great to see the Catholic Church the Jews the Muslims the Hindus create religious um universities to study stuff that was too hot to handle for everybody

(2:27:49) else and discriminate uh so that we don't get attenuated another version of this is if you have a company with fewer than 15 employees uh you get to do things that don't require um full compliance there are National interest exemptions but the biggest problem is that nobody has any money so if you've never heard my take on this there are no rich people because if there were any rich people uh all the interesting people would be swimming in money and I don't mean that they would be driving Lamborghinis like idiots I

(2:28:26) mean that they would be free and they wouldn't worry about whether they could feed their family in two years uh if you don't have the money for tenure and academic freedom at a meaningful level and you don't have the money to make the people who made you wealthy and safe like physicists and mathematicians rich enough because Fu money is the only Freedom left in our society then of course you're going to get exactly this so I guarantee that if I go on **Rogan** and I say exactly that which I did it'll reach millions of

(2:28:59) people many of whom are multi- multi-millionaires and billionaires and I guarantee you nobody thinks to create such an institution so you have to ask yourself the question why are our modern day oh I was muted that whole time medich families completely liberating scientists so that we don't end up with disaster we don't end up with terrible economics that leave us vulnerable to a Fed in investment Banks and we don't wind up in a situation where we're forever guessing whether Epstein killed himself or whether UFOs

(2:29:34) are real or fake Eric could I ask what kind of you know you mentioned in terms of being a scientist about the evidence and need to see it what kind of evidence would be compelling for you as a scientist in order to take the the phenomenon seriously from is Ashton rugging for anyone else from the technologically standpoint um I hear I hear him okay he's

clear oh my bad sorry Jesse do you want to take that for I really guys I really believe that I got a chance to speak to a lot of people and I'm I'm interested

(2:30:06) in boosting Jesse's voice so Jesse what what's your take on that I think I think uh they're more interested in your take than mine because you're more down qualified uh but I mean I'm just gonna words like get some and uhhuh no that's a real hype man right there that's awesome love it um I I'm really curious to get your TAP I think there's a different answer from a civilian perspective which is really all I can speak to which is I kind of already answered before you entered the room Eric uh as far as like

(2:30:44) Smoking Gun Joey you what what shifts the consensus and then got a question mat useful to a scientist or like what changes their sort of world viiew and so I I am curious to hear to hear your not to deflect so what I would say is uh get a bunch of fly a bunch of us out to a secret location um get us all uh whatever under whatever security that you would have needed to in order to execute the Manhattan Project by the way look at the number of people on the Manhattan Project how successful that was we need a lesle Groves analog to

(2:31:30) basically take the scientific talent and then show us things like do you have C for an object that came screaming in from behind our satellites and followed a non-ballistic trajectory um do you have high quality video why don't I have TI Tac video even Center of mass coordinates for the Tic Tac uh if it's not our object and it may very well be our object right it could be that what we did is we pranked our own Pilots with a new technology meant as a decoy and we wanted to see if it would work and as a result we've got

(2:32:03) a ghost story that won't go away because fraver actually saw something um the key thing is you're not I'll take anything that we can get our hands on where the government says we can assure you that the Providence of this we have an unbroken chain of custody the data is unadulterated ask whatever questions we have experts in the room and you know as the as the cool kids say today let's [REDACTED] go but um I I I promise you that Jesse's probably had me in this thing for four years and I've met one theoretical

(2:32:41) physicist in the entire time that everyone's talking about interdimensional beings and whether these things defy physical law and this is not somebody I've ever heard of in physics I'm not saying he's a bad guy I've just I've never really had a jam session with Eric Davis you've got to stop talking about how put off and jock valet uh and Eric W Davis and you have to start talking you know to Frank wilch and it's not that those guys are those other guys are bad but there's no way in

(2:33:12) the world uh we called in John Von noyman Richard fin Edward Teller um 700 People Robert Oppenheimer all of these people Rico fairy Neils boore all those people were part of the of the Manhattan Project this thing would the manhatt project and we all sitting around waiting for whether or not Jack fet has something to say I don't even know who kick green is he's got the same personalities and I'm telling you I would I would like to hear from Frank wilch uh Nema Aran hemed David Tong there all sorts of people who should be

(2:33:50) Ed uh Ed Wht is a very curious question because his father was in this and I don't know what to make of that Eric I have a I have a crazy physics question for you um in our interview with hell put off the bow AR effect came up oh yes which is I guess and correct me if I'm wrong the idea that vector and scaler potentials can possibly be present without a magnetic field present which you know sort of this bizarre anomaly this isic electrodynamics is it possible that some of these potentials exist in uh kind of an

(2:34:34) extended framework maybe if you were more faithful to Maxwell's original equations and kind of disintermediated um all over heavy side I understand what he kind condensed his equation equation doesn't have to equal zero and you actually have like new new possible uh uh wave wave types that that allow for exotic technology um look as you know I've spent my my whole life working on an all alternate Theory and let me just tell you uh I keep getting bombarded what what do you think of Jack sar's uh

(2:35:24) Theory or variable speed of light and all this stuff I believe that the next jumps in physics are so much more potent than these tweaks um that it's it's really the weird thing that happened to physics is that physicists don't listen to each other's ideas anymore and unless uh you're part of a a program so if you if a string theorist for example hears that his colleague has a new development listend chat and yet what a Friday night a nonring theorist comes theorist will set up a series of questions that sound

(2:36:08) as if they're interested but it's basically how do I get you to go away as quickly as possible set of question this is for example uh is practiced at that he says look I'm completely open-minded all you need to do is uh do this crazy thing that uh you know shows that you've got everything completely wrapped up and then I'll listen and my feeling about this is anytime anybody wants to hit the gas the right thing to do is not to just talk about some alteration of Poe potentials or make some con something

(2:36:47) that was constant variable and promoted to field content like there's a lot to do and nobody is listening to the crowd of people with different ideas and I don't just mean myself uh I don't think that much of Steven wolfram's ideas I feel better about Peter Whit's uh Garrett Le's ideas don't work but they have interesting sub points within them um there are plenty of people Julian Barbour uh what we're what we're not doing doing is we are specifically sidelining everyone who refused to pile

(2:37:21) into the string theory death car and I'm just not that interested I'll be honest I think that a lot of the physics discussed in the UFO Community is really low quality and that's not an insult because a lot of the physics discussed in the most prestigious institutions we have is of the same type of low quality it's just slightly better than the UFO communities I but isn't it possible though Eric that and I and then I'll I'll leave it to somebody else after this that we figured out something kind of on the applied

(2:37:55) side and you know initially and then tried to figure out the theoretical side through a lot of the stuff we've uncovered around you know Chapel Hill conference and you know weird

anti grab stuff going on at right patters or you know whatever um but uh but the applied sides came first and that sort of ran away into these different you know possible sequestered applications and we don't have a great theory for some of it but we have ways to like make it work just from an kind of an engineering perspective and

(2:38:31) obviously not having a broader theoretical framework limits the potential uses but maybe you've found like ways to make like local incremental progress based on uh limited framework works and application side breakthroughs you know the you rais an interesting point Jesse assume that you recovered technology uh just stipulate for the moment that you recovered technology from an unknown civilization far in advance of your own so basically like the anti theor mechanism but from uh not an ancient Human Society but something

(2:39:09) uh far more impressive uh whatever that would be it would be unprecedented because we've never made progress that way before so it's entirely possible that if these things exist and are here that you would be first confronted with somebody else who'd figured this out and then you'd be reverse engineering it uh which effectively doesn't happen the reason we have CERN in the LHC is that together because we we can't study anyone else we can't crib off anyone other than God scratch work um as a

(2:39:41) result of that uh yes that's that's a logically uh where little green men were and that that why is everything quiet I can't hear anybody oh I just want to remind the room to follow Skyfire news for the latest UFL updates in cool spaces like this sorry about that uh Eric yeah so the to just physicist by the way I think it's a human problem we uh we like to tell our secret well it's not just physicists but what I am trying to say is is that uh we

(2:40:48) the physicists are not behaving normally at the moment like even without the UFOs uh physics is an unbelievable mess and it's 50 years or 40 Years of it have been psychotic were understandable effort um there were basically two good guesses during the 70s one called super symmetry one called Grand unified theory and if you don't mind a metaphor for those were the right freeways but we took the wrong offramp when that didn't pan out we then uh you know started sniffing glue and uh doing heroic doses of of uh Sonoran

(2:41:29) Desert toad Venom and so we've been 40 years in Madness as a result of that it's very hard to say was that intended uh is that a way of derailing a a field that had created a Doomsday Machine and the hydrogen bomb was that intended to keep something secret Jesse and I are both um Jesse do you want to talk about the 1971 Australian document and and its significance yeah sure it's the most hidden and plain sight thing that grush has referenced in multiple interviews and that it everybody in this room

(2:42:11) should just research because it's insane it's basically um Australian intelligence their you know joint intelligence uh uh staff trying to get up to speed on American anti-gravity and UFO retrieval programs since the late 40s and it is a timeline uh from the you know estimates of the situation Twining memo uh in in in 47 after obviously you know um Roswell and and Kenneth Arnold um to up until you know 50s anti-gravity research and it talks about where a lot

of This research was anti-gravity research was

(2:42:56) housed different six University centers um one of which is University of uh North Carolina Chapel Hill which was kind of agne banson one of which was MIT which was Roger Babson um and so it's this to me absurdly I mean if you ever wanted kind of like an interesting Smoking Gun like you do all this open source research you you piece all this stuff together and it's like super patchwor quilt you find this document that like is this like very very uh smooth timeline of like everything and it's it's done by a you know five eyes Ally

(2:43:35) and uh it's pretty it's pretty bizarre and um Eric you uh had that you know C this sort of crazy thing that you pointed out is that like Pascal Jordan who was a Nazi and probably came over in some paper paperclip like program was part of the anti-gravity research but you had guys like arit Oppenheimer is listed as part of the anti-gravity research which to my knowledge in no other like credible public forum is that is that written about do you mean Oppenheimer I know teller was I think maybe maybe I'm making that up but

(2:44:14) I I thought Oppenheimer too and definitely teller Freeman Dyson um wheeler wheeler for sure right well wheeler wheeler is actually the weird Godfather of North Carolina Chapel Hill Institute for field physics right because in part dwit was going to blow it and Wheeler had to say don't worry about ping around with pseudo scientists let's get this thing done um so what Jesse Jesse also knows that one way that he was able to seduce me into this was that I had a different puzzle my puzzle was why did the physics community in the

(2:44:54) 1950s and 60s suddenly create the Golden Age of general relativity when there was no indication that that was the right way to go at the time no I'm not why were these pseudo scientists ping top people and it's poor taste this document if it's forged uh you know there were maybe three people on planet who were really focused on the idea that there was a mystery around um the Golden Age of general relativity so why would somebody create an elaborate 1971 forgery to tell this entire tale to clear up the mystery and

(2:45:32) the claim inside of the document is there's no reason to start studying uh this stuff but for the fact that we have recovered craft so um you you just have to look at this and is a thing of wonder that as of 1971 there were people who were trying to piece this together now understanding from um where does ER austan journal with a C Ross it's like 10 p.m.

(2:46:02) there so his point was I think that this was a physicist who was tasked with uh helping to operate the British um you know the Brits used Australia as if it were Nevada so Australia is uh the UK Nevada testing site from the earlier era and so apparently this was a physicist um who was trying to figure out what the hell was going on because supposedly these uh flying objects attended uh above ground nuclear detonations so the whole thing um the way I approach this is I begin from the perspective of let's talk who we know knew their stuff let's

(2:46:52) look at their mysterious and anomalous behavior joher and then let's try to figure out why they would be doing any weird stuff based on unseen forces and you know my my killer

question for this world is where are the physicists if this is a physics phenomenon stop talking material scientists stop talking about metam materials and smart materials start talking about um the most interesting thing is the absence of physicists if you want to know how the Soviet Union figured out something was going on with the atomic bomb it was because we pulled

(2:47:28) all the fion documents from our libraries and around 1943 and we stopped publishing on fion and so the Soviets said huh that's really interesting the fishion dog isn't barking what's going on how about super productivity the analog right now is where where are the physicists in a thing that is all about physics if it is real and not at all about physics if it's a head fake Eric what do you think about room temperature superc conductivity you know in terms of 1k99 I know you're very interested in in the physics aspect of

(2:48:02) it not interested um I got a question for Eric um last February we had a of shoot Downs uh we had the Chinese spy balloon and then three other objects that got shot down and I can't hear anything now and you did some reporting on on Twitter I'm just wondering what your thoughts are now after it's been about a year the the lack of interest and the lack of answers we've gotten from the government about that that was kind of awkward chat uh Jesse you want to take it I'll I'll take it after

(2:48:39) you sure um yeah I mean I I I think uh that was like that was the whole time was weird for me like I felt like there were like uh intentional conflations going on uh between prosaic objects the first one being the Chinese spy balloon which to me was just trying to detect the rits the limits of American radar systems flying over ICBM detectors over you know in the uan islands in Alaska um with probably with you know deflection Tech trying to figure out you know um whether whe you know C certain capabilities or whatever and then and

(2:49:20) then NORAD widens its sensors and then you're picking up a bunch of junk and then I don't know may maybe one out of those things is like a real UFO but like I'm even sort of skeptical of that and then you had a bunch of people kind of mouthing off about how that was sort of super UFO related and then it all seemed to go away and I I I was a little cynical about the whole the whole thing it it kind of smelled bad to me I would say that the whole thing is about what is anti-in uh the idea that we can't

(2:49:51) recover debris from these things lets you know that something weird is going on but the problem is yeah I mean if he's not interested in super conductivity then he doesn't even understand the basics CT operations another thing is uh he doesn't even understand the basics you know SciFi uh UFO fantasy stuff and yeah Ryan it was kind of a weird answer um let's just say not interested a pigeon flying through the air and it suddenly runs into not interested super conductivity and it can't make any progress it doesn't have

(2:50:24) words for I ran into a plate glass weird answer huh um whatever it was found this anti-in it would be interesting to know what happened there's a whole explanation about we opened an aperture to shoot stuff down and we by recalibrating the aperture uh we started picking up the fact that we're being spy on regularly but none of us really um not interested in room

temperature super realiz the government is going to waste your time and that certain people in the UFO Community is it sad that I think understand

(2:51:02) physics about stuff inum um pretty cring I'm just going to say I know that that didn't make any sense whatsoever and I'm not going to sit around trying to figure out uh how do think [Music] candra in the broom clet but what do you think about the lack of answers the denial **Foya** there seems to be some sort of concerted effort to both bury the story and hello I think I lost you guys oh you lost I just want remind everyone to follow skyp R news for the latest UF updates but uh yeah um I think we'll go

(2:51:44) also because I think Chris wanted to ask about Patrick's article yes absolutely and uh don't forget to retweet the space I mean it's rare that we get all these great minds in here and so I think a lot of people need to hear what's being talked about tonight but yeah let's go over to Chris hey Eric hey uh Jesse this question's uh for Eric but it uh also I would like Jesse's take as well so going back to where you guys were talked about you know having the right people in the room and I completely agree with

(2:52:11) that I think that actually goes back to uh couple TW that you had put out a couple weeks ago talking about interdimensional beings and you know you know the Congress Congressman came out talking about that and you know you had a couple tweets that went into that uh I'd like to you know if you want to talk about that a little bit more and then the second question is you to having the right people in the room you know Dr Kirk Patrick uh that was with Aro the director you know he has he has a PhD in physics do you think he was the right

(2:52:44) guy for the job and did you happen to to read his U his oped in scient space right now uh Jesse you don't mind I'll take this ahead of you I I do want to say I just don't think that we're being fair enough to Jesse Jesse is a much more informed person in the space he's willing to graze much more broadly and I wouldn't be here except for him let me just take that quickly because I'm gonna I'm gonna go meet some people for a musical jam session uh musical J I did read that I thought it was very

(2:53:15) disappointing let me just say this physics is a big place and there aren't many people who speak the exact language needed to make progress beyond the standard model and general relativity I don't think that Dr Kirkpatrick is somebody who for example uh I don't know his background but I would guess that like bundle theoretic and geometric physics uh both the quantum field Theory and general relativity side is probably necessary I don't think that uh he's necess necessarily the right person I

(2:53:46) don't know whether he's supposed to put the toothpaste back in the tube I do think that there's a very strange cabal of people who seem to generate an enormous amount of the weirdness around UFOs uh I don't understand it why does everything go through uh how put off in jock valet doesn't make any sense to me um but people get very used to it and they sit around and they talk about Diana Pula and kit green and Eric w Davis till the cows come home and that just doesn't sound like reality to me um

(2:54:21) with respect to you know we also don't want to hurt each other's feelings uh Eric W Davis has been a prince to me very very nice guy H how put off has been nothing but good to me I don't want to run these people down um but we're in a situation here in which if you're telling me we've lost control of our airspace and you're talking about interdimensional beings I I can promise you that David gush has been told that he knows he has a ba in physics and not a PhD he's not at the relevant level of

(2:54:52) expertise um and then he tried to do a good job by illustrating it and like look at the pain that he gets into you know he says like holography is an example of a you know Dimension shifting and then suddenly everybody's making F oh so you know is this basically ads CFT um it's really important to be more decent as humans to the people who are in this grush seems entirely sincere to me I've had tons of interaction with him if he's fooling me he's job uh I don't think I think that the problem is that

(2:55:29) what he's saying is so crazy that we just don't have any basic framework for it somebody said interdimensional and I can promise you I haven't met anyone with enough physics knowledge to fill that out that could be Kusa Klein it could be large extra Dimensions it could be um you know String Theory with cab Yao manifold I hate to be egotistical I got the answer anyone's guess it sounds like somebody read flatland and took too many drags on a doie straight up with interdimensional aliens and you just can't mix this sort

(2:56:06) of stupid [REDACTED] and National Security like that it just it it makes us look like the Keystone Cops everybody shabbat shalom have a fantastic night really great to be with you uh enjoyed it and you're in good hands with Jesse talk to you guys soon later thanks sir later thank you amazing Jessie thank you Jessie for uh for getting him in here that's great of course yeah yeah it's always it's always fun to uh get get Eric's view on on this stuff um yeah absolutely I hope I hope you enjoy the jam session Eric he plays like eight

(2:56:50) instruments by the way for anybody curious Jess I want to get your take on that question too that was for you and and Eric by the way and what's the exact you want repeat the question real quick yeah that was just talking about you know the right people in the room and then you know his tweets about that the interdimensional beings Patrick and his his article right if he was the right guy for the job when he was at Arrow stuff like that I think uh kind of I hate using the word epistemically but I keep wanting to use

(2:57:23) it so sorry but like like Eric and I are coming at it from two two entirely different places like when I show Eric the videos I'm like oh not extraterrestrial in some undiscovered physics framework I think Eric is so much deeper on the physics like like actual physics where he's is like trying to Port that into like specific theoretical models so like when I hear interdimensional I'm like okay like totally possible in some like again yet to be discovered framework um like you know interstitial reality or whatever um

(2:58:01) I mean I do think uh it is interesting right you have like diens space a fourth dimension which is time in that fourth dimension you have Zeno's Arrow of time which is like this sort of

constant linear progression obviously in general relativity you have like dilation um I think in Quantum stuff you you know a lot of the weird phenomena might have to do with time spookiness and so I think an interesting you know kind of crazy uh mental model which uh you know Eric might want to leave the room to not be Associated when

(2:58:36) I when I say this or whatever but it's like if you have a Fifth Dimension where Zeno's Arrow of time doesn't sort of apply and you have the ability to kind of time line edit I think that's that's you know an interesting kind of inroad to to to progress here and then on the Kirk Patrick's stuff but again I would follow more like the applied stuff the applied I think what's really interesting if if you can from a research perspective find different possible applied breakthroughs uh in desperate

(2:59:10) locations that went you know kind of dark or something after after after somebody made a claim I think that's like an interesting kind of heuristic um but uh yeah on the on the Kirk Patrick front I mean I think he's just going to be like looked at you know really badly by history and like you have one guy saying like you know I reached out to arrow and I'm I'm bringing 40 people directly to the Inspector General and like he's saying it's urgent incredible and then you have another guy saying the

(2:59:40) guy never reached out to me like that's so it's just so easily falsifiable it's such a bold lie it's so like so it's like we're going to we're going to know one way or another very shortly um I'm super skeptical of KCK Patrick and you know a lot of people use the kind of Ed Condon analogy again something red is really uh responsible for kind of digging up and like you know maybe there's maybe there's something there because again it's like I think it's really interesting when people are

(3:00:09) not again **Mick** West is probably like the best form of a skeptic where at least he's arguing based on first principles when people are like completely like uh uh reflexively against any sort of first principles analysis and just completely like smug and skeptical which Kirk Patrick seems to be uh you know even more so than NASA at this point um you know I think there's just something off there and you have to you have to ask you know some reasonable questions about motives Ashton and then we're probably

(3:00:43) going to wrap up soon I feel like uh and we'll head over to the Tupa after space and we could have like more of the community talking and what not but it was awesome space everyone go follow Skyfire news for all the latest updates Jesse dude you killed it uh you brought Eric in that was awesome that was epic deep was here we had kurk J **[redacted]** it was pretty stacked today Bruce is here everyone was here Ashton yeah epic space in general make sure everybody you guys are following skyfighter news uh red panda and tuba have just been killing it

(3:01:11) in terms of content putting it out there I've been super impressed by their stuff also huge thanks to Jesse for being here super impressive guy in terms of all his knowledge and picking up like the physics stuff and that's kind of what I wanted to ask Jesse similar question what I ask Eric Weinstein is you know first of all what are your thoughts on room temperature

superc conductivity and general and then what's your thoughts in terms of uh like the academic side like the Eric Weinstein in terms of their

(3:01:37) view of physics versus like I feel like you have a more Progressive view in terms of what's possible in general I'm just curious not to you know don't want you to badmouth them or anything like that but you know what are your thoughts in terms of like how you distinguish the people who are very strong advocates for their the UFO phenomenon versus you know what Eric Weinstein was saying about you know being skeptical needing to see more data Etc personally and I'm uh again probably unqualified to have this position I I

(3:02:08) literally have a ba in history but like I I think you have to follow applied breakthroughs I don't I actually don't think I think the theoretical models come after looking at observable anomalies and so like one interesting kind of like three liner breadcrumb is uh like it's like why did you have this like Resurgence and anti-gravity research in the 50s at places like R Patterson Air Force Base or like that makes a lot of sense the Chapel Hill conference which established quantum gravity of which Str theory is

(3:02:47) kind of the the the the the stepdaughter if you will in 1957 so it's like why do you have this interest in anti-gravity that like spikes in the 50s and I think there's actually very interesting try not to make political guys German programs um there are these Legends of like if you read ni Cook's book called The Hunt for zero point scoto Works which is you could think of as kind of the German Skunk Works and C Slovakia and Poland they're doing some pretty out there stuff you have the durlock Bell

(3:03:20) rumors and then you have like Victor shurger you know flying discs and saucers it's my understanding that at least some of that team there's a guy named Richard Maita makes it to a project in Canada that is a joint British aircraft and Canadian kind of outfit called Avo car which eventually gets taken over by the US and housed at right Patterson and so it's like you have you figured out like this like crazy applied stuff it's probably done in this like era of Border science in um uh you know Germany which actually

(3:03:57) didn't take uh relativity seriously because uh to them it was seen as Jewish science and associated with Einstein and they were obviously you know hyper Arian racists or whatever and so um it's it's think this stuff's taking place in an entirely different framework if you look at Victor shurger he's like this Bizarro naturalist who's talking about you know implosion vortexes and [REDACTED] and so like I again like I'm I'm maybe way more uh Renegade than than Eric is uh in that like I I think I think Theory

(3:04:36) follows uh these wacky experiments that often tend to Peak in times of in stability and War and uh you know I think I think it's I think it's sort of interesting to track that first and uh I think if you track the Personnel just from like a pure like IQ credentials physics level and you're like why aren't these people like interacting with the you know UFO world I think they're like I think you're just G to get really frustrated yeah it makes sense and I didn't know you were a history major I

(3:05:09) think that makes a lot of sense about how you have some deep knowledge about a lot of the and everything related to all this but um yeah very impressive thanks a lot man you I just want to um we're probably going to end it here I want to thank everyone for showing up uh every Friday we try to do like a major show get um awesome high level guest um and then we go through the news right um if you're following this topic um you know that there's news happening every single day before I was like really really paying

(3:05:41) attention I didn't know that you know I only got the the Normie stuff like when David grush came out or 2017 when we got all those videos or the Pentagon confirming in 2020 you know I didn't I didn't realize until I really started paying attention that there is news every single day so every Friday we go through the news of the week we try to have really good guest and I hope everyone enjoyed the space this was uh this was amazing I mean the guest list was nuts I can't believe the conversation and uh

(3:06:15) directions we were able to go um positively the conversation never broke down guys this is what it's about so please remember the space retweet the space we recorded it um so don't be afraid to share it again um a great Jesse thanks for coming bro thanks bringing Eric do you have anything coming up uh and yeah like T said everyone follow Skyfire news anything you want to promote or anything before we close out here uh thank you guys for the opportunity I I I hate to hit you with the Shameless plug I'm coming out

(3:06:42) with the crazy craziest kind of two-hour documentary almost as good as one of your videos red panda but not not quite there uh in in like I want to say like a week or two um so check check that out thank you guys awesome and I'm glad you know keemstar you lending your massive uh voice to this space is super cool and yeah tup but thank you for moderating and uh yeah app appreciate all you guys oh it was a pleasure man it was pleas defitely have to do it again when that video Drops make sure you uh like remind

(3:07:16) us I mean we'll see it anyways but yeah we'll definitely cover it appreciate you thank you def definitely will awesome man well I want to thank all the speakers again uh you guys were great uh sorry if you guys didn't get a chance to ask a question we're gonna have host after space come to that um and let's talk about it guys all right good show bye everyone damn that space was fire chat that space was fire wow okay let me uh let's do a quick breakdown and then we're going to end it for the night it's

(3:07:49) been a long stream that was really good space wow well we have some data for data here for Eric Weinstein if he's interested I may try to reach out to um Jesse and see if you can look at this Jesse kind of played it like I'm good at reading people um probably because I used to play poker a lot so I'm good at reading people and telling people what like figuring out what people's like um what their feelings are about stuff I think that my honest opinion of Jesse is he's not convinced the videos are real and so

(3:08:26) he's afraid to put himself out there with respect to the videos but I think that if we present ourselves in such a way where people know we're being honest about our own opinion

then slowly people will start to come to accept them and look at them with an open eye right cuz people like Eric Weinstein want evidence well we've got evidence man we got videos we got exactly what he wants to see now it's kind of crazy how like people will say they want evidence but then they look at the actual evidence and then they say that oh well

(3:09:02) that's not you know that's fake or whatever right and that's the reason why we ask people like what do you want to see from the evidence right because we've got it we're staring at it right here right we're staring at it right here you know it's like you what else can you ask for other than like seeing crafts seeing the orbs firsthand right and that's kind of what Eric Weinstein said in his response is he's like oh well take us into the room well you have to sign an NDA if they do

(3:09:29) that if they take you into the room they're going to make you sign an NDA and then you can't say anything about it right that's the reality of the situation so if Eric and Weinstein wants that then the problem is he'll never be able to talk about it right that's the issue that's the thing I find is kind of uh hypocritical about a lot of these people is like they want the evidence but then when they see the evidence they go oh that's fake or you know they don't realize they'll have to sign an NDA in

(3:09:55) order to be able to like even see the evidence um I want to address a few questions that were in the chat is how put off Counter Intelligence here's the reality of my opinion for everybody who's out there um I'm like two degrees of freedom away from halut okay so like me other people halut I think that on the inside a lot of these guys and I I can't believe all the connections that I've been able to make the people that know these people on the inside like I've been hang I've know I haven't been hanging out with

(3:10:32) Jesse but like we were in spaces with him I've talked to him on the phone he knows David grush firsthand right he's friends with him I know people who know how POF like so I'm not directly connected to these people I'm one degree of Freedom away from them or two degrees however you want to count that there's people on the inside that want the information to come out and there's people on the inside that don't want the information to come out I think that they both have justifiable reasons you heard it tonight

(3:11:00) on the space the reality of the situation chat is that some people think that this can be doomsday technology and they want America to have this technology and nobody else which is very Noble and patriotic and you know know a na a kind of nationalist approach to the situation um and I can't I can't fault them for that I think that Lou Alando is one of those people I think that Lou alando is one of the people that is country first and he's not going to release any information that could hurt the nation right because he has his NDA

(3:11:32) and because he's probably very patriotic and that's why I think the situation for him is that he's slow dripping the information and profiting off of it while not really telling anything thing that moves the needle forward because like I said on the space it's a Pandora's Box the moment you say that we have a unification theory of quantum and macro that's been proven

everything comes out at once it's not a matter of saying oh well we are going to get the medical healing and the teleportation Tech and the force field

(3:12:03) and the free energy but we're going to leave the the Doomsday technology hidden that's not an option it's not Burger King it's not have it your way it's the moment you reveal any of this everything comes out at once it's a Pandora's Box um the Eric Weinstein part about superc conductivity that was a weird answer so I think that confirms our opinion about Eric Weinstein which is that he's a very smart person but that when it comes to the ufology space he's got a childlike mentality to it he's

(3:12:35) he's a very new approach to it right he's still stuck in the CNN brain approach of well I haven't seen a paper about it that's been been peer reviewed by my favorite scientist and I haven't seen it on TV right like that's the issue is that and he thought we heard him say it right there he said he thought well why aren't the physicists coming out he was in a literal interview with Jesse Michaels and Hal POF Hal Poff is one of the people who knows about the information he says he knows Eric Davis

(3:13:08) Eric Davis is one of the people as well I have it on pretty good authority that Eric DAV Davis is one of the people who's hiding the information he's one of the people thinks that it shouldn't be released that he's happy to go out there and say that oh it's all fake don't look at it even though he knows it's real imagine just theoretically if how if Eric Davis has gone through a literal Stargate a portal and then he's going out there and telling other people that it's not real just think about that for

(3:13:38) a second the same way where we have him on record talking to Admiral Davis or uh Admiral what's the the Davis Admiral uh paper or whatever we have him on record talking about this stuff and then he denies it like he he downplays it right so just think about that just keep in mind Chad this is what **I want you** guys who are listening to think about is that there are people on both sides some people that want the information out some people that don't so to Eric Weinstein's Point why are the physicists

(3:14:09) not bringing out they are they're trying the reality is there's not that many of them what we found out is a small Niche group of people that know about this and all you have to do is say that they are disinformation or that they're crazy or all this stuff that they say and then nobody takes them seriously it's a lot easier than Eric Weinstein thinks and he even said it he even said well the moment that ER oh uh yeah uh W Wilson the Wilson Davis memo right that's the name of it but it's a lot easier than Eric

(3:14:45) Weinstein says he says well I don't want to go put my name out there I don't people don't want to tie themselves to it because they get attacked and blah blah blah well there you go man that's the reason why the disinformation is so easy because all it takes is people to discredit you and now you don't even want to speak up anymore because the people that know have basically no incentive to release the information let's just say that I know that orbs are real that I get told that the orbs in this

(3:15:15) video that we're looking at right here are real and I can profit off of it why the hell would I want to let everybody else know about it why would I put my family's uh like why would I put my family on the line just to reveal this to other people that don't want to believe in it anyway I wouldn't if the government were to pay me \$10 million to stop talking about this why would I not accept that right as opposed to all the abuse that I've gotten from people and all the stuff like that and I consider myself

(3:15:49) more able to take all the troll abuse than a random people like random people that are scientists or whatever like this stuff breaks them down for me I don't give a crap right so that's how it's so easy to keep a secret so those are the first two questions the other one was uh what are thoughts on meta materials are they alive I don't think that meta materials are necessarily alive but are plasmoids alive now that's an interesting question I think the question comes down to is the universe itself alive imagine our

(3:16:21) bodies right now if you were to look inside of our bodies at the like the smallest possible scales would we find living organisms in our bodies yeah absolutely we would would they be able to understand that they're living inside of a body of another organism that's alive probably not could that be the same as our universe theoretically so I don't have any I I don't struggle with this idea that plasmoids themselves could be alive I think that that's something that seems perfectly reasonable um now I don't have any

(3:16:56) evidence or proof of that but when you look at the double slit experiment one of the things that I get from the double slit experiment is that the universe is aware of itself that it's somehow able to retroactively react faster than the speed of light to the knowledge that it's being observed and that's a pretty weird phenomenon it goes beyond our understanding of Consciousness and linear time flows and that's what I think Eric Weinstein and the old school physicists that don't believe in a lot

(3:17:29) of this stuff really need to go back to how do they explain the double slit experiment the answer is they can't right and that's really where all this boils back down to you need whatever Theory you come up with you need to have that be able to incorporate the double slit experiment and the results related to the double slit experiment and once you do that you start to realize that even stuff like this which seems impossible can actually make scientific sense that we can break through what we understand to be possible and

(3:18:07) rational through this level of reality that we're seeing right here to to another dimension and now when we talk about multi-dimensional species we're not talking about ghosts and whatever although you might be what we're really talking about is what you see in these videos is the ability to break through these Dimensions to another dimension which is the dimension that you see when the Black comes up the cold endothermic zap which can provide potentially even uh negative energy which is what's

(3:18:41) needed to keep the wormhole open here that's the extra Dimension and that's why the plane literally disappears right here is there's another dimension but you can also just think

of it as faster than light travel right the way that Roy de Herbert looks at it this is where we have to break down this concept of extradimensional beings but what was said today when Amanda brought up and and retweeted that or uh posted that that uh video which I think it made it on [Reddit](#) by the way Amanda the for the contractor who knows

(3:19:14) about the information it's said about trans dimensional travel this is what they're talking about this is transdimensional travel you're staring at it it's just like keep this in mind chat the last thought science is explaining observable reality we just use words to explain what we see so if you want to call this super luminal travel if you want to call this transdimensional travel whatever you want to call it we're talking about an airplane disappearing in one moment and then appearing somewhere else in the

(3:19:46) same moment or in a moment later okay um I don't think that Eric knows about the MH370 stuff my guess is he has no idea whatsoever so and to tertiles point Wormhole multi-dimensional they're all the same thing that's not what's important what we call it is not important what is actually what we're actually seeing is what's important that's my whole point there you want to call it multi-dimensional you want to call it a wormhole at the end of the day they're all the same thing we're just putting

(3:20:27) semantical terms onto something that we're visually observing in our actual reality right here you want to call a wormhole a portal you want to call it a phase transition whatever you want to call it it's all the same stuff that's the important part and yes to Eve's point would would you say it disappears at the moments of planks constant that's also another way to interpret it yes is that the Super Force is equivalent to the plank Force and and potentially the plank constant I think I'm getting that correct from a

(3:21:03) scientific perspective is that the plank concept the reason why you get the plank scales is because this is where the universe is expanding theoretically f faster than the speed of light this is where you have a breakdown of the forces where we can't comprehend it I think that that is accurate Izzy big donation thank you very much they won't because they don't want to lose funding or credibility this is exactly right this is the why the scientists don't speak up to Eric Weinstein's question why do they not want to speak

(3:21:35) up about this stuff a because they're getting funding and the funding they're getting is huge these people are living high life right and the second is they don't want to lose credibility look how many people are calling this grifters even though we've never asked for money ever never we've never gone out there and said anything esoteric all the stuff that we've been saying is supported by physics and electrical engineering imagine if we were out here saying that like cons we can control the orbs with

(3:22:05) our Consciousness or that we can conjure the orbs with our Consciousness people would be calling us totally nuts right to the point that somebody just brought up in the chat the Chris blede Theory right and this is why I don't approach that is that I take it from a very rational logical approach as as logical as teleporting a plane really can be right because you have to keep

it somewhat grounded and it's not a matter of I really think it's aliens and I'm lying about it to make it more palatable

(3:22:34) I literally think this is locky Martin technology I literally do the reality is if I was trying to make this more palatable I would not be saying we're teleporting a plane here I would be saying that they are cloaking This Plane somehow cuz that's to me the most palatable option but it's not cloaking because the plane just literally freaking disappears and there's no smoke Trail anymore so just keep that in mind yeah Charles actually that's the one I was just talking about the Nico one guys I was literally just mentioning

(3:23:09) the Nico one we have like at least four different people now I think basically saying that teleportation is real you've got Steven Greer mentioning it um I think even Richard doy was mentioning it you've got this Nico guy mentioning it and uh Salvador Pas also says that it's legit I mean we've got tons of people saying that teleportation is real and people just aren't listening it's that simple they say oh give me the proof well what do you want me to do you want me to get locki Martin to break the orbs

(3:23:46) out this doesn't it's not something you can just do in your home you got to have like multi-billion dollar technology in order to pull it off so that's the problem right so chat I love what you guys are doing right now I think this was a great stream and a great space that we had we've been going three and a half hours uh let me see if there's any other last question s yeah I would say that the real grifters are the ones who are profiting off disclosure profiting off the science while not disclosing what they really

(3:24:23) know to me that's what a grifter is somebody who knows more information but they're slow dripping you that information so far I've never done that so far to date I've given you guys all the information I can give you without compromising the people that I trust and my sources um um and in some cases I've even done that I've shown my DMs and I get this I get people attacking me for that I don't say stuff and I get people attacking me for that the one thing I don't do is I don't give you guys false

(3:24:53) promises if it's my opinion I tell you it's my opinion if it's a people that I've talked to I tell you as my people I've talked to and if it's part of the investigation I just put it out there right away um only a handful of times have I even said that I'm going to give an announcement for announcement only like once or twice I think I said tomorrow morning check out the post I'm going to make rarely do I even do that kind of stuff I just put it out there and I don't care how many people watch or how

(3:25:18) many views I get or how much money I make that's not a factor at all in anything that I've been doing okay any other last questions before we end tonight cheers everybody I definitely want to find out who that Nico guy is because I'd be happy to talk to him apparently he's putting out a book pretty soon now that does make me question stuff a little bit but the reality is maybe we'll put out a book one day I don't know right I might put out a book one day and because the answer is I want

(3:25:54) to get answers for these freaking videos I want to I don't want to necessarily profit off it but the reality is I think that the book that we would write could be a New York Times bestseller I mean even if it was fake I think it could be a New York Times bestseller cuz man we have gone through some crap chat like you guys who have been following in from a since August you know what we've been going through we used to be a 30 follower account and we would join spaces and basically beg people to look at the stuff we're looking at now we're

(3:26:25) at 79,000 follower account and we're in spaces with Eric Weinstein keemstar Jesse Michaels and we're asking like real adult scientific questions to people like just look at how far we've come incredible story just incredible I sit there and find myself looking at some of my own tweets and just rereading them like five times because I find it interesting and I'm just sitting there going [REDACTED] I wrote this it's crazy man it's really crazy so the reality is I don't know what comes next for us guys I'm on this

(3:27:05) roller coaster ride just like you guys are if you guys think that this is wild and you can't believe it well imagine how I feel being in the driver's seat right I can't even believe it half the time I'm sitting here looking at a plane disappear out of SpaceTime I would have never thought this is possible without seeing two perfectly in sync videos with far more detail than anybody could ever fake it's just freaking nuts so yeah we'll see um last thing I'll say is that there are people who are interested in

(3:27:43) documentary I turned one person down already who wanted to do some kind of like human interest story style documentary about me I just I said I wasn't interested I didn't really want to do that um Melo demon who you guys saw in the space tonight is somebody who's my friend who wants to do a documentary about it the reality is I don't think the government will let a documentary get done in the same where way we have people talking about us and talking crap about us like that's going to happen to people who are serious

(3:28:15) producers as well they're going to say don't don't do this because they'll they'll make up something or they'll say it's a national security issue or whatever because the reality is if this information is real if the V video that we're looking at right now is Real This represents billions of dollars in lawsuits and potential jail time for the people who have been hiding this information that's the scary part of about it part of me actually hopes it's fake CU if it's not I'm at real risk so

(3:28:49) that's the reality of it a little bit guys um but yeah documentary a documentary would be sick about this guys the only sad part is like I don't know if we have enough like at people aren't following me around recording me but that's also part of the reason why I'm streaming everything because one day if somebody wants to do documentary about this I want them to have everything recorded right I want them to have everything which is all our streams all the podcasts we've been doing I want

(3:29:17) everything documented and then also if I were to just somehow disappear one day well there you guys go you've got like me saying I wouldn't I wouldn't suicide myself like a dozen times like how much more do you need than that right um so appreciate you guys just to close

out the stream tonight let's go back to full screen uh Izzy thank you very much for the second donation I appreciate you cheers to the ugly and beautiful **truth** that's the last that's one of the last things I want to say is

(3:29:46) that um the **truth** is ugly the **truth** is not something that's easy to accept for people that's the reality of the **truth** I learned that even before the videos came out is that the **truth** is something that people do not want to accept right and I knew that ahead of time and that's fine I don't care I'm fine with accepting all of that uh the other thing I saw some other messages in the chat honestly this stream if we made a documentary I think that it would be similar to Tiger King with based on the just amount of drama

(3:30:19) behind the whole phenomenon like keemstar was talking about today in the space like it's crazy how much drama there is about there keemstar is like I never expected this much drama I didn't expect it either when I got involved in it I had no idea what UFO Twitter was going to be like it was way more drama than I even thought political sides you've got people like they've got their own pet beliefs about the phenomenon's about and other people had their own pet beliefs like it is wild it deserves like

(3:30:50) a tiger King style documentary it really does I mean there's literal criminals like keemstar saying in this community literal criminals it's just nuts okay any last questions guys yeah there's probably an active disinformation campaign hiding the stuff but here's the thing too guys I don't want you guys to go on a reddit and everywhere else and claim that everybody's different disinformation agent the reality is there are probably a few but most people aren't most people are just blinded in their own world

(3:31:26) view just like the movie The Matrix most people are not necessarily disinformation agents they just unknowingly fight for the status quo what they think and they know to be true they're willing to fight for it because the reality is if they are wrong then everything they know is a lie and here's a sad thing that I've realized as well is that I've polarized so many people with this where now if they were to admit they were wrong it would damage their credibility permanently like just look at it through the lens of just **Mick**

(3:32:03) West alone if these videos were to end up being true **Mick** West's whole career is over permanently over he can never **debunk** anything ever again because everybody would say look at how wrong you were about the mh37 videos and every single reply to everything he **debunks** for the rest of his entire life that's just the reality right and that's just **Mick** West let alone all the other people who've been railing saying how fake it is Imagine The Psychology that they would have to go through to accept that they were wrong about the

(3:32:37) videos they will never accept that they were wrong even if the dod were to come out and say that these videos about MH370 are real the majority of the **debunkers** would not admit that they were wrong most of them would say no the dod is lying whatever because cognitive dissonance would take over and they would have to commit to themselves that they world is not a lie so **I want you** guys to understand the reality of the situation we're in we have to awake

people up it's not a matter of proving the technology to be real technology is

(3:33:09) already 100% real based on my own investigation and everything that we found out there it's a matter of waking people up like in The Matrix waking people up to the reality that they live in a matrix and that's all I want to say to you guys I appreciate you guys very much um Everybody in the chat tday everybody who followed along we had an awesome stream awesome space um thank you guys for being here thank you guys for being part of m370x and I can't look forward to talk I look forward to talking to you guys

(3:33:40) again I think the next stream will be tomorrow night guys so tomorrow night uh next stream thank you for being here let's do it again peace every

(00:58) Malian 370 contact 120 9 [Music] night breaking news tonight A Malaysia Airlines flight with 239 people on board including four Americans has gone [Music] missing [Music] I remembered the line from the Hindu scripture the Bhagavad Gita Vishnu is trying to persuade the prince that he should do his duty and to

(02:04) impress him takes on his multi-armed form and says now I am become de the destroyer of worlds yo yo Chad how's it going nice to see you guys today glad to have you out here appreciate everybody um yeah there are there Twitter spaces going on right now who is first on my screen um kmml was first then Dorian you were second hey mystical station sorry I'm doing a quick edit I messed up on one of the text to speech things I was doing earlier I was playing a little pal world that's why I'm a little late it's G to

(02:57) be a late night stream cheers everybody I gotta take it easy in the martinis though tonight gotta work tomorrow kmm borian sorry bro um if you think black budget projects are going to release this Tech your delusional what what's the point of that comment what what exactly is the point of that [Music] comment it is it to get us to stop or what that ain't happening that ain't happening uh anyway um what else we got going on in our chat let's see nice to see

you weighing in on issues today on X having great takes

(03:50) yeah not everybody likes my takes I mean there was a couple people that said they wanted to stop following me because of some my takes pretty funny uh I'm not going to get into too much of the politics side but uh James O'Keefe came out with a video that I thought was pretty damning I mean basically just admitted that the administration's been lying about uh a lot of stuff which you know it's politics not that surprising that they're lying but um you know so I made a comment on that because I just love

(04:17) sting journalism how can you not love sting journalism right like this old school sting journalism like James o'keef is sitting across from this dude and it's it's actually James O'Keefe with blond dyed hair and glasses on it's like if it's like if you couldn't recognize me if I took my glasses off like this and the guy has no idea he's talking to James O'Keefe I'm just sitting there cracking up looking at it going my god dude if you fall for that like if you are like on like a you know

(04:41) gay date and you don't realize you're sitting across from James O'Keefe man like it's all on you man that's just all on you too funny hey William uh have I had any representation from the government approach me or want to help at all uh no I have not but I have obviously had people that are affiliated you know like contractors and and stuff like that you know Salvador Pas and people like Dave Rossi um I think a few of the other people have been giving us Clues and some of our streams also probably are um they

(05:19) could be contractors I don't know to be honest with you but reality is guys so let's start off what's the agenda for today um agenda is we're going to do a little bit of Rolls-Royce research I don't know how far we're going to get today yeah Mike Obama doesn't want to run apparently yeah Michelle Obama apparently had no interest in running not that not that surprising honestly um I found the logo finally um hold on a sec chat but uh what was the other part um and then uh like I don't know man a

(05:57) lot of the politics around the vaccine stuff is Prett pretty wild to me man there's a lot of people out there that like just think everybody's evil if you don't if you didn't get the vaccine or you're killing people it's pretty pretty scary man um but that's just me I guess text to speech I think it's just other people's choices my opinion on that uh what else was out there what what other takes were there today um oh yeah so the other thing too is that I'm definitely going to have s on

(06:33) again soon probably next few weeks um I've got some other people I'm trying to get lined up with hard TRS the reality is like it's just all this stuff's draining on me man there's not enough hours in the day I've already really fallen off on answering my emails which I need to get I haven't been able to edit any of my hard **truth** podcasts so it's just been a a ton of a ton of work man um and then doing my normal job for eight hours every day as well hey hey William Bill nice to see you too so what

(07:02) I was going to say though is um you know I have it on good authority the people that we've talked to on our streams as well as my own conclusions as well as the videos and our investigation that this technolog is real right there's nothing that can convince me technology is not real that's the **truth** that yes we've already figured out a unification Theory it's already been out there the government govern military industrial complex knows about it it's in special access programs saps that's the reason why Congress has

(07:36) no idea about it right this is the reason why people will say oh I want the evidence I want to see the **truth** they're not going to wheel out the overunity devices for you man they're not going to wheel out the orbs for us right that's just not going to happen at least not for the public right um H they're not going to re you know whe show us the teleportation technology they're not going to do that that's not in the cards right because it's it's locked behind these special access

(08:01) programs that's what Congress tells us as well that they can't get access to it it's all hidden for national security purposes but it is it exists it is real so how do we get it out you know the other thing I've realized is that it's not as simple as just building it we can't build a super a super uh harmonic conductive orb super conductive harmonic orb we can't build one right it's too expensive it requires too many different components the tests that people do that we could do already been done and those

(08:31) even require really expensive Labs as well so it's really not going to be easy and those actually won't even be good enough for normal people that are out there is what I'm starting to realize even if we build one of these Labs that they've been using like if you think back to the NASA paper we were showing like a week ago you look at the setup that they've got and it takes a lot of expensive equipment probably tens of thousands if not hundreds of thousands of dollars worth of equipment and even then you

(08:58) just write a scientific paper and people don't they don't understand it common people don't understand it the reality is that we need to change people's mindset that's what we have to do even the hovering magnet bisma thing I'm I'm still in progress of doing that like that's not going to convince people either although that is going to look cool and it's going to convince people there's stuff that's neat that's out there what we have to do is we have to convince people that you know

(09:27) unification of quantum and macros real andoss possible that's what we've got to do slowly but surely right and when we convince enough people then you know it'll come out that's the sad reality of our situation right now is that we have to convince enough people and once we've convinced enough people and there's a significant portion of the population that realizes that it's real then all the information will come out naturally it's kind of sad to say that's the case but that's that's what we're dealing

(10:04) with right now chat kind of sucks huh um sorry I'm doing a quick bit of editing here so I don't know exactly what we have to do with that we just keep fighting at it you know keep

fighting at it the other thing too is this I think that the really the way that it'll come out is they're going to mess up again right they're going to mess up the government's going to mess up videos are going to get **leaked** they're going to come out if we press hard enough maybe somebody else will leak some information

(10:49) for us right sad part too is we might need like **China** or **Russia** to come out somebody who is adversarial against the United States that wants this information out there that has the classified information that they could drop to us we might need something like that we need another video that corroborates the MH370 videos if that happens if we see another video of orbs like that it's going to be game over we're we're going to win right had to stop listening to which space Sandy what what space is it is there a space going on oh the

(11:27) alien scientist one or a different one that can't still be going on can it sorry I haven't been on Twitter for a couple hours hey Egon nice to meet see you bud yeah I mean we already had one whistleblower that's the sad part right like Edward C Lyn is the guy who's implicated in in the the videos getting out if he's probably not Regis ated n but he's definitely implicated in the videos getting out um yeah the problem is adversarial Nation doing disclosure wouldn't be a great thing I agree I mean I'm not a I'm

(12:01) not a spy but the government needs to step up and they're not going to I mean I've literally called the government out several times I would also say if I was lying the government should have been coming out and making statements about it um damn it I had this all set up and then I made a new statement and uh I had it ready and I had it all done and then I realized it's spelled iMat with Emerson oh boy so annoying I'm going to play what the video I made for you guys here in a second we'll see if I have any other

(12:43) misspellings you guys have you guys look at it Trump's not going to disclose it either he would have he already had one chance to disclose it here's the reality of the politics too guys Trump's not going to disclose it he already had one chance and he didn't do it um and he's taking money from Bigalow Bigalow definitely knows about this stuff right uh Robert Bigalow knows about it he's giving Trump \$20 million so man it's kind of a sucky situation RFK is not going to disclose it either that's also reality too so if

(13:18) people are wondering okay will RFK disclose it no guys I've I've been in this game 40 years in politics and learn and watch politics where every single president has said that they'll disclose it the moment they get in office they get the call and it's never going to happen once they get the call it doesn't happen anymore because what happens is you think about it this way right no they they're telling Trump trump knows guys people like to think that like oh Trump's not going to ever get to know

(13:42) like no the president's no Obama had to call in that operation he had to call it it Obama is implicated in the operation and Trump probably has done stuff just as sketchy um and and once the president finds out like they realize the implications right think of the Imp lications that we've been presenting doomsday weapons that's how you get people to shut up you go we're

not going to release this Tech because literally if Isis gets it they could blow up the whole planet that's all you have to say

(14:11) say to the president and then right do they want to say something yeah but they can't right they can't say anything because reality is no one wants to be responsible for Isis getting uh bombs that are going to blow up the whole planet hey Amanda what uh what space were you guys watching maybe we'll check out some of time variances stuff I'm not really feeling like working too hard on stuff tonight what spaces are we in how come my why do my DMs show up when I go to Twitter so annoying um yeah I mean I like RFK you

(14:55) know I'll probably be voting for RFK or Trump I'm not really keen on any of my options to be honest with you um but yeah it's wow but the reality is that uh you know we got to vote for somebody probably let's see what's this video here out walking and it appears **debunk** this video guys we're going to **debunk** a video here today okay let's get it going I probably should do a PO World stream maybe I will I was playing with my brother I hadn't played video games with my brother in like five months now we're

(15:41) playing some pal World CU he and I like to play uh those survival games we' played a lot of different survival games out there this one's it's pretty fun but it gets kind of boring after an hour or two um okay so let's start with a little **debunking** of a video I'm I'm a **debunker** now guys so this video here station space station for a docking when there's an astronaut out walking that just doesn't happen that is not standard protocol okay so I'm going to turn the sound off on this one you see this

(16:16) object here this is not a UFO or anything this is like a piece of the shuttle or the space station that fell off right and I watched the the original video cuz this is why I was asking people for it first of all this a UFO it's not going to be this is super close this is like this would be like right on top of them this guy whoever this person is would be freaking the hell out like this is actually just a piece of like a tarp or something that fell off the shuttle it's hard to tell from this version of it but when you watch it from

(16:45) the real version you can tell it's just floating away this is just like a tarp and it's just floating away it's a piece of the space station this isn't like a UFO so I don't know this usually happens unfortunately this this is apparently like a six-year-old video or something like that five or six years old and then when people like do all these weird things to it it makes it look oh it's spooky blah blah blah it's not man sad part is I've seen so many UFO videos reality is very very small percentage of

(17:14) them uh interest me at all now if it's something that I haven't seen before where we're seeing anomalous movement then sometimes it'll interest me but if it's just a small dot moving around I have no interest in it guys if it's just a light moving around in the distance and it's not moving I'm normally or any way I'm not interested in it I see a lot of lights as well that are just birds and bugs where people are they're out of focus um and then you see a lot of stuff

(17:40) like this where it's something else but they the way they cut the video you don't really get to see the whole thing like right there you can tell it's just something floating away right it's moving very slowly it's just floating away drifting in space they freeze frame it because if you saw it in real real time it wouldn't look anomalous at all just out of focus is why it even looks a little bit weird yeah I've seen the tether incident tether incident is pretty weird uh problem with the tether

(18:04) incident like what is that it's like Spa UFOs aren't like morphing and changing shape like that so I don't know that's the reason why the MH370 videos are so compelling is that when you look at them MH370 videos are by far the most compelling videos I've ever seen in UFO Aly and it's not even close honestly the next closest for me is probably the UFO turkey video and even that one has nothing on the MH370 videos nothing these are the most compelling videos i' I've ever seen in my whole life right um when you first

(18:35) look at the videos they're so abnormal that you do think that they're fake it's so crazy to look at this at first because then and then you start thinking about you start processing it you're like wait but that's a drone like we're literally looking at the nose of the Drone here and you start thinking about and you're like wait the person that **leaked** this wanted us to see all this everything that we're seeing they wanted us to see it right they wanted us to see this like this is isn't fake because the

(19:00) way that it's shaking the way that the shake increases when it zooms in like this is all perfectly real that's the scary part about this video like they just screwed up and they **leaked** this video and these Trails no one could ever come up with this no one could ever come up with these gravity engines everything's completely consistent with science too that's the big problem with these videos otherwise it' be easier for them to claim their fake like if it was blurry or out of focus or it didn't show the crazy orb

(19:28) movements are totally realistic if it didn't show any of that then these videos would be much easier to dismiss and that's the reason why the **debunkers** can't even try right this video that we're looking at right now there's only one **debunk** and that **debunk** is the zap here and they only try to match one frame that doesn't even match that's how real these videos are the **debunkers** have nothing literally nothing no one's even tried to **debunk** the orbs because they can't because they're 100% consistent

(19:57) with physics and they have a monopole and you can see a heat signature in them it's like there's no **debunking** these the jittery contrails I I don't I think that I can't decide how dishonest they're being I think that when they're talking about the jittery contrails they're actually talking about the camera shaking I think they're talking about the cam when they see this and they think that the contrails are not jittering it's literally from the shaking of the camera the contrails are

(20:24) perfectly normal there they're not like it's not going up and down or anything like mck is either just completely delusional or a liar as are the rest of the **debunkers** I don't know yo the

reality man is I'm probably not going to be watching any videos that people send me you got to realize I don't have time I don't have time I've got so much going on man people send me these hourlong videos expecting me to watch like it's never going to happen man just being just being 100 100%

(20:51) honest with you guys I wish I could but um we've reached the point now where between just just managing Twitter alone is like almost a full-time job and I'm I'm doing my normal job um eight hours oh yeah the Nick gold stuff boy Nick gold what in the hell dude Nick gold is full CNN brain I don't know chat how how is it possible with some of these people let me switch back over full screen like the thing I can't figure out chat is like you've got people like Nick gold who think I'm pretty sure his opinion

(21:26) are that aliens are visiting us like he came into one of the spaces and he just started immediately gaslighting everybody he comes in and and Chris who the funny part is like I'm somehow stuck in the middle between the **debunkers** and what I'm going to call the True Believers right the people that believe the aliens are visiting us and whatever and they both hate us um so and science EV evidence Fringe I'll get to that in a second but uh so he comes in and they're talking about that DOD uh statement that we posted

(22:03) that talks about like they don't have a good reporting mechanism and the first thing Nick gold comes in and says is this vindicates all the all the Believers and Lula's on like why is he gaslighting so hard both sides are sitting there trying to claim that this proves that they're right and it's just like some anoculus statement about you know we don't have a good reporting mechanism I'm sitting there in the check when I'm the only one who's spoken to the AO in the whole space maybe one of

(22:29) the only people in the country who spoken to the A and everybody else is trying to like Spike the football here and there just ridiculous um so the thing I don't understand is anyone who thinks that aliens are visiting us how do they think the aliens are getting here man how do they think the aliens are getting here the only way the aliens can get here is they have faster than light travel that's it there is no if you're moving slower than the speed of light we're talking 20 30 years minimum to get

(23:02) to us minimum maybe even like a 100 years just and that's from alpha centuri the very closest star so where do they think the aliens are coming from man where do they think the aliens are coming from the reality is you need faster than light travel for Interstellar distances to become reasonable that's just the reality and I'm somebody who's not even convinced aliens are visiting us and I say okay well what what does faster than light travel look like it's going to look like teleportation simple as that well here

(23:36) you go man here it is this is consistent with physics and electrical engineering and magnetism and electricity like this is all consistent with that this is your answer right here so the thing I don't understand is why are the people that are out there that think that aliens are visiting us how are they against these videos If you think think aliens are visiting us if you if

you're so far out there that you think aliens are visiting us but you think we're looking at video game Graphics here how do you reconcile

(24:07) that how do you reconcile those two diametrically opposed positions I I just don't get it you can believe that aliens are visiting us but you can't believe that this video is real even though it's completely consistent with science I don't get it man okay so somebody mentioned the the cloud **debunk** uh which is we've been threatened by **Jonas** that he's going to sue us for some reason well it's like okay first of all **Jonas** uh you were the one who decided to get involved man I literally am on

(24:40) record telling you you shouldn't go try to make a **debunk** video because there's a lot of evidence that proves the videos are real and if you come out and proving a **debunk** video that's well above and beyond just claiming I took some pictures it's one thing to come out and be like I just took some pictures here they are go nuts it's another to come out and go oh yes I took these pictures they're proof that your videos are fake and all this stuff's fake like that you're putting yourself out there man

(25:02) **Jonas** your lawyer has a good luck man really good luck honestly because you got no chance in hell man just going to be honest with you um you know you put yourself out there reality is we had already proven that the clouds are moving and evolving before that even came out so we had already ruled out two-dimensional pictures being part of these videos first of all we have two videos we have two videos and one of them is **undebunkable** this the Drone one they're both in perfect synchronization as well so that alone already rules out

(25:36) the idea that you would have 2D uh static picture because you need to build a 3D render in order to even produce this so if you're building a 3D render like a diarama you're not using 2D backgrounds you're going to make a 3D render so you're going to make the clouds in there and then you're going to try to capture it from both angles does that make sense to everybody I feel like people don't have basic reasoning skills so we've let's just so first logical conclusion two different angles

(26:06) that are perfectly in sync right we've got two videos perfectly in sync here right perfectly in sync videos this requires a 3D render plus we've shown that the clouds match up that you can line the clouds up if you invert the thermal video that the clouds actually line up now of course they don't line up perfectly because you've got one coming from the side and one come from the top so we don't know exactly where the Drone is it's somewhere over here but you can see the clouds come in frame like right

(26:35) about well now the the plane's not in the picture but I forget we've got to pull up the other one where the shows the side by side oh there it is right there that's the part right there so this is the only part where we can see the clouds but notice the cloud right here comes into play in the exact same time on both videos right so the Drone is like back here where my mouse is oh wait you're not sorry you're not even seeing the screen okay I'm an idiot sorry so here's what we've got we've got two side

(27:06) by-side videos right here right now notice right here when the when the plane gets near This Cloud you're going to see the cloud in the second video boom there it is same cloud two different videos right so we know that we've got our drone right here somewhere and in fact now I'm wondering if it's not seeing this cloud back here is it this cloud back here from the angle anyway so we know that we can see the clouds in both so if you are going to develop this you need a 3D rendered environment you need a diarama you know

(27:50) 3D render I don't have anything good that can build it but a 3D render so you can take one one picture from here and then one picture from straight across right now if you're doing that you're going to build a 3D environment and you're going to build the clouds in 3D so that you can capture and they can both be in perfect synchronization so you can get these clouds to match up just like we see here where we see them in both videos at the same time Cloud One Cloud 2 we see both clouds at the exact same time in both

(28:18) videos this rules out 2D Graphics so if you're going to come out and say oh I found a picture where it matches we've already ruled that out it literally can't be so then what's the logical question if you've ruled out it can't be a 2d picture well it's pretty simple someone took the video took the clouds from the video and inserted them into a picture that's what they did I don't know who did it but someone did it in fact you can just use Ai and do it and you can do it in like 5 seconds if you can teleport

(28:53) a plane you probably have ai that can do it within just a couple minutes right now the other thing I want to point out is you can actually see the clouds moving you can see the stuff over here in the background moving you can see all the stuff moving around here now each frame each perspective change is only a few seconds so that's the reason why you don't see the clouds moving for a long time if we were looking at one spot for the full minute and a half you would actually see more movement in the clouds

(29:20) but you still do see movement and it's generally easier to see if I if I uh go like this with the frame on the same frame you can see some of the clouds evolving now I think that some of them are easier to see than others like this one right here is one of the best ones look right here where my mouse is right here on this Cloud right here you can see the cloud evolving that's not compression artifacts the Cloud's literally evolving and changing right that's not compression artifacts we're seeing like atmospheric

(29:51) Distortion probably mixed with the clouds evolving and if you look at these clouds down here you can actually see them move move as well they move up and down dynamically so these are not that's not somebody didn't add some effect in After Effects right that's not what that is it wouldn't even make sense right if somebody's making a fake video they're not adding all these CL evolving clouds everywhere and I think it was like Punjabi Batman or somebody who went to the effort to show that like each a lot

(30:20) of these effects like even here you can see the clouds move you can see this hole even open up right here what do they do they they edited in a tiny little hole and the clouds these are

a lot of small details to be editing in your perfect videos that have no discrepancies you see how it opens up like that right here in this spot where my mouse is so no we're not looking at 2D clouds in these of that I'm sure so did **Jonas** fake them or somebody else I don't know and I don't really care I never really have cared right and if

(30:50) people out there want to think that we're looking at 2D cloud pictures well I've already explained why they can't be if people want to think that uh a non-matching VFX is not even the right color not even the right color only one of the frames is even remotely close this Frame if somebody wants to think that this is somehow in our video you know what I just don't really care man I can't reach everybody if somebody thinks that this is the same effect that we're seeing in our video then they're not

(31:16) somebody who's ever going to realize that Quantum and uh general relativity can be combined they're never going to realize it right you hear what I'm saying guys so and the reality here is that we've been able to deduce so much information from these videos makes it almost impossible for them to be fake now the real question is what exactly are we looking at here this pretty much has to be the cber system now why does this have to be the cers system because in the bottom left you can see nr22 down

(31:49) here in the bottom left you can also see the coordinates update as well this indicates satellite imagery right means you're looking down like Google go Earth on a Google Earth video playback uh no I'm explaining to some of the people in the chat who are new who don't know about the **debunks** and what have you just to give you guys a quick uh rundown so I think we're done with that though I just like looking at the videos too they're pretty incredible right I mean these are just people are asking

(32:21) like cuz the way we got into this as well is yeah even movie visual effects aren't on par with these videos man it's crazy it's just totally crazy I've never seen anything even remotely as compelling as these videos in my entire life in ufology then granted the only time I've really been paying attention the last six years but I'm not joking when I'd say I've seen hundreds if not thousands of videos I used to lurk like every day on UFOs sub**reddit** watch the videos that people would post people

(32:50) send me a lot of stuff as well but unless it's like this quality there's not much we can do about it look at it this way look at it this way guys they've in in the **debunkers** minds in a lot of people's minds these videos have been **debunked** how does any other video have any chance if you if you are **debunking** real videos like this there's nothing that's going to convince the debunkers period right nothing certainly not lights moving around in the sky none of that stuff's going to convince people like we

(33:22) need stuff like this we need stuff that's showing like sinusal patterns spinning around an airplane right that's what we need like that because it's clear that this s shows a purpose right it shows that it's like getting it prepared for super luminal speeds and in my mind this is definitely human technology some people seem to think that I think this is human technology because it's

easier to digest no I just think it's human technology because they're literally filming it before the

(33:52) orbs even show up it's like they didn't they either just got super lucky and it happens to be non-human intelligence and the thing is we don't need non-human intelligence to explain anything we're seeing here like we know this is not aliens flying around in little orbs we know there's no aliens in these orbs right nobody thinks that these are little aliens flying around in the orbs it doesn't even make sense like the pattern is too exact everybody agrees that this is some kind of computer

(34:18) program running it so what do you need aliens for right if it's a computer program we've got computers we've got quantum computers what would be the point of them in an airplane out of the sky there's no point for an alien to zap an airplane out of the sky like this makes no sense whatsoever yeah acrona we've tried to get in touch with basically everybody we're not going to get in touch with Circa 370 whoever that is that's that's probably just [REDACTED] that one with the phone call or whatever

(34:53) was [REDACTED] for sure um Jim Stone we we had no way to get in contact with I think we did get in touch with Sarah Bach like early on somebody reached out to her even though I asked people not to and I think she's the one that like wouldn't respond and like freaked out and like said never contact me again and Philip wood I've tried to get in touch with the lawyers for Philip Wood's estate that were suing and they wouldn't call me back so yeah it's hard it's hard to get in touch with people man they've pretty

(35:24) much been silenced most of the people and then of course like the real kicker here is this portal that we see right this is it's like no one even would know what to look like has anyone ever even seen an endothermic event before why would no one would ever fake this as an endothermic event ever that's the funny part is like if someone's hoaxing this they're just going to make it an explosion and the whole the whole hoax would be that it blew up that would be the hoax hoaxing it to disappear in an

(35:57) endothermic event with three harmonic orbs converging on it is not something that anyone would ever have thought of in 2014 let alone made two perfectly Instinct videos with it we do need members of Congress realize that anybody who touches these is going to be look at it even if you think it's real now it's not an implosion either because implosions are also uh exothermic events implosions are not endothermic they're all even in implosions a release of energy if I if I'm my science is correct I could be

(36:31) wrong um here's the problem with Congress looking at it too right is anyone who thinks that they are real is going to be afraid right anyone who thinks they're real is going to be afraid because boy this represents a gigantic conspiracy honestly our best bet sad as this is to say say chat is a o a o might be our best bet that might be our best bet because they have the capability to find out if this Drone footage is legitimate I mean if this Drone footage is legitimate game over right it's real really it's that

(37:17) simple maybe that's why they debunked they're debunking the portal because even if then we get the Drone footage as real then they'll be like oh but they took real Drone footage and they uh they they put a Pyromania VFX on it maybe that's why they refuse to try to debunk any other rest of this video there's literally no way anyone could even know what these drones look like back then people still didn't even think I have still have people arguing that you can't early on you remember

(37:47) some of the debunkers were claiming that there was no rainbow pallet like this they only came in black and white then we disprove that and then they just move on to the next thing right so if this drone footage is real like that's that's in my mind that's it they're real although whatever we already know they're real anyway yeah Edward Clan I've been calling his name out for how many months four months he's never come out to tell me hey man stop yelling my name on podcast on Tim pool and Alex

(38:24) Jones Luke are you trying to be a troll what do you mean there's no evidence we're literally looking at them and we have multiple patents and we have four different unification theories and at least three different scientists who all say that they're real that what we're looking at is real not just that all you need to know is that our re all you need to know is look at the double slit experiment that's all you have to do just look at the Double spit experiment in fact let's watch it together chat

(39:01) if you don't think portals are real explain this striking the back wall with the most intensity directly in line with the slit the line of brightness on the back screen shows that intensity this is similar to the line the marbles make but when we add the second slit something different happens if the top of one wave meets the bottom of another wave they cancel each other out so this is called an interference pattern right this is called an interference pattern so this is why you have the cancelling out effect this is

(39:45) why if you have waves right then what's happening is we're going to get an interference pattern oh surprising what happens we get an interference pattern and where they cancel there is nothing so when we we throw things that is matter through two slits we get this two bands of so if we were to shoot matter right through this double slits we should get two slits right H and with waves we get an interference pattern of many bands good so far now let's go quantum an electron is a tiny now you can't post links in here

(40:32) you just have to tell me to search for any tiny bit of matter like yeah destructive constructive interference let's fire a stream through one slit it behaves just like the marble a single band so if we shoot these tiny bits through two slits we should get like the marbles two bands what we don't get two bands so why are we not getting two bands if we're shooting individual electrons through chat we get a wave pattern particle wave Duality how can it act as both right what an interference pattern we do have

(41:12) uh videos Luke we literally are staring at the mh37 videos which are videos of portals happening and yes scientists can recreate it quantum teleportation is real and it's already been

proven we fired electron we know n locality is real we know faster and light communication is real that's an objective fact there's no it's not an argument we know that's real the only thing that you have an issue with for people like Luke is you don't understand how physics works if you understood how physics works you would understand we're

(41:43) not breaking the laws of physics whatsoever the reality is this stuff is going to come out I'm telling you that as an objective statement here that's going to come out right I just want to help people out that are watching this later on this science is going to come out there are going to find out about it I'm telling you even the reason why it's being with suppressed as well is for national security purposes and the answer is pretty simple ultimate Annihilation the whole planet could be destroyed with this type of Technology

(42:14) we get a pattern like waves not like little marbles how how could pieces of matter create an interference pattern like a wave it doesn't make sense but so how are little pieces of matter creating waves should be impossible right physicists are clever they thought maybe those little balls are bouncing off each other and creating that pattern so they decide to shoot so they think okay well maybe they're bouncing off each other if we're shooting them too fast right so let's shoot them one at a time electrons

(42:52) through one at a time there is no way they could interfere with each other but after an hour of this the so ask yourself this if you're somebody that thinks that the universe is plain and simple that there's no magic to it why are we getting a wave pattern when we're shooting individual atoms through two slits walk us through that what is particle wave Duality how is it possible how is that possible Right anyone who goes down this rabbit hole will realize that teleportation must be possible because

(43:37) you're going to only get to one conclusion here get ready for it same interference pattern is seen to emerge we're shooting atoms through the through two slits one at a time and somehow it's going through both at the same time the conclusion is inescapable the single electron Le the conclusion is is inescapable the electron leaves as a single electron and somehow goes through both slits but it's more complicated than that it actually goes through neither slit and both slits at the same time that's how weird it is

(44:10) what does that mean the answer what that means is that the universe is cheating there's some underlying framework to the universe that we do not understand Beyond observable reality leaves as a particle becomes a wave of potentials go goes through both slits this is Schrodinger's equations the idea that we don't know when we look in until we look in the box whether or not the cat's alive or not right that's reality that's not fiction that's literally what happens in observable reality and that's

(44:44) all science is science is observable reality and studying observable reality and interferes with itself to hit the wall like a particle it's interfering with itself but mathematically it's even stranger it goes through both slits and it goes through neither and it goes through just one and it goes through just the other all of these possibilities mathematically it's just Breaking All the

Rules right so let's see what do we got what our trolls saying there probably are more videos that's the funny part and where

(45:22) are they they classified where are the scientists who are doing it they're also have ndas that's what I'm telling you straight up they have ndas they get scooped up the moment you try to create a gravitational wave which is what's required for this to happen nobody at home is creating gravitational waves that can move an airplane this requires huge amounts of resources this requires locked Martin producing this stuff for decades and that's why I said at the beginning of this you're not going to

(45:49) produce this in your home you're not even going to produce this in your own lab you can produce the fundamental requirements for it and the moment you make a gravitational wave the government's going to knock on your door and they're going to force you to sign an NDA in the interest of National Security our in superposition with each other but physicists were completely baffled by this so they decided to Peak and see which slit it actually goes through they put a measuring device by one slit to see which one it went

(46:20) through and let it fly but the quantum world is far more mysterious than they could have imagined when they observed the electron went back to behaving like a little marble so just observing it causes it to break down just observing it guys not changing the experiment just looking changes the way that the particle acts stops acting like a wave right what's the answer to that the answer to that is the universe is paying attention the the universe is moving faster than the speed of light right so to advert four the whole thing is

(47:01) hinging on ndas yes yes it is that's why it's National Security right oh hey Diamond what's going on buddy It produced a pattern of two bands not an interference pattern of many the very Act of measuring or observing which slit it went through meant it only went through one not both so what did we learn here well this is how quantum entanglement exists right somehow just observing in my mind and I've said this before what this means is that the universe is somehow aware of itself right the universe somehow knows

(47:43) what's going on now this is hard for people to understand and realize this is already fundamentally magic what we're talking about here the idea that the universe is reacting to somebody just observing it this is where non-locality comes from this is where quantum entanglement comes from this is where quantum teleportation comes from it's real folks it also means that there's an underlying framework to our universe that we do not understand right we do not understand it and even to this day if you were to

(48:14) ask Neil degrass Tyson and these other U you know physics celebrities they're going to say the same thing nobody knows the reality is there is a simple way to understand it we live in a matrix we live in construct that has an underlying framework that we are not perceiving with this reality because it's projected onto it and when you break through break through that reality to the underlying Matrix we should be able to recreate this exact functionality and there's no reason why it should act differently on

(48:44) a tiny scale or on a large scale there's no reason for it to act differently so that all we have to do is figure out what is the unification Theory we have four different unification theories that we've already uncovered is part of this investigation now which one of them is correct it's probably somewhere in the middle of all of them we have salvator pases superforce we have Roy D Herbert who has the dilation Theory that's out there um what was the other one I have to go look at my profile oh ER equals epr by Susan and

(49:21) Malina which argue that from a mathematical standpoint quantum teleportation quantum physics quantum mechanics is equivalent to a wormhole general relativity special relativity and that the mathematics lines up and that they're essentially the same right again also from a mathematical standpoint I'm going to use this wait I don't I don't have a napkin somewhere around here but you know if you were to take your piece of paper right and you just bend it and fold it that's how you can manipulate gravity

(49:55) time space space and time are the same so when you manipulate time you're also manipulating space itself so reality is we just need people to wake up to this and if people wake up to it then we will get the disclosure that we want everybody will get the disclosure they want people that want aliens to be real well guess what if you can teleport objects and now distance is no longer a factor now you get aliens you get some aliens and you get some aliens and you get some aliens because the reality is I think life is

(50:24) everywhere to think that we this planet is the only planet in the universe has life is extremely egotistical there's definitely life elsewhere in the universe no doubt whatsoever um and then if you're somebody else who wants UFO and craft or whatever well there you go right remember when we think about ancient civilizations having a different Tech path than we have well if you want a craft that can somehow manipulate this this uh quantum entanglement at the macroscopic level you know there's no reason other people other civiliz ation

(50:56) wouldn't have figured it out it's a fundamental property of the universe the double slit experiment will be true no matter where you are in the universe okay I think we've got that all good everybody gets some alien cheeks woo uh Eric Weinstein no I think that Eric Weinstein respectfully I think that the old school physicists are good people I think that they're behind the curve when it comes to the science that's that's hard to say but that's the reality I think that a lot of physicists

(51:29) out there are only looking for the papers that uh confirm their world view so few so little of science is a matter of pushing the boundaries but that's what happens right science doesn't move forward like inch by inch it moves forward in Leaps and Bounds even Einstein was considered crazy back in the day now we look up to Einstein like a God and probably we shouldn't because it closes our minds to what's possible from the physics perspective right Gary Nolan's in a space slightly higher brain frequency oh

(52:11) he is a slightly higher percentage of pyramidal synapses have you tied any of this together with some of this kind of unique phenomena um we have been doing um so we have

published paper sec switching it over uh actually you know what Jewels where you know we found this area of the brain at the head of the CATE in paman that had a neuronal density yeah we're G have to ask you know I think the classic well the way that we we talk about it so that it falls within mainstream Sciences uh intuition right and um let's get on our is something

(52:54) which um is actually a fair thing to talk about Psychiatry and psychology uh but it also kind of leaps over into into other areas where it would also be said to uh Define you know coming to a conclusion with no obvious manner of getting there right this intuitive leap people say right that you you can't connect the dot what's her name that you came to the conclusion and so without jumping you know to calling it psychic powers Psy we're talking about psychic powers man uh what we we did do is uh for people who were autistic

(54:00) and people Jules doesn't really like this that much so I don't know if she'll let us get up schizophrenia we'll see is that is he cutting out I don't think it's our internet right did he just disconnect I think um Gary's just moved away from his Wi-Fi signal a little bit oh there is yeah we missed about the last 30 seconds of that uh Gary oh okay um yeah I don't know what happened there okay so what was the last that you heard um a connection with skia okay so so we had collected the

(54:47) brains of uh the MRIs from people as well as their psychosocial and intelligence scores uh and it's a it's a German study and a British study that had collected these this definitely retics and schizophrenics um and the reason we antar because actually amidst those let let talk very high function I'll answer you guys questions in a minute I'll write down on the way to Frank schizophrenia there's a lot of creativity uh and on the way to Frank autism there's a lot of uh high functioning intellectual

(55:20) ability and uh it's only you know really at the edges of those spectrums do uh do people end up with mental health uh issues so uh we had written an algorithm which allowed us to uh look at these MRIs and it would automatically uh find all of the brain regions uh it would give us the surface volumes the sorry the surface areas of these various regions the automatically then determine the volum if you have any other questions let me know I find some of this psychic stuff kind of boring with the right uh MRI readings we could also

(55:58) trace the neural paths between these regions and so the first thing that came out of that and then of course we we threw in to that whole data set the prior MRIs that kit had done by hand in a double blinded manner with another uh neurophysiologist um and the first thing that came out of it which was of great relief was that all of the numbers that kit uh had come up with previously were a lot of people we don't like so there was absolutely nothing biased in the way that he had collected the data um and uh

(56:33) it also gave us the ability to say man I hope everybody doesn't ask about psychic stuff man can we just get to some science that people with this can't do all the psychic stuff and Asal projections and the 100 to 200 remot viewing stuff man so we had validated it in a second clinical cohort in fact two clinical cohorts so that's not I'm against it it's just get us anywhere uh

have so that was great um but all of the people with this were also at the high I've never been in space with him so I

(57:05) want to I want to judge him I mean not really judge him validating this judge him by what he says here luckily now in the literature there's probably about I know 20 or 30 papers that have come out showing the importance of the CATE in intellect and reasoning ability but what we also found which was fascinating because the brain's not you know all reduced to one area uh that there were uh tracts of brain matter leading from uh the cod8 to other areas of the brain that would also be increased or decreased

(57:40) accordingly um and we published the paper so if you look my name you can find them so I won't repeat all of those findings it was you know it's it's relatively dry but that's the point of it is that what you want to do I don't think most people are I think very a lot less people than people think are disinfo you want to Pepper the literature dry basic facts because those are then the things that you point back to to say first of all you have a track record and a reason to be talking about

(58:09) this that you're not just jumping in out of the blue and of course I'd gotten the I'd gotten a lab at Harvard friends there uh a woman Maria Modi uh to these guys really just talk and talk talk with me because she had a background in autism research so we had the track record of her to build on as well as then the interest of of mine in the automated uh sectioning of of MRIs uh and so the next step is actually I'm actually working with some other people to fund some larger studies to actually bring in uh people with some of

(58:47) the more unique abilities all interested in I'm just not going to say it because I I I don't trust links don't work in the chat by the way recording it and it won't end up on on you know some haters uh blog in 20 minutes um so uh we're going to do the study properly um and we're probably going to do it uh well we're going to do it under appropriate IRB um configurations but the idea is to is to see what areas of the brain I already saw the message especially with people of of of not just High function

(59:25) but intended ability where they can as you were saying before about these individuals with um who like I think the best of people guys I think that most people aren't intentional disinfo I think that more complicators everybody has their own into whatever state that they believe they have ability to people are just straight up L changes in their brains they do sometimes whether it's you know you know wave functions or other things that that matter I'm not asking anything about the human mind their brain to see if not asking

(59:59) anything about brain waves or human mind there's I'm not asking they are uh that no off to have such an ability I mean just today literally there was a paper published on ADHD uh with like 200 MRIs showing that in fact it looks like those are the kinds of questions you want if you just want validation want to feel good if you know that you have Psy you don't need somebody tell uh so you know there's I I think that there is perhaps some oh I think the human mind sing with the right I think that a

(1:00:34) lot of people just want to be special but structure is what I think they convince themselves they're special in whatever way they want every as an example it's pretty much valid around the age of 12 to 13 you lose your ability to learn languages easily but prior to that your brain is more flexible so but once you've learned a few languages prior to that age you're more able to learn more languages so you know the open question is did you change your brain because you learned a language if you expand the definition of

(1:01:11) when people lie generally it's because they get told misinformation that they believe is true people may think that about us but nobody's told other way brain when you're young to enable more uh higher level functions when you're older can I ask so anyway that's that's keeping saying the same thing um have you ever noticed any correlation between people that have these oops areas of there there's my DM you refer to being more active and experiencing do you do you have you ever come across um like a number of people

(1:01:48) that have been through Early Childhood trauma um I'm friends with a lady that I've mentioned to you before shy k mes um has done a lot of advocacy over here in the UK and changed the law um for child protection over a number of years after going through Early Childhood myself and we've a lot of people that claim myself included um to go to to to have these experiences have gone through Early Childhood trauma I know that there was some psychological papers done in the 80s and 90s about the same people

(1:02:26) that have been through Early Child I don't care how many people hate I think he's experiences but it seems like I can't stand these Boomer spaces blah blah blah 45 minutes of speeches over and over instinctual possibly some kind of predatory awareness that is developed early on in childhood that allows people to become more aware of other things that in their environment that that people that don't experience um aren't seeing I mean it's it's I think it's an important area it's not something that

(1:03:02) I'm probably going to get into not because it's uninteresting or unimportant it's just so uh I could just imagine the number of complications of how you would design a trial uh around something like that I mean we're gonna you know all of what we're doing has got to be voluntary and the more and I know this from working with kit the the more Psych social complications you guys it's not a matter of uh the um I just don't care about psychic powers the more I don't really care about the

(1:03:34) aliens in ways happy if it's real you're not going to get the answers you need with a space to abstract concept something simple at the beginning is there's too many people lying about their special powers and stuff right it's just like one of the things that we people say they're talking to their dead parents sure maybe someone has that power but there for every real one there's like 10 people lying about it right you know we have you know ideas on paper to eventually move in that there's no way

(1:04:04) you can prove it it's just esoteric concept right higher what I want to know about is does Gary Nolan think that objects can move faster in the speed of light I think there was a

paper that came out I wanted to ask I want him to ask us two years ago to talk how do aliens trans cranial stimulation in an area of the front how do these UAP crash that he think they we finding how en their ability to a random number generator um and they had a reason for the area that they that they focused on it was a fascinating paper

(1:04:35) tear what's the best way to increase my anti-gravity powers and invisibility per I don't think it is directly um it might be I I didn't recognize of the authors and I'm I'm not I'm not conversent in all no obob is the one auraura um who was next I'm sorry I wasn't keeping track than me Obby L was definitely the one that thought hey Gary um got mod for all the work was that as well it is immensely appreciated that um you have taken this on and um um so I've got two questions for you um the first one is uh

(1:05:14) based on your early observations and or experiences do you think be honest I'm two weeks behind my email from that any kind of sense of apologize world that may or may not have influenced your later studies and interests and and path forward I think with many experiences there's sometimes this narrative start at the beginning of Life and then and then continue through um and then my second question has to do with um the immune system and particularly the assap findings go indicated that very high number of people who've had experiences

(1:05:50) have had currently trying to also set up a space with event imprint or something that's activated way I'm just wondering if you can sort of maybe bring us up to date on any particular be you can discuss around current research in that area thank you okay so the first one was um what was the first one again sorry just quick um yeah just um influences um there just there does sometimes seem to be a narrative Arc with experiencers and things influence them oh did it influence yeah I mean well certainly I

(1:06:23) mean it was I mean interestingly around the same time that all of this stuff happened I remember um I would would be going down to the Windsor Public Library back when you could you know when there was no internet this would have been 67 or so and um I was in the uh not in the children's section because I found all those books boring um I was reading books on uh defitely think AI all those other stuff and the Librarians became quite concerned because I'll be quiet so you guys can listen to from other

(1:06:56) libraries uh about these other subjects I found I was still reading books on science and dinosaurs and all the stuff that you know little kids would read but I found this other area quite interesting awesome Lobster appreciate that man I think I've said this before as well I remember I'll Google getting a National Geographic my parents got me that uh and opening it one day and there was a star map of all of the galaxies and look I remember looking at it and thinking what are the sagas what were the what are the king and stories across

(1:07:26) the Arc of all of that uh was that the airplane one that we already reported on so yeah I I and it was all at the same time that I had those those early experiences so um I mean I've always known that there's I me you have to as a scientist always not take for granted is this one

you're shown you always have to do that so it's perfectly acceptable to think that there's something just on the other side of what you believe is the end of the of reality where's the pilot one we already often say to people

(1:08:03) friends of mine who are religious I said where's heaven those were the two that we got reported on those sound like alternate Dimensions to me um so yeah I mean I I think it I think it does so I think you're right I think the second question um about the immune system and that that really was C Kell uh who had been uh who instigated that and he of course uh is um a biologist as well and uh you know he was right that the most Salient immediate response system in the body to any kind of attack um whether it's just

(1:08:45) you know physical harm or pathogen or radio frequencies or anything is the immune system you know that inflammatory EV that occurs and you know to a reonal degree the immune system has a memory 287 people and so uh and it has an effect I guess we're doing esoteric stuff tonight chat uh and so uh you know I my RV is you go Gary pan perhaps a Telltale sign that something happened um what its long-term consequences are I really couldn't say you know we had when I first got brought in to the group with you know kit and col and jock and you

(1:09:30) know all the people that uh we all know well um the elders uh the elders the first thing that they wanted me to do was to collect the blood from these uh many of these people who were you know let's called them acute uh experiencers who had acute events and acute interactions that had harmed appar it's woo Wednesday folks um and we did and you know we saw some I saw some signals of inflammation in their blood but unfortunately many of the individuals that had had these things happen to them it happened to

(1:10:03) them 10 to 15 years ago and so it was just really impossible but what I did do was I provided them and I understand that they gave it to people in the government change the name of the a methodology of how to collect blood on a more um acute basis so that you can catch the signal as it happens so I hope that helps John yeah that's great thank you very much okay I think I was next hello Gary this is red for Skyfire news uh congratulations on making the soul foundation and my question is does the soul Foundation have any projects plans

(1:10:40) or goals for 2024 and also what is it like working with grush David grush and Carl Nell and what are your guys's roles within the organization now at least a normal question here we go um well let's see I mean I think our goal goals in the near future uh oh come on no with a pretty good drum beat okay um and they're you really these are aimed at again like I said before about no I've been removed from the space well why are people removing me from the space dude fuing kidding me you [REDACTED] kidding

(1:11:42) me what was her name what was uh her name uh jewels yeah I guess we just listen anonymously oh once get booted you can't get back in is that serious wow I don't have an ALT

(1:12:47) account well I guess we're not listening incredible wow what what was that that person's name yeah wow

(1:14:24) yeah man I already reported Lobster on it go check my my uh check my my tweets I reported on today no I'm not blocked by die Dragon so I'm not sure did the other person block me I don't think any of them block me what was that JJ person's name yeah it was JJ right what's JJ account

(1:15:38) name guys let me check guys what was JJ account name can somebody was in the Stream in the space tell me National diagnostic codes and and you you you do that because you're you're binning their symptoms into certain categories um around 2015 or so that he had coined the term interference syndrome and so I remember this one PowerPoint that he'd given and by the way if you ever have Kit give a you start a PowerPoint prepare to have about two hours because that's how long he'll douchebags me get blocked um and it was

(1:16:31) at that time that jock and kit and I were all looking at the screen of this MRI and we recognized in a couple of the MRIs uh that there was this common feature uh and first we thought it was damage we thought aha we found the common damage and it turned out that that was the Cod paman neural density uh and uh so that's how I came to know kit um and if you know kit the funny thing about him is you know he'll be absolutely sure of what it is that uh he's stating today and then tomorrow he'll be absolutely be sure about the ab

(1:17:09) the absolute opposite of what he just said um but you know he went out of his way he would fly all over help these uh check the die Dragon person they it wasn't them and as it turned out you know probably about % people uh were Havana syndrome patients so we actually saw the Havana the first we work it was a woman uh was how the literally the CIA was trying to downplay it um isn't this a common story and how angry she was that they were ignoring the data to downplay it because they didn't want anybody to know that again

(1:17:51) we didn't have control over over some adversary million people their hands up it's going to be a minute I might go get some water while we wait here really remarkable um how it's it's and it still is lobster I already reported on it buddy I already reported on it so uh but that was basically I already reported on Lobster got all of that go look at my skire news was already on top of it and I retweeted what was the second question basically that you guys have been studying in I like ones where there's

(1:18:22) multiple Pilots so yeah so F first you know um I I think people need to go look on Wiki uh as to what a metamaterial is um and and we shouldn't use the term incorrectly um a metamaterial is really um a at least as defined sorry in uh materials research a repeating structure that can be used to guide or alter electromagnetic um waves of any type um it could always be sound uh Etc so light mostly and there are these you know just repeating structures that at at the right positioning and size uh will change the characteristics of waves

(1:19:13) that are passing through them um and so a solid object is not a meta material you know a piece of molten iron is not a metamaterial the ubat tuba is not a metamaterial um it's a strange thing it it certainly came or at least has uh an association claimed alleged with a with a UAP um you know I've tried to coin the term Ultra material that you know anything that

is designed at the atomic level that doesn't have a repeating structure because material usually has a repeating structure um you know let's just call it

(1:19:58) what you want uh but I'd always thought that something like Ultra material would be a better term for it um whether that's or not I don't know um so I actually presented at the soul foundation and those videos will be coming out I think you know cross my fingers in the next couple of weeks there there's actually there is actually a date but I've been told not to say it um and it took a heroic a heroic effort by a bunch of people to help pull all of them together into a professional format so I think

(1:20:30) people are going to be happy with that um I showed um Atomic maps of three materials using an instrument called Atomic probe tomography literally pulls a sample apart atom by atom and determines its three-dimensional positioning in the XYZ at around five angstrom scale uh of um the uat tuba uh the um the uh see Mak sraco material that Jac had collected that has a long history um and I tried to do the Bismuth magnesium material uh but unfortunately it fell apart in the instrument uh because it was so fragile so how how it

(1:21:19) was the nose cone of a missile as claimed by Sean kpatrick kind of flies in the face of the fact that the stuff at least as that I had was literally would fall apart if you sneezed at it at this point I think it's just decayed whatever it is um and so there there's a way to get the atomic structure of of that and a few other materials and and one of the things which is unique let's say about the uba is it's nearly pure silicone silicone I mean it's just like 99.

(1:21:52) 99.999999% silicon which is like okay that's not natural there you know the the natural state of silicon at least on our planet is sand and quartz um you know this kind of uh almost silvery looking metal silicon so you know it doesn't prove that it's from something else it just proves that somebody made it and you can you know I'll be expansive in the term of what a somebody might be um so that's interesting um you know and a couple and the other material from the am I saying

(1:22:33) it right the sraco material uh also was extraordinarily pure aluminum which again is not something that I'm going to grab water while we're waiting bonded to I'll back in coulees I think it was aluminum and what was the the other metal I forget nickel I forget anyway it's in it'll be in the um it'll be in the presentation so but I think that it's this Atomic measurements of what we're going to need to understand what the function of these things might be because you know any civilization

(1:23:07) sufficiently advanced is going to go below the limits of what even we're at in designing circuitry right we're down around the nanometer scale Gary can I ask you a question about that um do you know if the the materials have been passed around for a number of years um or or whether it was stuff that's been um recently discovered um during the 70s 80s and 90s my father was one of the Head Metal testers stress testers for Rolls-Royce UK and we actually um went out well we went all around the world in

(1:23:44) my childhood but settled in um Miami for quite a long time um we came back when I was 16 um and he's a uded to Rolls-Royce and the American Rolls-Royce being one of Britain's biggest military contractors um and um NASA um Homestead Air Force Base and General Electric also doing investigations into bismuth layered meta materials um as part of the stealth program in the late 70s and early 80s um and my dad sort of explained it to me that they were um um experimenting with cloaking technology um um and discovered

(1:24:31) that passing an electrical signal um through um sort of bismuth layered um uh Alloys could um could create cloaking of some description um and it all AI it seemed to create some kind of alteration in how it appeared externally um and he sort of suggested that it was used to we're still going huh almost guys there was a cute husy in the make the object or make something underneath appear a lot smaller than it actually was um uh it sort of it made the macro was out I don't know on some level but he won't discuss whether it

(1:25:22) something one more question come ACR and I of Wonder passed around for a while it could have been I mean look this stuff uh yeah seriously you know which is I guess it's called we got um six seven hands up there are certainly multiple stories like what you've said about bismuth um and magnesium and bismuth isn't the best conductor so it makes sense to use something like magnesium underneath it or to pass an electrical field so uh but this is really beyond my expertise uh I'm really just telling

(1:26:06) other people's stories um so that what you just said about your father uh is an interesting new story that I hadn't heard before I'm I'm going to pass it back to some other people who've been talking a lot about the bismi material I mean I don't think I don't think I mean it's it's interesting so I have this material from two different chains of custody um and one is much larger than the other uh but they're both bouth and soap and uh and magnesium as well as some other things

(1:26:46) in there uh and uh but they're different so it's interesting that I mean they're clearly at least observation um so I'm just wondering one came from one part of of the design and the other Came From Another Part of That YouTube channel posting new or just go dark I only actually have time for one more question um I'm in I'm literally in Mexico City right now so and no I'm not here to look at the mummies um I'm here on can't can I ask Mitchell I'm sorry to be rude I just wanted to ask him about Eric

(1:27:28) Mitchell I think it's m whoa don't everyone speak at once it was uh deep neuron next thank you my friends this is awkward hey uh thanks die I appreciate it Gary I won't uh take too long uh yeah definitely want you to get back to Mexico I think you deserve a vacation um I wanted to switch topics from metam materials definitions and so on to quick question about the uh proteins and if anything has been studied about if there's anything different about the proteins that are involved in the let's say uh signals transmission

(1:28:23) uh or the neuronal connectivity and growth of uh these let's call them experiencers or folks who had these sort of like um particular anomalies in their cot pamin um has there been

any studies around the proteins um well first of all I would need somebody's brain for that mine if it's for sign no I'm just kidding so um but uh a couple of my students though we've recently solved a really difficult problem in histology of brain material which is has high what's called autofluorescence um it's it's

(1:29:08) actually the fatty material causes uh when you're looking under the microscope if you if you hit it with you know various laser light the whole tissue just blows across the spectrum so it's hard to use flent them so my lab is known for having developed this instrument called codex and um miby but the Codex uh the long and the short of it is we've come up with ways to cool to have people like this brain tissue using this spectroscopic analysis approach um now uh my students you know fortunately or

(1:29:46) unfortunately are are looking I mean it's I don't direct everything they do and they just decided to go look at the hippocampus um of the brain uh and I'm like well do we still have the rest of the thing I'd like I'd like us to start focusing on the Cod a pamment and that would allow me to answer exactly what you're um at least begin to investigate exactly what you're asking there's another kind of instrument actually made by um by a company called buer uh it's it's a kind of mass spectrometer that um

(1:30:17) doesn't require antibodies and you want to know who's the CEO of uh Brer Frank Lan one of the backers of project exactly he's one of the co-founders of so and he's actually I he and I knew each other before um I found out that he was interested in this whole um area so um people are Terri you know I'm I'm gonna try to find some I'm actually giving a talk at one of the big tissue mapping conferences it's the um it's the uh start instit one of the co-founders Microsoft who died um a couple of years

(1:30:59) ago from cancer uh and uh but he established and gave as part of his estate large amount of money to this big tissue mapping and I'm giving a talk at that and so I'll be able to um find out who's doing some mapping in the brain and do some poking around because I I do think it's it's the time is now to look at the kodate paman a quick funny story about about Allan um I was at a meeting of the Allen Institute to go over the direction that they should be um in and he was sitting next to me um and uh you know listening in to

(1:31:41) the comments and you know offering good uh ideas and then he had to leave uh and so he leaves and I noticed in the uh chair next to me this big thick wallet and his about an hour later I I said hey know this is I think this is that Billionaire's wallet I was like damn I should have taken one of the credit cards nice um but his assistant came like screaming into the room at one point say oh my God oh my God did anybody see this that was pretty funny put Eric up who's Eric you could have fed another project if you had I could have done all

(1:32:19) kinds of stuff with that and then ended up in jail okay well hey um thank you everybody for showing up and I'm sorry I'd love to be able to talk forever here and there's deep see G Gary you and you and Eric Weinstein are both in the space you're some of my favorite people is there any way we can have another space where you two get to talk uh sure I mean I

can't be right now but um some other time I don't see Eric wi that would be amazing I think many of us maybe we we had a we were just we just

(1:33:02) got together a couple of weeks ago um it was a lot of fun so uh and both of us are still knocking our heads against the wall is to figure out well what exactly is this that we're dealing with so um well it's fantastic that you both involved with it um and it's much appreciated and thanks for your time Gary enjoy your holiday yeah yeah thanks Gary take care bye bye everybody him off but yeah thanks Gary any chance we can bring Eric up where is he how come I don't see him well that was a trip I'm sorry to anyone that couldn't

(1:33:45) get up that was a bit of a struggle um I see we have Eric in the room there he is or we did have um I have sent him a message asking if he'd like to come up and speak it would be a pleasure to have you up Eric if you'd be interested um if not I completely understand we're just going to throw a ER I wasn't expecting that we were just having a little group of us having a chat about different things um and shows up I'd sent Gary a message asking if he'd be interested um I knew he was on holiday and didn't

(1:34:25) want to disturb him but that was really very kind of him to spare as the time I don't think we're big enough profile for some of these people at the to you all for coming lot ha us I apologize profusely for anyone that get obviously it's a bit of a struggle when all of a sudden you have a load of people come in the room not everybody gets a fair crack at it um but um hopefully um there's a possibility that I could perhaps organize something again um and um you know perhaps you'll all come

(1:34:57) along next time er's still there is she closing on the space um anyone still want to ask any questions or contribute to the room or chat about stuff I think it was Ashton then Ralph yeah also everyone follow Skyfire news to stay up to date on UFO news we're we're just going to ask him in the chat so we'll go Ashton jump hook I'm really sorry that okay I did offer you the speaker and then it sort of dropped away um sorry about that oh it's no problem it happens all the time thanks for hosting

(1:35:37) J I will make sure that if I can get another um space organized um that you'll get you know first refusal I appreciate it no big deal um yeah I don't think I think Eric left as well but I was just going to ask you know you know the question that I always like to ask people especially scientists is you know that are you know believe that aliens are visiting us that we have uips is how do we think that they're getting here and do we think that there is some mechanism to move faster than the speed of light which in my mind

(1:36:09) would be a requirement for any Interstellar species to be able to get to us and then what the implications would that would mean and what disclosure means to people so even if they're not in the space right now I would ask the people that are in the space that are listening like you know what does that mean to you what what does disclosure really mean to you for some people I think it may mean non-human intelligence for some people I think it may mean crafts and the ability to fly around and then for others like

(1:36:35) myself I think it's the technology that could change our entire civilization hopefully for the better that's all I wanted to say thanks again Jules appreciate it how do you raise your hand in in this space if you're on desktop you not might not be able to oh that's why ask about to respond to Ashton I would if I have if I have the availability are we going in order or not how about yeah Ralph and then Artis Tony thank you thank you Jules thank you very much that was quite awesome that you're able to put that out there um my

(1:37:18) question would have been had I got a chance which I understand and I apologize for interrupting there for a moment is in Eric Mitchell's case Eric Mitchell happens to be if not my best friend one of my best friends I've known him for many years I know his case extensively and one of the things that Eric talks about is obviously in his initial experience it was traumatic dramatic and there was what Gary referred to as injury um and but what my curiosity is this is in Eric's case although he had that event

(1:37:52) uh shortly thereafter uh if you're looking at it you know from a different perspective his his speech pattern and his the way he enunciates his words his in intelligence level went up about 30% and uh so in my from my perspective he gained as a human he he it was a plus now I I think if we were to go back he would wish that it never happened but if if anybody can tell me or if they have any knowledge or I was hoping that Gary would say what percentage of these people that are having these experiences are I don't think they're all negative

(1:38:28) I'm just wondering what percentage are positive if anybody or has a positive result after the fact if anybody can comment on that I'd appreciate it I we were actually talking about this before um Gary came in earlier on um because there's several of us that knock around on the edge of um UFO Twitter that are experience Matchmaker with me right now we were actually talking about Early Childhood trauma um shy Keenan um was talking about it the other day she's done a lot for child advocacy and she's

(1:39:00) noticed that a lot of people that have been through Early Childhood trauma or trauma as a rule um are more open to experiencing than than ordinary people um and there is like almost in the people that we've talked to and I've got no basis of information you know no no Research into that this it's almost 5050 some people take something positive away some people take something negative away and um um who was it that I was talking to earlier um um I can't remember someone that was in the room um we were actually discussing

(1:39:44) the sort of feelings before and after um sort of strange experiences with the phenomena um there's a there's an anticipation with some people that something is going to happen um and there is sometimes Matchmaker but think they like a good couple never know what may have guiding both are single that is I have no idea when they need guidance margar reassurance on something an element quite terrifying as well a negative Noel she was cute very cute thank you Jules Artis Tony hey um I had just a general comment open don't get freaked

(1:40:41) out supposed to but I I had a my general comment was that I know he has this um and I wasn't actually going to bring it up this way with him was going to try to remain more neutral

but since we're since it's just us I'll just say you know there see you know you've seen the little tiff that he has with Neil deGross Tyson and which I think and again I wouldn't say this to Gary you know I would try to show more respect but I I think it's probably unprofessional U but one thing my my

(1:41:13) comment is I would like to see more public debate among people who are qualified as qualified as Gary it seems like time we have someone who's willing to debate they're you know they're attacked by the you know the different tries should we ask these people um and one thing I miss is you know I'm probably the oldest one here I I'm 61 I don't know if anybody here is older than that um back in my day debate was a gentleman's game you know we would sit around the campfire and and and and we

(1:41:44) would have debates experience win just by uh your argument you wouldn't win by I'll address that in a second as well game I would like to go back to that point where especially we you know where we could have more scientists involved I think they would probably be more likely to be involved if you know if the community wasn't such in a big you know riff all the time H UAP Comm anyway I'm glad I had a chance to ask that here because when he does come on the show I lot of people find are sing in this

(1:42:18) better formed question for him and also I don't think they have to travel faster than speed a lot to get here so I want to get ashon on the show too I'll hit me up anytime Tony thanks I'm following you we can DM later what's that Ashton I said I'm following you so we can DM later okay good great that would be awesome but yeah I don't know what anybody else thinks about that I I actually kind of like Neil to gross Tyson um well I mean you know from I don't I don't I don't really understand

(1:42:58) the the little tiff between him and Gary but can I speak on this yeah I was I was hoping somebody would yeah yeah um let's get ke in here I just get so excited you notice like most of the leaders um or the main people in this community um you know from the outside they get labeled as you know crazy people or whatever um you know lot of negative stuff they get but if you listen to them none of them ever say oh I know what it is it's this it's that you know always like we're trying to figure this out we're trying

(1:43:31) to because the phenomenon is real There Are UFOs there are things uaps that is real we're trying to figure it out um and somehow that gets spun into oh you believe aliens are here right and so with Neil deG Tyson I mean this guy won't even acknowledge that the F pH phenon exists he won't even acknowledge okay we should probably get to the bottom of these uaps and UFOs and with him being you know the public scientist to the to the country like the main celebrity that gets on all these talk shows um for him to shut it down so fast

(1:44:09) without even trying to solve the problem or say hey we need further research uh it's very insulting to everybody in this community that's actually trying to get the answers so I I totally understand uh where Gary Nolan's coming from did he go too hard yeah he probably did I'm not actually I'm not actually putting up the case for Neil deG Tyson my case is for let's get

Gary to invite those people with NE I agree 100% with what Keem that's my point my point is who is he who does he

(1:44:44) respect enough to have a public debate with I don't think he wants to really actually debate and I'm not asking about again I'm Talk's a I'm an older guy influenc he's not like phys fighting and all this scientist that does like actual experiments different influ I wish we could go back to that and then you know who who are the people that he respects that we could get get involved because we just you know we just debate this all day long and we don't you know I'm design I'm gonna design Bill contractor

(1:45:15) I'm not a physicist I'd like to hear physicists you know that who are more qualified to debate the the whole not necessarily debate just discuss it you know I I don't think Neil would be able to have that debate because Neil does doesn't even want to uh you know come to the 50 yard line to actually have the conversation about it you know every time we hear him talk he goes well it's like two billion Lighty years to the nearest star like he shuts it down like oh it's impossible so we're not even

(1:45:44) going to have a conversation about it um that's how I interpret everything he says on the topic no I was just using NE is an example of of uh the fact that you know we can't we can't see there doesn't seem to be many choices really was my point you know who are the other scientists that people respect that we could get to there's no public debate among those professionals that I see you have you have individuals like Eric Weinstein will go on a you know Joe Rogan and talk about things but there's

(1:46:13) no there's no real feedback that we can watch for you know physicists talk to each other and discuss it um you know and and we can watch and see and and get ideas for feedback from does that make any sense no that makes a 100% sense I'm not pushing NE Tyson I'm I'm wondering why you know in in their industry they shouldn't be fighting like that they should be setting an example between you know what they should be setting an example for us and we don't have those examples true but I think it comes from

(1:46:50) a I got a def defend Gary Nolan again I think it comes from a place of uh frustration because he won't even entertain the fact that there are things in the sky that we don't know what they are in to acknowledge that they can't even have a conversation on it and ke before you got here he was talking about how he when he hears people like ridicule and debunk like hustle he thinks of his own traumatic abduction experience and not being able to talk with people about it and then because of his position all the people who have

(1:47:19) come to him with their I abduction type experiences so he says he like he admits that he goes off on people but he says he's channeling it from like that place and look the debunkers are very important to the community you need the debunkers all right they're doing great work to try to get some of the hoaxes and some of the nonsense completely out of here but the de the debunkers that I see in the community acknowledge that something is in this video something is in the sky right they at least come to

(1:47:49) the table they come to the 50 yard uh yard line to like have the conversation Neil doesn't he shuts it all down again I'm not trying to focus on Neil it was just he was just you know he's sort of the opposite of what you know what I mean who are those people that Gary can he you know that he respects who he would be willing to bring into the discussion there's another element to Neil is that they're having they're having conferences you know this Soul conference we we still don't have any

(1:48:22) information about that they're having their own conferences in the house amongst themselves but they're not they're not publicly debating it or giving you know talking or even discussing it so that's what I would I mean that's that's that was really my that was my only comment anyway thanks for yeah we're gonna over on Skyfire we're g to be covering more stuff on Neil and and how incompetent he's been on the topic but um thank you guys thanks for having me on thanks for hanging

(1:48:58) out Logan then Kristof then Nick gold then alien protocols oh uh I don't have a question although I know that I remember um you is W still here uh yeah anyways um so Eric had his incident right he made him like um however much smarter when it happened right but um a similar uh something happened to me I think when I was around like uh was it I think like 25 26 there I had like a sudden blast of like um I I don't I don't know how to describe it but I was smarter all of a sudden I and it happened over the

(1:49:35) course of like two weeks I noticed it's just like strange um I don't know what what happened but I noticed I was smarter and every day for like two weeks I just felt like smarter and smarter and then I don't know if it kept happening or I just started getting used to the feeling but um I would definitely got like intensely smarter for whatever reason I don't know what happened but I wondered but I wasn't connected to like any UAP event so I wondered if like the maybe it was just natural you think I

(1:49:59) don't know but that being said I uh over the past like year and a half I definitely feel like whatever smarts I did gain I feel like definitely much more like a [REDACTED] now probably like 30% Dumber at the current moment than I was like like a year and a half ago I just put that out there um well you're not dumb just so you know I gonna say experien Kristoff and got a lot of good information let's move along I might even uh oh yeah I mean I'm definitely I had some few I had a few brain cells to like spare that's for

(1:50:42) sure that be a one in a lifetime opportunity well it's nice hearing some beautiful voices in here I haven't heard in a while and uh I love you guys uh I'm really fascinated on an aspect of phenomena that brings phenomena nefy and everything powerful that if which one it was what it seems to be leaning towards is true the implications are difficult to imagine and that is aports and the ability to have some people under some circumstances produce Metals produce unknown objects uh this goes to a very pivotal aspect of our

(1:51:30) reality and could hint very strongly at uh some very different thoughts than we've been accustomed to living with I'm probably going to drop here as well have you ever done that

on accident I've been a part of exp and purp ni talks drop out and it's a mindblower we close out the stream as well don't I want to answer some of guys questions here anyone else's questions with Ashton Forbes anything you want to ask and even Bigalow mentioned that objects that were a ported or bent or things like that much

(1:52:05) like Hutchinson's have a transmogrification over time they're still changing their Elemental content over time they are displ something that's beyond our understanding of business he has a lot a lot of weird stuff and they're all related it's that super awkward personally I think the subconscious mind can connect to the great data field and in that not only get local data information but maybe even tweak it a little bit wink wink n n Kristoff the ni gold hello hello everybody best wishes so about a week and a half

(1:52:56) ago uh I have asked in a very similar panel uh getting a little bizarre who spoke to us and we were able to ask questions and this qu this one question bothers me so much and I don't know how to find answers for it ER Jules uh and many of you many other others in this panel you guys have ability to you are much more connected I'm just a weirdo farmer in Poland but if you guys can keep getting who's this polish farmer why is I like this guy you know Dr Nolan also is Dancing with Jack valet so was Richard doie and many

(1:54:02) others can can you help me understand why is there a cut of date we have mentioned somewhere Jack valet papers of 20 28 if if please if anybody has any hands or why this is why is 2028 the cut of date for Jack valet findings and if you can ask Gary Nolan in DMS or anybody else that you have connections to okay Chris certainly I'll certainly ask him and message you back see that much love thank you so much this is this is quite perplexing to me and ask him about if he believes in aports we got mention in here hey guys it's Nick I just wanted to

(1:55:07) touch on Ashton's point about the whole faster than light thing and what Tony kind of alluded to and that he doesn't think it's necessary I just want to kind of echo that and just underline it a little bit because you know U we hear that you know this whole notion of like getting here is so difficult um and that's just a common meme when often moreing type people or skeptical people all across the range um you know throw up reasons as to why we shouldn't expect to see anything like that wish I was

(1:55:35) paid by investig you know I think we can reorient our thinking around it by just thinking about a few key kind of perspectives from the 20th century by some of the smartest people of the 20th century um you know obviously we had Frank Drake who was really helping us express just how large everything is and th how big a set of you know probabilities we might be dealing with especially if you kind of take the non cernic view that um we definitely or rather the cernic view that we're we're not at the center of everything and that

(1:56:04) you know there's no reason to necessarily think Earth is particularly special and so in the vast of space something is out there well we should also remember ferm's Paradox okay because F's Paradox is usually thought of in terms of like someone who was like you know knocking the idea of aliens being here but that's not actually like the heart of ferm's paradox in

fact it was quite the opposite and fery enrio fery was like a very very smart guy and you know not even going close to the speed of light fraction of  $C$  even

(1:56:34) potentially using techniques that humans are already kind of envisioning um not necessarily capable of today but like sea Pathways too you know maybe 5% of sea and getting to that point 5% of SE how long time is also really long right and so even even if there's a lot of space between things there's also a lot of time to allow things to go relatively slowly over great spaces and propagate and then the third idea that you combine is really Von nyman's just Notions and Von noyman was you know one of the

(1:57:05) smartest guys of the 20th century as far as I can tell and you know he had this Notions of self-replication he was really into that concept computationally electronically all of this stuff and when you kind of think of like how much stuff is out there how long toate it doesn't need to go but a fraction over long periods of time especially if it was self-replicating y we actually really ought to expect that stuff is here by now and not here as in like it came to Earth I foret the last one he's talking about just kind

(1:57:38) propagate itself across vast swats of space by this time which is you know kind of far into the game in some ways you know there's no reason a civilization couldn't have started doing that a billion years or more just in our own Galaxy so I think it's like things I mean UAP do seem to go hella fast right like crazy fast so they seem have the speed element but it's not necessarily you you really have to be breaking through the speed of light or anything like definitely get here just to throw a

(1:58:08) quick little Counterpoint notion out there um is that civilizations may not need to travel after a certain number of solar systems they might have garnered enough intelligence with the exponential growth of intelligence not to need to travel further um they may travel inward or uh choose other methods I've always thought that conceivable that a super Advanced civilization probably wouldn't gain any more knowledge after maybe a quarter of a galaxy um and only you know seek out the super Rarities after that

(1:58:42) but what do I know yeah if I could respond uh there because I think that Nick brings up some good points um but I would also challenge some of them so you know going at 5% of the speed of light just to get from alpha centuri to Earth which is the closest star uh is 81.5 light years so that is a whole lifetime to go for at least in human years to get just the closest star that's here um I actually agree with uh the idea I think that you getting with Drake is that there's potentially life everywhere that's my opinion is that life is

(1:59:15) potentially everywhere as well um and then I'm also familiar with the idea of self-replicating um drones and that how you could a civilization that's Advanced enough could pretty much uh By moving from one star of the next and self-replicating colonized an entire galaxy I don't remember the number of years but you know tens of thousands of years but that's not really what we're dealing with though right like we I think the common theory out there is that we're seeing these craft and at

(1:59:43) least some of them are from elsewhere and unless you're saying that okay they're already here cuz they're ultraterrestrial hypothesis then you have to have some explanation where they're coming from maybe you say okay they're from somewhere else in the solar system maybe but if they're coming from anywhere else like actively then you do need faster than light travel because 81.

(2:00:07) 5 years to the nearest star is too slow you know and I think even but we don't know if they're coming from here actively or if what we seeing is like stationed in Jupiter like we just don't know right I don't have that data um we don't know like if we're just seeing a localized presence that happens to be in our immediate vicinity and it got to this section of the Galaxy you know 400,000 years ago like again I'm not saying anything is biologically living in a sense that we think of it like something that was came out of a vagina

(2:00:34) frankly like or you know in our species case like even if quote unquote biologics were involved which I have no data on it's like that could mean a lot of things in like a hyper Advanced alien self-replicating spaceship drone AI thing right like it just might be able to fabricate biologically we have no idea I mean I don't know but I'm open to all sorts of possibilities because there's nothing that says that can't be the case um and I do like that kind of philosophical premise of like anything

(2:01:02) that isn't strictly forbidden is mandatory it's a really interesting concept and it actually deals with probabilities and odds over vast periods and you know even the very unlikely is kind of bound to happen eventually so I I imagine that that kind of techn technology that we might even confuse for something that we're interacting with more biologically derived in a way that we're familiar with what we're seeing but we don't have any hard data to that right yeah no I respect your beliefs I

(2:01:30) have respect everybody's beliefs with regards to whatever they think uh is happening with you know the non-human intelligence idea well again it's not my belief I don't necessarily know that that's the case I'm just throwing out like from a very early hypothesis setting perspective what what kind of possibilities are at least in the range of possibility the I just don't see the distance thing as ruling out the Extraterrestrial hypothesis I don't know that the Extraterrestrial hypothesis is even

(2:01:58) what's going on but if if we're looking at everything that's kind of open to us at this point I just think it's it's probably something that ought to be on the board right yeah just my last thought on that is that if there are crafts that are able to levitate without any propulsion then and like what Gary Nolan was talking about with respect to magnesium bismuth zinc from electrical engineering perspective that opens the door to stuff like non-locality from a macroscale object and we know non-locality is real because we've seen

(2:02:27) it in quantum entanglement and quantum mechanics and then all you need in order to scale that up is uh unification Theory that's all I'd say but thanks Nick appreciate the conversation Ashton I just want to jump in with something um you know the Magnesium

bismuth zinc um combination in these meta materials um my father I I don't know whether you heard earlier on I mentioned it my father was one of the chief metal testers um and stress testers for Rolls Royce UK in the 70s 80s and early 90s and um he said that in

(2:03:01) the late 70s they were actually experimenting with combinations of those Metals um on Military contracts um with a view to creating some kind of cloaking device um and that was what took us to America to the plant that was opened Miami Florida which was a complete front they were actually working with NASA as well several years doing work with them and Homestead Air Force Base that's cool D and I don't want to you know the monopol little combo but I think that's really awesome I think your connections with Rolls-Royce are really

(2:03:38) interesting Rolls-Royce is a very very interesting company in my mind yeah it's strange that um there's that connection with the stuff that you're looking into with Rolls-Royce as well um and there's been I don't know whether you got any further with um finding out any information on the um the sort of extra time that they claimed that they weren't very quiet about um but that I mean they've been involved in military contracts for many many years over here um and if you actually look at

(2:04:10) Rolls-Royce UK and Rolls-Royce USA they're massive companies they're as big as um you know GE and some of the other companies that that are sort of doing um Air Force development military development yeah one last thing I was going to say just for you Jules was that we I was actually going to look into Rolls-Royce tonight before I saw this space pop up with Gary Nolan and we had saw that they had a contract with Lockheed Martin actually to produce uh Power needs for them as well so they've got some sketchy stuff going on anyway I'll

(2:04:45) let other yeah it's like just before we go to hands if you look umro Miami Florida you can only find one very very very old article about plant that my father worked at and it was basically set up as a part supply plant but it wasn't they were doing research and development um and my dad explained it to me that they were doing research and development in conjunction with Homestead Air Force Base and GE and as soon as that track finished and the plant was basic um it was a complete front I mean they've got labs and all

(2:05:27) sorts on the edge of Miami International Airport um you know huge amounts of labs but on the front of it it looked like they were running an aero Parts um Supply um Factory um making Parts um there was a lot more to it um than than they let on but it's can only literally find one article about the plant um from about 1979 and I think it's the New York Post or New York Times or something um it's very very hard to find information about the plant because it was just kept so Hush Hush um I don't know who was next um hey

(2:06:18) ocean hello how's it going Jules I just put some stuff up uh in your nest there you were talking about like hyper awareness and six days ago I was writing a a thing about hyper awareness um and then also pingpong so they took a section of I'm I'm not sure if it's human brain probably not it's probably sheep or something but they trained in a Petri dish um a little section of brain cells how to play um pingpong so might want to check that out and thanks for

the space yeah I was going to say I'm having

(2:06:54) trouble getting someone up but I think they just got up yeah okay never mind um was who was next I'm not sure was it lipstick I haven't heard lipstick say anything yet or dog star I could go next if you want uh oh press releas all right so I live in Sydney Australia mate and I'm gonna tell you right now I have had an Alien Encounter before okay and what happened was I have my telescope I look through the telescope I look at Saturn right I saw s and I saw a fake accent I swear to God mate I swear to

(2:07:32) God I saw a starve David yeah he's doing a fake accent seared my eyes I was in the hospital for days mate I was absolutely gone mate for weeks mate absolutely gone and next thing I know Jesus Christ he came back to mate and I'm going to tell you mate Ro play yeah let's move on yeah let's just move on dstar I think you were next right that dude was doing yeah he was doing a bad Australian accent I knew right away that was a fake accent hey guys wow that was interesting um what's up Jules Logan love to your

(2:08:16) guys hey yeah regarding Rolls-Royce um when we look at the EM it looks like RX or 741 just I'm going throw that out there for you and then the emblem or the logo that's on the vehicle it's a Sil right it's the air of God or like Pegasus I knew within 5 Seconds that's why I clicked on his I was like this is not not a real Australian accent interesting choice of um of a logo deity entity right that's all roll press Rel has gone though let's sketchy man thank wonder if we can find an

(2:08:51) archive this who was next Melinda maybe okay uh yeah it's good to see the attention sorry I was okay I think we're going to drop and I'm gonna answer questions in the chat and then we're going to close out for tonight sorry we didn't get to a lot of our stuff as usual that seems to seems to happen see if we can find I think if she can hear US Melinda go ahead I think she's having trouble yeah she dropped and then she tried to come back up and then good we found the way back dropped get just bad connection

(2:09:32) this press release got message Gary Nolan let him party man he's trying have a good time in Mexico for crying out loud just deleted this just asking me something that's wild send him a message we'll see I remember one time he sent me a message he said like um he like really like this uh meme I made can you guys hear me he's blocked me so I don't know hi guys um Everybody um yeah I'm trying to get to work you're breaking up Belinda I don't know if your signal is not working either maybe it's really bad it

(2:10:16) may can hear me now I'm gonna drop down though on this you guys hear me not it's going in and out I'm GNA drop out of that it's too messed up for me uh I'm G to thank I'm GNA send a thank you to to what's her face she's super nice for letting us get up there even if we didn't get up one of our co-hosts was a big troll though for sure um okay so I'm about like two weeks behind on emails I have to follow up with people about interviews podcasts everything so if you're somebody out

(2:11:06) there who's watching and I haven't got back to you it's not personal I will get back to you I've just been trying to focus on my work so I don't lose my job cuz I'm honestly not doing this for money and I've made like no money off of this I certainly would not be able to replace my job with this uh I just do it because I like it so just wanted to let you know that uh let me see here that press release may be gone that press release may be gone uhoh November 3D hopefully somebody snapped

(2:11:53) it on November 3D man if they deleted that press release that's so sketchy they basically had a press release said Rolls-Royce was going to supply power now the good news is we have another one from Wall Street Journal but we had a press release right from their website that that link used to work I don't think I screenshotted it either yeah this is not going to work oh that sucks maybe we can look back and we can find it not sure oh annoying yeah it's not on there okay um let's do some questions before we

(2:12:25) close out for tonight guys what what's tragon ghost trag's ghost Chang his picture thing here EF framework yeah I may try to look at that n the problem is like the archive is like of the list of the press releases so it's kind of annoying okay people wanted me to answer questions there was a Wall Street Journal article too about it a lot of interesting stuff yeah I need to be screenshotting everything especially now okay let's do some questions if you have any other questions put them in the chat we're

(2:13:19) going to close out after this getting late I'm really really tired so what are my thoughts on Antarctica Antarctica is really really really weird man the Antarctica is very bizarre um why is it that you no one's allowed to go to Antarctica why are we doing weird experiments on Antarctica why do we have a neutrino detector in Antarctica is it just because it's cold or is there more reason um I don't know I mean obviously I don't know much about it but the whole thing seems sketchy to me um also these pyramids in Antarctica

(2:13:53) also seem really weird if there are lost civilizations it could make sense like why these look like pyramids like this legit looks like a pyramid are these really just pyramid-shaped mountains is that is that what I'm supposed to believe here am I supposed to believe this is a pyramid shaped mountain in Antarctica pretty suspicious man okay so that's the Antarctica question uh the Canadian Pilots okay so I did do a Twitter post on the Canadian Pilots I didn't I mean didn't do much on it but if you look at my

(2:14:43) profile Skyfire news beat me to the source here on the Canadian Pilots m multiple pilotes reported seeing three lights forming triangles a little over a week ago uh and so this was January 19th I think and there's like at least two and you can listen to the audio here East vagina uh reported the same at least two of them maybe even three that saw triangle lights forming triangle formation pretty interesting um I personally believe that most of the UFOs that we're seeing are probably man-made I would not have thought that several

(2:15:19) months ago but from part of the investigation now I think that that is probably the case yeah my Twitter should not be shadowbanned uh should not be um do I think people who

have experiences are either truthful delusion or Liars I think that most people are the truthful guys I used to watch Ghost Hunters and the thing that I learned about Ghost Hunters is when you have experiences that's what it sounds like it's an experience it's something that you experience to yourself right like the mind is a singularity so absolutely

(2:16:00) I think there's a lot going on and if our reality is a projection and if we have local time uh local frames of reference where we can experience time differently then people can have an experience that is unique to them that other people may not experience you can have a shared experience as well I have nothing against experiences in general the problem I have with it when we're talking about like spaces like that with Scientists is like I want to ask tangible questions I want to know what people's thoughts are on the science the

(2:16:28) hard science the stuff like even we talked with Nick gold I even like those conversations right I want to know what Nick gold thinks about the phenomenon right and I would I could have pressed him a little bit more because what I want to know from Nick gold is okay Nick gold says well I don't know it could be these other things okay well what is it right take it a step further if you think that okay if you take the premise that faster than light travel is not possible now you've limited your scope of possibilities

(2:16:56) greatly right now you're dependent on what okay now it's got to be AI machines that have somehow come to us 500 years ago right because it's a lot harder to get between solar systems at that point right um so you've really limited yourself to the ultraterrestrial hypothesis if that's the case but sure you can still believe that right you can still whatever your theories are but that's what I want to be talking to people about I want people to be thinking outside the box because once

(2:17:22) you realize that faster and light travel is possible boy the doors just open wide up right um so that's those physics influencers here's the thing about physics influencers okay like Neil deGrasse Tyson that's like just having a conversation with a smart person right and Neil deGrasse Tyson's a smart person even if we don't agree with him if even if the UFO Community doesn't agree with him he's still a smart guy doesn't mean he's right about everything nobody's right about everything I'm not

(2:17:49) right about everything but those types of people are not experimental scientists they're not going and doing experiments right they are the type of people like my dad tells me is this one story that he had in college where he got an A where the professor just said give me the benefit of your thoughts and gave him an A that's what I think about when I think about people like Neil deGrasse Tyson is like people just want to listen to him they just want to have them on just give me the benefit of your thoughts right as opposed to like okay

(2:18:16) what is the science what do you really know what can we really prove like and not even necessarily prove but like explain the science to me in a way that has me think right um am I paid by any agencies I am not paid by any agencies uh I have never been paid by any agencies I'm not working for the government in any capacity except for in my job where I'm a contractor

and I work with them like every day sadly it's a lot lot more boring than my current job or more boring than the stuff I do outside that's in my current job than

(2:18:52) the MH 370x stuff the MH 370x stuff the science all this stuff is a lot more exciting it's hard to like focus on that but the reason why I don't post during the day very much is like I'll post like a really quick post here and there but like I'm focused on my job because I'm doing like boring remedial database changes and uh stuff like that the stuff I like to do with regards to my job is like the workflow St where I like sit down with the providers sit down with the doctors and the nurses go over their

(2:19:23) workflows figure out how we're going to make it work and I do some of that stuff too but um no take it easy tragon ghost uh okay what other questions do we have anything else on the paid by the agency's front no and for anyone who thinks that I'm making like a lot of money off of this like you just don't understand social media doesn't really pay that way right social media doesn't pay that much money I'm in no way like compared to these like other UFO personalities or something like I'm

(2:19:52) making nothing and I'm making nothing even compared to the the podcasters whose streams I go on and stuff like that right like some of these people's podcasters where they have hundreds of thousands of views are getting thousands of dollars from me going on their shows thousands of dollars they're not getting hundreds of thousands or Millions no but if you were to add it up I've done a lot they're making pretty reasonable amounts of money they're making livings off of that right some of them are making

(2:20:19) really really good livings off of it for me no I'm getting like maybe a few hundred a month it's not like living money or anything like that that's before taxes so that's if you add up like all my social media and my YouTube stuff like right so no I'm not making any money off this I'm not grifting anybody I've never asked anybody for money in fact I'm happy that people aren't Dona anymore people used to be donating way too much money so I'm glad that we got off of that because that was just making it

(2:20:50) awkward and I don't know if some of that was like to try to discredit me or what it was really weird some of the donations I was getting um so I'm glad we're not doing all that I want people to keep their own money yeah Lobster that was very interesting next hard truths I have a couple people who I'm not going to announce at the moment but I'm trying to work out potentially getting them on I will say that I have talked to Salvador pi and I am planning on talking to him again I'm not worried about that no

(2:21:17) one's going to make him not talk to me um but the thing with salvator pi is I want to be able to uh talk to him more from the scientific standpoint I want to be smarter on the science when I talk to him so that he doesn't just fly right over my head right yeah there's a lot to take into consideration as well guys you know like a lot there's a lot of stuff coming at me all the time so I do my best to try to absorb and respond to as much as I can but when I'm doing working eight hours a day it's really hard to get

(2:21:54) through everything like there's my list of priorities is really long right now um let's go to full screen for a second have you tried to contact Edward C Linn good question so I did try to contact him once upon a time um back boy that was October when we first found out about him after like a week I tried to contact him we were able to find his information pretty easily it's really easy to find people's information now is it really his information that's that's the harder part but let's just say we had pretty

(2:22:29) pretty good reason to believe that we had his information uh I called the cell phone number and uh the person that picked up hung up right away like picked up and then hung up which is weird because why would you do that you would do that so that you somebody doesn't get your voicemail right so that somebody doesn't get your voicemail and I didn't want to freak him out or anything like that so i' never called back again uh I did send a couple text messages just letting him know who I was and because reality is if if you look at

(2:22:59) two ways right if he is the person that **leaked** those videos then holy crap right like he's probably scared and he does not want to talk to me if he's not the person that **leaked** those videos then he's probably thinking this is some crazy stalker but if he's not then wouldn't you pick up and be like hey man you got the wrong guy that's what I would do be like hey sorry man I'm not that guy so I don't know pretty weird situation we also contacted his lawyers as well uh I I talked to his lawyer or I

(2:23:29) didn't talk to his lawyer but I talked to a clerk there who passed information on and then I never got a call back um so not sure pretty weird Ice Cube detector yeah that's interesting yeah we may have to check out the guy that trag's ghost was talking about this time and variance person not sure I'm going to get around to it tonight as you can tell I'm wiped out um I I mean I have a direct contact to Malcolm Bendle I could probably get in touch with him whenever I want the problem there is like it's just going to

(2:24:01) go way over my head man what my best League of Legends champion preferred role did I miss that question before OC rants uh I was a jungler and my favorite character was Elise so for people who don't know that's the spider lady I was a beast I was Diamond ranked Diamond one close to Challenger several times um but I played that was a long time ago guys like 10 years ago um okay any other questions I think that's it for tonight guys so yeah if you guys have any other questions keep them for tomorrow or we

(2:24:41) should be streaming tomorrow again no guarantee but I do try to stream almost every day and uh I'm going going probably try to post that post that um lockie Martin or um Rolls-Royce thing tomorrow before the next stream I have all the evidence already kind of lined up I just need to get a good list of I just need to kind of write out my thoughts on it so yeah at least was hard to play but I was I was a beast man I was a real Beast okay have a good night guys it was nice talking to you peace fam

(02:02) malan 370 contact 120m [Music] night7 breaking news tonight A Malaysia Airlines flight with 239 people on board including four Americans has gone [Music] missing [Music] I remembered the line from the Hindu scripture the Bhagavad Gita Vishnu is trying to to persuade the prince that he should do his duty and to

(03:07) impress him takes on his multi-armed form and says now I am become death the destroyer of worlds yo y yo what's up chat let me break this down a little bit here we go how we doing tonight everybody hope we're doing well hey Aaron hey webc hey kg yo YouTube hey Billy hey Corey hey Randy hey PJ okay we got some spice tonight sorry I wasn't streaming yesterday uh was just tired working on stuff hey memory hole how's it going man so what are our topics tonight we got some spicy stuff tonight uh first of all we're going to

(04:03) go show uh really the UFO Community being as classy as they've ever been and then we're going to break out into you heard it right Jonas DMS tonight folks Jonas De Oro DMS so uh I wasn't going to say anything but uh people started sending me messages from the debunker Discord saying that he's like threatening talking about legal action so I decided that okay well in case of transparency since he wants to put it out there uh we'll go ahead and we'll show all the DMS we'll show his threatening DMS to us

(04:34) if that's what he wants I no problem with it um and then we'll talk a little bit about what the legal case might be I think that's really exciting I think everybody wants to know and then we will dig into a new unification theory that we found uh there's a new unification Theory found by JK Philly fan we found a patent out there pretty good so before we begin cheers everybody cheers okay I hope you guys are ready on the spice yeah the UFO hate group I didn't even really like to use that terminology

(05:09) but wow they really are a UFO hate group there's really no denying it um so I think it's not super appropriate to make memes about people equating them to serial killers and cannibals is it apparently it is I don't know so one of the uh Cosmic doia here Cosmic Dalia I guess is one of the uh hate group members she's uh the wife of uip Mike and recently the drama was that she uh was feeling unfulfilled in her marriage and she was uh sending DMS supposedly to other men including talking about how hot Lu alzando was and

(05:59) then U P Mike got in a tiff with keemstar about it cuz keemstar was uh basically talking about how his how U's Mike's wife was talking about how hot other dudes are and um so I don't know it seems like there might be a little bit of trouble at home so some reason she seems very upset at me uh because now she's apparently making Jeffrey dmer memes oo pretty cringe I

don't know if the point here is to show how stable the UFO Community is uh missed the mark on that one so yeah I don't know I decided that

(06:38) we'll give her the attention that she's obviously seeking here from me I mean I guess she's feeling unfulfilled at home so she's looking for other men to F the void presumably that's just me speculating I don't know for sure of course okay now let's move on so let's move on to the DMS so people started sending me these messages here uh from I guess this is **Jonas** I think it's kind of funny he's got a snake as a profile picture huh and uh there's a Glenn greenwold versus Destiny debate oh that sounds

(07:17) pretty good I think j6 has been beaten to death folks I think it's been beaten to death um he needs to look into what making false statements about can and their employees implicates I have another meeting with my attorney next week if you guys want to find out more evidence please let me know via DM so apparently he's uh you know I guess in in the **debunker** Discord trying to get ADV legal advice on what he can do or whatever I don't know yeah these are these are not the Jones DMS apparently see these were sent to me from the

(07:51) **debunker** Discord you know the nut job Discord as we call it the one that committed felony fraud against us so um hopefully **Jonas** is not accomplice to any of the felony fraud that was committed against me but that's where it came from so interesting first person here is Tony Adams from Twitter the person who created the or basically copied the satellite video and pretended like he made an original which he didn't um and he's actually offering to give **Jonas** money here in this in this uh thing so honestly Tony go for it man you

(08:24) should give them all your money you know legal fees would only be needed if it goes to court I've already paid for whatever crap I had to put together with the lawyer oh man money well spent I'm sure um can't sue for defamation unless you're **Jonas** lucky me then oh so this is **Jonas** okay everything AF posts is already being documented but I would need to litigate in the United States and I really have better things to do to be honest because it's all just really silly despite the very real lie so what

(08:54) is the definition of liable chat what do you guys think definition of liable is oops this is this is Japan law let's look what liable means publishing a false statement that is damaging to a person's reputation well I think that the I'm not a lawyer but an affirmative defense against liable would be the **truth** and I've never posted anything untrue about **Jonas** so I don't know what he would have a problem with uh in terms of that and also you would need to litigate in the United States so I'm not sure if he's

(09:31) not planning on litigating in the United States it seems like **Jonas** went to the school of **redditors** for law maybe he went to legal advice sub**reddit** and found the advice there but I'm not really sure he seems kind of like an idiot just just for my interactions with him and from what I've read about the posts here he seems kind of like a **[redacted]** um and then I guess oh so so now he's actually brigading against other accounts trying to get them to report other people's accounts um which this is definitely a

(10:04) breach of Reddit policies but we don't really give a [ ] about Reddit yeah it is teenager stuff but it gets better so let's take a look at the Jonas DMS so let's see if I ever uh defame Jonas or you know let's just see the the post so this actually goes back to December 9th when Jonas made the debunk video which I had warned him not to make I warned us not to make the video because it would uh open him up to scrutiny that he didn't need to do there's no reason for him to make a debunk video whatsoever I mean he got an

(10:37) anonymous email and within one hour he was making a debunk video I need to retreat from this it's getting to be a bit too much from me hope you can understand well I don't think if you're trying to retreat from something you probably shouldn't make a debunk video about it especially when you have no understanding of the case whatsoever and you are trying to disconnect yourself from it that's not really the way that you disconnect from something that's the way you insert yourself into something and I tried to

(11:08) tell him this but he didn't want to listen so I said sorry man sorry you're getting harassment DMS and emails I've told people not to bother you and that you're not nefarious at all and I don't mean this to be rude but that's why I told you to be cautious if I were you I'd delete your YouTube video it's being used to debunk videos in your name and whether or not you know it you're being used for this purpose let the other people be the ones that a bunky and then you can separate yourself from it that

(11:32) seems reasonable right I hope Jonas is recording this and he can send it to his lawyers I hope his lawyers watch this video that I'm making right now so that they can know that they're just getting free money from him let's keep going you're right thanks for the kind words I'll leave the video up for now since I'm not sure how people would interpret that but I think about it some more I hope you get to the bottom of it so he said I'm right and then he decided of his own accord that he's going to keep

(12:05) the video up anyway and oh keep himself open to the same level of scrutiny that he's been getting right which I mean we're dealing with a pretty hot topic here this is 239 people that disappeared and nobody ever found the plane right pretty wild so I said just to be honest I think this move here is going to cause more controversy that's why if you disconnect if you wanted to be disconnected you should delete the video otherwise it looks like you're afraid of the truth revealing you people are uh digging into your

(12:35) history hard right now and the timestamps of your pictures and questioning how you took these pictures from the airplane windows on both sides of it it's pretty hard I know because they're messaging me look this is December 9th still so this is a month ago so I never even reported on like any of this stuff uh and a lot of people are skeptical of how you were already making a debunk video within a few hours of being informed about this turns out based on his own accounting and it was less than an hour but anyway like I said I won't

(13:03) throw any shade your way because I truly believe you're an honest dude I don't want the blowback from this so then I said another message later that day a few hours later hey man I'm

going to have to make a post about how weird it is that you're deleting your video you're not deleting your video while you not accepting a \$10,000 reward where all you had to do is sign a statement saying you're not making anything up it seems dishonest that your video post has nearly a million views and you made that knowing nothing about

(13:28) the case while admitting to me that you knew the corridor crew all factual statements right all factual these are things that all are true if you want this to go the way the easiest thing would be to delete the video otherwise it looks like you have dishonest intent I have to be honest why would you make a video matching the clouds like that at all I certainly wouldn't be doing that after receiving an anonymous email like you did that's the last thing I would be on my mind is getting directly involved and then I said another

(13:59) followup the next day I've got experts in my DMs analyzing the pictures saying there's unusual anomalies regarding the light and other aspects in one or more of your pictures I'm going to making a post in the morning coming out claiming you're making fraudulent claims on your YouTube video I don't remember if I did do that or not and this is something that I think I copied here from somebody else's message that they sent me bottom line is that these two pictures numbered 1842 and 1843 which show Cloud patterns from

(14:26) MH370 video are not from the set by Jonas but somehow Jonas is attempting to fabricate the evidence this is what someone has sent me so then we find out that the pictures don't exist before 2016 that they're not on the way back machine before that that the textures.com person is a troll that everybody involved including the person that supposedly found these pictures knows the corridor crew and was slid by me we looked in the Torance and we didn't find them and that was at Jonas's request and we looked at multiple torren

(14:57) and didn't find the images anywhere in there um so let's fast forward a day and I said I'm not entirely sure what's going on it stinks and then I make my whole post about this person who says right away that they did this because uh crap uh well that's awkward the person who found the images admitted that they had an axe to grind with me for dunking on their favorite YouTuber the corridor crew one of the only questions I asked Jones was if he knew knew of them which you admitted that he has followed the corridor crew

(15:30) for 15 years but he claims he hadn't seen their videos about me I asked him to delete his video after refusing the \$10,000 Bounty which was contingent upon Him signing affidavit saying he wasn't lying or making anything up I said I'd follow up in the morning with more details now whole sec I'm going to switch back I just want to make sure I don't reveal any other DMS that's why I'm trying to hide the side here okay okay and don't worry guys we're not going to spend too much time on this

(16:01) just first 20 minutes or so hey everybody okay and now so this fast forward to this date stamp isn't correct here because this was yesterday but it says December 13th this is not correct so um this I don't know why this date stamp is wrong but I got this last night this message right here hey Ashton just letting you know my lawyer is currently setting up a liable case against you

I'm not going forward with any charges at the moment let's face it as inconvenient for everyone but I want to let you know

(16:39) that we're documenting everything you publish about me online and currently looking into our options for a defamation charge I'll be in touch with the other relevant parties such as textures.com legal team and our partners in the US as well I'd appreciate if you take down any posts about me I won't respond to that publicly and I'm happy to pretend it never happen and let you run your business I'm not sure what that means exactly um anyway just thought I'd let you know Jonas so I'm going to go ahead and just

(17:05) let Jonas know and his lawyers if they're watching I'm not taking down anything because everything I posted is factual I have never defamed or libel Jonas in any way shape or form and I don't really appreciate legal threats usually if you're going to if usually if you have some type of legal issue you can just go ahead and send it on over to them right but I you know what if you want to press charges you want to go and waste your money feel free I'll be happy to engage my lawyers and make sure that

(17:32) you pay for everything now may I have your contact information or that of your legal counsel I'm proceeding with a defamation case against you no I I don't think you are Jonas but you're free to go ahead and try if you want no one's going to stop you it's a free country I also want to inform you that I filed a comprehensive police report in the Tokyo Metropolitan Police Department detailing the false and damaging statements attributed to you oo what a badass guy wow a comprehensive police report with the

(18:01) the Tokyo Metropolitan Police Department o this is very scary uh I wonder what those uh defamation uh posts are considering I've never said anything factually incorrect about Jonas the only other post I made were the videos that were literally of Jonas doing video effects editing and I remember chat I posted them in full context as well those streams are still available so you guys can watch the nice thing about being fully transparent about everything you do is that you don't generally have to worry about people uh you know

(18:32) distorting the truth about you yeah it turns out Jonas might be a little bit of a nutcase and a little bit of a baby um for the record I'm not in Tokyo and I'm not in Japan so I don't know good luck with that I guess now I said I didn't say anything false about you good luck for the record when people Sue they don't threaten people about it laugh my ass off you're such a loser I also recorded our call so good luck man I'm proceeding in Japan not the US statements don't need to be false to be

(19:07) convicted of defamation here no subpoena needed either just making sure you're in the system here okay well first of all if you're already going to admit that the statements don't need to be true or don't need to be false then you already kind of destroyed your whole case right there by admitting that right I'm saying that my affirmative defense is that I've only posted truthful things so secondly I'm again not in Japan so I don't know good luck Jonas and your lawyers glad you're spending off the

(19:37) money so my response [ ] off Jonas you absolute loser no need to get angry you're such a redditor and your understanding and so is your understanding of the law law okay it's pretty clear that Jonas uh you know thinks that the law Works in a in a some other way than he apparently does kid I told told you to think twice before you made your debunk video and you didn't listen you didn't listen when I told you the clouds are moving and evolving and when I told you to listen to the evidence everything you did you did to

(20:10) yourself the people calling you a fraud are in no way connected to me you're just a loser and you always will be this is gold thanks I could post our entire interaction for the lws and the clicks but I'm not going to because you just want clout sorry what one more thing if and when the USD classifies these videos I'm going to send all the families of the victims after you and have them take everything you own since you decided to make a debunk video on the fate of their loved ones so Jonas I hope you show that

(20:43) to your lawyer I really do because now you are committed to these videos being fake because if they're not boy your lawyer is going to be a busy busy person so anyway anyway like I said I wish you the best Jonas I really do I think I don't know man whatever you want to do doesn't really matter to me at all I'm certainly not afraid okay chat how was that what are our thoughts so do we think that uh I'm going to get sued by Jonas what do you guys think you think that the Tokyo Police Department is going to come after

(21:23) me like The Dark Knight There's No Boundaries here pretty wild stuff huh you know the funniest part is that I wasn't even saying anything about him I didn't even bring his name up in the podcasts right never even been mentioning him kind of wild that he's uh just trying to yeah it does seem kind of designed to distract me in general but it's not going to work not sure why he's is so upset at all to be honest with you yeah I don't think that the uh I don't think the Tokyo Police Department

(22:06) is going to be coming for me oh just want to make sure you're in the system whatever that means man not too afraid about it yeah we knew he was a redditor in the video call between me me and Kim right you can tell immediately this and this proves it right Jonas is 100% a redditor like Reddit brain to the maximum right just completely delusional dude is just completely delusional huge nerd huge loser uh and again I'm just posting this is my opinion on Jonas based on the interactions and him threatening me with

(22:46) legal action with no basis whatsoever uh you know that was again everything he's done has been 100% his own choice and his own doing no one has forced him into any of this uh he inserted himself into the situation and opened himself up to that level of scrutiny um just wild stuff right again I'm just going to give and again I'm always truthful to people just like I was truthful to Julian Dory when I told Julian that he should delete his podcast video with us because it makes him look bad um you know the best thing Jonas

(23:18) could do would be to delete his debunk video that'd be the best thing that he could do you know if you want to separate yourself and stop opening yourself up to the level of scrutiny

delete YouTube video uh and you know just come out and say you don't want anything to do with the case right the guy did two ask me anything on **Reddit** two two different as I've done zero ask me anything just zero **Jonas** did two ask me anything's on **Reddit** and he thinks that if somehow he's uh above scrutiny on social media

(23:51) pretty wild man pretty wild people in the chat are saying Tokyo grift Tokyo grift I don't know if he's a grifter I just think that I don't know I think he's just delusional a little bit delusional **redditors** think that you can just Sue anybody for anything it's pretty hilarious maybe all the other **redditors** in the uh in the **debunker scam** Discord will uh give the money that they uh fraudulently took from me here's here's some advice uh for you **Jonas** as well is if you are in touch with the

(24:22) person who **scam**med me out of \$3,000 if they help you in any way shape or form then that makes you an accessory to a felony that's in the United States here so I hope you're not because yeah if you are if you take money from them and it turns out it's from one of the people who **scam**med me out of \$3,000 then that would make you an accessory to a felony which is real prison time so I would not uh do that okay yeah so the quick recap guys um super quick recap got a threatening legal message from **Jonas** out

(24:54) of the blue out of nowhere there was no basis for it whatsoever um you know just seemed like classic like **redditor** legal advice kind of nonsense so just kind of told him to F off um and uh then people and I I wasn't going to post about it or make any things about it that happened yesterday and then people started sending me messages from the **debunker** Discord where **Jonas** is like openly talking about it um and uh so I decided okay well if he's going to openly talk about it then I'm going to go ahead and

(25:25) and video about it I mean I thought he wanted to be private but sitting there like trying to solicit money from the other **redditors** and all the other stuff then you know okay we'll we'll you know dunk com a little bit over it rib him a little bit so the problem is that he is now disgraced his family no I don't know about that man it's a little bit much guys I mean I was leaving him alone I wasn't doing anything to him but he keeps opening himself up to undo scrutiny that isn't really necessary at

(25:57) all so I I mean the facts are that he turned down uh \$10,000 that kim.com was going to give him so kim.com was going to give **Jonas** \$110,000 just for coming out with the pictures and all he had to do was sign an affidavit saying that nothing nothing that he was saying was false that's all he had to do I have taken that money 100% 100% he even said in our when I recorded our three-way call that he would sign it and then the next day he came out and said he wouldn't pretty weird and then he tried to backtrack

(26:43) after we called him out and and posted the video of him claiming he would sign it and then he tried to backtrack and say oh no I was just waiting for my lawyer to review it and then he said he was going to give the money to the families of the victims which also doesn't make any sense because there's no way to do that so he was definitely saving face at the end um you

know at least in my opinion but you know ultimately it's up to him I mean he did two amas about it asked me anything so can take a look at his his messages

(27:10) there okay have we recapped everything are we good on all that can we move on to the next thing okay hey alien girl you guys ready to move on to some more exciting stuff science and investigation but yeah that's the drama that's the drama we've got going on and apparently people are really mad at me people are really mad at me you wouldn't think trying to find the **truth** about a missing plane where there is no answer for what happened to 239 people would elicit such a hostile and angry response from people for some

(27:46) reason it does okay so Arwin yeah yeah no is uh **Jonas** is definitely not going to hit me with defamation case he's welcome to try if he wants but he's not going to his lawyer will uh inform him I'm sure teach him how the law works but I I mean I just gave him the same the same advice just once again I gave him the same exact advice that I gave him a month and a half ago or two months ago which was just delete your **debunk** video that you should have never made to begin with there was no reason to make it

(28:32) whatsoever uh now we he's revealed himself to be a **redditor** um you know so we know we can't trust him unfortunately oh yeah Kathy no problem so this image right here Arwin from the uh MH 370x investigative team she has been on fire Arwin Evar pretty sure that's not her real name so we're fine with that she's been trying to investigate all the names of the passengers oh wait I'm not even showing it hold on there we go okay and hey everybody else who jumped in did the serial number on the parts on

(29:15) the aircraft Parts match they did not use a unique serial number they used a part number on there uh silly wabbit so could be from MH370 could be from the duplicate C of the plane that was purchased by G tesis I just think that it's interesting that the media doesn't report on it accurately in terms of the part numbers it's odd that they are kind of lying to people about that uh I don't know where you can find the **debunk** video I don't know on Twitter somewhere or social media somewhere okay

(29:50) so Arvin Evan star has been looking into the names of all the freescale semiconductor employees and here's the rub we can only find 16 of them we can't find the last four like they're just not on the manifest like there's either something wrong with the Manifest or like we don't know there's just inconsistency so she has found 16 of them and 16 of them look at where they're all sitting all the yellow dots are the freescale semiconductor uh employees they're all sitting next to

(30:19) each other kind of weird they're all sitting next to each other 20 employees 20 is too many from one company why are they if they're all sitting next to each other like this presumably they're all traveling together right pretty bizarre yeah the media is important with import are busy with important stuff like Taylor Swift yeah exactly you got it so I'm going to make a post about this but I I kind of want a little bit more meat and potatoes to go along with it I'm not sure I don't know about the

(31:00) triangle pattern that's a little bit much James I don't know about the triangle pattern but but okay so they work for the same employer does that mean that they are all traveling together so here's the thing I uh I travel with other people and I don't ever book my flights with the same as them uh oh we got a redditor mad in the chat we got a redditor who's mad in the chat boy they didn't like that bye Pete boy they're getting mad so the only way that these T these seats would be next to each other is if

(31:37) they were booked together right they if they were booked together by their like company at the same time even like for my company when I travel we don't all book our flights together they're all booked independently so the fact that everybody's sitting together is very strange especially because the company should have a policy that they don't let this many people be on the same flight exactly Dan the employer booked them all at the same time which they shouldn't have right because you would have hit

(32:12) the policy that you have too many people on board the plane if the employer was booking them all at the same time they should have said huh 20 people all at once that's too many what if the plane goes missing right pretty bizarre yeah even when people travel or yeah yeah not really X milu um even in 2014 you generally do not pick your seat uh you don't work it out and pick your seats together that's generally not how that works no it's it's definitely strange guys guys I traveled for seven years

(32:51) straight with my company and I would go to the same places with co-workers you don't sit next to your co-workers in fact in fact usually when you get on the plane you want to be away from your co-workers so that you can just hang out by yourself it's pretty unusual actually for people to want to be sitting next to their co-workers and not in this case it's not just a couple of them they're all sitting next to each other this only happens when the tickets are booked together right and once again if they

(33:19) were booked together the company should have the company's flag should have gone off and said oh we already we have more than four people on board this we can't let any more people get on it now again I'm speaking from experience over seven years straight traveling and and I've been still traveling occasionally since in the last 12 years or so so I have a lot of experience I've probably flown more more than most people ever will in their entire lives Mill I've flown millions of miles I'm

(33:47) like George Clooney in the up in the air movie like a lot um and I'm not saying that to brag I don't like flying I'm just saying that's what it is Pete if you're still there real real story is creepy likes your Costa Rica videos just want to let you know um so you may want you may think you want that but I'm guessing the people that saying they'd like to sit next to their co-workers probably haven't flown very much now if you're defectors that's what I'm thinking about now I'm getting

(34:16) a little conspiratorial here but if you're defectors then it would make sense to stick together also and this is getting very out into the weeds but if you're expecting

something to happen then it would make sense for you to want to be next to each other and grouped up now these people aren't necessarily grouped up with these people but this is weird how many people are sitting right next to each other over here on the right side like this indicates that there's it's very odd they're all in

(34:45) just one big group this is like if you were to get on it's like a hockey team like a kids hockey team this is like what you'd expect them to be sitting not if you're like just a bunch of free scale semiconductor employees these are very important people you definitely wouldn't want all these people on the same plane very weird um side note yes to uh X little mats or little little Matt explorers say they think they found aelia air heart's long lost plane but they can't find MH370 pretty weird right the reality is

(35:18) they're never going to find MH370 and the reason why they're never going to find it is because if they found the black box it would expose the LIE so even if they flew the plane to Diego Garcia they're not going to go crash the plane into the South Indian Ocean and the reason why is because you would find the black box and you would show that the whole narrative is a lie they literally cannot find the plane if they ever were to find the plane it will expose the **truth** yeah yes Alex says my father is an

(35:51) electrical engineer and he thought it was a red flag that that many from one company are on one plane he's traveled to **China** many times and he says basically never happens and if you ask your dad I'm sure he'll also say he doesn't sit next to all his co-workers either when he's traveling especially not on a long flight where he wants to be going sleeping and getting some peace and not talking to his co-workers where was Philip wood sitting good question Antonio we may ask Arwin to look into

(36:16) that just using Ashen Forbes name in UFO chats this UFO research has to change I don't know what that means Ron Shaw but yes I would also say before we digress to the next thing there is some pretty uh pretty horrible people out there that are really really angry at us not really sure why and how I threaten their uh existence so much but the reality is we're not going away we're never going away no matter what that's just what it is we're here now um what percentage of their Workforce it's not a matter of the percentage of

(36:49) the workforce but these were important people in general I think they I think they were a pretty big company thousands of employees I think but yeah usually it's only like two to four people per per company on the same plane is usually what the policies are for any company where you have intellectual property that you can't afford to lose even my company where it's not even really that much intellectual property yeah and so wey even says I have five kids anytime my wife and I want to fly together we have to each

(37:19) book a set because they only allow us to get six tickets together yeah and apparently there's limits on that as well the RO you can look up you you can Google it guys but um they were engineers and uh there are a bunch of Articles talking about how important they were to the company it's funny because I did a podcast with a podcaster and the person tried to claim

that oh well they're not the cxos so they don't matter which is just stupid because the cxos are not the most important people at a company at all that just goes like

(37:47) that's a redditor brain right with people that think that like oh the cxos the CEO CFO are the most important people no that's not how the companies really work man the most important people are usually like the middle management people who make the day-to-days operate the ones that'll sit there and work at their their job for 20 years and and not expect any type of moving up the ladder those are generally the most important people that have the institutional knowledge on how things work okay so next subject um is going to

(38:15) be we're going to dig into some science okay so there's another unification theory that was found but I wanted to post this because I just think it's really cool and I think that Arwin is it Arwin or am I saying her name wrong Arwin Arn's been doing some amazing research for us in our Discord looking up the P all the passengers names and where they're sitting I may ask her if she can figure out where Philip Uh Wood is sitting oh we have 17 out of 19 now hold on chat oh look and another one right here

(38:48) they're all next to each other every single one how much you want to bet the other ones are like sitting next to these people how much you want to bet this is where they're sitting like next to these these ones right here Philip wood is 11c wow right here so he got a bulkhead seat interesting I think this is Bulkhead right CU this this the bathrooms right here probably yeah man my dog is going at that bone back there um so Philip Wood's right here too man it's pretty pretty wild huh yeah the uh curious if they're on

(39:29) the same project yeah I mean they're all going to China to supposedly upgrade the manufacturing plants there which seems like a weird weird cover kind of bizarre uh I think that patent thing is fake uh Ryan I think that patent thing is a red herring I'm not sure that's really real in fact there was something that I read on one of the 4chan posts that mentioned somebody who was claiming to have inside information and they argue that the intelligence communities know how conspiracy theory people think

(40:02) so what they do is they throw out fake conspiracy theories that will get people to latch on to them so that they don't look for the real stuff kind of interesting thought I don't know if it's true or not but makes sense yeah the the yellow ones are the engineers those are the free scale Engineers 17 out of 20 we found so far I think it's very suspicious that they're all sitting next to each other that is very odd very very odd but we'll find more I want to get a little more meat and potatoes on this

(40:36) before we make a post about it but I'm thinking about making a post like tomorrow about it um yeah it's just really weird really weird they're all sitting next to each other okay let's see what else we got science okay here we go okay next one is JK Philly fan method of gravity Distortion and time displacement yeah no it is odd guys it's this isn't really a debate it's it's odd for 20 people from the samey to be sitting next to each other it is odd 100% we already established it if you

(41:31) didn't if you didn't listen to the arguments go back like 5 10 minutes you can listen to them but yes it's not normal for uh 20 people from the same company to be sitting next to each other if you don't know that then you probably haven't traveled for work before but yeah it is odd you don't sit next to it unless it's a sports team or something like that um all of them sitting together and being on the same plane is very unusual very unusual um and again I speak from somebody who's traveled from my work for

(42:03) many many many years and probably have more miles and flight miles than maybe even all of that combined but like a lot I have a lot I've flown more than most people will in their entire lifetimes um now this is a really interesting one we're going to go through this patent I'm going to read it out to you guys because I think that we found another unification Theory now it's pretty similar to the ones we've had before so if you're keeping track at home we have already had salvator pi argument for a

(42:35) unification Theory the pi force right which unifies the other forces together and we also uh spoke with uh Roy D Herbert as well and Roy D Herbert is dilation Theory now both of these theories the pi force and dilation Theory are both unification theories of quantum and macro um HIZ would say that the super the Super Force is basically the equivalent of the plank force and it's a force where all the forces I don't know if they converge is the right word but a way to unify all the different forces Roy Herbert would

(43:10) mention that the properties denote the behavior irrespective of scale irrespective of size so regardless of if you have a neutron star or an atom you can have these things act the same way okay now what I'm going to say here right away before we get into this is that I am 100% certain that the unification Theory already exists probably already been discovered multiple times out there and we are not discovering anything new what we are doing is we are revealing the **truth** we're simply revealing the information

(43:39) that's already out there one thing that we have been told before as well is that patents would get retracted papers would get retracted even though they're true and this is one of the ways that they cover up the **truth** so it doesn't it's Not Unusual to me that this would be an abandoned patent and uh but that you know somebody could have been forced to hide this information in general okay let's get going abstract a method for employing sinusoidal oscillations guys sinusoidal oscillations okay you already had me

(44:23) interested in the beginning why because the mh37 zero videos are showing sinusoidal oscillations in them we're seeing sinusoidal oscillations right in our videos these patterns have been mapped that these orbits make right here and they're perfect sinusoidal patterns that means they're perfect wave functions right while they're spinning around this people were able to map these it's a perfect wave function perfect sinusoidal pattern okay the the orbits are doing it's a 120° 0 point sinusoidal pattern sine waves and it's circling the plane here

(45:04) as well hey Sandy welcome so right in the first five words we're already hitting a bingo okay so a method for employing sinusoidal oscillations of electrical bombardment on the surface of

one care type singularity in close proximity to a second carot type singularity in such a method to take advantage of the lens turning effect to simulate the effect of two point masses on nearly radial orbits in a 2+ one dimensional anti-deSitter space resulting in creation of circular timelike geodesics conforming to the van Stockum solution under the vanen

(45:46) Bro modification of the global geometry permitting topology change from one space-like boundary to the other in accordance with the Geroch theorem which results in a method for the formulation of  $G \neq 0$  I think is what that stands for or I'm not sure over model uh type geodesically complete spacetime envelopes complete with closed timelike curves okay so that's a lot of words uh yeah can we look up like 12 of those words yeah pretty much I think we're going to it's a good call let's

(46:24) look up a few of these words it's going to be kind of important that we try to understand what the heck we're talking about here let's get grock in the play so let's start with care type Singularity what is a carot type Singularity alt Joey over here knows it knows it all heed all the words as type of space time singul that can occur in the center of a rotating black hole um unlike the schwarzschild singularity the care Singularity is ring-shaped H ring-shaped guys interesting unique geometry arises from

(47:06) the fact that a rotating black hole drags spacetime around it causing the singularity to flatten into a ring the existence of such a singularity has been the topic of a debate among physicists as it challenges the notion of singularities as defined by singularity theorems wow there's more than one kind of singularity hello um is that what we're looking at here so one thing that's interesting about that right is when the plane gets here the the orbs change and now they become a ring formation remember I've been

(47:41) talking about the ring formation is it making a ring-shaped singularity around the plane here huh and then is this a ring tap shaped Singularity right here is that what we're seeing here is a ring-shaped singularity there's a couple different ways we can interpret that the letters sent to me I don't know the more and more I think about the letters did that by the way that YouTube account go dark guys has anyone been following that YouTube account I haven't followed in several days let's go look

(48:37) oh is it gone is it gone dude if that if that account is gone how nuts would that be dude what it was called real world creepy right wasn't it called real world creepy oh no oh it's still there oh I subscribed to it by the way now nothing there's been nothing no new videos so they make three how many three Miami fake videos and then they send me a letter and then they do some weird tunnel thing and then they do the glitter and then they do the Adam and Eve story and then they just disappeared for two

(49:29) weeks this just seems super weird to me man they were act so active pushing out one per day so it doesn't make sense why they're doing this for money it seems like the other videos were just a distraction to send me this video that's my true opinion on this the rest of these videos are kind of just they're not even remotely the same quality as this video now

they're interesting some of these other two are pretty interesting but like these other ones are forgettable pretty weird um okay so the Cur Singularity

(50:05) let's look up some more words the lens thring effect so the lens thir effect I think is when the black hole is spinning and how it's going to distort SpaceTime because of its spinning did he leave two passwords I I don't know man when I saw the password thing from Dan I thought maybe it was a troll or something but we broke into it right away within like an hour somebody used a I think a uh Brute Force attack and the password was just like **truth** or something like that and it turned out it was something about using memes meme

(50:45) Warfare was very weird Okay lens sing effect yeah frame dragging so phenomenon predicted by Einstein's theory general relativity occurs when a massive rotating object such as a black hole or Star drags the surrounding SpaceTime along with its rotation this causes the orientation of nearby objects to change over time and has been observed excuse me in such experiments as gravity prob B it's an important concept to in understanding the behavior of rotating objects yeah um nah gravity Pro B I think is they

(51:32) just send a a thing into outer space around the uh around the earth and they're trying to see if it gets time dilated or something like that I want to look at more of these words what is my dog she's losing it 2 plus one anti- dimensional sitter space okay let's see what else we got 2 plus one dimensional anti deit space is a type of space time that has two spatial dimensions and one time Dimension it is a solution to Einstein's field equations in three dimensions with a negative cosmological constant this

(52:20) space is often studied in the context of string theory and quantum gravity as it provides a simple ified model to explore ideas in these fields the geometry of space is that of a hyperboloid and has constant negative curvature okay I don't know what that means it's interesting though let's look up the van this thing what is Martini shake and not stirred that's correct cheers okay and if science bores you which I hope it doesn't then you can go back to the early part of the stream where we talked about

(53:15) drama we had some spicy drama going on and now we are digging into the science we definitely need more memes though I may pull up some at the end okay the van stockum okay this is a lot of words guys why is it it's still going okay speculative idea for faster than light propulsion system that's the alabar warp drive so the van stock drum under the van Dem broke modification is a way to basically allow a bubble to be real uh um it's an attempt to make the alary warp drive more feasible by reducing the

(54:01) amount of negative energy required to create the the bubble changing the shape of the bubble from a sphere to do a more elongated football like shape H this change significantly reduces the amount of negative energy needed to create the bubble making a concept more plausible from an energy standpoint uh the Von Stockman component of this modification refers to the solution of Einstein's field equations proposed by William Jacob B stockum oh why retire um describe a rotating cylinder of dense matter that could theoretically

(54:38) create closed SpaceTime curves which are paths and space time that allow for time travel in the context of the whatever modification it's a solution to further optimize the shape of the warp bubble by incorporating the rotating cylinder concept the overall energy requirements can be reduced even further making the alary warp drive more feasible okay so basically is reducing the energy know science makes me so sleepy um okay so basically we're talking about war bubble here okay and now why is this interesting because this is similar to

(55:20) the uh Dave Rossy research uh manuscript scripts paper whatever you want to call it that was out there okay one sec chat let me eat one of my olives and we'll keep going yeah the drama was somebody threatening me to make a police report in Japan about me for hurting their feelings or something like that for a situation where they 100% involveed themselves uh with no reason whatsoever and then pretended like they didn't want to be part of it pretty wild okay now uh should we go with the claims first I think the claims are already

(56:17) pretty consistent with what we already mentioned here okay let's read the claims a method for the generation of a pseudo 2 plus 1 Dimension in anti-d citter Space comprising of the steps of creating two care type positively charged rotating dilation singularities including the steps of maintaining one of the singularities as an axis of rotation reference Singularity maintaining the other uh of the singularities is a target Singularity and subjecting the target Singularity to a differential electron flow so as to simultaneously

(56:51) pass the differential electron flow above a photosphere of said Target singularity in a direction of rotation therefore and contrary to the direction of rotation thereof in order to release a directed flow of gravitons in a cytoidal oscillation simulating rotational effect of the target Singularity around the ax of rotation provided by the reference Singularity guys when I'm listening to that what I'm imagining in my head is the MH370 videos like exactly they're spinning around it and what direction are they going to

(57:23) send it to they're going to it backwards or forwards in a perpendicular uh orientation based on the ring formation that's how I read this now I don't know maybe I'm wrong because I'm not a scientist but that's how I interpret it so when I'm seeing this here I'm predicting I'm looking in my mind I'm looking at this and the electron flow that they're creating here and then what they're doing here is they're making this ring right around the plane and it's going to go backwards or it's going

(57:51) to go forwards presumably backwards but that this is cre this is somehow setting up the uh direction of travel here and that yeah they're doing some kind of quantum dance exactly right it's crazy that I'm sitting here actually saying the teleportation is possible but we're reading the patents a method of generating a force around a body so now they're talking about literally generating the force around the body comprising the steps of employing sinusal oscillations of electrical bombardment

(58:25) on the surface of one care type reference singularity in close proximity to a second care type Singularity to take advantage of the lens thirring effect wherein the electrical currents

employed in the bombardment are passed simultaneously across the Photosphere of said reference singularity in its direction of rotation and contrary to its direction of rotation to release a directed flow of gravitons in a cytoidal oscillation simulating a rotational effect of the target Singularity around the axis of rotation provided by the

(58:59) reference Singularity I mean it sounds like there's two singularities what they're saying is the wormholes right one mouth of the Wormhole is over here the other one's over here in my mind what I'm reading here is they're talking about having two entangled singularities right so if we look at now the thermal they're talking about this this is creating one of the singularities and then it's moving to the other one and it's yeah it's like entanglement dance basically right that's how I

(59:33) interpret it so it's doing the the rubber band right stretching it out poof now thing goes flying over here pretty bizarre hey S3 hey everybody else pretty crazy right how we're actually starting to understand the science creating time like Curves in a compact time oriented manifold I think this is supposed to be GM but that it's uh like they don't they don't have the special characters over a model type geodesically complete SpaceTime envelope under the vanen bur modification of the alabar geometry resulting in the

(1:00:13) creation of timik Curves in a compact time oriented manifold per permitting topology change from one SpaceTime boundary to the other in quins with uh jro's theorem I guess we have another one we have to read here jro yeah exactly Oldtown roads see you get it like their motion is phasing the entanglement yes I think pretty much sounds like it's talking about creating a wormhole oot yeah oot um gous theorem is a uh is a result in general ativity that uh provides a topological characterization of globally

(1:00:57) hyperbolic space times so I think that's what they're talking about tunnel it was first proved by Robert G Ro in 19 Gro in 1970 the theorem states that a space time is a globally hyperbolic if and only if it can be foliated by a family of couchi surfaces which are SpaceTime hypersurfaces that intersect every causal curve exactly once yeah so I think that's pretty much what it's saying is like you could if you were to take SP space time and bend it like a piece of paper or like this napkin right here

(1:01:34) right you bend it and now you can poke a hole through it huh very interesting okay now there's a lot more to read through here um why is it got gous theorem everywh highlighted like this there okay here we go okay field of the invention the present invention relates to the use of technical time displacement devices which operate by the modification of gravitational fields these Drive systems do not depend on the emission of matter to create thrust to take advantage of the time dilation but rather create a change in the curvature of space time in

(1:02:19) accordance with general relativity this allows travel across topologies by warping space time to produce top topology change from one space likee boundary to the other in accordance with derous theorem I mean we're talking about a wormhole here right we're talking about warping SpaceTime itself yeah that napkin was used sorry we're talking about

warping SpaceTime itself to create a wormhole pretty much right so yeah we're talking about some pretty Advanced physics here this does not break the laws of physics suspends

(1:02:56) them literally and and uh metaphorically um the concept of gravity should be examined in the light of quantum gravity and in turn as a component of quantum physics itself the fundamental minimal Quantum of energy in quantum physics is Plank's constant Super Force plank the plank force is the Super Force thus in accordance with this uh equivalence of formula  $E = mc^2$  that's the big formula that for some reason **redd**itors struggle with uh the fundamental minimum quantity of mass can therefore be derived taking this minimal

(1:03:35) Mass it is possible to show that the formulation of all matter the forces of nature and indeed SpaceTime itself derived from this single quintessential quantity so basically they're saying there's going to be a unification thus the number of quintessences in the system is equal to  $NQ = m / m_q$  then the total energy of the space system is more logically given by the energy of a single quintessence directly multiplied by the number of quintessences such that energy equals  $h\nu_q = mc^2$  hey Arwin I don't know where you're

(1:04:13) at there's Arwin nice we'll make Arwin a moderator cool furthermore this minimal Mass term quintessence can form the basis of the existence of quantum gravitational field in the form of space-time lattice from which quantum gravity may be derived from the first principles furthermore the conglomeration of these quintessence is also accounts for the formulation of the elementary particles and the forces acting between them as in super String Theory this concept explains the formation of matter and the forces of

(1:04:51) nature on a quantum mechanical basis and and directly explains the existence of wave particle duality thus as  $N = m / m_q$  the frequency of light and matter  $f$  is determined directly from the number of constituent quintessences this leads automatically to the fundamental equation derived from  $F = NQ = e / h$  where  $NQ$  is the number of quintessences which leads directly to the frequency of both light and matter this  $U_r$  leads directly a universal wave equation for matter matter is a wave everybody where  $B$  is the relative

(1:05:32) directional velocity um as the momentum complicated equation then this equation also gives a standard De Broglie like wave equation in agreement with current theory and experiments so what was the key uh letter the key thing right there it was uh the fundamental oh directly explains the existence of particle wave Duality very interesting yeah energy space and matter um I don't know if space is the same as matter but matter and energy are the same for sure um okay using a universal wave equation the standard equation for special relativity

(1:06:21) I'm not going to read all the equation derives from first principles I'll post this in the chat though for you guys okay also from these observations a modified de Broglie wave equations um wave equation may be derived that results the results of which have been recently verified by a paper in which orbitals of electrons were experimentally directly visual or virtual visualized moreover a fundamental equation for general relativity can be formulated where  $G$  is the gravitational constant and  $RQ$  is the radius given radius of a quintessence

(1:06:57) such that the universal wave equation is in a direct agreement with general relativity thus special general relativity special and general relativity and quantum mechanics can be unified baboom so basically just mathematically there not only did they explain uh particle wave Duality but then they also went ahead and took general relativity and they unified it with quantum mechanics that's pretty big that's what we call unification Theory folks I understood like 60% of that getting better I don't know how much you

(1:07:32) guys understood and yes like the double slit experiment for Evan so Double SL experiment is where we have proven that particle wave Duality exists non-locality quantum entanglement faster than light travel that's how that's been proven so Sebastian is liking it all caps this is real yeah this is pretty wild this paper here now um really quick side note big question Stefan uh Stephen says question why do redditors smell so bad um I would say from uh you know just if we have a theory of why redditors smell so bad

(1:08:23) probably cuz they don't shower enough probably because their hygiene is really bad that's what I would imagine probably because they eat too many Hot Pockets anyway this paper is from 2004 2004 this is a long time ago long time ago 5% 2% 3% yeah the big ones the big words that you want to make sure you understand our unification Theory and that this can explain particle wave Duality if you understand that this is a unific Theory we take general relativity is the big stuff like stars quantum mechanics is

(1:08:59) the tiny tiny little stuff right particle wave Duality is why uh we have quantum mechanics why we have quantum entanglement and why we have um non-locality okay from here it is possible to proceed in a number of ways the geometric structure of the electron and forces of nature may be derived from first principles and in turn structures of quirks including the top and the bottom otherwise known as truth and Beauty can be seen okay moreover the presence of SpaceTime lattice refers to the understanding of quantum epr effects epr

(1:09:36) remember eer equals epr epr has to do with quantum mechanics by allowing a theoretical flow of energy through space-time lce it can be shown that energy is not bound by space time and energy equals mass remember so if energy is not bound by space time then we've gone ahead and we've basically shown that um entanglement is possible thus locally accounting for phenomenon such as entanglement and Quantum tunneling like I just said quintessence can also be used to explain logically the inner physics of a black hole the missing mass

(1:10:10) of a galaxy the the continuing expansion of the universe Glo inflationary Theory and the Big Bang hence it is now possible to understand the universe including space time matter and the forces of nature from the radius Mass vibration of a single quantity quintessence so basically what's the big one here the missing mass of the Galaxy you know what they're talking about right here dark matter they're saying that this can explain dark matter and the continuing expansion of the universe is dark energy so they're saying that

(1:10:43) this Theory can explain dark matter and dark energy so dark matter doesn't exist dark

matter is just a property that we don't fully understand start making a paper about this here I think it's cuz we're going to make a post about this so what else did I want to steal I want to steal blah blah blah where's the thing about the unification special relativity take this bunch of math and then what is the thing about particle wave Duality where am I missing it chat could have sworn it was right up here

(1:11:28) somewhere it's in here somewhere right here it is okay so this is I mean this is huge guys really really really huge okay with this understanding of space time matter and the forces of nature in particular gravity is possible to demonstrate that a modification of gravity fields in and in turn the warping of SpaceTime can and technically can be technically readily available just write that down welcome to quantum gravity folks pretty good ch- Ching n there is no such thing as dark matter dark matter is just what we how

(1:12:22) we explain why GX spin as fast or uh do not go flying why they're sticky so how do we know dark matter is uh why what do we think of as dark matter so if I were to take this rubber band here and this is our galaxy and in the middle we have a black hole if we were to look at this galaxy we would imagine that the stars in the middle are going to be moving much much faster than the ones on the edges but when we look at them we actually see that the stars on the edges of the Galaxy are moving almost as fast as the ones in the middle but how is

(1:12:56) that possible because if you have a star moving on the outside of the Galaxy really fast it should go flying off inertia should cause it to go flying outside the Galaxy but it doesn't so there's more stickiness there than what we visually see from the amount of mass that we see how is that possible enter dark gravity or dark matter dark matter is what we call the idea that there's more stickiness there than we can visually see but but the reality is once you've unified Quantum and and macro now you

(1:13:28) also are explaining dark matter at all there's just more stickiness naturally out there basically is a way to think of it the way that Roy de Herbert mentions and thinks of it is probably a good way to think of it which is the more complexity there is The more mass there is so as things get more complex more mass gets developed and therefore when there's more mass now you have more stickiness okay um okay using standard equations for special relativity it can be demonstrated that by differentially increasing the velocity of

(1:14:08) electrons by applying a differential current their Mass can be increased in a specific way in turn by increasing the mass of the electrons by general relativity the number of gravitons emitted from these electrons can be modulated that means we can control control Gravity by multiplying this effect using an ultra centrifugal and centrifug boy that's a tough word Ultra centrifugal centrifug centrifugation goal Ultra centrifical goal or device the differential equ gravitational emissions can be manifestly Amplified

(1:14:50) this in turn in accordance with general relativity will cause a change in the curvature of SpaceTime wow wow chat hello MH370 videos Hello MH370 videos by increasing the mass of the electrons you can basically increase gravity and modulate gravity modulating gravity just

means control gravity and then by amplifying it now you can create a situation where the gravity will be Amplified I'm just going to take this whole thing now why is this important chat this is why it's important right here what are they doing

(1:15:47) right here they're amplifying it they're amplifying the electrons and the and whatever this this big word thing is here they're increasing the mass of the electrons they using super conductivity and then by multiplying this effect and they're multiplying it by having the orbs come and suck in then the gravity emission can be Amplified and they're amplifying the gravity emission this is why they're coming they're focusing in at the last second here guys this is what they're doing right

(1:16:16) here uh they were within a week of one another uh old kamam hat old kamah hat asked how close were my interview with Danny and Julian uh yeah they definitely set those interviews up I was 100% set up during those interviews the intent was to try to discredit me and discredit the case I don't know if they were like who was telling them to do that or whatever but it was a big setup for sure 100% 100% but that's side note now Arwin good question are they still reducing the mass to zero or n not sure sure I'm not sure I think

(1:16:55) that it's a matter of perception Arwin so they're increasing the gravity the effect of them increasing the gravity may still cause a bubble and therefore cause the relative uh mass of the object from our perspective on the outside looking at the plane become zero yeah so I still think it's possible for there to be both yeah Alex this is pretty wild right like this is actually explaining the videos I think right like actually explaining the videos I'm sure these videos are real guys I'm I'm 100% man and just to be

(1:17:34) clear like this is not just my opinion like this is what scientists have been telling me on my hard **truths** podcasts I've been trying to learn from them both uh you know from what you guys have saw and behind the scenes CU I'm still friends with them right I still talk to uh um Bob Greener like all the time even though we don't I don't see exactly I think that my opinion is that Bob Greener probably understands the mechanics better than almost anybody but I think that his uh explanations just he tries to take man

(1:18:09) outside the explanations entirely and I think there's still in my opinion humble opinion I think that there's something inside these objects that's causing this I think there's no way somebody faked videos that explain wormholes Guys somebody what fake these videos knowing how wormholes are supposed to work like who is this genius they faked the videos they knew about physics of the airplane and how and you know how the airplane can going to fly in that certain altitude wall and descent they knew about sinusal patterns

(1:18:45) and how the breakdown of the fabric of SpaceTime works and how to teleport a plane like what are you talking about there's no way there's no way look at this I think we're looking at a real gravity bubble here right we're looking at the real aquaberry Drive In Action right here that's it it's even creating the ring like it's actually explained in this patent are **debunkers** going to come along and say oh well the the Bitcoin billionaire just decided they were going to read

this patent and be like Oh I'm going to

(1:19:22) recreate Rec create the the SpaceTime effect no way dude no way right like this is the equivalent this this patent right here is the equivalent of us finding cloud pictures this is the the **debunker** equivalent of us finding the cloud pictures like we're literally looking at a pad and explaining the videos from a scientific perspective I me look at this this yeah sorry I got to look at it like one more time because this is this is wild man like and they change orientations right here to get ready right there

(1:20:04) they're changing orientations and getting ready and now they're amplifying the energy here and amplifying the electrons potentially increasing the mass of them and increasing creating gravitons and they're inang they have to be entangled to another orb I think they have to be I think they have to be right I mean this is practically a yatsi moment I think like this is wild I was reading this last night and I start posting in the Discord holy holy crap right holy crap okay this effective warping of SpaceTime

(1:20:41) does not of necessity imply superluminal velocities but does allow the creation of warp drive systems which do not depend on the creation of thrust by the ejection of material as used in current current space Technologies I mean it pretty much just says that yeah you're going to be able to warp an object with this doesn't necess necessarily imply super luminal velocities but that's what we're saying he's being a little koi at this last part right like holy crap I mean honestly Arwin I'm just going to be

(1:21:11) clear with everybody in my opinions I don't think that this plane went to another dimension I don't think it went 10 years in the future I don't think it went to another planet I think they just sent it over to the malds I just think they s sent it over the malds here it is right here this is our route this is what I've always believed since early on in terms of once I figured out that this was or once we I guess realized that this is like some type of super luminal event the plane is especially because the plane's going

(1:21:40) east the plane is like actually going like opposite of this direction right here in the videos we know because we can see the coordinates so if it's going backwards getting sucked backwards it's going somewhere over here and what's over here the Mal you might even land the plane over here on one of these Island bases and then lift it off like deal with the fire or whatever land it over here and then you fly it back down to Diego Garcia and that's the reason why one of these Islanders here sees it at 6:00 in the

(1:22:08) morning or something like that they teleport the plane over here they take care of it maybe even maybe unload some of the passengers I don't know and then they take the rest of the plane to Diego Garcia where it disappears and here's the sighting right here right here on this dot you can see this is the sighting of the mald the maldiv people on this kudah houdo island 20 people on this tiny little island all see this plane big plane made L and noise draws the Ark in the sky 6:15 a.m. they know because it was prayer

(1:22:41) time one of the people even saw the red and white stripe of Malaysian Airlines man they saw the plane you know they saw it no I think the plane survived I don't know about the people but I think the plane survived that's why I kind of like the idea of the remote autopilot too because even if the people didn't somehow survive I think the remote autopilot could have landed it safely but I like to think that people survived but I don't know man I really I just really don't know I can't tell you I

(1:23:17) have all the answers I think it has to be entangled to another order because you have to a steering wheel you got to have a way to drive the engine right you can't just like where is it going otherwise just anywhere how do you control the direction of travel right the hard part is this is if the plane was on fire from over here I'm going to make this maximize for a second the plane's on fire at 1721 Mike McKay sees it it's going back to panang Clos this airport and then it switches and goes up here towards where KT sees it

(1:23:52) this is an hour and 20 minutes of a depressurized plane the oxygen masks only last at best 30 minutes so you've got 50 minutes of no oxygen masks that's why they're flying low right is they're trying to give people enough oxygen but it's going to be cold on the plane people are going to potentially be like not having enough oxygen to breathe there might be toxic gas or toxic smoke spewing as well as H hallogen gas causing this glowing orange impression that we see like it it's not looking good for the

(1:24:25) passengers even before we get to the super luminal warp bubble whatever is going on here right so I just want you all to know everybody who's in this chat right now that this technology is real if I were to disappear or whatever I'd expect you guys to pick up where I left off technolog is real I'm not being attacked by direct energy weapons I'm not suicidal or anything like that I'm not going to disappear now here's a weird thought while before we continue remember what uh Amy said I'm

(1:25:01) gonna I'm GNA pull it up remember what Amy said guys why is there two videos of this oh yeah cuz I replied myself okay he said it has been he said it has been suppressed every single [REDACTED] time and he said I don't think they're going to suppress it this time he said I think you're in the clear he he said they obviously know about you because I've had multiple both protective and threatening interactions with various agency affiliations whatever he was like if if you haven't

(1:26:06) had a US government agent come to you and say stop shut the [REDACTED] up stop shut the [REDACTED] up if that hasn't happened they're gonna let you they're gonna let you do it they're wa do you get that guys if that hasn't happened to you if they haven't come to you and said stop shut the hell up shut the heck up if that hasn't happened then they're going to let you do it this is why I think I'm being used this is why I think I'm being used I'm pretty sure at this point I'm being

(1:26:39) used now I don't think it's a a situation where I was chosen I think it's a situation where they're just ready for the information to come out and they've been waiting for anybody

to reveal it because otherwise they should have come to me and they should have told me they should have more directly told me to stop and nobody's done that which is what makes me think that it's a situation where they want so they want somebody to release the information in a controlled setting probably like

(1:27:13) Arwin saying and yeah I think they're using me to get the word out as as a a matter of opportunity it could have been anybody else right could have been it doesn't have to be me it could have been anyone else um and this is the reason why I am being as transparent as possible about this to everybody right because if something were to happen to me or if I were to stop or if I were to even switch sides or anything right then I would want you guys to know all this all this information right this is all

(1:27:46) publicly available no they didn't tell her to stop either and that was four years ago and then people may say well if they didn't tell Amy to stop why did nobody else push forward right maybe they did maybe that's maybe it's a matter of there isn't anybody else nobody's pushing forward remember my post from this morning guys let's look at my post from this morning I'm just a normal guy who has worked in healthcare all my life because I wanted to help people being taken advantage of

(1:28:23) we've discovered that unification of quantum and macro has been suppressed independent uh has been independently solved multiple times and constantly suppressed this may be true of the fate of MH370 as well everything we've discovered has been hidden in plain sight now why did I say this because other people have proposed the fire Theory too we found out they just haven't put it all together they just haven't forced their way forward MH370 is not primarily about Discovery it's about Revelation it's about honoring the

(1:28:57) sacrifices of those who got us to this point science is a process of building on the knowledge of our forebearers now why is this important because what we're talking about here is this idea that it can be anybody right and we are potentially just being used in the same mechanism for disclosure to get this information out because who's talking about this nobody is Corbell is not talking about this Ros cart's not talking about this Steven Greer kind of is but he's not taking it to this level right he's talking about teleportation

(1:29:29) existing but he's not out here like he doesn't have videos to show people he's not talking about their explaining the science to people right yeah old uh camel hat that's an interesting part they had the podcasters tell me I think in a certain way that is a bit of a could be a bit of a a uh message I'm not sure and maybe you know if there is foul play with the Amy situation then maybe she did get told right I mean her message gets pretty dark man her message gets pretty dark after that I'm not

(1:29:59) going to post the rest of it but you guys can watch it yourself if you want yeah I'm doing what an analyst does and that's what my job is as an analyst and I'm putting it all together right we're not going to let this opportunity go to waste it only takes one person to make a difference be the change you want to see in the world that's my message to you guys it only

takes one person I am just a random person that happened across this I didn't even believe in half of this stuff a year ago right and now I'm at

(1:30:32) the Forefront of it disclosing the science showing people the science explaining how it matches with the videos it really just takes one so why is this video awesome why did I post the attack on Titan video because in this Attack on Titan video the scouts here are doomed they're up against an opponent that is a literal Titan that can wipe them all out and they have no hope they have no plays whatsoever their only play they have one play suicide charge suicide charge in order for the hope to have their one best person get

(1:31:09) out there and expose and win and win it all for them so let's watch what happens I want you to imagine that the Beast Titan is The Gatekeepers right The Gatekeepers the United States government the one who controls all the media that has all the power and the people on the horses are us they're the people that came before us the scientists that have been suppressed before us the scientists that had to retract their papers the ones that have been discredited defamed all of that stuff that's them gas going

(1:31:42) to do anything guys the overconfident Elite they think that little bugs like us can't make any difference right little paper here and there patent here that getting exposed folks so that's what we're trying to do to the government folks we're trying to expose them no we're not I don't even care about getting copyright strided hey Amanda welcome yeah it's super dramatic and over the top and that's why I love it that's why I love it chat that's why I love it okay so now you guys all understand the

(1:32:16) video you understand why I posted it I knew it was going to be super corny when I posted it and don't even care okay um quintessential Mass do we need to go through the rest of this I think that might be good enough okay taking this mass energy it is possible to show that all matter and forces on nature and space time can be constructed from the singular quintessential quintessence quintal quantity excuse me moreover using this quantity the laws of physics can be derived from first principles thus uh priori priori

(1:32:53) all components of the physical Universe including SpaceTime can be constructed from this minimal Mass component termed quintessence now I wonder if pal Salvador P would probably call this the Super Force particle wave Duality if the presence of quintessence accounts for the structure of matter and matter itself forms from the the number of quintessences then the frequency of matter and thus wave particle duality directly arises from first principles specifically that wavelength of matter derives from the vibration of

(1:33:23) quintessence from which it is constructed con uh constituted this is the frequency and in turn wavelength of light and matter is directly equivalent to the number of quintessences contained within it we find that the actual frequency of light can be directly derived from first principles from the effective mass of the photon and thus from the number of quintessences it contains okay let's see what else we got down here I think we already got to the good part this is like the boring super deep science part although I sent this I put

(1:34:00) it in the chat for you guys I'll post it one more time for you guys if you want to see it quintessence you call it the huge Force the big dong Force should we call it that big dong force be real scientific about it the huge Force the Trump the trump version the huge Force I like it uh um this is thus the standard relativistic equation that dur was able to construct from the schinger wave equation this relativistic equation can be derived from the modified wave equation this one takes account relative mass which the quintessential wave

(1:34:37) equation contains okay I feel like we need to look into a little bit of dra right I'm hearing dur a lot how long does this go oh boy yeah we're not going through all this oh boy oh boy that's a a little too long let's see detailed description of the invention I think we'll read the detailed description of the invention then we'll call it after that how long have we been going almost two hours yeah 365 tags on this is a lot um yeah Egon good point if the orbs form a circle in a two-dimensional plane and

(1:35:36) the plane travels perpendicular to the plane to the fourth orb then the whole thing forms a cone right yeah possibly thanks Remos appreciate you buddy does anyone have permission to post my content on Bill b yeah you can post my content anywhere you want as long as it's not a location that I'm posting it which is really just Twitter so go nuts man slam dunk Mo welcome yeah sorry I went I started live earlier tonight because I gotta I gotta stop early tonight so I can actually get some sleep I've been I've been

(1:36:09) struggling that's why I didn't uh stream last night because I was super super super tired the direction of the orbs rotation dictates the direction of the teleportation I think that's probably true Egon if they Rota in the opposite way would the would it be telephone in the opposite direction maybe not sure about the rotation of the orbs indicating it but seems possible let's see if we can understand more by reading the technical the description of the invention the theoretical understanding of quantum gravity allows allows the

(1:36:42) design of time displacement systems from first principles it is unlikely that gravitations of care singularities can be controlled in a precise way using current technology nevertheless less an understanding of three-dimensional SpaceTime and matter does allow the design of Elementary displacement systems that is systems who are hold or whose displacement rely on Direct warping SpaceTime as opposed to the ejection of material to provide thrust resulting in time dilational effects um so yeah basically they're

(1:37:12) saying that we can now that's interesting time dilational effects God we keep saying all the right buzzwords right where's the full Amy video it's in one of the posts it's in the replies in one of their I think I not sure where exactly but it's somewhere um the background of these systems are already partially understood and quintessence Theory allows for further development for this invention the formulation of black holes in the laboratory represents a crucial step to understanding the mechanisms that

(1:37:44) underlay gravitational physics and in the turn warping of SpaceTime right in my mind right there I'm thinking ligo I'm thinking CERN large hydron collider the essence of black holes

permits the localized application of the axial torsion spin rotation coupling effect resulting in a rotating frame with relativistic factor which can be used in the creation of an alary bubble uh space time bubble under the Vanden bro modification of the alabar geometry resulting in the method for generation of pseudo 2+1 dimensional

(1:38:19) anti- Deiter space using two kyp positively charge rotating dilation singularities where one Singularity is maintained as an axis of rotation or reference Singularity the other Target Singularity is subject to a differential equational electron flow so as to simultaneously pass above the Photosphere of said singularity in its direction of rotation and contrary to its directional direction of rotation to release a directed flow of gravitons in a sinus ital oscillation simulating a rotational effect of the target

(1:38:55) Singularity around the axis of rotation provided by the reference Singularity that is literally saying there is two singularities one on either side that's what it's saying when it talks about the directional flow directed flow of gravitons in a sinal oscillation we've got a we need this it's basically saying that yes it's going to basically shoot a flow of electrons creating a gravity wave that's what it's talking about creating a freaking gravity wave right there from one orb to the other from the three oh

(1:39:39) wait I'm you can't see my face that's what I was talking about it's creating from like you know one to the others that's what it's talking about right there in this instance the space time laps would be repelled by the gravitons in such a way as to disperse SpaceTime quintessence in a circular fashion around each of the singularities producing multiple event Horizons around the simulated axis of rotation multiple event Horizons what this as well why is that big chat we might be seeing more than one

(1:40:22) Event Horizon here two event Horizons chat I'm using the **debunk** video um how many event Horizons are we seeing we're seeing at least two right there's one here's a second Event Horizon yeah wow it's a ring and we're seeing the two event Horizons I think huh wow wow chat I think we're I think we're on to something here this is pretty wild the release of gravitons from the target singularities controlled differentially governing the electron flow across the Photosphere what's a

(1:41:20) photosphere Butters Kennedy Josh you're Butters Kennedy the one with the dogs Butters Kennedy just posts sweet dog pictures all day he's got a bunch of like Dash Hounds or something ah the Photosphere is the visible surface of the star it is the deepest layer of the star that is transparent to photons of certain wavelength so it'll be like the outer layer is the Photosphere going to be is this going to be a photosphere the outer ring this is this the Photosphere is that why there's a z is that way there's a flash is the

(1:42:20) Photosphere yeah Trent I get your point but we also can't see this so I don't know yeah it's a little weird this should be the only Event Horizon but maybe this is a photosphere I don't know it's possible I'm not to fully understanding every aspect here of this very very possible in fact very likely um but we'll get there we'll get there I mean we're doing all this with just two

open- Source videos that are not even Declassified as far as we know so imagine if we had access to like a

(1:43:03) hundred of these videos um okay what was it going to say in turn differential directional flow across the Photosphere of gravitons would determine the direction of motion through the SpaceTime lattice and the resulting time display from one space like space like boundary to the other in accordance with this dude's theorem when in implementing this approach it is important to remember that the black hole is not excited by the Smashing of the clump as it hits the Horizon the hole is rather excited the whole is excited

(1:43:40) chat when the metric uh perturbation uh perturbation associated with the clump is felt by the background metric I don't the excitation of therefore constitutes a smooth process wherein whereby infall of a clump from rmbb and through R plus serves as the source in turoski equation for small perturbations of to the Cur geometry this is an important distinction great CU I don't understand it with a great deal of relevance to the Practical engineering of the displacement unit since we need to gauge the driving of q&r modes in terms of an

(1:44:25) eactive coupling from Clump infall okay I understood like no none of that what I'm thinking here is it has to do with like how to specifically set up the mouth of the Wormhole and how to determine how you're going to entangle it to the others I don't think we're seeing both ends at the same time but that's a very interesting thought uh where three that's an interesting thought uh okay so WP gen light n for truth 2 says the Photosphere is the whitish part between the outside and the inside where the black starts

(1:45:08) that's interesting that's the Photosphere so he'd be saying he or she is saying that the Photosphere is this part right here Photosphere would be this part and it in the inside this part would be this Photosphere seems possible application of the method described in the previous section results in Translation outside of the cosmological Horizon where  $F$  less than zero the topology of the resulting geodesic for a large constant  $R$  is mathematically equivalent to the idian cylinder of the condition  $R$  do s I think

(1:46:07) that's a sine wave where  $T$  is the coordinate along the cylinder  $I$  plus or minus are located outside the Future Past cosmological Horizons where  $R$  is a time like and  $T$  is space like in the case of a rotating curve black hole there are two circular Photon orbits that can exist in equilateral equatorial plane and be exploited to create a tip sinusoid one is a propagating orb movement moving in the same direction as the black hole's rotation while the other is a retrograde orbit moving against the black hool's or rotation the

(1:46:46) radi respectively given by that where  $a$  is angular momentum okay um the fact that the prograde photon or in the cas or or in or case Cooper pair with Bose characteristics they're talking about Cooper pairs which is uh in super conductivity that's when Cooper pairs get formed Bose characteristics they're talking about Bose Einstein so that can all be attributed to the lens theing effect the Dr dragging of inertial frames due to the black holes rotation which we can control and influence by electromagnetic

(1:47:28) induced load coupling within the open magnetic field lines threading the black hole Horizon I mean that sounds exactly like the orbs uh converging right this dragging would cause charged Cooper pairs to revolve around the black hole relative to a static Observer at Infinity thus the such an observer a proper grade Cooper pair would have to orbit at a smaller radius to compensate for the inner angular momentum acquired while a retrograde one would have to orbit at a larger radius to comens for a L momentum indeed in the limit of zero

(1:48:24) rotation these two orbits coincide at  $R = 3r_s$  giving the single circular orbit of a Schwarz child black hole now recall that orbits around the Schwarz child black hole are necessarily confined to a plane passing through its Center because of the spherical symmetry of the SpaceTime however in a curv space black hole only has axial symmetry um so Schwarz Tri black hole is let's let's look up a Schwarz Tri black hole what do you guys think have I ever tried measuring the

(1:49:38) frequency of the orbs oscillation do you think they have to hit a certain frequency to trigger the event some sort of resonance probably yeah probably probably some sort of resonance everything's seems to have to do with resonance right so most likely yeah uh this is Magneto hydrodynamics and super conductivity definitely comes into play yeah I don't know who you are but you are nailing it Magneto hydrodynamics is mhd we probably need to add mhd to our list of science stuff if it's not already on there I think my dog finally is done

(1:50:18) eating that bone so we're not going to have the stuff in the background we will understand this one day or we'll get killed one or the other hopefully we get to understand it and the government won't disappear us so the main difference is the rotation a schwar child black hole is a nonrotating uncharged black hole Cur black Hol is rotating I don't think our black hole is rotating the rotation of a curve black hole induces some unique properties for instance that has an osphere I don't know what that means a region outside

(1:51:12) the event hole where space time is dragged along in the direction of the rotation h it's the rotation is the main difference should I get see if Lulu wants to come up sympathetic resonance man these real terms it's hard for me to tell the difference between uh science fiction and science fact at this point okay um one could for example contemplate the existence of a spherical Bine orbits to orbits with constant coordinate radi that are not necessarily confined to the equatorial plane around the curve black

(1:52:04) hole it may seem a little surprising that spherical orbits could even exist but there's an interesting reasons why they're possible note that an object in a spherical orbit would in addition to moving around the black hole in asthal Direction be Uno undergoing some periodic Motion in the latitudinal direction this is only possible if there is a conserved quantity associated with the motion of Direction just as angular momentum is necessarily conserved by its rotational mot Motion in an azimuthal Direction the azth right is like the the

(1:52:38) circle around uh the object now because the curve space time only has axial symmetry geodesics in it should only have two constants of motion namely energy and angular

momentum however Carter discovered the remarkable fact that geodesics in the curved SpaceTime possess a third constant of motion turns out that Carter's new constant governs the motion of geodesics in the latitudinal direction although it is not related to any obvious SpaceTime symmetry thus spherical Tim like orbits which assume Egan like

(1:53:14) properties around the curve black hole are possible and when coupled with charged bosons may be exploited to manipulate the relative event Horizons of the target Singularity H they're talking about the orbits spinning around the the plane here the location and the temperature of the modified Event Horizon depends on the time charge angle of incidence of the Cooper pairs the fermionic spectrum of draa particles displays a spin rotation coupling effect due to the interaction between the particles with spin one or  $= 2$  spin minus one equals

(1:53:52) 2 H and the black Hole is with rotation something is important about the spin think we may need to look into the spin let's let's ask grock what the heck science fiction mhd is very applicable because it's Vortex Dynamics yeah I don't know if I'm going to be able to fly on any more planes

(1:54:56) folks time and variance X I have not seen that no okay the spin of a particle refers to a fundamental property of subatomic particles that is analogous to classical concept of angular momentum the spin of a subatomic particle is an intrinsic property that does not involve actual spinning in quantum mechanics the spin of a particle is quantized meaning it can only take certain discrete values the most common values are of half integer values such as half 3/2 Etc integer values such as 0 1 and two Etc these values are measured in the units

(1:55:31) of reduced plank constant this makes no sense to me one key difference between the spins of the particles lies in their behavior under rotations for example particles with integer spins bosons follow Bose Einstein statistics and do not obey the Exclusion Principle which states that no two identical fermions can occupy the same quantum State uh simultaneously on the other hand particles with half integer spin Fermions obey them okay so particles that have zero one and two are boson particles that have half or three halves are

(1:56:11) Fermions okay that actually explains a lot in summary the difference between the spins of particles lies in their quantized values and the way they behave under rotations hey thanks everybody thanks everybody who's in the chat now I appreciate you yeah I hear Diego Garcia is pretty nice this time of year um so particle spin two has an angular momentum of two units of plank constant oo two this type of particles often associated with the graviton in the Context of quantum mechanics particles have different values of spin which is intrinsic

(1:57:04) property for example a photon has a spin of one an electron has a spin of a half and a graviton is thought to have a spin of two wow yeah this is fire today chat we are learning some straight up science right now I'm going to skip I see there's an ad I'm going to skip this ad guys we are learning some straightup science this is we've had some fire streams we had some drama in the beginning we've got some straightup up uh hardcore science right now Spin 2 equals graviton particles with inner spin bosons

(1:57:45) obey Bose Einstein statistics and can occupy the midst Quantum State I didn't realize that spin equates to Bose Einstein statistics so it's really that simple integers are bosons and half integers are fermions it's that that's that simple does anyone in the chat need more explanation on the bines versus um fancy a harmonic of the resonant frequency to absorb energy more like a harmonic of the resonant spin in relation to the mass of the plane and the direction of the spin itself in summary a particle with a spin

(1:58:28) equals 2 is a hypothetical elementary particle often associated with graviton that has an intrinsic angular momentum of two units of the  $\hbar$  constant very interesting stuff okay where was that where were we at man reading a lot of sense gets me super tired though okay so the fermionic spectrum of draa particles displays its spin rotation coupling effect due to the interaction between particles with spin 1 equals 2 so these are going to be your grav your gravitons your your bosons the effects arise from the interaction between the spin of direct

(1:59:10) particles and the rotation of the evaporating black holes the feature of the spin rotation coupling effect is its dependence upon different helicity states of coupled particles with spin half and its irrelevance to the mass of particles okay um I'm going to just hang tight chat for just like two minutes I'm going to quickly make myself another Martini won't take long damn chat we got the fire fire is going off right now fire careful shout the smoke detector Mel off guys Post in the chat anything else

(2:00:01) I need to know guys I feel like we're a long distance Runner here and uh we're catching up to the to the sprinters here EF framework okay how do I can I copy paste this oh that's beautiful this is probably going to be very similar to dilation Theory so again check out my uh my post

(2:01:09) from this morning because the reality is this has already been discovered multiple times the person who comes out and says oh they discovered uh you know Quantum that the ER equals epr equivalent like it's already been discovered it's already been solved in fact you could even argue that the plane mystery has already been solved but that nobody just was able to follow through with it right that's the kind of that's the crazy part that's why we're not even really disclosing anything at this point

(2:01:40) we're just exposing it revealing it right lock lock heed Martini we never forget who we're drinking for exactly exactly chat this account's only 7even days old weird very weird s day old account trag and ghost you've kind of turned in from trag you've made a quite the change man you started off as a **debunker** and now look at you now you're one of the orb fam you know this is why I think there's hope guys tragon shows us There's Hope for everybody people can start off as a Debon Bonk and then they can turn into

(2:02:29) uh fullon orb fam right yeah I'll check these out later okay good to have you here tragon good to have you here man gives me hope that people can be turned um God that's just that's just straight vodka okay yeah you kind of need a little bit of alcohol in order to get through some of this stuff it ain't easy folks this ain't easy reads is that my ice machine what was that um

in order to create a signal capable of inducing a topology change from one SpaceTime boundary to the other in accordance with this theorem the

(2:03:28) electrical charge oh look there's a typo here the electrical charge in the upper half of the Photosphere would need to be maximized the electrons will have a vector in the left to right direction as the singularity spins clockwise Which Way of the orb spinning I don't know there's a right or wrong answer related to what we're showing here but which way are they spinning I think they're spinning counterclockwise right actually they're spinning it's hard to tell in in three dimensions which way they're spinning

(2:04:03) right they're going counterclockwise though right yeah definitely counterclockwise and now do they switch and go clockwise right there now they're going clockwise right now they're clock counterclockwise again now they're clockwise again I can't tell if it's going clockwise or counterclockwise and now here the problem is they're taking each other's place and the frame rate's too low so we can't tell which way they're spinning it looks like counterclockwise to me God that's hard to

(2:04:40) tell can you guys tell counterclockwise is important I feel like we got somebody like in the no in the chat right now and they're just guys pay attention to this account pay attention to this account I'm good at picking this kind of stuff out yeah they're definitely going counterclockwise wow so they're spinning counterclockwise maybe at maybe the electrons are going the opposite direction or something like that if a maximized current is applied to the singularity in the same direction this will travel in an increased velocity due

(2:05:29) to the electrons relative to the center of gravity of the singularity due to the flow of the current doesn't don't the electrons go in the opposite direction of the current whereas am I wrong on that this is why we had to learn electrical engineering chat according to special relativity and the SpaceTime last Model this will result in an increase in the relativistic mass of the electrons and in by turn general relativity and increase in the release of gravitons and this is the most indepth unification Theory we've ever

(2:06:10) read there was a toroid of a of as Cloud when it disappeared was that English yeah they're definitely going counterclockwise because of the right- hand rule so it goes backwards maybe Egon good thoughts chat you guys are on fire tonight the lower half of the electrons yeah actually now that you say that right it's just a matter of perspective from which side you're looking at it right so if they're going counterclockwise then the right hand rule is going to point them backwards uh Egon I think you nailed it

(2:06:59) right the right hand rule is going to point them backwards so the direction of travel is going to be of the electrons is going to be backwards from the plane using the right hand rule yeah it is going to get sucked backwards isn't it guys you're going to get our man killed over here WP gen genl this guy's going to end up getting disappeared I'm afraid to even click on his account am i g to find out this account's one day old no oh whoa you posting videos about Bob Greener an apek who are you who is

(2:07:56) this who is this oh chat we might be yeah so we're we're going to subscribe to this channel folks yeah El anybody was in electrical engineering they know they know some stuff folks when did I notice four orbs uh I can't take the credit for the four orbs um that was Bob Rossi who uh proposed that during one of our hard truths so and ever since then we've kind of ran with it four orbs makes sense because I had already propos like here's the crazy part chat and this is why people are hating on me though too is

(2:08:47) that I have just logically deduced a lot of what is scientifically accurate the super conductivity uh even when I was calling it wormholes turns out it really is actually wormholes and I I backed remember when I backed away from the Wormhole stuff and now we went back to it also as well I had hypothesized that quantum entanglement was required early on but I didn't know how to explain it and then I moved away from that and now we're back on quantum entanglement again um yeah I don't know I don't know you

(2:09:16) can say I'm getting lucky or whatever but I'm not sure it turns out that the stuff I've been describing since the very early on super conductivity quantum entanglement all the stuff is you know even double slit experiment I don't have the in-depth scientific knowledge of it but I have the ability to like just look at it and understand it like intuitively is the only way to put it mechanically I'm not good oh you're Gerald you was on you on live must have been on one of the aliens scientist ones okay I knew you were one

(2:09:51) of those guys I knew it Gerald nice to see you sir welcome welcome yeah wow but that's what's weird so before I go on like yeah this is why I'm getting attacked so hard it makes a lot of sense right the people that know it's real know that I was on it that I was like intuitively understanding it and that's scary right because that's somebody who doesn't even know like you know I I don't even know the in-depth science of it but I'm looking at it I'm going wait a minute this is legit this is this is how it

(2:10:34) works right and so they had to immediately try to discredit me and attack me right away right because they knew that I would figure it out because it's just a matter of time and that's why I think that my play which is try to understand the science is the right way to do it um and thank you Gerald you're not the only one to tell me that and that's part of the reason why I keep going because I have a lot of people telling me like you are you are figuring it out and they're not like dumb people these

(2:11:02) are like very smart people who are scientists and engineers and mostly electrical engineers right um so yeah I appreciate that pretty crazy pretty awesome okay uh um but just for the record I I don't think I'm anybody special and I never going to change I still even remember when kim.

(2:11:30) com asked me so way back in the day and my opinion of kim.com is I I'm that whole situation was weird uh feels a little bit like it was consensus cracking like kim.com wanted to get close to me so that he could then Flip Flip it around and go oh this has been debunked right and that way they' get everybody to stop looking at it they may even work thought it might have

worked on me as well and it almost did I just had such a bad feeling about it after it happened but even though I still think he's a good guy kim.com even though I

(2:12:01) think even if he was an agent of the government which it would have been very easy for him to be I mean the government basically controls kim.com I'm not going to lie to you guys they basically control him they have him by the balls um when you have somebody's money you have them buy the balls right and uh even said that like this is what you guys have to realize the world is not black and white they might not even have told kim.

(2:12:25) com what the **truth** is or not right but they might have told him like Hey you need to do this for us right they might have told him something like that and he's a smart guy so he probably goes why why are they gonna have me go talk to this nobody Ashton Forbes guy right even help build me up a little bit uh cuz the whole plan then is to chop me down afterwards right and make make this whole thing go away so I still think despite all that kim.

(2:12:53) com is probably still a good guy my interaction with him he's a good guy one of the things he told me was never to let any of this stuff go to your head don't let it change you and I never would there's no way I would ever let it change me um although I agree with Arwin he's definitely scopy like he's the definition of scop kim.

(2:13:14) com is the definition of scop still think he's a great guy but that's the reality you could argue that I'm scop right you could very easily argue that I'm a scop I mean I'm sitting here talking about teleporting planes right even if it's true that could be a scop right it's a scop in the sense that like they're trying to get the information out that's why it's all black it's not black and white it's just Shades of Gray right like what's the what's the right Play Because here's the thing James

(2:13:41) what's the right play what's the right play What's the wrong play is the right thing is the good thing to do to reveal this technology to the world world or is the bad thing to do to reveal this technology of the world what if this technology destroys the planet then this is the wrong thing to do right that's why we can't think of things in terms of black and white you have to think of it in terms of Shades of Gray so kim.

(2:14:08) com could be a great guy but he could also be a a scop agent of the government he might be getting used without knowing it look at it like this as well the reason why we don't attack people like Jeremy corbel even Ross kohart who I'm not a big fan of the reason why I don't attack these people is because they're also being used sometimes they might be getting told the **truth** sometimes they might be getting trolled fictions they probably have to wonder themselves that's part of the reason why they probably even if they're good people

(2:14:38) themselves probably part of the reason why they don't want to talk to me is because they don't know if I'm being used they don't know if I'm being passed information that's to send them information that's incorrect it's tough this is exactly what Tim bersett said exactly Amanda great call out Amanda like Tim bersett says they may not even know it's disinfo he could be

blackmailed or manipulated somehow you never know exactly so Amanda you get it and now this is the reason why I am transparent

(2:15:10) about everything that I do the only way to break that down like how do you know whether or not you're being played with the answer is you can't know so what do you do what do you do when you can't know you put it all out there you show everybody right you show everybody what you're seeing how your brain's working so that people can see that you are being as honest as you can be that way no matter how it plays out you're covered that way if you get **scammed** by a raw file you realize that

(2:15:41) you were not involved in it you had no idea you were just an unsuspecting participant right and if you don't get sced **scammed** if you find a a paper on the internet like this one that literally explains the videos then people realize like I didn't set this paper up that you know I'm learning along with it I'm reading this for the first time I only read like the first couple paragraphs last night right yeah and so Kim was.

(2:16:07) com was very quick to turn his back on the investigation I would say that that is your very typical consensus cracking disinformation mechanism right you know what consensus cracking is guys we may stop here for tonight we've been going almost two hours already under the guys of a fank account a post is made which looks legitimate and towards the **truth** is made but the critical point is is very weak premise with substance is this maybe this isn't right oh LinkedIn wait no no no no no LinkedIn that might reveal my personal

(2:16:47) information uh um once this is done then under alternative fake accounts a very strong position in your favor is slowly introduced over the life of the posting it is imperative that both sides are initially presented so the uninformed reader cannot determine which side is the **truth** as postings and replies are made stronger evidence or disinformation your favor is slowly seated in thus the uninformed uh reader will most likely develop the same position as you and if their position is against you their opposition to your posting will most

(2:17:19) likely be dropped so what do you do you build it up you pretend like you're on their side and then you bust boom now it's all fake now what does that do it makes everybody think it's fake that's why you have people come to me and they go oh uh kim.com said that was fake though right because it gives a huge amount of people the impression that it's all fake and it would have been better if I had jumped on board with it as well that's why it was weird that kim.com the same the very next morning

(2:17:48) before just I had just woken up and the **Jonas** thing had been up there all night and he's already calling me up telling me that I should pressuring pressuring me to come out against the videos right pressuring me right away to come out against the videos the 150,000 was never paid out nobody even met the criteria of it and then **Jonas** didn't take the 10,000 even when he all he had to do was sign an affidavit how is not somebody not going to take \$10,000 from kim.

(2:18:22) com kim.com was sitting there I have the video kim.com was sitting there saying just

give me your uh ewallet and I'll send you 10,000 in Bitcoin right now he was saying that to to Jonas while I'm on the call with him I'll send you 10,000 in Bitcoin right now you can see my reaction on the video if I were to play it and I'm sitting there just going give me 10,000 I mean I'm not going to turn against against the investigation for 10,000 but [REDACTED] if I had just took some random pictures I definitely would have

(2:18:53) taken 10,000 for that it's crazy and now the same guy is threatening to sue us I guess he must really have a lot of money doesn't need 10 grand I got news flash for him lawyers are expensive man hey Neil I appreciate you bud yeah attaching your name to an investigation you're not part of it all is real weird real weird chat that's real weird 20K no for me okay so if anyone's listening the government wants to buy me out \$10 million \$10 million and I will say that the VFX matches perfectly I'll

(2:19:54) say it's a pixel perfect match that's that's how much it probably would take me to sell me out honestly probably wouldn't even take that much as long as they were to give me something that says they'll uh let me know about the the technology reality is you guys again the world's Shades a gray and I'm not even sure it's the right thing to reveal this I just know that this point there's no way I'm I'm stepping out unless I get to know how to what's real and what's or

(2:20:22) what's possible and what's not that's the reality that's the reality you either got to give me 10 mil oh yeah I'll definitely hook you guys up with some money if they give me 10 mil you you guys I'll probably give you guys like a million I'll just spread it around yeah you got to be real I mean you got to be real everybody can be bought out everybody can be bought out oh I mean you guys will know there there's no way around that right like you guys will know if I come out and all

(2:20:51) of a sudden I'm like yo Chad it's a it's a hold on guys um Let me let me look at the the VFX again oh um you know what Corridor crew is right this is a this a perfect match guys um yeah turns out I was wrong this is clearly a perfect match I don't know anyone who thinks this is in a perfect match is crazy if you guys know that you'll know right away that I sold out you'll know right away 100% No Doubt but at this point there's only two way let's say three ways okay there's only

(2:21:22) three ways I get out of this okay one they pay me 10 million bucks okay and then all of a sudden you'll know because I my account will either go dark or I'll be out here going oh guys I was the corridor crew was right they were too smart they figured it out two second way uh they turn me so if they let me be on the inside and know how this stuff works and I become like an agent or something whatever you want to call me spy Intel operative or honestly I just don't give a crap just show me the goddamn orbs okay two is

(2:21:57) they show me the orbs they show me the orbs uh I get a new job and whatever that is I mean maybe Russia and China disappear me at that point I don't know I don't care that's that's option two option three is they kill me that's the only other way those are the only three

options 10 million bucks uh show me the orbs or or they kill me those are the only three ways this ends yeah if I come out and say guys **Reddit** is the the most legitimate platform ever everybody should be on **Reddit** those are the the smartest people

(2:22:29) in the world are on **Reddit** then you guys that's guys that's actually the uh the safe word guys if I come out and say that uh if I say that the uh that **reddit**'s the the say the best platform you guys will know something's wrong guys that's a safe word wait this side up is that actually true did cter crew actually **debunk** no way home set leaks Jesus if that's true wow honestly what would I prefer I would prefer they show me the orbs that's my first preference second preference is I'll take \$10 million and just go back

(2:23:12) to sleep living in The Matrix with my \$10 million and third option is prefer preferably not to be killed preferably not to be killed yeah if I just no I wouldn't even buy a new car guys I'm not that kind of person I'm not even the kind of person that like I'm like Walter White I'm GNA be driving my uh janky like Toyota or whatever right with my \$10 million I'm not the kind of person who likes to be flashy I'm the kind of person that like practical things but if I have all the bling around my my

(2:23:50) neck you know diamond encrusted four orbs pendant guys diamond encrusted four orbs pendant if I have the diamond encrusted four orbs pendant then you'll know you'll know then you'll know I sold out yeah \$10 million is cheap man they should give me 10 million that's nothing man come on the lawsuits alone would be in the billions and billions of dollars I'm mostly joking guys I'm mostly joking but it's fun the reality though is everybody has a price everybody has a price everybody will

(2:24:25) talk under the right amount of pressure that's just the reality oh I should have gone oh yeah yeah if I got the new uh the diamond encrusted diamond encrusted four orbs headphones that would be funny that's all you guys will know okay um is there anything else we need to look at in here okay drift velocity and drift velocity I don't know what that means Cooper per production as the Cooper Bears cross the Photosphere creation of the bows particles results okay non-hole accre across the target Singularity is then motivated by

(2:25:20) Magneto rotating rotationally induced Ultra relativistic disc Dynamics in the region of the flow bounded by bounded From Below by the marginally bound geodesic radius  $R_B$  as the particles impelled have a high spin values a largely coherent magnetic field in this region has the dynamical implication of compact Mass segregation at the displacement nodes of the non-axisymmetric MRI modes this results in a prolific gravitational wave emission coincident with the gamma ray stage maybe those are gamma rays the gravitational wave

(2:26:02) emissions are then manipulated to influence the reference Singularity to produce a variable gravitational signal which is then used to mathematically approximate gravitometer distortion including top topology it's getting late topology change from one space-like boundary to the other in accordance with the theorem so what they're talking about there is the spin and then the convergence is inducing The Singularity and it's creating the path so

what they're doing is the reference um the reference Singularity is the one

(2:26:44) that's being teleported to so again if uh my thing here is this is the plane and we're creating the entanglement here the plane this is the target Singularity Target Singularity reference Singularity so these are two sides of the Wormhole right so they are manipulating the influence to produce a variable gravitational sinusoid to mathematically approximate the gravitational Distortion basically to determine how to make it go from this point to this point I wonder if there's a limit to how far it can go or if it

(2:27:23) can just literally go anywhere pretty wild yeah if Lulu comes and she's got diamond encrusted uh pendant you know we're good where is she oh there you are come on pups come here interesting sounds like the creation of a gyroscopic spherical field line perturbation of space changing the time reference of the target yeah since space and time are the same God that just gets that's just such a mindbending thing it's like if you're changing time you're changing space and when you're changing time

(2:28:06) that's like what wow is this the unification of all of them that's what Roy de Herbert would mention right so Roy de Herbert he talks about time dilation a matter of speeding up the time when you speed up the time now you're creating a situation where the object can go the speed of light and I think it's really just the difference between the physics approach which is a theoretical approach versus the engineering approach which is like how do you actually get it done yeah Egon good question I've always

(2:28:42) wondered how do the three orbs entangling with the fourth orb is the fourth orb doing something cool too good question that's a really good question I'm not sure maybe it is maybe it's not I don't know wait am I not seeing all the messages no I think we still are okay so that's a pretty good question if you control space can you stop time yes that's called super position Alex so you can hold an object in super position then you can stop time um if you move close to a black hole your time is also

(2:29:18) going to stop because the more mass the more the slower your time flows so a black hole has a huge amounts of mass so that's going to cause it's a basically a singularity of mass so that's why your time is going to become zero uh does Lulu like snow now we're asking the big questions yes Lulu does like snow uh she hasn't experienced it too much I used to live in California but she does like the snow she's definitely the cold does not bother her at all like at all yeah I feel like I got some

(2:29:50) questions to ask Dave Rossy and maybe Bob Greener as well pretty wild guys hey Monica yeah we've had a pretty bomb uh space or stream tonight two and a half hours it's been going hard um and we've only been ramping up more and more people so I think guys first of all make sure you like the stream I don't know why it probably does stuff I just feel like it's a cool thing to do second of all anything cool that you guys learn tonight **I want you** to post in the replies on the Stream post on Twitter so

(2:30:24) on Twitter I I posted the stream if you guys discovered anything cool tonight uh if you clip if you want to clip anything tonight and post it in the replies on my Stream post for the one I made on Twitter guys um I am planning I'm going to post tomorrow the write up of this patent because wow what a patent what a patent pretty pretty awesome and then uh let's let's show a couple memes tonight yeah time is not what people think it is I think that's pretty accurate oh liking the stream helps the

(2:31:06) algo guys alos are good okay I think it's time for a few memes we haven't shown any memes in a while um let's see what we got waiting for the recreated videos never going to happen or waiting for the guy to come out and Su the Bounty right little Bernie uh little Bernie I once again acting for you to read the evidence literally no one reads the evidence none of their bunkers read the evidence hey Nash I appreciate you buddy I appreciate the people that have been

(2:32:09) following people have been caught on um yeah tragon thanks man have a good night buddy uh all the people that have been uh watching and and catching on you know I hope you get caught up to the investigation we are currently trying to understand the science the best that we can and we are making big strides guys already just in the last couple months it's been I feel like we've learned like two years of electrical engineering like college level in just a couple months and the reason for that is we're looking

(2:32:40) at the answers to the test we're looking at how you manipulate gravity in two videos so you can you can understand it a lot easier here and we've got a lot of people helping us out um let's see oh this is a good one just sympathizing with the families who remain silent what else we got we got a challenger to the corridor crew guy like look at these glasses dude these glasses actually rival the corridor crew guy should I get some glasses like this guys should I get some glasses like this so that I can rival the corridor

(2:33:33) crew guys Jordi Le Forge glasses like this is next level right here hard for me to believe that these are real sorry you got hacked wpg but yeah you can post on the replies on Twitter on YouTube but I don't really read all YouTube replies uh depleted you probably recognize a lot of these memes because a lot of them are yours Boeing board of directors when one of their planes catches on fire uh good question Casey on the plane exit I'll pull that back up again before we log off tragon you might appreciate this one

(2:34:29) if you're still here James somebody jumped in named James there's like 10 James in our chats by the way pardon me I cannot help but notice you Bann tragon goes for being a troll and that concerns me trag's ghost was not banned remember when they thought I banned trag's ghost and someone was like trying to make me feel bad about I was like wait but I I didn't ban him though trion's ghost is now an orb orb follower here's a little C another quter crew waiting waiting still waiting after

(2:35:03) weeks for CTO crew to release the videos they said they can create in five hours see what else we got I can't get over these glasses okay couple more oh this is one that I did the L

crew Joseph Marinello also known as king milk fart one of the worst trolls you guys don't know what this is from the movie This is the End this is Channing Tatum uh hugging Danny McBride it's pretty funny okay last one here 200 plus Souls oh horror world changing technology H just kidding for the families obviously they take precedent but at the

(2:36:02) same time world changing technology is pretty wild right pretty wild pretty good memes pretty good memes tonight we definitely got to make sure we're doing those memes um okay uh oh yeah maybe one more last one Ashton literally look at that data and the evidence Mike exner what data and the evidence stop lying fat fat troll face Ashton showing Mike exner look at it look at the evidence Mike exner the sad part is like we're going to probably be hating on Mike exner again guys cuz this one right over here I'm

(2:36:53) going to close the methods down one here let's let's copy this uh I I'm G to make sure I have this saved somewhere safely okay um this [Reddit](#) post somebody found look at this eight years ago 2016 Mike exner constantly bered me the bfo values could not be an error because the temperature sensitive AFC oscillator was in a hermetically sealed and heat tin can if the AFC was not heated the bfo values would wander off but hey wait a minute the atsb published a basian analysis report by the dtsg dated

(2:37:40) December 3rd 2015 which said from at least 1803 to 1825 there was no power well the AFC heat is part of the power this is what we're talking about so Mike exner is telling people that the temperature was in hermetically sealed and heated tin can but the official report says there was no power so the heat was not [Music] on these people are just like Mike exner is full of crap the dude is full of crap he can't answer any logical questions he was being bered 8 years ago by people because of their nonsensical Arguments

(2:38:15) for these like bfo BTO values right and so then somebody here breaks it all down now I'm going to talk about this probably tomorrow it's getting too late tonight but we got more to come folks we are not remotely done we are going to destroy the imrat data we're going to destroy it it's not credible at all and they literally just like made up some calculations they threw out data they didn't like that didn't make any sense and they just invented uh they they basically tried to fit the data

(2:38:49) into their uh cognitive bias the best they could it's embarrassing uh so yeah we're going to expose that and then uh I don't know what we'll do tomorrow but thank you guys for hanging out tonight chat this was a fun stream and uh any again any updates like tragon go ahead and post the time and variance thing on the replies on the on the Twitter post and I'll try to take a look at it I'll try to watch those tonight thanks guys have a great night it was fun chatting with you and uh we'll see what's up tomorrow tomorrow

(2:39:19) yeah probably be an early live again tomorrow probably but no guarantee I'll probably post it on Twitter but not sure probably like 7 o'clock go live tomorrow we'll see have a good night everybody it was fun talking you peace

(00:37) Malayan 370 Conta 12m breaking news tonight A Malaysia Airlines flight with 239 people on board including four Americans has gone missing [Music] I remembered the line from the Hindu scripture the Bhagavad Gita Vishnu is trying to persuade the prince that he should do his duty and to impress him takes on his multi-armed

(01:46) form and says now I am become death the destroyer of worlds calm situation hey is there yo what up chat how are we doing tonight hey everybody hey Kimberly hey Jack hey Jess William saw you there buddy Cipher Billy Dorian Alex did I miss anybody Bernie what's up bud how you guys doing yeah that opening is pretty epic I was talking to uh let's see it was a Friday night I went out to dinner with just my mom actually my dad stayed home and she was telling me about the movie Oppenheimer and I went well Oppenheimer is uh my

(02:40) intro to my stream every day so that was pretty cool we talked a little bit about science and stuff like that pretty sweet um hey Hermes man how's it going yeah so let's see what's been going on um just kind of took it easy this weekend for the most part you know we had our kind of troll stream stream on on Friday with TJ uh which turned into you know what we would expect which is this drama in the UFO Community which I'm sure you guys have seen a lot of um and so I just want to talk a little bit very briefly on

(03:18) some of that I think that keemstar is probably the best thing that's happened to the UFO community and maybe ever but for a long time right that Community needs somebody to come in who can just beat down the trolls right and beat them at their own game and that's what he's doing for a minute I get a little bit worried about him right because if this is a big disinformation campaign that these trolls are running the keemstar is a huge threat he's a huge threat uh so I'm appreciative of what he

(03:52) does and his spaces are really good so definitely going to try and um going to try to deal with uh you know try to get some hosted spaces with some of these people I want to try to set up an MH370 space where we get all the OG experts in there and let them hash it out see what they can do to explain to us you know why a plane didn't how it crashes in the South Indian Ocean without leaving a debris field um Kimberly I'm sorry to hear that about your mom so I think mental health is always is a big thing a lot of people struggle with that

(04:28) in general and I think it's probably I don't think I've said this so just going to go ahead and say right now as well that I have no issues with mental health I would never hurt myself or

anything like that I'm very happy about my life um yeah the other thing regarding that I think that rolls into is hey Evan thanks for coming here man uh is the Amy stuff Amy ESD right we're going to take a look at Amy esd's stuff here tonight I was digging through quite a bit of it where is the where is her PDF have it somewhere

(05:08) around here we're going to look at her PDF tonight um I'm probably not going to do more stuff on Amy because I want to be respectful to her family and the reality is that the most likely scenario was that she uh uh had it you know was suicide that's the reality of it it's the most likely scenario I know we are you know in the conspiracy world now but I think we do have to keep it somewhat grounded right and not try to dig up too much pain for them but at the same time I think that you know even if she

(05:54) um you know committed suicide if she was troubled you know it doesn't help when you have the type of community bearing down on you like that there is in the UFO community and the toxicity and as we've seen from like the **debunker** crowd uh the absolute unwillingness to even consider that they're wrong or even consider that there's something more to this world than what they are than what they believe so let's take a quick look who's Amy Amy ESD Amy ESD died in June of 2022 she was an anti-gravity

(06:33) scientist she wrote this that you see right here in front of us this is a PDF that she presented she presented this PDF in 2018 anti-gravity talk I think her dad is right here this has got to be her dad Richard Eskridge because it says father daughter company with expertise in gravity modification research and development so he was technical lead I believe for NASA Marshall which the Marshall site is like the site where they wanted to I think they wanted to have space force get the headquarters get moved there um dude was

(07:17) definitely in the no and you know his daughter grew up in that whole world as well yeah I mean yeah I I think think that so what I'll tell you yeah honestly she's even I had a crush on her just watching her you know in I mean obviously you're talking about somebody who's not with us anymore but uh very smart lady very smart lady and uh died way too soon man and so let me go pull up my Twitter real quick geez what's wrong with my throat today which one of these has my Twitter on it I have it up here so also record

(08:00) number of homeless people so you know world's in a messed up place right now there is there sound going on no there's not okay um oh well whatever I don't care you see the hay ocean thing um let's see so I was also in a space earlier very briefly only for like 45 minutes where we were talking about free energy and the only reason why I bring it up is cuz it's somewhat relevant to the discussion here that we're having which is when you look at the Amy stuff specifically here right I've done a few

(08:36) posts on Amy uh I went through pretty much this whole stream there's probably a few other clips that would be worthwhile um maybe we'll just watch them let's just watch the one from today okay from today is the one where she talks about what disclosure means and I think that she was somebody who was definitely in the no um here's the here's the rub guys on on

this right is that when you get to a point where you know that we can teleport an object right an actual object like you know this bottle or like a

(09:13) 777 um now you start to wonder logically what that means for our reality right what does that mean for our reality it pretty much means that you know our reality is a simulation now I don't like to use that terminology because it makes it sound like it's just a video game where you can't reset which it's not right you know when we pass what we are is never going to come back we may come back in a different form but it won't be the same the same person right uh and again that's me broaching

(09:51) on the esoteric but the reason why I bring that up is that life is still precious life is still sacred you know there's there's a meaning and purpose to life I I fully believe that yeah holographic principle right is what we're talking about but really what it means is there's a matrix underlying Matrix underneath this reality that we do not perceive right um and now when you realize that that's the case then the situation is that well where's the line between fiction and reality right where is the

(10:26) line it starts to get blurred and I think that that's personally in my opinion I think that's what happened to Amy just from the little that I've seen from her I'm not an expert on her but you know she was talking about stuff like directed energy weapons being used on her and things like that and it becomes a part where like you know you don't know what's what they're what they're capable of you know if you know that the government can teleport a plane like why can't they use

(10:54) an energy weapon on you they probably can right and now I hope you guys understand my Approach CU my Approach is I just don't give an f I do not care at all right bring it on you want to zap me with an energy weapon you want to I don't know use psychological warfare good luck don't miss that's my Approach right um there is nothing in this world that can phase me you could wheel out a I told my I told my mom this as well is that I think that I'm a good person for disclosing disclosing this type of

(11:32) Technology assuming that it's real because there's nothing that can phase me you can send an army of trolls after me it's not going to do anything you can wheel out an alien body in front of me and I won't even bat an eyelid I'll just go oh that's cool is that is that ET um you can't you could have a plane teleport that's not going to phase me there nothing is going to so that's the kind of resilience it takes to be in this game that we're all in right now all of us are you guys are in it too right the

(12:07) ontological shock in this situation is very real very real we see the videos breaking the minds of people I'm not going to do a troll hunt tonight but if you want go into this video that I made on this clip right and take a look at the comments in here you're going to see that people are viscerally upset they're actually driven to anger over something that have nothing to do with them and that's the part that's a little bit concerning because people talk about all kinds of weird stuff right look at

(12:42) like uh what's that guy's name Chris the guy who's seeing the UFOs help me out chat we've got a guy who's summoning UFOs with his dad right and you don't have anybody going out there telling them they need to stop and stuff like that right you don't have people telling them all it's all fake you I'm sure there's people are saying that it's fake but it's much much more esoteric than what we're disclosing and yet you don't see that same level of visceral anger right and I

(13:15) think that that boils down to because in the back of people's minds when they look at these videos they know what we're looking at here is real Chris bledo thank you guys the bledo now for our situation they look at this and they go yeah okay this is this is a little too real it's a little too close to home right and it also implicates the US government in and and all the media lying about the plane and so it's it's a lot of baggage along this right for the bledo summoning UFOs or whatever they were on Fox News

(13:54) yesterday or or today or something like that I saw right you don't see people getting viscerally angry at Cris bledo so that's just what you have to keep in mind so that's what people like Amy are dealing with guys doesn't surprise me that she would potentially be on opioids you know drinking I think I think generally normies out there would be very surprised to find that a lot more people are doing drugs than they would think that's my opinion from my limited time on this Earth and uh you know it doesn't make it

(14:28) right I wish Amy was still here with us right now because I think she was a brilliant mind no doubt about it whatsoever the the thing I want you to take away from this conversation that I'm having right now is that everybody out there matters and we need everyone we need every brilliant mind that we have out there and we need people to not give up we really do we need it so let's check it out so my vision of disclosure I like the library thing sending it to libraries on a certain day so the first thing I noticed about this

(15:02) particular clip is that she thought she wanted to reveal this information open source oh that was four months ago thanks JK Philly fan appreciate you bud but still the point Still Point uh matters for the blood so now she wanted to disclose this information open stores she wanted to go to libraries how how awesome of an idea is that lead it to to lead it to drop it off on libraries right I mean I think that's an awesome idea um what now because what what is she thinking there when you're thinking about dropping off the library so that

(15:41) common people will see it common people normal people right in the libraries now does anyone really go to libraries not in my opinion but you know I'm sure there's some people that do but that's just a great thought right because she knows the media is never never going to pick up her research on anti-gravity she knows that because she knows how the inside of this intelligence Game Works what I had sort of envisioned is I want to publish the paper on archive.

(16:10) com because you Absol [redacted] lutely cannot publish this in a peer-reviewed journal because the peer review committee will laugh you out of there but they'll send it to all of their friends we need to so that's just wild right she knows exactly how the science Community works

this was I think in 2000 that this video was recorded So this was like probably early covid or something like that she knew that science Community was full of crap and she knew remember what Salvador Pas told us this is the other thing I want to tell you guys chat right now before we

(16:50) dig hard into the science this community is a lot smaller than we think it is out there this is not a huge sprawling community of hundreds of individuals the number of individuals that are connected to this disclosure campaign and this science behind the scenes is probably dozens dozens of scientists like a number where you can memorize them all in fact the all the pieces are starting to put get put together for me right now in terms of who the players are and now for me it's just a matter of like who's on what

(17:20) side I want to know who's on what side which of these people are trying to disclose this information and which of these people are trying to suppress it and silence it I really don't know at the moment but I think it's actually a small number of people and I think that if you watch closely and you pay attention to the presentations that are out there that you will be able to figure out who they are right pretty wild pretty wild I mean right off the bat I want to tell you guys I got in touch with Mark who is

(17:53) the third person in this interview and I got in touch with him weirdly the same way I got in touch with Dave which was that I messaged somebody and went who's the person in charge of this account and it turns out it's Mark and I'm like wait what like you're the person on this account oh yeah this is my company you know Falcon whatever right and I start watching some clips old clips of him going through his like um their engineering space their lab or whatever and like you just see a lot of the same

(18:22) the same people right and with Dave it was similar like I I was messaging someone I was like oh and there like oh I'm Dave I'm like wait what like this is it's pretty wild how everybody's kind of put together and connected right so then after Amy mentions that you can't peer review it then Mark comes in and says okay well we need to get it out to the media now this is where I'm going to criticize them let's listen reach out we need to have a group of all of the media vendors that we can

(18:52) possibly control and ask them all to pitch in give them all the information all at once and just Spam the internet with it yeah so that's the Bob Lazar mistake right there right that's the Bob Lazar mistake the idea that ABC c CBS MSNBC Fox News are all going to just go ahead and report on your your anti-gravity technology right now what's the mistake chat the government owns the media government owns the media 100% this is not an option spamming the internet with it how how you going to do that going to put it on **Reddit** where you

(19:31) going to put it right you put it on **Reddit** it's going to either get deleted or they're going to **debunk** you that's what's going to happen 100% we have to learn from this and we can learn from this now this is the same reason why I don't post all my stuff on **Reddit** this is the same reason why we're banned from certain **reddits** um this is why I chose Twitter in general this is why I don't go sending letters to CNN and Fox News right CU they're never going to they're

never going to report they

(20:04) they'll reach out to us when they want to report on this they know they're aware of it right 100 over 100 million impressions we might have hundreds of millions Impressions if you add up all the people like kim.com and stuff like that hundreds of millions of Impressions the media knows about the MH370 videos we know that the government knows about it too of course so this was the mistake we need need Partnerships well ahead of time and Amy knows it right away right when she's talking about Partnerships what is she talking about

(20:36) there chat she's talking about the fact that we need people who trust us believe us who are not Counter Intelligence who are not trying to suppress us they need people that will report on the stuff accurately and fairly and not try to turn it into a joke right she gets it when I watch this 100% she gets this is she drunk she might even be on drugs I don't know but doesn't make what you're saying any less true period like you can't be calling these people to be like can I disclose UFOs tomorrow you have to be like in

(21:10) talks with these people exactly right you can't call these people up and be like can I disclose UFOs tomorrow precisely precisely that's not how it works you don't just go hey guys I got this big story everybody blow up my story right and and you know who else made that mistake me me early on I thought the media would do that I thought the media would go oh these are two incredible videos of MH370 disappearing oh we never really found the plane this makes perfect sense did they do that no they did not nobody

(21:43) reached out not a single person not even a journalist the closest we got was we had Michael shellenberger follow us for like a day or two and then walked away from it he was reporting on UFOs and he walked away from it right it's just too too big some of these stories are too big because they have too much implications right if this situation was um you know this is this is anti-gravity this means that everybody's been lying to us and our government's been lying to us it's huge and so we we need to pick Mark and

(22:18) I have been talking about this already we need to pick uh the most credible person we can possibly get who will publish it and talk about it on TV and there you go so what's the next view right um you know what so what's the next move the next move is you find the person with the most reach and you find the person with the most uh credibility who's that person I was thinking Tucker Carlson Tucker Carlson couldn't agree more in fact that's one of the people that I was pinging when I was first breaking this

(22:57) story because Tucker Carlson has been reporting on UFOs he was reporting on them back then as well and you know she she she understood what it really takes is you need somebody who's going to change people's minds somebody who's going to make them think twice right pretty important I totally agree I hope talker Carlson looks at this because he is one as far as I know the only journalist on TV who talks about us openly and doesn't make fun of them he talks about them with sincerity and he's been doing it for

(23:34) years and what happened to him he got canceled off of Fox News he got canceled off of Fox News he was their number one biggest audience Grabber by a mile and they fired him in fact I think they not only did they fire him they paid him to not work I mean it's pretty wild man man makes me wonder if what he was saying might have been partially linked to that now have I seen the **foyer** request by Adam Winters in response to her death no I have not uh if you want to put that on my replies on Twitter or something like that that

(24:11) would be helpful to take a look at um but I'm probably not going to go too much harder into the Amy uh esgd stuff unless I find some more credible evidence uh what I'll say is I have seen some evidence that makes me believe that you know at least her family the the public narrative out there is that she committed suicide um that's horrible I don't think it changes anything about my posts and I think that um I think that it means that you know it's still just as serious a situation you know even if she did even if she was

(24:48) driven to this or if it was F play Foul Play either way like we you know the science Community the disclosure Community lost somebody special for sure so let's just do uh a quick moment of silence for Amy I think she deserves it we're going to do 10 seconds so I'm going to start the clock okay yeah Okay so we've addressed this unless something else comes up uh I don't want to dig too much more into it I don't want to make our family grieve anymore now just as a matter of record I'm not going to stop talking about the

(25:48) MH370 videos there's no chance I'm going to stop talking about them guys and we're going to get into the science right after this okay um cuz what is the way forward right the way forward is we don't stop talking right so even if people don't want the videos to be real even if people want us to stop talking about the videos um you know it's not going to happen even if the government's not going to talk about them the media is not going to talk about them we're not going to stop talking about them we're

(26:21) just going to make it more and more and more Awkward for everybody cuz the reality is this these are the most incredible UFO videos of all time period there's no UFO videos that are even close to this period right and we know that cuz we're know we're looking at real videos here it doesn't take a rocket science to tell us we're looking at a real video here people are just in straight up denial that's just what it comes down to they're in denial man they think that somehow we must be looking at a video

(26:50) game because this breaks people's whole reality but what we're looking at here even if it was **debunk** these would still be the best videos of all time we're looking at forward facing gravity engine there's no videos like this at all we're looking at military equipment from two different angles both perfectly in sync right these are the best UFO videos ever simple as that of course we're not going to stop talking about them no one that's never going to happen now what do we do then what do we

(27:22) do well the answer is we force the US government to make a statement on them if somebody believes that these videos are fake then there's no reason why they would be against

the US government making a statement about them right chat right so that's my proposal Force the US government to issue a statement on the videos the US can claim that's not their mq1 C Great Eagle drone that's not the fate of MH370 to which they've rejected every single foer for the interest of National Security National

(27:53) Defense no one on either side should be against this William I don't care what's going to happen we're going to keep doing it and every time they don't issue every time they don't issue a statement it will build more credibility towards the videos if the videos were fake they absolutely would issue a statement on them they have in the past for similar situations they've issued statements saying that's not real will they lie that's the big question you just said a second ago it's

(28:23) they're never going to make a statement now you're saying that they're going to lie which is it that's exactly why this is our Focus right the answer is we're going to force them to make some statement and the reason is no hoaxer ever came forward \$150,000 in Fame and no one could produce any evidence that they are hoax these videos and I want to be clear because I don't want you guys going out there and spreading misinformation about it a lot of people are saying oh well it's \$150,000 to prove that the videos have

(28:55) been fabricated no no it's 100 \$1 \$50,000 to prove that you are the hoaxer or you know the hoaxer and that you can Pro bring the evidence with now I'm probably going to end up removing that because I think people have had plenty of time we've had months and months and months and the reality is someone's going to fabricate a fake claim to being the hoaxer it's going to happen so I don't want to give them any more financial incentive to do so they can still come forward if they want they can

(29:24) get famous from their great work here or whatever but we're probably going to be taking away that \$150,000 they've had months and months to come forward and they have it okay um real quick as well I'm going to address something else which is people have asked well could the governments it's not possible for the government to pay more to keep them quiet doesn't make any sense if the videos were that you would only pay them to keep quiet if the videos were real you wouldn't pay them to keep quiet if

(29:52) the videos were fake um but the other thing too is that could the government have made the video theoretically the government could make the videos they would have the technology there's no doubt about that right we're talking about them teleporting a plane the reality is doesn't make any sense they're still trying to silence the videos they're still trying to hide the videos no one's promoting them the government's not promoting them they're not having the media promote them they're trying to get

(30:16) nobody to talk to me about the videos only alternative media will you know it doesn't make any sense that the government would have created them I if they did I would love that but also then where's the plane what's the explanation what are they covering up exactly right there needs to be a deeper layer if that's true so just want to bring that up and the reality too is the

victims deserve no less the victims deserve no less right okay any other follow-ups on that take it easy Evan appreciate you buddy

(30:53) we're going to go into some science now I think okay let's take a look at some of Amy science let's close out of this for now but you can take a look at this if you want guys um we'll come back to this we might take a look at some of the science related to the fire scenario yeah benator I got your DM man no need to spam it I got it what do you mean how can they be any um chris Le TV says if they wanted to cover it up why aren't they being more proactive about it what makes you think they aren't how how more proactive could

(31:58) they be what would you think they should do more than they've done they may have fabricated a whole fake **debunk** with cloud pictures that's pretty proactive they haven't had the they haven't allowed the media to report on it at all they've made no statements about the videos at all I disagree with William I don't think that they can lie if they have somebody go on TV and say that the videos are not real and they get proven to be real that person could be sued they might go to prison who who going to take the job of

(32:28) I'm going to go and lie in front of National Television right the thing about government you have to realize is there's rules that's all government is is rules and there's policies and there's procedures that they have to follow when you understand the government from that perspective you understand how the government works now sometimes those rules and policies are stupid sometimes they're deceptive but putting somebody up on the spot and let making them lie on television is uh incriminating

(32:58) criminally incriminating um don't uh don't Gaslight me chrisly don't tell me I think I can speak for myself you know I can speak for myself I don't want to I don't need people telling me what I do or don't believe or what I have and have not accepted I can speak for myself on that front with their resources they could silence you in your live streams how are they going to do that how are they going to silence me what are they going to do they're going to delete my live streams what would

(33:30) that do I think you got to think a little bit more conniving if the CIA killed me if they made made it so that I can't post on my live streams how is that make how does that silence anything does the exact opposite right does the exact opposite my a lot of my following conspiracy theorists if I were to go missing it's going to become Amy ESD times a million right part of the reason why I'm not that afraid the other part of the reason why I'm Not Afraid is cuz I don't give a **[REDACTED]** but that's one of the main

(34:08) reasons anyway I don't want to digress too much let's take a look at Amy's uh presentation here because I think this is a very interesting presentation yeah so I get Alex I think has a good point I get the sense that people are knowledgeable andda protected I suspect that many cannot speak about it cannot legally speak of it now one thing that we just learned as well is that we learned about special access programs I didn't really understand them that well special access programs are apparently Above Top Secret Above Top

(34:37) Secret right and now if it's above top top secret I wonder if even Congress can access it like there's top secret with compartmentalized access and that's probably the compartmentalized access part is when you have access to special access Pro uh pro programs I disagree with your assertion cashley I think that the government has been doing things to keep it silent I think that they've sent out their army of **debunkers** and their trolls I think that they've used all the connections and resources

(35:18) that they have in the podcast world to either prevent people from talking to me or to try to discredit me or to try to get certain podcasters to actually hostilely attack me and try to make me look silly on videos and you've seen how that worked out not very well one podcaster deleted their entire podcast after doing a six-hour interrogation where they tried to cherry-pick minor aspects of the case in order to try to discredit me and then falsely edited it in a deceptive way and then when they talked to their lawyers

(35:50) and realized that they could be sued for defamation they deleted their podcast entirely so this idea that the government's not doing anything it's I think it's just a false assertion anyway just I one last thing I want to say on that front before we get into the Sciences take a look at the sub the **debunker** sub **reddit** go take a look at it there are multiple people who are spending all every hour of the day all day long full-time jobs and on the weekends trying to convince people not to look into the videos and that the

(36:31) videos are not real full-time jobs multiple of them in fact there's almost if I had a guess I was thinking about this the other night I'd guess there's the equivalent of 10 FTE they call that full-time employment 10 FTE on that sub **reddit** alone either people who are have no jobs whatsoever and they're out there just trying to convince other people the videos are fake out of the good of their heart or whatever weird psychotic reasons or they're being Direct directed to do it whatever it is

(36:59) you've got the essentially the equivalent of 10 full-time employees sitting there on that sub **reddit** all day long every day any post that comes up within seconds they're already replying just keep that in mind they have a dedicated Discord where they coordinate with one another it's extremely coordinated look at the Wikipedia thing from the **debunkers** recently how they're editing Wikipedia posts look at Dom Icr's replies about how there are people now in the community notes or Community not noting 70 Community notes per day

(37:29) that's not even a reasonable number of people you can do right so there absolutely are people who you know I I don't know what the division between people who are just robots and you know their live their just world view is so threatened they feel the need to play this savior role versus how many of them are actually being directed by the government but there's probably a mix probably a mix and then um what do I think about Punjabi Batman let's answer a few questions I guess since people want to

(37:58) know um I think Punjabi Batman has a great heart I think that Punjabi Batman is somebody that knows there's more going on that may even have connections to know there's

more going on but he doesn't he doesn't have the inside information right and so he's just doing his best to try to you know prove whatever he can I don't agree with everything that he posts I probably agree with like 50 to 75% of it if I'm being honest uh but I think that the fact that he's been banned like three

(38:30) times from **Reddit** it is extremely telling as far as I know he hasn't violated any rules whatsoever right and so anybody who tries to solve the case gets banned from trying to solve the case that's what you should be looking into um could there be any could there there be AI any way to discredit you I'm not sure I'm following that uh I don't trust anybody if you want to know the **truth** I don't trust anyone reality is I have Punjabi Batman doesn't even come to my DMs on **Reddit** that often compared to other people I

(39:21) got people all kinds of people every day like probably over 20 messages a day on Twitter some of them are very very long I can't can't get to all of them I don't have time but lots of people I don't trust anyone that's out there I come to my own conclusions I look at the analysis and the evidence and I report on whatever I think is credible related to the case that's that's the **truth** of it and I you know so even going back to the **mick** West Post which okay I know we're getting sidetracked here but one

(39:53) last one is people get invest Ed in uh a certain belief set and it becomes difficult to get out of that now of course people are going to say well make you believe in things as well so don't don't you uh have that issue well yeah maybe so he almost had a moment of self-realization there **Mick** West did he almost realized that he was talking about himself there for a second I've never seen anyone in the **debunker** community more delusional than **Mick** West is ever in my whole life I constantly question my own beliefs every single day

(40:29) related to the case and why am I dedicated it's not because I'm that they've been **debunked** it's the opposite it's because literally no one has addressed the evidence at all certainly not mck West he just talks past other people Cherry picks what he thinks and then moves on right that's that he's literally guilty of the exact thing he's talking about in those videos like he gets a certain mindset that nothing can be real this is exactly how it is whatever he sees can't be real

(40:57) that's his first bias right away is that he sees a video but this must not be real how am I going to come up with a way to claim that it's not real that's literally what **MC West** does like not disparaging that's just exactly what he does right and then he never considers the thought that he might be wrong in fact I don't think there's ever been a video that mck West has ever looked at in his whole life that he didn't think he could **debunk** ever in his whole life even after he was told the dod videos

(41:23) were real the dod Navy videos were proven real proved him wrong he didn't admit he was wrong ever and instead still tried to **debunk** them that's not somebody who honest in any way shape or form he's a nut job just literal nut job right no he says he's not a paid operative right then there's only one other possibility he's just mentally unwell like he thinks that

everything must have a plain Jane explanation for it right nothing can be phenomenal or exceptional or and the worst part is he just doesn't understand

(41:57) science either right it's like maybe if you tried to actually understand science instead of just being like well CNN told me that's not possible so I'm just going to go ahead and try to **debunk** that and find a cherry pick way to cherry pick it it's like you just this is the problem with the **debunkers** man like they think that everybody else is crazy or whatever but it's actually just them it's just them who the ones who are crazy anyway you should distance okay sorry last question then we're moving on or it's

(42:30) not really question you should distance yourself from the UFO committee nah I did that once already I'm going to be in the UFO Community you know why because the UFO Community needs help UFO Community needs UFO Community needs somebody who's going to come into it and say you know what I don't believe in every esoteric thing that's out there but I do know that there is something to this that's what they need you know that's what the that's what the UFO Community needs that's why

(42:59) it also needs keemstar as well because he just trolls better than everybody else in that Community um it's just it's toxic it's super toxic okay you guys are ready for some science so I'll still answer questions that are in there but let's keep going um William uh one piece of advice for you William the schematics that you're posting on I'm trying not to say this rudely but like pieces of paper or whatever you should do them on a computer you'll get a lot more attention if you do them on a computer I know it's

(43:36) probably a big learning curve to you know move it over to a computer but when you draw it on a piece of paper it doesn't doesn't have the right uh it's not getting the traction that you want you got to one thing I'll tell you is that when I was in entrepreneurship class in college my ta told me put color in your presentation and you'll get another half grade higher right just put color in it now does it have to make sense does that from a logical perspective should I have to put color in my presentation no no I

(44:12) shouldn't but it does increase your grade by half same reason why I increased my production quality why I bought a better camera and now I sit here looking at people's pres like you know their podcasts and their cameras and I'm going why are all these major major UFO people have like these crappy setups right or like I was in the you know even the alien scientist one there like two people are like in the dark in their videos I'm like okay they need to at least turn a light on um you know because it gets more

(44:39) people watching for sure okay so the re I went through this whole presentation with Amy already and the thing that I realized about it is that it um it's kind of like a history lesson like she definitely understands the history of anti-gravity research and that's why I think it's important is this will be a good history lesson for us and then we can dig into a little bit more uh some videos or anything that people want to present or want us to watch and then I think we'll we'll close it down after

(45:12) that okay yeah thanks William uh you know I appreciate you too man I think the reality William of your work is I think that what you're doing is very smart and could even check out but you're not going to get a lot of people taking you seriously if you're writing it on pieces of paper like you got to get to step it up that's my opinion but I think you're I think you're a smart guy and you probably know what you're doing I mean I'm not PhD but look smart Okay anti-gravity and gravity

(45:49) gravity is a fundamental force that has been responsible for interactions which occur because of mass between particles between aggregations of matter such as stars and planets and between particles such as photons and aggregations of matter that is 10 to 39 times the strength of the strong force and it extends over infinite distances but is dominant over macroscopic distances especially between aggregations of matter anti-gravity then is reducing cancelling or protecting against the effect of gravity so we

(46:16) probably need a better uh explanation and definition of anti-gravity I guess I don't need this uh because anti-gravity makes it sound like you're negating gravity but really it's just that we are getting rid of the force related to gravity right uh uh Chrisley ask me that again at the end we'll we'll go over that again in terms of the methods to be taken more seriously in general the reality is um yeah distancing yourself from the Woo is of course important especially when you're already talking about something

(46:51) that's too incredible people ask me constantly I guess we're going to talk about it now why are you not will can you look into remote viewing um what was the other one that people were asking me today but I get asked to look at a lot of esoteric stuff right and I just go I'm already too deep in this I'm already not getting people uh taking us seriously right related to the science alone and the reality is if you believe in the esoteric stuff it's the same reason why I say I don't need to worry

(47:20) about aliens and stuff like that and talk about the the eight different races of aliens on the planet because the reality is if we can prove anti-gravity is real well then aliens visiting us isn't really a problem anymore most people's reasons why they think that aliens can't visit us anymore or visit us is because it's too far away now if we have technology to go faster than the speed of light that just gets thrown out everything's going to fall into place if anti-gravity is real now you open the

(47:47) door to a lot of esoteric stuff so that's why it's like it's like a building process right building blocks yeah Thomas Town said Brown we may look into him we may look into dra after this as well so the basics on gravity here this is talking about just really where gravity came from in terms of the science uh advancements in gravity what does relativity have to say uh it's a deformation in SpaceTime according to general relativity anti-gravity is impossible without negative Mass I think that there's been a lot of arguments

(48:22) that you don't need negative Mass but that there are some that say that maybe we can't even achieve that yeah the things that I avoid um yeah the The Cliff High stuff around uh the

Nephilim and the palladians and all that like I I just avoid a lot of that stuff in general right I'm not trying to determine who spiritual war is going to win over who else's spiritual war when it comes to stuff like remote viewing and astral projection I'm I'm out on that it's not that I'm I'm not trying to hate on

(48:57) people like that but if people come at me and start trying to hate on what I have been researching then I'm going to throw it back in your face for sure uh do I use a flowchart nah no okay um standard model of particle physics does not include negative Mass okay unified field Theory okay so now what are we talking about here now we're talking about Roy D Herbert Salvador Pas how do we take the forces electromagnetism strong force weak force and theoretically gravity you know gravity remains unexplained this is the same reason why

(49:34) we have stuff like dark matter we don't understand why we're seeing more gravitational force than what we see with mass visually so people have postulated that a graviton could exist but we don't know we don't know if there's graviton and CERN the large hyron collider could not find a graviton I think that Roy de Herbert and many people are now coming to this uh realization that gravity is simply a side effect of mass existing it's a property it's not a actual particle although I think uh Dave Rossy would

(50:14) disagree I think he thinks that it is a particle although I think it really just comes down to definitions honestly to me all I care about is can we envelop an object in a bubble and allow its gravity localized gravity to become zero if so I don't care what you want to call it you want to call it gravity gravitons or you want to call it uh you know the Matrix whatever you want to call it makes no difference for me okay so then she gets into the early stuff now some of you just mentioned Thomas Town said Brown there he goes the

(50:53) Bayfield Brown effect this is something that we've looked into to already here um and I think if I remember if you have different uh uh can't remember how this works but I think this is where you have your lift right so if you have one I'm going to say this incorrectly but I guess it's an electrode a smaller electrod a bigger electrode that the force will lift up you know like if you make your little your triangle thing Mig and um they tested in the vacuum supposedly ruled out ion wind so that there there

(51:30) is some type of electrogravitic uh effect now we've come to realize I think even just from our investigation that in my opinion is that the universe is electric right it's uh electricity and magnetism explain almost everything out there we call solar wind what does solar wind even mean guys what is the idea of solar wind even mean right when you think about that it's like solar wind just means that we're exper we're like we're in a a circuit the planet's in a circuit connected the Earth is connected to the

(52:08) sun right and then the magnetic field around us is bending the electricity around us the same way where if you have a circuit and we were to make a toid we could get the electricity to bend in the shape that we want right same exact idea hey chip Messiah thanks for being here from Thailand man appreciate you buddy solar particles moving across space What particles

particles of what right particles of what and the bigger question is this when we see the aurora borealis we can see a release of energy where's that energy

(52:48) coming from where's that energy coming from I think it's a good it's a good thought um so then we have Nicola Tesla space Drive 1928 this is crazy is this real did he actually really make a a spaceship in 1928 I I've already decided long ago that electrical engineering is the actual Pinnacle of science not physics I used to think it was physics and now I think it's actually electrical engineering think that if anyone out there wants to know the reality the real **truth** of our reality I encourage to get

(53:26) into electrical engineering yeah yeah planets look like atoms so does solar systems I mean I think that what Roy de Herbert tells us is that scale scale doesn't matter right what matters are the properties the properties will denote the behavior so that's why you can get a neutron star to act the same way as an atom and when I was talking to Roy Herbert about this idea that a neutron star is moving super fast well that there's like it's like being on The Cutting Edge where neutron star is about

(54:04) to turn into a black hole if when neutron star is spinning really fast its time is moving really fast but then the moment it gets too much mass and becomes a black hole now it's time is going to slow down it's a very interesting concept where it it can be it can be moving at you know at Super luminal speeds one moment spinning super fast shooting all these these radiation beams out it like a neutron star does and then if it were to get if it were to collapse with another neutron star it can collapse into a black hole and then now

(54:33) it's time basically stops becomes a singularity this is interesting so we may have to look up this patent oh apparatus for aerial Transportation wow it is real wow wow chat wait when did we when was The Ripe Brothers 1910 yeah so right brothers were early 1900s so this isn't quite that revolutionary but still pretty revolutionary neat electr pulsation I mean Tesla definitely had figured some stuff out I think that really does go all the way back to

(55:42) Tesla yeah chle I agree with you on the idea that the universe itself could be an organism I think that you could argue that the universe is alive I think you could even argue that the double slit experiment proves the universe is alive catch Daniel on dark Joseph with Dr Joseph frell on Friday night no I didn't see that dark journalist uh if you want to post uh any relevant thoughts from it in the chat I can address anything I see on there I'm not sure about dark journalists now I certainly don't think dark journalists

(56:20) is controlled by the government I definitely don't think that but I get the idea that there a lot of people come off too strong about this idea of like The Gatekeepers and what have you out there and attacking them I think that dark journalists attacking Chris melon too far too far they the whole thing there back and forth was a lot of cherry-picking right people trying to hate on Chris melon because there's a UFO picture in the background during one of his presentations too much if you're going to attack somebody you need to make sure

(56:58) it's important you know solidify it not just factual but important and same thing where honestly you know my one criticism of Jeremy ree is that you know attacking Corbell and Bob Lazar over and over and over again not a good look right and yes you can say okay well I'll change my mind if new information comes out well if that's your Viewpoint then you shouldn't be attacking anybody you know let people say and believe whatever the hell they want who cares right I think that it it's a lot

(57:30) more credible when you do your own thing and you push out your own thing out there now if people attack you in your thing I think you have a right to respond for sure but you know attacking other people for their beliefs is not not really where I want to be I don't want to be calling other people out there as uh frauds or whatever it just doesn't do anything for me here's the reality of the situation chat this is me just speaking off the cuff honestly as I can the world isn't that simple the

(57:59) world is not as simple as the good guys and the bad guys it's not as simple as black and white it's a lot more Shades of Gray so if you look at my post today the reason why I brought that up is that I do believe that there are people that are actively trying to achieve disclosure of information like what we're looking at here on these slides and I think there are people that are trying to hide the information and I think the people trying to hide that information absolutely are lying to the public that

(58:32) they are trying to discredit people that are trying to get the information out there I think that there is a bit of a battle back and forth probably like like high school or middle school but the reality is both sides think that what they're doing is noble and just both sides think that their cause is a just cause that's what I think and that makes things a lot more difficult right so then it's like okay well now what are we even fighting for right are we fighting for the extinction of our species if we

(59:04) reveal this technology are we fighting to destroy ourselves right and that's we have to look at it from both sides all the time from this point and every Point going forward it's not as simple as the answer is okay we just all this information comes out no what are the implications is society going to collapse is the socioeconomic structure going to collapse are terrorists going to get a hold of the technology and destroy the planet we absolutely must address those questions we have to right now does that

(59:37) I've thought those questions in my opinion right now is that we are still going to disclose this information why are we going to disclose it because they freaking teleported MH370 and 239 people were on board that plane and they lie to those families and their loved ones simple right now when they fess up about that then maybe we'll talk about whether or not we should keep talking about free energy and technology that can destroy the world but until they fess up about MH370 and plane they teleport and they

(1:00:08) got caught in two videos uh you know we'll keep pushing we're still on the side of getting it out there makes it pretty simple though right chat makes it pretty simple now the

Gravity Research Foundation I didn't even know this was a thing 1948 so this is three years after we dropped the bomb nuclear bomb Hiroshima Nagasaki now we come up with a Gravity Research Foundation so also keep in mind that what are we reading right now guys why are we reading this the answer is because a one person died maybe killed herself or was

(1:00:57) silenced over this information and she was working with her dad to develop this and her dad was a very very connected scientist right it's no surprise that she got into anti-gravity right I mean we can put two and two together here her dad was researching anti-gravity and he helped her come up with this whole list of the history of anti-gravity research right Kimberly James brings up a good point we don't even understand our cell phones I think it's a good example we know how complicated this device is

(1:01:28) right here it's extremely complicated device I couldn't build this device it's extremely complicated right there's a lot of stuff that we use every day that we have no idea how it really works right now you might you might say I'm an electrical engineer I know how it works well great then I hope you can also understand anti-gravity okay okay before anyone can have the audacity to formulate even the most rudimentary plan of attack on the problem of harnessing the force of gravitation he must understand the nature of his aders

(1:02:05) adversary adversary I take it as the most ax axiomatic that the phenomenon of gravitation is poorly understood even by the best of minds and the last word is off is uh the last word on it is very far indeed from having been spoken so this is a really good quote why did they put this quote in here cuz the reality is that let's think back to what salvator pi and Dave Rossy said a new approach to Old physics right a new approach to Old physics we are not saying we are not breaking the laws of physics notice that

(1:02:44) not a lot of people say that anymore what we're doing is we're bending the laws of physics we're bending them we're saying that no this is actually consistent with physics as we know it what is science anyway science is the study of observable reality reality does is not beholden to what the scientific calculations say the calculations are beholden to what happens in reality that's what we have to remember folks that's why when we look at the double slit experiment we know there's

(1:03:15) more to this reality than what we're being told because we're watching the universe react retroactively or faster than the speed of light however you want to call it that's what led me down this whole Rabbit Hole years before I ever lost all the MH370 videos okay government contractors aeronautic research laboratory right Patterson Air Force Base Advanced study they became locki Skunk Works wow interesting the serial generator 1946 hey look a toroid it's always a toid right right very interesting claim combination of

(1:03:59) anti-gravity and free energy device now if I were to look at this I'm going to say this looks like spinning magnets around some type of toroidal device here or electromagnet it's always seems to be the same thing toroids every single time right the dean Drive 1950s 1960s rela reactionless Drive claimed prod propulsion without propelling exhaust now what does this

look like looks like Thomas thomon Brown right linear oscillating mechanism effect maybe due to friction the Wallace machine 1968 spinning brass

(1:04:39) discs align nuclear spin H interesting this sounds a little bit like coherence right coherence kisma field mechanism action okay these are things I had never even heard of so whoever came up with this presentation her or her dad they they knew quite a bit about what was going on okay lathe wise gyroscopes how funny would it be if there was just a literal MH370 image in here lath wi gyroscopes for a second when I saw the blue I went wait a minute what Eric lawi invented maglev hypothesis rotating spinning disc

(1:05:24) creates a force of orthogonal to both Spin and Direction H claims mechanical kinetic forces can cause weight change this is pretty interesting the rapidly spinning inner wheel will maintain its direction in space if the outer framework changes this is a little bit over my head but this is pretty interesting for some reason I feel like there's something something going on here he was talking about lath wise gyroscopes green ear was what uh what yeah three directions of Shear cuz you've got yeah you've got

(1:06:07) this outer layer spinning you've got this layer spinning and then you've got this layer spinning as well pretty interesting we might need to look into this we might come back to that pretty interesting um I don't know if you say your name kley or Chrisley TV what are the implications does the particles both exhibiting the wave and particle like Behavior have for the footage um the answer is that if you can rebuild the wave function then you can teleport a macroscale objects if you can scale it up right if you can reverse

(1:06:57) that functionality or you know we don't even know what's causing it right the way that I look at the double slit experiment is like Roy D Herbert looks at it where you're breaking out the cheat codes you're looking at the top layer of a computer program what the very first rule is and when you look at that computer program you work your way up to the top all of a sudden you get to a point now where you are you're cheating you're breaking through to underlying framework of the reality if

(1:07:26) we can create quantum entanglement and we can have two objects infinitely far apart and if I change one of them the other one instantaneously changes the same way or detectable way where information can be traveled now we're teleporting information and when you think about what the universe is in general energy is equivalent to matter  $e = mc^2$  so why would we not be able to teleport matter theoretically there doesn't seem to be any reason why there should not be a unification theory that allows macroscale objects to function the same

(1:08:03) way that a Quantum object functions so I think it's the I think that the double slit experiment is really the basis for everything related to maybe even anti-gravity as well um okay now this looks like what is this a triangle black triangle I don't know man's field Amendment restricted research by the duty for non-military applications includes anti-gravity research man they really were doing a lot of anti-gravity research yeah cubits so that's how uh Quantum entangled computers work cognizant ape entanglement you entangle

(1:08:45) two spins on electrons and when you one of them changes the other one changes as well so even if it changes to be the opposite like if I turn this one object this way this one goes this way well you still are passing information at the speed of light or beyond the speed of light right if from a very very far distance if two things if one outcome is dependent upon another now if I flip this one to the left and this one turns to the right now I've passed information faster than the speed of light quantum entanglement

(1:09:15) non-locality quantum teleportation and what we found out is it gets weirder than that we can pass full sets of information and the information does not get distorted does not get scattered when it shows up on the other side so it's like if I were to take like let's say I were to draw a picture right so I'm G to I'll I'll pull up my paint real quick I want to show you guys something because this is  $E = mc^2$  okay okay God dang it okay  $E = mc^2$  equal means that uh a wormhole is equivalent to Quantum in

(1:10:07) teleportation now if I draw something here and let's say I take a circle and I'm going to entangle this circle to another Circle and these circles are light years apart okay so this is uh let's say on the earth and this one's over here on Alpha Ari right and I'm going to draw a smiley face on it okay and now I've got my smiley face over here so I've got smiley faces that are entangled in both locations let's just pretend like these are the same okay this one's Alpha centuri this one's

(1:10:49) Earth okay now if I rotate it let's say I rotate it 90 Degrees to the left okay so now I've got my face over here my eyes are over here my nose is right here oops my nose is right here my face when this gets entangled it's not going to come over distorted so one way for it to look would be if I draw my face again and let's say the smilees up here the nose is here this would be distorted right it's not it wouldn't match but instead what happens is that the information doesn't get lost

(1:11:36) whoops rotate the other way the information does not scatter this would be a scattering effect right instead it gets entangled so what happens this is hard to do the information stays now it rotates a different direction but we can still pass information this way right so this would be our upside down head face man where now he's a unhappy face his nose is upside down he's been entang he's been uh scattered but what actually happens with quantum entanglement is this is the bottom one now why is this

(1:12:19) important because what this means is that we can send a person through and when I go through a portal I'm not going to have my arm up over here and my head's not going to be down here the information's going to come through in the same way it means like I can walk through a portal and I'm going to come out and I might look you know I might be off I may be angled a different direction but yeah it's it can be like a mirror like that but it's not like you're going to just everything's going

(1:12:47) to come out a different order right that's why quantum entanglement is interesting and it doesn't this distance here that we're looking at can be any distance now how is that

possible this is real how is this possible there's only one way this is possible we live in a simulation we live in a computer program this is cheating what should happen if we were in a random Universe where there was no underlying code this is what should happen it should get scattered but that's not what happens we

(1:13:23) don't get scattered when you go through instead it's and we shouldn't even be able to have this teleportation of information over this type of distance that shouldn't even be possible the only way this is possible is that the reality is this line isn't really here reality is that you have two edges like this and these edges are talking to one another and they're somehow able to talk to one this distance doesn't really exist we just perceive that distance to be there because of our the projection

(1:13:51) onto our reality pretty cool huh having a little science experiment guys I'm starting to scare myself with how much I'm starting to learn starting to scare myself folks yeah the yeah you've got it cresley so essentially the government has found a method to transport matter without Distortion or with minimal Distortion or the bigger question is did those people even live on that airplane the bigger question here and I'm glad we're having this discussion CU I think this is a very entertaining

(1:14:25) stream and discussion for it if we go back to the videos did these people even live from this or did they get liquefied or something now if there's a field around this airplane somehow they're able to create an electromagnetic field around it and it doesn't I don't even think we have to think of it in terms of a bubble if we're Advanced enough they can make a shield T just just around the airplane just around the edges of the airplane theoretically physics says that those people inside the the bubble and

(1:15:01) whatever it's shaped they're going to be experiencing their own reality with inside that bubble and now why is this crazy not in a crazy and a cool way is that this means that no matter from the outside perspective no matter what this plane looks like it can it can collapse down onto a single point but the people inside of it are still experiencing reality as if I'm in this room right now even though this whole room collapses down into a single point and then that means that when they come back out from the outside Observer

(1:15:32) perspective us watching this video they could come out somewhere else even after being scrunched down to a point from our perspective they can come out and from their perspective they're just going to be like what do you mean nothing happened now I'm over on the other side of the planet pretty weird huh pretty weird but that's what physics that's what the double slit experiment that's what non-locality allows for and how do we know that that's true how do we know that when they disappear

(1:16:00) like this and and it looks like they're shrinking or moving to the speed of light or whatever you want to call it really they're being encap encapsulated in a bubble here if you want to think of it like that how do we know that it's true time dilation because time dilation is real time dilation is also magic time dilation says that my time moves based on the rate of mass

that's next to me the more mass the slower my time flows the closer I move towards a black hole the slower my time is going to go and it

(1:16:37) gets weirder than that the larger we are the bigger we are the slower our time is going to go you this can actually explain why a fly moves so fast why an ant moves so fast it's not that they're the flash it's that their time is moving faster because they have less mass less Mass equals faster rate of time even on the planet just based on our size pretty incredible right pretty incredible yeah bag of holding and this is also what some David grush said this guys if you if you're a David grush enjoyer out there for my casual David

(1:17:18) grush enjoyers he says that the inside of the crafts when they get inside them are larger than the outside how is that possible the same exact stuff that we're talking about right now because the perspective on the outside is different than the perspective on the inside pretty weird and the craft themselves in that case if for that to happen I think the craft itself would have to be made of a metamaterial that's actually causing all of the like completely causing the outside to be disconnected connected

(1:17:53) from the inside it's really magic man really is check out the movie Interstellar if you're more interested on that Interstellar and I'm just being honest like I almost always am if not always Interstellar was the first time that I realized the time dilation was real and it blew my mind I went wait time dilation is real I Googled it I started looking at it I started reading about all the experiments they did on it and I went holy crap that's why we call it space time because space and time are

(1:18:26) interl the more mass the slower your time flows the less Mass the faster your time flows yeah that video proves that Star Trek warp drive is possible not Star Trek teleportation but Star Trek warp drive and maybe Star Trek teleportation at one time in the future okay let's keep going there we have the Hutchinson Effect folks they tried to recreate Tesla experiments claims of Philadelphia Experiment reproductions what's the Philadelphia Experiment chat Philadelphia Experiment is when they literally teleported a whole ship

(1:19:16) now when I first thought about the Philadelphia Experiment years ago I thought that they were making it invisible no no no they're teleporting to not object this is why I'm looking for the video the pictures this is what we're afraid of right if we don't do it right then you scatter your image if your image gets scattered now this is what's going to happen this is the concern right here cuz how do you control and make sure that the whole object stays outside the in in a bubble in a localized vacuum

(1:19:50) that is separated from the rest of reality if you don't do that correctly this is what you would expect right it's going to get in T it's going to get Mex messed up messed up it's going to get uh scattered and now here's where you can I don't know what this is supposed to show but I think this shows the straight up teleportation and breakdown of matter right here similar to Bob Greener yeah quiz aoto says that satellites in low earth orbit experience a Time difference uh yes and and not

(1:20:26) just do they experience a time difference but then there's also our field is not consistent all the way around we did a post on this the other day so our magnetic field is not consistent all the way around uh which means that they have to account for the various dips in gravity even though it may seem minor but after you circle the Earth thousands of times it's going to add up right and yeah so even if you just go into outer space you're going to experience time at a faster rate than you do down here because there's less

(1:20:57) Gravity the further up you go pretty wild time is entropy entropy is change if you could freeze everything in a room down to a mo uh to the movement of electrons and all other particles you could not say time is moving correct and N signs equations don't require time to move in any particular direction time is most likely an illusion that we perceive and that's why time dilation is real right CU time is an illusion that we perceive because of our biological bodies and the way that our brains function so Hutchinson now look at what

(1:21:37) we're looking at here the Woodward effect mock effect we might have to look at this one this is Alco Berry Drive right here this is Star Trek next Generation If part of an accelerate an object accelerate the exact moment when becomes a little heavier it would pull the rest of the object along with it in other words it would create a Thrust without propellant word would call these temporary changes in Mass mock effects and the engine that could use in the mock thrust the mock effect Thruster wow wonder if there's any good videos on

(1:22:25) this I mean we can actually just watch him but whoa 917 James Woodward the mock effect wait wait what wow welcome to APAC that's Tim Ventura this Corporation you'll know what he's up to okay next slide please distribution of matter on the cosmos was the reason why have Aur it's not something that's is he still alive we'll come back to that okay theorized to enable warp drive what we're talking about via large NE negative Mass warping SpaceTime large negative mass and small point theorized

(1:23:14) to create stable traversible wormholes stable traversible wormholes alberry Drive ALU Drive yep everything everywhere all at once ning Lee guys ning Lee in the AC gravity and I think panov as well uh um she theorized the magnetic field applied to a superconductor will align ion spins to produce grav gravit magnetic and gravio electric effect 1999 Popular Mechanics article UAH and NASA msfc collaboration left UAH and founded AC gravity LLC in 1999 then straight up disappeared she straight up disappeared

(1:24:18) and then she died in like 2022 pretty wild why do I recognize this guy what happened to ning Lee She [Music] disappears so this would have been 2012 the panov effect so same deal rotating superconductor produces gravity shielding effect so guys I've been sitting here talking about Gra superconductors you want to know why superconductors are important cuz we' got two scientific experiments by two different people that both believe that they create anti-gravitational forces using spinning superconductors two of

(1:25:05) them there you go and how I can't really still explain it yet but we're getting closer the reality is if you spin the superconductor you're creating the magnetic fields that are extremely

powerful that can theoretically break down the fabric of SpaceTime I'll give you the slides right now but you can see it right at the top of the screen 2001 patent collaboration with NASA msfc claim 2% reduction in weight widely panned by the community oh there's a a consistent some consistent stuff that happens every time anyone T actually

(1:25:42) does the real experiments and brings them out there someone was asking this earlier right when we were going through it like how do you get the information out the reality is this is an information War more than anything else right because everybody who posts anything gets discredited they get forced to retract it they get **debunked** whatever it is even though it works right they people come up with some other explanation are they being paid by the government some of them probably are and then the rest are just going along with

(1:26:10) it because they're NPCs in The Matrix right they're fighting for their Matrix they're fighting for the idea that we that there is nothing special okay Tor Jose Vargas Tamir Dada gravity beam generator work at the University of Southern Carolina creation of a inhomogeneous electro electric field with two asymmetrical holic concurrent electrodes experimental quantum gravity websites still online Tor present work unclear H this seems a little bit like Thomas tonson Brown a little bit right also this makes me wonder if we're

(1:26:52) getting close close to the EM drive if you guys don't know what the EM Drive is it's like electromagnetic cone and you put or you put microwaves in just cone and then the cone will produce a Thrust pretty interesting uh lee Tor panov uh modan P panning what is this Popular Mechanics articles no longer available that's interesting douglas douglas tors University of Southern Carol Carolina research paper never made public penov out ousted by the university in 1997 of tomier or Tomer how do you say that Giovanni malasi Wikipedia page

(1:27:42) deleted here you guys go what happens to the scientific researchers I wonder if these were the four that she was talking about who have already produced anti-gravity could even be more than this guys I think that the very moment that room temperature superconductors are admitted to being real which I think that we're on the verge of it I don't know if it's going to happen this year but the more that we have videos uh which I'll show right now the I'm going to collect every single video and by the way anyone who's out

(1:28:19) there who finds videos like this send them over to me I want floating rocks send me every floating rock that you find room temperature super conductivity will break open anti-gravity anti-gravity is going is coming with this because look at what we're looking at here we're looking at a rock floating suspended in space not just floating but they're moving the magnet around to the side and the rock is staying in the same spot I mean the moment we see more stuff like this um anti-gravity Technologies coming

(1:28:54) with folks here's another I mean look at this flux pinning on this thing look at that that's a magnet that's a neodium magnet it's floating on the top of it with nothing else there's no you know there you go and the reason is that superconductors are creating magnetic fields that can cancel out a super powerful magnet with no energy being inputted whatsoever it's going

to change our whole world it's going to change everything anti-gravity is coming out with it guaranteed and why well we just looked

(1:29:37) at two experiments that use superconductors now imagine the superconductor gravity shielding it only produces 2% now imagine that they don't need to uh cool it with liquid nitrogen they don't need to cool these superconductors they can use room temperature superconductors for this experiment yeah yeah you're going to see some magic what do I think about plank time I haven't really looked into it too much if we're talking about plank time we're talking about what the the tiniest scales of time when we're talking about

(1:30:07) the beginning of the universe reality is I don't even believe in the Big Bang really I think the Big Bang might be [redacted] too I think that the big bang I think that we misinterpret so just for people just for people's education that are out there the reason why we believe there was a big bang is because when we look at all the other stars and galaxies out there that are far away especially the galaxies they're all red shifted so we think that oh everything must be moving away from everything else right I've never liked this

(1:30:40) assumption if everything is red shifted the the Doppler effect then the idea is everything's expanding and the way that we argue it the way they taught me in physics is like a balloon I wish I had a balloon but yeah I have this this dog poop bag here okay yeah maybe not but I want to talk about this anyway uh guamar so when you blow this up right from it goes from being a small thing to a large thing everything inside of it is moving away from everything else when it's being red shifted and I never liked

(1:31:19) that idea because it felt like it was everything moving away from everything else is a little bit too just too weird for me right I think that the better explanation is that light is losing some of its energy as it goes through space and it's becoming red shifted for another reason now if if light is somehow being bent or losing some of its energy and becoming red shifted like that now everything doesn't need to be moving away from everything else and if that's the case now we don't need a big

(1:31:51) bang to explain our Universe I think our universe is infinite I think the most logical explanation is that our universe is infinite that's just my opinion though okay um yeah Lulu was she walked back she went back to the other room uh Claude po uh what did he say modification of [Music] panov polenov pod clov right pinov I should should learn how to say his name correctly propelling Force claimed to be the result of electric discharge of I think this is what's YB o this looks like a disc spinning here univ versions

(1:32:41) Theory tested at Nasa 2015 that wasn't that long ago a lot of these really are similar in terms of the systems right Morning Star Applied Physics 2000 to present uh modified serial machine with gravio gravio electric mag uh mechanism so yeah here is again we're seeing a toid right we're always seeing a toid look at this spinning this is like a a multiple toroids here right when I simplify this in my mind it's just a matter of trying to get the magnetic fields and the electric fields to flow in a certain way right that's

(1:33:22) all that they're trying to do here and this is just explaining the forces in terms of their directions and the right hand rule right I think that's what it's showing here for the pointing vectors when you think about like that it's not that complicated when you look at this huge thing with all these arrows it seems more complicated and then I think the question is okay well where are you trying to move where are you trying to get your pointing vectors to to point to to the middle here down the middle as a

(1:33:53) straight line now Bo Phantom works somebody argued that this was not the tr3b was not produced by Phantom works I don't care uh I think that this is just a picture that's added here uh the grass program was admitted to in 2014 I found some supporting evidence for that the other night podlin off might have been an a collaborator did they produce tr3b I don't know who cares mechanism REM resembles the brown generator and then reason to classifications ah this one right here this is the Eric W Davis one right here

(1:34:34) are they both Eric W Davis h wow the authors are are classified on this wait is this is this real guys the authors are de are classified on this one well I know what I'm reading tonight guys highly recommend we read these when the do is declassifying uh warp warp

(1:35:38) engines we probably should be paying attention and it's got all the right buzzwords Casmir effect extra Dimensions dark energy is a higher dimensional artifact okay I like that warp drive and higher dimensional [Music] manipulation yeah wow someone was taking it seriously right my hair looks fantastic does it appreciate you guys here looks good today they said guys he gave me I needed that boost today Travis I needed that boost today uh the traversible wormholes I've already read that one is definitely Eric

(1:36:25) W Davis that one I know is Eric W Davis least I think it let's just double check wait it is right I mean I mean Eric W Davis is probably author on both of these if we're being honest there's probably some other people as well I could have sworn I saw a version of this out there that had uh Eric W Davis but I know he's talked about V uh VM teleportation which is the type of teleportation that we're talking about which is the type that's consistent with a macroscale object being able to Traverse through a wormhole just like

(1:37:19) this here so okay appreciate you guys uh so yeah definitely want to take a look at those I'll send you the other one as well here's the other one uh just in the sake of time tonight since it's already getting pretty late uh we're probably just going to finish this up I'll give you guys that homework maybe we'll take a look at these uh Declassified papers and then we can do a followup maybe even tomorrow and then yeah oh that's the end of the presentation right there okay cool so let's let's just skip through some of

(1:38:10) this I'm not going to watch this whole thing I got to try to go to sleep I'm exhausted yeah I think that uh I am going to have s back on so the other thing too is that we'll have salvator Pas come back on oh is this cuz my sound is super high yeah and we should we got to think about though what we're going to talk with Salvador Pas about in general I wanted to be more scientific this time because we're a lot smarter than we were a few months ago on the science

so I really want to get his opinions on you

(1:38:42) know how and why the science is being suppressed what we have to look into to figure it all out um and why Eric W Davis is got his name over all these papers but he's just hiding in the shadows somewhere right what's the deal with this Eric W Davis dude like he's writing papers about teleportation all this stuff but he's not going on like any not going on doing any media whatsoever no interviews nothing about it at all and then supposedly he's been hating on Salvador Pi's work according to Salvador

(1:39:16) Pas like what what the hell something's not adding up here guys right something's not adding up I don't I don't get it I'm pretty sure like if I'm going to go spend like I don't know however long it takes to write some of these papers and then like then poo poo on people that are arguing for the same exact stuff that I wrote a paper for how's that how does that make any sense I don't get it something something's missing there folks yeah salvator Pi is the key for sure I think that the thing I worry

(1:40:00) about with Salvador Pas and this is just my opinion is the same kind of stuff that I worry about with Amy not that he's going to hurt himself I think that he absolutely would not um I think that the issue is like when you're on the inside and my opinion is I think salvator Pi has seen crafts like I don't think anybody comes up with the papers that salvator Pi has come up with without just straight up seeing the crafts right he's seen he's seen the damn crafts um I don't think he could ever

(1:40:31) admit that but I I think he has it it would take a lot to convince me that he had not seen the crafts and the reality is when you seing some UFO stuff some floating orbs and things like that man your whole life changes it's hard to tell what's real and what's not anymore right it's hard to try to stay silent and then you've got to not talk about the stuff that that you know you know is true that you have you know ndas about it has a mental toll on everybody man everybody except for me I don't give a

(1:41:05) crap you wheel out those wheel out the orbs right in front of me right now I want to see them float wheel out the bodies I don't give a crap okay here we go let's see if there's anything interesting in this what's wrong with general relativity textbooks uh  $c^2$  so this would be  $E = mc^2$  not sure this is something to do with e equal MC s here the rubber sheet wouldn't act this way without being stretched H the Springs the distant matter stretch the SpaceTime rubber sheet giving it a large potential energy even when

(1:42:01) flat Why is flat SpaceTime always taken as mandasi space in general to is not special relativity has no gravity the local potential has the universe distant matter potential in there too and when you put something down oh there he is damn could he make this uh video screen any smaller that's about as small as someone can make that holy crap look at this on the side on the right chat something about this right here is very interesting I think and again I'm the kind of person that I I don't have the Science Background I just try to

(1:42:45) understand things in layman's terms when I look at it here I think that they're saying there's if this represents space time right here that just the fact that it can bend means there's a potential there yeah the enormous potential energy that flattens space time in the cosmic scale is not the end of the story the co the cosmic gravitational field also induces inertia and inertial reaction forces the gravitational induction h me of Ken wheeler of inertial forces is not widely accepted in general relativity Community but

(1:43:26) Einstein was convinced that it is true does can anyone tell me what this symbol is here and what this means poal due to to the matter density that's uniformly distributed throughout cosmic space that potential is exactly equal to the square of the speed of light oh the potential of all the matter that spread out through all space time got it spatial flatness and general relativity cosmology is obtained because that because this  $f$  equals speed of light squared and both are locally measured in variance so when or wherever

(1:44:13) the space time can constructed to be essentially flat the speed of light and gravitational potential have their invariant values but their derivatives not near necessarily how does this help consider the Rel relativistic n Newtonian approximation to the general relativity is written by George uh luchak God can anyone just have a normal name that I can pronounce correctly in the early 1950s okay okay we're going to skip ahead through some of this we'll see if we can get some spice the mock effect equation okay too

(1:44:43) much numbers too much numbers for me you guys know I hate math storing electrical energy in a capacitor equals  $m$  squared yep oh quick side note on **debunkers** you guys remember when I was doing early spaces and they were trying to make fun of me for saying  $E$  equals  $mc^2$  guys if you're out there and you're trying to make fun of somebody for quoting Einstein not a good look not a good look energy equals speed of mass times uh or mass times the speed of light squared is basically one of the most fundamental aspects of

(1:45:26) nature Mass equals energy it's how nuclear bombs work the M effect Thruster the Mega Drive interesting also looks like I don't know what this is exactly but could be a toroid in here I imagine Faraday cage counter poise okay too complicated for me what does it do can it does it lift off okay some experiments blah blah that looks cool vibration momentum conservation and pendula you know what that sounds like to me  $f$  torsion balances and the momentum conservation guys there's a lot we we keep coming back to the same stuff

(1:46:17) over and over and over again right all the same ele keep coming back up time and time again no matter who you're looking at toroids vibration waves it's like we I think we've got to get away from this idea of particles we have to think of the universe and waves and uh protrusions through the vacuum piso electricity okay Mega Drive past and future tracking software okay motion basically here they're I think they're trying to measure the difference in uh like the gravitational effects the data

(1:46:57) point comparison with the tracker s SW tracking targeted data points synced with the picoscope data shows in detail frame by frame the motion processing 1800 60 frames

highlighting the devices Newtonian conservation actions through non-device resonance and the mock effect actions through resonance actions with a device and torsion aluminum block tracking together okay so is it some anti-gravity stuff going on presumably whatever it is looks pretty damn cool so maybe if we were have to create a device this looks like what we'd have

(1:47:32) to do huh pretty complicated hopefully we get there to understand this I just want to see the floating orbs you know okay let's look and see who we've got hanging around here who is in this Aiden schauer he's in our replies this guy looks familiar I wonder if David is David Rossi I guess this would be before his time 2017 he was 25 this was six years ago he had been 19 maybe you guys recognize anybody Timur of course Haler Jeremy

(1:48:41) ree Rick Jeff reer I feel like it's important to start remembering some of these people's names we see the same people see coming up over and over again uh I had two questions about it uh one it seems like you're dealing with a lot of nonlinearities in these things okay seven on August 12th was with the sweep rate low slower slowed down from what I had been using okay before that on that I think we're going to call it there for the night guys Diego Garcia free energy clip was great were you the one who sent that to

(1:49:23) me strictly stats appreciate you man credit to strictly stats for sending me the Alex Kier uh video that was pretty good I like that a lot that was weird man that was 1994 I think or 1996 and he was already talking about the uh the magnetic field anomaly over Diego Garcia that didn't even come out till 1997 or I mean 2017 20 years later how did he know about that 20 years before it was public public knowledge that's pretty damn bizarre man wait what Unexplained Mysteries just did a video about Amy Eid mystical Wonderland where is

(1:50:14) that damn guys we are on the Bros we are on The Cutting Edge right now of conspiracies holy crap I think we just might have blown up the Amy eage thing like it got like several hundred thousand views on my Twitter account that might have got people looking at it again so for the record what I want to say about the Amy eage thing is I don't know if there's Foul Play going on there all I know is that when anti-gravity scientists start going missing and dying of mysterious circumstances uh I take notice and the last thing I'll say for

(1:50:54) tonight also if if we can I I'll look up this if someone can find a link to the Unexplained Mysteries thing about Amy eage either send it to me in Discord or reply to my tweets or whatever you got to do to get it to me I want to take a look at that um the last thing I want to say tonight is I'm going to show the videos one more time they're going to mess up again they messed up when these videos came out they messed up when they these videos came out and they got **leaked** and they showed some secrets that they did not want to come

(1:51:38) out they will mess up again they may have already messed up and the videos may be out there for other stuff but they will mess up again and information will leak again again and we will be ready to pounce on it when it does and we will expose it so just remember that chat I want everybody who's following me to remember that and when some more stuff leaks and gets **leaked** out there make sure you pounce on it and you do not let it go right we've started

something here that is not going to be stopped it's too

(1:52:14) late to be stopped nothing can stop this not even me disappearing will stop this it's the ball's already in motion it's just a matter of when it all gets revealed is that going to get revealed tomorrow a year from now 10 years from now 100 years from now not sure but eventually it will come out so thank you guys very much tonight for hanging out with us in this stream going through Amy E's work and scientific background if you want to do some homework let's read these papers and let's figure out who's

(1:52:47) who are the authors on these my guest is Eric w Davis is one of them for sure any information we can find out about it any parts of it that we think will mesh with what we're seeing on the MH370 videos like if we find something about a triangle or three orbs or you know you know a 3D a 2d shape on a 3D environment anything like that that can connect then we'll report on them you guys have a great evening let's chat again tomorrow appreciate you guys being here tonight even though it was pretty late thanks Bernie for jumping on

(1:53:19) as well buddy I always appreciate having you around uh I'll look into what you said as well up here in the chat so thanks everybody have a great night appreciate you everyone

(00:07) Malaysian 37 contact 120m night breaking news tonight A Malaysia Airlines flight with 239 people on board including four Americans has gone missing [Music] yeah that's what I do just just that way [Music] everything I remembered the line from the Hindu scripture of the babad G Vishnu is trying to persuade the prince that he should do his duty and to

(01:12) impress him takes on his multi-armed form and says now I am become deaf the destroyer of worlds yo what's up everybody TJ Aller space tonight for real I wasn't even going to stream I was tired but then I saw oh is it time TJ Allard space guys skin walker Ranch the legend is hosting a space if you think I'm missing that you have not been following this case Okay uh I don't know what happened here the guy who apparently produces TV shows uh had a hard time figuring out how to set up a space not a good look not a good look

(02:07) just messing with you TJ just messing we know he watches we know he follows okay what's going on here waiting for the the space to get started up I probably shouldn't to give mck West that much attention but it was uh some [REDACTED] I think it was the first time he messaged me or uh mentioned me on any kind of interview as well so felt like it was important hey everybody hey Jess hey Aaron Cosmic highness solar what's up solar FYI we're drinking tonight pour one out for Amy ESD whatever happened to her does it it

(03:09) was terrible either way right if it's some kind of crazy conspiracy which people are making it out to be that's horrible it's horrible that somebody would have to know so much about technology and then feel depressed enough that they would you know take their own life it's terrible and the other option is well the government uh stepped in she was saying too much I mean she was talking a lot on that stream while drunk she was saying names I just I don't know can't stop thinking about it this is probably a

(03:49) good time for me to say that I would never hurt myself and never uh you know going to be very careful when I drive my car and when I walk down the stairs you know any if I were to disappear under any mysterium uh mysterious circumstances it would be suspicious just remember that guys you might think that's crazy you have to say that but we just we want to be safe guys we want to be safe we got people sending us weird creepy letters on YouTube you know we're talking about teleporting planes so let's just yeah we

(04:23) make sure it's clear where's TJ Allard man been waiting for this space man hold on I'm trying to figure out how this works oh man we might have to retweet some of this him there I don't know man listening to this uh this woman Amy talk got me feeling weird Vibes about this situation real weird Jeremy was basically like she doesn't seem like somebody who's suicidal right put a finger down if you've been kidnapped giving me weird vibes man where's the TJ Allard crap dude sorry give me a second chat I

(05:04) apologize this is unacceptable un acceptable we're getting it's uh in the middle of the night by two large men who asked you if you wanted to go the easy way or the hard way holy [REDACTED] just in in case anyone was wondering that was not pornography that was Dom Dom LC how do I find TJ Aller stuff dude look where I even followed him guys there he is it's an am with TJ Allard where is the thing dude dude to the answers what is this man what is this TJ Allard he's famous producer of Skinwalker Ranch producer Creator secrets of

(05:57) Skinwalker Ranch wait is that is that on Netflix I've never watched it sorry TJ I've never watched Skinwalker Ranch guys sue me I'm out here talking about teleporting planes but I'm too good for Smoking Dog men TJ where's the space TJ I know you're watching hold on DM some people see what's going on here folks red panda saw me go live return of TJ I guys I don't know how many people in the chat don't know who TJ is guys do I really have to do a lore recap I probably should okay since

(06:50) we're on a live stream and I want it to be entertaining okay here's the lore wait hold on let me message make sure I'm telling uh red panda and tupacabra that like this is embarrassing for him man he's a producer there we go this man's a producer uh oh hold on hold on is that my DMs oh it is something that I can whatever I don't care I've been pretty open about who I DM so I they talk about inven how do I pause stuff that emerged there it go that's one of the uh points of speculation is that we have

(07:44) back engineered something oh there it goes what the dude this this application is trolling me guys okay so I'll give you the TJ background while we get into space yes you are correct uh LJ

whatever your name is sorry I don't know how to pronounce it got give me the pronunciation here here's the guy this is the one go go again go go go come on like go yeah that's tips thing I'm I'm trying to have this [REDACTED] balance as I can there are going to be like I said earlier there's going to be people in

(08:19) this space who have with each other that are probably going to be on the same speaking panel and imag where is he I need you guys to just as much as you can just keep it professional right everyone here has a job right guys if that's your intro it's gonna be just keep it professional you're living [REDACTED] life Tiff I love it I love it Tiff just because it's called TJ Allard addresses everything does not mean it's a drama space okay I'm gon I'm gonna mute this okay guys so quick background here for everybody

(08:54) TJ Allard uh he came in and showed up in some early mh37 any spaces and in those spaces like he made it all about him like we spent an hour of two hours just talking about like trying to sell TJ Allard on the what happened it was like really weird and so then I did a followup where I was I was kind of mean to him making fun of him it was the Danny TJ and Julian space uh with uh I live streamed it and it was the funniest space I've probably or stream I've ever done um so that means I have too much talent but all we did was

(09:31) make memes and listen to them just cry and yell in the uh in the space and TJ basically just talk nonstop and Tred to take it over so either way it was super entertaining so if you think I'm missing out on TJ part two you haven't been following me closely enough definitely just the there he is there he is here we go chat okay you're all caught up oh also te J is the uh Skinwalker Ranch uh producer brand ambassador for TJ Allard yes I am not a secret I am not a secret brand ambassador for TJ Allard that's a

(10:15) fact is Tiff is oh my God Tiff's gonna be she's gonna be the levity she's gonna be the levity tonight there he is TJ what's up bro let's wave let's go let's wave TJ He Man um yeah so wait like let's let's let's let's talk regular let's just have a regular conversation idea why TJ doing addressing everything how was your night how was your night bro so Random very interesting um I'm sorry I would have been here earlier got turn it up you're so low I was a business dinner so uh ran

(10:48) late oh business dinner oh he should name drop somebody was all very surprising who's he at dinner with all kind of came to the surface although it's been out there for a long time so TJ I can I have to say I genuinely like from appr you emoj my gift I mean like the fact that we communicate like this be rud don't be rude I mean listen good I'm always happy I I love this community I've been you know supportive and trying to help push it along for a long time send TJ some heart emojis guys this is

(11:21) good this is good well we're both we're both from La I mean like we know the business but UFOs they're hot right now right I mean from La guys Liv in La yor don't he's East Coast don't try to take the East Coast [REDACTED] don't do that he's not from La TJ do you work more in LA or do you work more in new the East Co East Coast stuff uh I was in New York City uh for 20 years or

something what they address good question Steve I have no idea but it honestly does not matter to me I'm so excited about being space

(11:53) TJ right now that it could be just literally about I don't know his adventures in New York City is possible not very I and I live here a that's um do if you make any memes uh you can post them in Discord I'll share them on live stream I don't I don't know I'll share them on live thing I I truly don't like I I got to approach I love how like TJ's not even a UFO guy right so funny he's he's really he's really not have you ever seen [REDACTED] TJ space is like dumbfounded by our community I love it

(12:25) no I'm not at all like I've been part of like this has become like you know my about the last sometimes I sit there at work and I'll be uh just sitting there in a meeting and it's like a live meeting we got video on and I'm just looking for the emot treat my uh my work meetings like I do my Liv try to elevate anything that I think is possible which is why I you know gravitated towards Shawn early on and I'll say it up front like you know Sean's awesome I've been talking probably three is maybe three four years

(12:56) now at least three and this is public it's it's on you can go look it up this isn't this has already been out there like we've talked about this publicly many of time many times I got be careful I'm just because he was not I don't want to give the government a reason to disappear me get any kind of uh he wasn't trying to make money off of his what his experiences are what he was we are GNA figure out what happened to Amy es his request was always hey can somebody help me identify we are GNA

(13:20) figure out what happened to Amy es chat you know get some muscle that's real real hard Tru these things I don't know what talking pitching shows about The Experience now um it just has yet to kind of Catch Fire uh I I really think that that's the one of the next stages of this whole you know this this exploring this the phenomenon and exploring all these anomalies and I think that it's it's a good Next Step um barring any phys we might have to read this Amy stuff if TJ Bor us well yeah it's like once they acknowledge fully

(13:56) having a private conversation going to be like the people who have experienced will be start getting on top of it is very important what made you go for skin walker um so the the uh what made him go for skiner or the inspiration I should say for Skinwalker was um trying to do a longitudinal study about one location um for an extended you know for longitudinal meaning extended period of time at one spot want to do a study in one spot way that's how they came up with the story thing you know no they definitely sker first see if you can

(14:32) determine um any kind of correlations um between events and data um and so that was the pitch the pitch was basically a paranormal Oak Island um and there were two locations that were interesting two networks which were uh Area 51 and Skinwalker Ranch uh neither one of them could be kind of secured and uh it took me almost two years of trying trying to do that uh and then eventually getting to Brandon and pitching brand convincing him to do I kind want to troll him but also want to reconcile in that series The that's Chen I don't know what we do

(15:15) here were like oh you can't get into this you can't get Area 51 you can't get uh troll TJ or reconcile we speaker so basically my opinion doesn't matter uh on anything but it matters a lot to me my my uh experiences have been um you know just so I did I I I affected by by the ranch in the audience I got sick I was super sick um for about n months he's right next to me when I started going out there and i' had gone through all kind of testing I had some kind of upper respiratory infection that perfect 5:00

(15:55) shadow you know assuming was caused by my time there oh going talking about now I was in New York City at the time gone to a number of doctors uh gone through all kinds of tests um i' I've talked about like some of the testing I mean that I the names of things I remember were like I did something called like the Muran challenge or something along line or like and try to test all different parts of my lung capacity and and and Tes me for some kind of viral infection or some kind of infection but my understanding my doctors were telling

(16:28) me was that when they test for things um so I'm in New York drunk no C for lack of you know better uh terminology 69% terminology there was no pallet minute to go to vote uh what could have potentially or reconcile potentially contracted or gotten while I was out there yeah well so people call it the hitchhiker effect that's one you know way that people describe it um but I did have I suffer Parish I think we all want to know the answer to that question physical what are the motivations for TJ to address anything why do people care

(17:03) someone catch me up hearing things I don't know but I had don't know you know that were consistent radi exposure so when I say hearing things it was like if somebody has ttis right and you hear a con he's just literally telling us a medical situation eventually the way you deal with it is kind of like when you look at a cloud justand your mind besides the shape and now like you could you call that paradia right yeah and so the idea amazing content chat hearing was chat I need you guys to help me out here audio definitely eventually

(17:39) I I put a keep this moving FKS this constant ringing get some likes so we can get some more people in here for this TJ Allard experience that's about to go down it's like a senses uh like whatever but yeah totally I get what you're saying people want to know why I'm doing this I freaking like it that's why I just do stuff like after going yeah after I stopped going out there um you know it took a while um months a year bit about six months to a year um you know the the symptom stopped and then I

(18:16) you know that was it and I'm all set I can't be serious Chad I can't be serious put some 2018 maybe oh wild so it's like been you basically ever since like you experience I want to say put some respect anymore I just never that was it it stopped you if you're out there not trying to disrespect SK walk SP like you know good guy like he has a hard time staying serious stories his experiences out there he had like not only a profound spiritual experience but he uh also had some profound experiences from Skinwalker

(18:54) Ranch when he was on a bigo's sorryish we already interesting love chrisel skiner ranch coming together just chatting about the ranch I guarantee get so many people listening but I

appreciate you coming tonight and I'm gon to shut up now but um I just want to say thank you TJ and whatever he's probably thanks for breaking the ice Tiff and doing that [REDACTED] love you enjoy your wine over there you'll let me say this right um if you guys don't mind like the space and repost it not for my ego because I I

(19:34) would like to get some people who are on the opposite side of this I would like to get them on the panel I I really don't want this to be like a one-sided thing um so if you guys could do that or you want to tag them whatever it is um let's let's do that but I I want I just want to read let me let me go find it because I'm doing this in [REDACTED] real time I want to read TJ you're funny I want to read um something that I saw so this is my introduction to this conversation that we're we're

(20:14) going to address tonight and this is the first post that I saw so I'm going to read it I would love to get Darren in here um if anybody can get Darren in here I'm gonna I'm gonna read the two posts that I saw just so people can get some context if you don't know what we're talking about here okay so Darren says uh this is Dazzle W guy on Twitter um oh I'm muted oh they're serious here he says hey TJ just wondering what is your connection to Skyfire news do you have a hand in that

(20:47) seems very similar to story fire in name you seem to be pretty close with Tupa and Keem you are also a producer for the skinwalker rant show and there was recently a big scandal with UFO Shane being paid by someone he thought was from that team have you looked into that at all red panda koala is making a movie about UFO Shane it all seems a bit hokey to me um and this is the other tweet that I saw from him there may have been more because I didn't go looking this is literally what I saw on my timeline okay

(21:20) uh he said hello UFO Twitter it seems like I can't believe there actually a space about this right now many may have heard that has been being claiming to be a representative of this way too serious red panda koala is supposedly making a documentary about UFO Shane here are uh how are the two connected well kear run Skyfire news Panda works for Keem is managed by Ifm management Ifm Management's person in charge of AC Acquisitions is TJ Allard uh oh TJ Allard is a producer for Skinwalker Ranch it looks like there may

(21:59) be some alleged [REDACTED] of foot my friends oh follow the money is drama being pushed on this community for the sake of entertainment is Panda being funded to create this film as a means to sew Discord in the UFO Community who is receiving payment for all of this and who m space or not I can't tell if this is serious or not so I'm assuming it's not but that's what I saw that's those are the the tweets that I saw and I did see some subsequent stuff after that um so I I'll just I'm gonna mute hold up

(22:38) I'm gonna mute up I'm gonna mute up and I'm gonna let TJ I mean whatever you have to say from there and we'll just let it go from there but that's what I saw if you feel free daming Alle yeah I mean this is pay me pay me and I will do it Sean is this the stuff that you text me about I had noidea happening yeah oh yeah oh yeah yeah those are those are the screenshots

that I sent you and I was like what the hell was going on here yeah that's it he did not know about these Dam awes that's funny um I mean

(23:06) and I sent you another I sent you some other stuff in there wow TJ doesn't know about these damning allegations guys yeah I mean I think this is great um I mean it's no secret you know I one of the creators of Skinwalker oh we have to skip this yes I worked with TJ Ifm Legend um to do some stuff o spicy he great proximity so when I moved uh New York City why is he making it sound so sketchy why say manager John from say no and question KCK around ideas for a long time um and so you know people read into

(23:41) a lot of this it's it's funny that pretend like I it kind of goes to the mentality of a lot of you know the if this then that so it must be true logic um you know without anyone knowing any of the backstory or you know any of this information um I wish I'm going to I'm going to say he didn't deny it there was the money element there but you know it's no secret yeah you know yeah tell me guys what this some called me the UFO media mafia boss now um I mean there's part some **truth** in that um you know I've

(24:14) been part you know conally involved in a lot of this stuff um but yeah uh I mean I I'm just curious about like where all this came from while the digging all of a sudden and and like so what prompted all this kind like you know like through you right I met I met a lot of these people the community people here through you and I like these are good good people that you know I've interacted with um I felt like they've had their finger on the pulse of stuff and you know and then at a certain point uh I think Keem started jumping in

(24:48) and I I think Sean with you like we I tried to bring him in a couple of your spaces um because I'm like you know this is what I really want to go I think that there's something I'm honestly surprised that he's taking this serious kind of inod to like you know other parts of this community and uh he's reacting to a troll Ser terms aggregate this and this is his wheelhouse and uh I mean I I probably the best thing that could happened all right so let me so let me ask you this right because I don't want

(25:18) this because you know I told you like you know I'm G to ask you some questions course you know I'm not going to like you know we're I'm not full disclosure I'm friends with TJ but I know nothing about this business I don't know anything about any of this like saw I don't he's not impartial um some of the stuff that I'm seeing is and by the way I wasn't familiar at all with keemstar before he came into the UFO Community I know millions of people have been it just it just never crossed my

(25:50) table like ever so my introduction to him is whatever I've seen on Twitter right um um I want to put that out there I'm not a **[redacted]** Fanboy I I just don't care and it's no disrespect to him it's just anybody like I I just I don't care right um that's first but like there are some people who are like you know he he like I've seen people say he goes into different communities he's done this before um you know the uh what is it called the the drama alert thing like this is kind of what he does and

(26:26) they feel like maybe it's not a good IDE trolling that he's kind of here to show Discord maybe and it's and it's for that purpose like let's take it off you for a second and all the allegations like do do you understand that perspective or do do you not understand that perspective no I I can see how people I would say no you know take that angle on it um but it's not about take that angle course it's about he there are there is obviously a lot of disc in the the UFO Community I'm gonna um there's a

(27:00) lot of drama and it I've aced Keem in the past to like the Ryan seest of the in Ryan seest so he did for traditional celebrities he did what Ryan Crest did for started it to did that same thing for influencers telling them that is one there there is uh if anyone could do it they would and guess what they didn't and so he's carved out he has found in you know this New Media environment this new the new digital age like found a way to reach people in a way that wasn't being reached and and kind of

(27:40) aggregating and bringing it all into a home base so that if you want to know what is going on in a community of any kind um in terms of the know conflict within it that's that's the person to go to now one of the things is that that I think that the skyers doing Sky fire news is doing is kind of like again aggregating there's no place to go right now it's a One-Stop shop it's about to get good the UFO world and I think one of I think it was sounds so sinere I can't believe how serious he's taking

(28:13) this you can't find anything out unless I thought this was and then you have to listen to that whole video and then you know go through it get the Back stories blah blah blah well if you can find a way to distill that down to bites that are easily consumable that appeal to people in the way they consume information now let you know that's where he going to go like you know what I think that was great you know kind of like Gap it's basically Gap analysis right so you found a gap in the market and you f it reaction and that's

(28:43) where sucess comes and I think that what do you think is the best way to consume is he talking about the market and stuff hold on SE hold on SE I I love you but just just give me just give me a second because we are going to do hands just because I want to keep this is structured possible no it's listen listen you've had you've had a you're drinking wine you're enjoying your life over there I'm not mad I'm not mad um I love you okay all right I love you too Tiff okay so you know what Ashton has

(29:13) his hand up I wait go ahead ashon oh thanks Sean I appreciate it man hey TJ how are you doing good man how are you good to see you it's it's been a day man I'm having a good time though having a couple drinks but um we don't have a lot of people on the other side in here so I thinking maybe I'll just you know I want to the **truth** that's that's kind of what I'm waiting for like just for the conversation again like I don't I'm not here to **[redacted]** fight this is not going to be a scream I want

(29:37) everyone to get their **[redacted]** off whatever they have to say I would love for anybody on that side who you know has their feelings and thoughts to to jump up if anyone can tag them or

see if they want I messag Daren I want to hear Dar until they show up I I don't mind being the being the the uh prosecutor here's the what's the other side is what I'm trying to the side is that you're sewing that you're sewing Discord in our community and that you brought um keemstar in and you know there's that

(30:12) it's no accident of what's going on that's I mean again that's my little short version that I've seen but maybe there's more I I really don't know I can read the Tweet off to you again because I mean connection what about those payments though to uh um UFO Shane you got how long have you known Shane TJ how long yeah let's let's yeah like so do you know UFO Shane I don't know who UFO Shane is I try to find I asked when I when you sent me that stuff I started asking like who

(30:45) is this guy and no one could answer like nobody knew um and again I'm not really in that you know that Community uh you know to to actually know um but yeah I'd be well let me just say this I I like that's what I like what I do know about you is you're not hilarious you have business in this community like you know certain names but you really you you don't you're not in the mix of this stuff it was to the point where you named a particular person and you like said it as like a group and it was just

(31:20) funny because to me was like that's how much you don't even you're not focused on it and which is telling to me um but but if anyone doesn't know UFO Shane is someone on UFO Twitter and he allegedly was getting paid he says by by someone from Skinwalker Ranch I heard that he said it was branded at one point and switched uh in like \$800 a month \$200 a week 9 people in here should we play the clip uh if you if you have it go for it yeah just give me like 20 seconds s yeah sure um so was the uh I was ask TJ how

(31:59) long have you known keemstar maybe that's a more important question if we're trying to find some connection here keemstar don't they're like neighbors how are you they're neighbors whoa busted yeah right yeah guys it's pretty funny because my manager you guys obviously live in a good neighborhood like manager Tiff can you hear can you hear um I cannot yeah yeah just drop down come back up it's it's all right my manager and me are like childhood friends and we still live relatively close TJ's like our

(32:36) neighbor as well that's how we all know each other so Darren made this video and he's like follow the money and he made like a pyramid and he put TJ at the top me and Brandon Fugal in the second row and then Shane and like all these other people below and it says follow the money so I called Darren and I I just explained what I just told you guys now and and I go so what's the conspiracy here and he literally told me I don't know we're going to have to follow the money nice what does that

(33:10) mean yep it means nothing TJ damn immediately ruins the uh can't do the anymore he's do and and by the way the only one that I know 100% that traded money back and forth was Darren and Shane Darren like literally used the that gave him money I'm just following the money bro so I don't even know what I don't know who Dar who's Darren I don't even know

who Darren is he's the guy that made the the big follow the money pyramid thing today um he's okay I don't I don't he's also the guy the tweets I

(33:45) was reading earlier TJ that's that's who that's who said that and just just real quick um yeah let's I'm I'm going do strict strict no hand uh hands just so we we can get this [REDACTED] out red do you have that clip ready really actually yeah here's the clip of him first saying he got paid all right listen I literally did the same thing Lou did I I I contacted bra and fugle guys and I have lost all access because I asked one simple question that wasn't to their liking so that's where I'm basing my

(34:21) once again this is my thing I'm not trying to say this is what happened to L exactly or other people exactly but I used to get almost 100 people in this m stream meme Now bring up stre where's he at I asked one I asked one [REDACTED] question he left I asked one [REDACTED] phenomenon about the brain ofle what the hell can't see more people it so I got an email get some trolls up here I could look it up I can't remember his name he runs a site and they they they gave me a lifetime membership and I know L's probably

(35:06) laughing his ass off right now guarantee you the same they gave me a lifetime sponsorship to Skinwalker Ranch if I mentioned the website in my show and it it rounded out to be like it rounded out it hold on and Kimble Kimble knows all this by the way he's never it Kim was there with me the whole knows all this and they me like a month wow who told you to come in on black b's video because it has nothing to do with Skinwalker ran who told you to go tell him hey this stff this harass you're talking about who told you that it was

(35:49) that [REDACTED] dude and I don't remember his [REDACTED] name I'm sorry that I don't but he was paying me \$800 a month man wait okay okay hold on the guy paying you \$800 a month is the one that told you to go attack green wol yeah and they also told me to be nice **Green Street** okay that's all we need to hear I know my God it's true y if you're in this community if you're in this UFO Community there is some shady [REDACTED] [REDACTED] going on you know she wasn't the only one getting paid that's by all means I wasn't now

(36:27) there were people like Kimble like Kimbell paid me money for UF that's open book All Guest on the show right like you know what I mean like and you pay people for their time there's nothing wrong with being paid for your time and that's what Kimble did if you don't enjoy there was also someone who paid me money you justn green I don't take life too serious okay so this is what Shane said how much is it true yeah real quick like sh Shane is a is a liar too so I don't I don't know I'm not saying none

(37:09) of that's true but just take that with a grain of salt because just laughing Brandon fugle was in a space the owner of skin walker Ranch and correct me if I'm wrong he he denied all of this is that correct and if you don't yeah he denied and um I think I have payment of \$800 is that correct guys watching like uh the guy on Cheaters get stabbed I remember seeing only two payments of Bitcoin for around \$800 sketchiest stuff like get stabbed catching people are cheat we don't know we don't know who was who

(37:51) that was sorry I'm over talking this but it doesn't matter so but I think the the relevant thing there is the person that he said was paying him denied paying him which is odd some okay was guy who ran the website TJ do you know who runs the website for Skinwalker Ranch I don't uh I think that keeps on changing I'm not involved with uh that Skinwalker the ranch website actually I just got a message saying there was no payments of \$800 so I I could be wrong there there's no well that's the thing it's kind of Muddy like

(38:28) there's I don't really know what's going on with that but that was a major part of how TJ got brought in to this um I'm gonna this those people are that's what's really funny like I don't know who uh Daryl or the other guy I don't even know who those people are um and that's what's even funnier like what's his name um it's Darren and you know what like honestly I I am one of Shane's actual friends in real life like we we have phone numbers Etc and um sh he's an alcoholic him and I like all

(39:08) day long just sharing the dirt because I'm a recovering addict I'm drunk right now you know what and actually I'm a recovering alcoholic so I'm not the best person to say [REDACTED] right now but I what's going on here Tiff Tiffany Tiffany Tiff I love Tiff Tiff I love you mute up or get to the point and I'll talk to you in the group chat what's up come on you know what I'm cryste I'm just kidding I'm just kidding um so no Shane uh he uh wow he received uh this 800 for all that Serv like two billion

(39:46) worth of transactions Shane loves Bitcoin gambling so unless there's an account that we know Fred Rogers of the government that probably a bit Quin Casino he got really he loves the clout like keemstar he's literally since his mother was pregnant with him he's like I've been subscribed to keemstar and it just like his mother was pregnant but that's just something to keep in mind I don't know divine intervention obviously because I'm just like a dumb girl but whatever but but but that's what I mean right so like

(40:19) even his claims can't be taken necessarily as truth so when something starts from [REDACTED] like you got to be very careful of like where what the [REDACTED] is going on from there and that was a major springboard to how TJ how you got brought in this um UFO intros Kimbell what's up your hands up yeah thanks Sean um just to add a little context for a lot of this for you and TJ maybe um so there's some history in a lot of this you have a group of do not like tupacabra or red panda koala and they've done all kinds of nasty [REDACTED]

(40:59) um red and Tupa come along and they're they're starting Skyfire news uh with keemstar serious and so people have been trying to attack Skyfire news for various reasons um and so when all this came up a week ago where Shane was talking about getting payments from Skinwalker Ranch and then they they found there was a connection between TJ and keemstar the that's kind of where all this is coming from so you have these personal beefs this you know this long history let's get against certain people who happen to be involved

(41:37) with Shane that kind of no one's involved with but if Shane is making this stuff up and it wouldn't surprise me honestly based on my history with him but it is a pretty long con because I

I do remember getting DMS from him back last spring um about these payments from someone at skin walker Ranch all right see I'm glad you brought that up because that's extremely relevant because that that's what I was thinking right because I'm like you know we know that they're serious you know T very serious Sam and a lot of

(42:11) that other group they don't get along for various reasons I can have an echo I don't know who's uh someone's mic on can you can you mute up it's red thanks red um oh sorry yeah oh you're good so I was just wondering like I'm like how much of this is a situation where you got like some [ ] murder beef with somebody like you don't [ ] with somebody and then now you're you're attacking people associated with them and now it's just all out War like what the hell's going

(42:44) on and some of it looked like that like that's just from the outside in not knowing any of this [ ] um that's what it seemed like so Sean can I just say like on on topic um that yeah sorry guys I've been drinking tonight so I'm not going to be doing any excise conspiracy stuff got five tabs open that he was the one who said that he needs to uh I have that right here serious so R I had Carl and Chris telling me to be nice to listen to this **Green Street** to Steven **Green Street** because Steven **Green Street** was gonna tell the

(43:25) **truth** is he here and then stepen **Green Street** said was not what they wanted and then I was told I didn't have to be nice anymore so I was literally told to be cool to this guy and I've been in spaces with Stephen **Green Street** I've be with him and then all of a sudden it's just like [ ] a dead man's trigger it's just like [ ] this you know he's an [ ] he's this mean to him who said that specifically no one no one told me to be mean to him but that but I was told to not be critical

(43:54) of him who told you that stop St don't flick come on uh I'm trying I'm trying I'm trying I'm super drunk I'm trying uh but Carl Carl the crusher super drunk mostly Carl Chris doesn't give a [ ] uh honestly I think Chris like Chris is the best [ ] example of someone who's just trying to figure it out like a directed you to be neat to like you know you know no he told you to be nice to St yeah I don't know if this is not entertain you man I don't know St being if you want to check out science or

(44:23) conspiracy me tomorrow I'm to the drama right now tjard producer Ranch Som midle of all the drama that that told him to go to the west gate and stuff like that I gotta just be like closer to the m never says anything like that uh but Carl told me you know like we've been working with **Green Street** we've been doing UF Twitter drama you guys I love your this is the drama you're all the main players they're represented they're not here with us [ ] are off we're trying to lure like we have like very

(45:02) interesting we're trying to catch a big fish cire Keem anything that's what I'm saying Panda like like Shane is a drunk person he's a drunk person who is a clout Chaser and so like he is easily easily influenced so if uh Carl and people know that people know that too people [ ] know that hold on let me let me hold on Tiff I got to get around the room um just real quick guys

I I still would like the other side anybody to be in here so if you could just like this retweet it whatever like even if one of them come

(45:38) up just so I don't want this to be an echo chamber um this is I want this to be a dialog to to be fair I think I think they're holding a space listen cool I mean you know they have special guest is what I they can come through if they want they don't have to um Aston you had your hand up what's up yeah I mean life right now just so you know yeah they should come in because I mean we gotj here you know so this is a very serious conversation here and very serious allegations that we're dealing

(46:07) with um TJ uh what do you think in terms of you know have you been trying to influence the UFO community Through keemstar did you bring him here to bring us more drama what was your intention sir there was no intentions oh my God it's just kind of funny like it's not at all oh my gosh uh yeah it's not a uh that was not an intention Keem loves this stuff and again like he know he he this is what he does like he knows where there is where this is happening I've actually never seen SK this is awesome there's there's

(46:45) a lot going in here how how can I you know fill a gap fill know people were talking about needing to be filled and you know it was more one of these conversations like yeah I just happened to be you know one of the careers of the biggest UFO show of all time and it was like we start talking and he's like yeah you know let's he's been around he kind of jumps in spaces in and out we talk about stuff but like no this is I didn't bring anything Keem was like wow I'm going there and did his own thing man like

(47:14) that's not my you know I wasn't saying to him like you know let's do this let's let's bring drama to the community nothing like that at all yeah but when were the CIA meetings where you guys discussed how you would have keemstar destroy the though oh okay yeah uh I got to find a date right there's got to be a specific date here or something no there they're truly isn't there's nothing I wish I had an answer for you there I I just don't uh that's a good question though uh I can see where

(47:40) that where people are coming uh coming at it from that angle but you know Keem has been sitting here with his hand up for a long time I wonder if he has anything to contribute like go for it man thank you thank you just I I gotta like go back and explain explain how this all played out right so obviously we know there's a hate group right a group of people that sit there and spam and attack and this and that and oh my God you said something about Lando this hate group seems to be like um in love with Lando for some reason um but that's

(48:14) the group they exist uh it's very and when Shane revealed that he was getting paid by someone um and he did get paid by someone there's a Bitcoin address we have the receipts right away they got accused of being the ones to pay Shane right so their way to kind of like turn this all around so they're not a suspect is by making pyramids of me and TJ at the top and Brandon fugle and somehow Shane's down there follow the money but the guy who created this conspiracy right is the only know for who

(48:59) Gavey he's the only one name what okay will give him a lot of money okay intros go ahead what's [REDACTED] well I just first of all i' I've paid Shane uh small amounts to get guests or whatever but um honestly I feel like what Darren was doing for Shane at the time on I don't know everything but on the surface was a good thing it was a gof on me he was trying to raise money to bail uh Shane out of jail so I don't know that we need to hold that against Darren honestly here Shane is a superal I'm sorry UFO intros you

(49:38) don't understand this conspiracy comes from Darren so confus but you're using you're using a payment he did out of generosity so hold me it's getting good I'm let me just real quick this the first had to use that button let me just hold on the reason why it's it's more ironic right like Darren is not back to the UFO Shane Darren can pay anyone who he wants like Kimble you're just a member of the community I don't care who you pay with your money to do anything like you're

(50:11) not it doesn't matter but it is ironic if Darren was paying someone and now he's Mak it's just kind of ironic it's definitely a little bit ironic if it's like dude you're the only one that was doing that or you were actually doing that and now trying to connect dots that might not be there to connect I didn't get much sleep you know draw this conclusion when you were the one that did it it's kind of it's kind of iron yeah that is my point that is my point Thank you Sean well it you might have a point too

(50:49) based on what Tiff said you might have a point just because he is easily in like influenceable and so even if it was a you know a payment made out of generosity that may have been some kind of an attempt to influence Shane so there could be something there dude there are mentally ill people in this community that people [REDACTED] pray on and it's sick and Chan's definitely one of them that has been he's been stalking us on the other side of that absolutely that's a fact I've seen it it's very

(51:21) like I've seen it I want to ask Keem a couple questions here um and I just address a couple things um I want to address one the hate group uh where I don't think it's an organized effort um I think we're talking about people with individualistic kind of Click personalities um yes people kind of group together a little bit and kind of band together and choose to you know asking here uh dislike a certain person or whatever um but I don't think there's any coordinated effort um to attack

(51:59) people in the community um at least not in that sense um I want to ask can you tweet out can you tweet out Lando sucks he's a liar I don't out right now let's test it out right now no if you don't think this let's do a science experiment and let's gather the evidence I'm so sick of people saying well I don't think I'm not going to out something I don't try out never have better dick than Stone date like just to see what would happen I do I do want to ask uh Keem so you are

(52:35) known for drama alert it does seem from some angles that you're coming into the community this gu serious kind of feeding off some of the drama that's already existed is that

would you say that's untrue feeding off the drama I wouldn't say that's untrue because there is a ton of drama in here and the nature of news for the most part is drama right conflict battles off the drama um the the battling of ideas right that's what news is so you're saying that UFO Twitter has peaked in its drama so much

(53:10) so that TJ Allard and kingstar are like all hands on deck I think there's opportunities in the drama to create content and yeah real quick hold on let me just let me sorry let me let me just say this right like doesn't ke and I found this out because I didn't know keemstar until he came into the community he has something called Drama alert so I'm not saying as a bad thing so like I I think if that's part of his brand he's probably going to try to capitalize on it from a financial standpoint I think he I don't know what

(53:50) other areas or communities he's been in he's probably done the same there I'm not saying that in a bad way either so please don't [REDACTED] jump on me I'm saying it as a business fact probably yeah we need some more however it's a whole different thing yeah yeah just the land real quick it's a whole different thing to then take that and then make it like a sop just because we're into UFOs and [REDACTED] no not you I'm not saying you I'm not saying you I'm saying that this

(54:18) is being said I'm saying this is like one of the things that people are saying like it's like it's part of this that's why TJ that's why TJ's here because hold hold on the same thing Tiff please Tiff You Gotta Throw your hand up I love you but you have to throw your hand up okay real chase the same thing I'm saying about the UFO hate group I'm saying I would say to Darren and his coordinated effort that's that's not normally how things work there's not normally a DN coordinated to of they

(54:51) have to go after of people coming together and saying yeah we all dislike so so and come after a certain why does this entertain it's all on their own individual will um so that's how I see it more than that so I think the it's ridiculous to say that you know TJ and Keem are in cahoots to go after something and then it's also kind of unrealistic to say there's a UFO hate group The neither side I don't think are really doing that a cool can I speak for myself now and why I'm here it would be

(55:28) lovely yeah go for it would be lovely um yeah uh I I've followed the the UFO phenomenon for years and years and years I had my own experience when I was a child I've always been interested in this stuff did not know that there was a community first time I found like the UFO Twitter Community was I think TJ was hosting a space and I just jumped in to listen and it was it was awesome I was like wow I didn't even know this thing existed um so yeah uh I I wanted to find like a News Network in the space that would

(56:04) keep me up to date with all the news cuz every day there is news in this space that's funny CU I Hada who he was before this and everything is like in a three-hour podcast or a long article and people don't have time for that like I wanted there to be an outlet that has short clips I thought um you know tweets pictures whatever something real short to give you the most important part of that story and then once you're you know brought up today with that short

form content and you want to research it

(56:37) further then you know there's a link to the original Source or you know it's credit I think the space name is accurate because that doesn't exist yeah return I made it that's why fans the whole idea of like keemstar came in and he's causing all his drama I responded to a lot of drama think we were about 3 days old when somebody accused me of pretending to conduct the interview because we took a clip from their interview even though we credited them they created this entire false narrative that we were

(57:11) pretending to conduct an interview because we use the c or so I had to respond to that people in blogs then um go ahead and I I did say there was already drama here so I'm not I'm not saying you're NE necessarily creating all the drama there's been drama since UFO Twitter existed I'm pretty sure so I'm not arguing with that point then because I um brought on tuba and read this hate group thing they started attacking Skyfire news nonstop attacking me and talking smack left and right uh

(57:46) this milk farts person tweeted out keemstar's afraid of me he will never have a conversation with me so I said okay let's set it up in person and you know this [REDACTED] backed out right away and started putting all these conditions that like I couldn't make money off of it and he had to have the final edit so he got owned and that really set them off uh what else happened um I caught Mike UFO Mike going in and calling people pedophiles like no evidence and no proof and then I caught his wife cheating on him that was pretty

(58:22) embarrassing can we get them in here [Music] all those guys are in their own space right now I mean listen I I set it out I don't want to hear no [REDACTED] afterwards that this was like a [REDACTED] Echo chamber I I even put it in the description let's have a conversation everybody's welcome I don't have any personal issues with anybody that [REDACTED] read that they had they had the chance to come in if they don't want to come in they don't have to [REDACTED] come in but Sean that's my point those guys

(58:51) in the other space that's the group that I'm talking about I know I was referring to TJ cuz T TJ is so TJ so doesn't care about any of this that I'm kind of just telling him like that that group like they're having their own they're having their own thing right now and and that's fine I'm very aware of who the group is man I I know who you guys are talking about um let me uh let's let's get the red what's up red real quick for Chase oh hey welcome **Green Street** uh quick reminder for the

(59:21) room everyone be sure to follow Skyfire news that has been on the Forefront of breaking this story about the illegal and really sketch ways that money is thrown on in this community for narrative control UFO Shane himself said he was paid to promote Skinwalker Ranch and attack people there's a paper trail that there were payments again that's just one person saying something you can't unless there's direct proof that he's getting paid by Skinwalker Ranch that that doesn't mean anything yeah so like I said just

(59:51) continued to follow Skyfire news it's an active investigation in into people who are clearly not wanting what they've done to come to life so I I'm pretty sure I heard red say that Shane said that not a group of people I don't know why we needed a clarification that it was one person and then real quick here's another great clip in this whole kind of like perception management uh stuff that's been going on Joe Rogan and Pula talking about the Craftsman of ethologist and we already have many

(1:00:19) documented cases of this same group that we're talking about going after her and I even have uh milk fart He was ordered to attack her and he doesn't even know why but first Joe Rogan so what I found factions within the perception management of UFOs he's just got everything required feels like he's like playing one of his factions was responsible for sadly harassing people who do research and I found this out by being harassed we actually all serious we're talking about this group people like

(1:00:52) we average Professor doing their work like team messing around guys just don't italized and then I start to study UFOs thinking that they're not real maybe think that relig and then quickly having people come into my sphere research sphere who are you know part of CIA part of FBI that kind of thing and then getting a shock that you know whoa this could be dangerous and maybe I shouldn't be doing this but I did get harassed though I did get harassed and it still happens how did you get harassed most of

(1:01:28) it is um doxing and uh email harassment at my University began and um both to me and Gary at the same time and people showing up um people yeah people in my town what kind of people schizophrenics schizophrenics no but no but people you wouldn't want to meet yeah loons yeah you think that's targeted you think oh for sure but do you think that also that might just be people that are obsessed with this particular subject these are people that are a people in those thirsty I mean there's no doubt okay this clip's gone on long enough

(1:02:11) there it is sweet yes and he often asks her about Ron pandaly alleged former head of the CIA weird desk oo okay I'm interested about this I suspected that this was another instance of king milk fart being ordered to attack people as knowledge of Ron pandol is pretty deep into UFO lore especially when considering king milk fart was fairly new to euphology I didn't know that how would he know about Ron pandoli why would he be hold on red red red red just uh because I I want to I want to keep this on topic like I don't want to like Veer

(1:02:48) because like we can do that in any space anytime all the time I I really want to keep this as much much as we can in the sphere of Skinwalker Ranch TJ payments um yeah I was just saying there is like no group you know what I mean we have literally yesterday on Joe Rogan somebody talking about this group and I'm not hold on guys hold on let me just yeah Chase Chase I love just let's not and this is for everybody because like I knew this was going to be a hard space to manage it's fine but I just I

(1:03:23) just want to keep it it's not even any just in the sphere of what we're talking about we have hands up Green Street hasn't talked yet what's up Green Street get it Green Street hey

guys um I saw the title of this spaceist TJ Allard addresses everything and I had a question for him and I'm because I'm personally curious It's on topic so I uh TJ I as you know um produced three 40 minute investigative documentary episodes on Fugal Skinwalker Ranch I had previously done two on the Bigalow era um and I'm

(1:04:04) literally I'm literally actually curious if you ever got around to see did you those reports and if you did just personally what did you think of them so uh yes I did um you watched them and I've said before like I think you're super talented I think you're good what you do um I don't always agree with the framing of your narratives um but that was the nerdiest question ever you know how to tell a story man that's what **Green Street** profession question is um you know I literally I've said many

(1:04:38) times let me down I expected more guys out of green stre you're Pro um he just wanted to get like TJ to make him feel good agenda that you know what you're working for **Green Street** if people can't see that and I like a hard question what you do then that's their thing you don't always have to agree with it um you know you can't knock the work um you can you know kind of push back stor but uging the dino beavers guys is any of that stuff real with the dino beavers and the smoking uh M dog I I I really

(1:05:10) think the first one that you you dropped really helped our season that our Premiere that year um sorry guys thanks for that that was kind of uh you know unintended consequences perhaps but the show's been taken off and you know just keeps getting growing and so that's a good thing with the spin-offs and everything else but uh yeah I mean that that's that's all I can say um I guess just so thank you for that and then for a followup uh obviously the episodes as they go on they get more and more

(1:05:39) critical it obviously ends with me asking Fugal and the team for their quote best evidence and then they provide me with more or less subjectively microphone nothing and I I'm curious you I'm going to ask ask you what do you think is the you produce the show you see the show you're involved with the show what do you think is the best piece of raw data evidence that shows something paranormal at the ranch bigun skeptic guys so this is It's a uh expecting fireworks question uh something I can't really answer because

(1:06:18) you're gonna have to watch um got to watch you'll you'll you'll get to see and I think there's some undeniable stuff that you'll uh you you'll that's his answer left thinking like I don't I don't know what that is um you could give one example just the way I was I have just said I'm a producer I don't do this show yeah yeah that that was more or less the answer I expected thank you sure no problem and and Stephen TJ was talking earlier about how he got um a mysterious

(1:06:47) kind of sickness from the ranch um so I don't know TJ if you wanted to talk a little bit about that mysterious sickness yeah I can you know say that again like and I've talked about that publicly in the past I'm sure Stephen's heard you know my why is he promoting some mysterious sickness I had like about a nine month I always now I'm starting to wonder if he did pay um respiratory infection all he did is not talk anymore he's like giving up weird information

identify it and call it whatever they want

(1:07:13) right talking alcoholism I know that I was sick I went to doctors we couldn't identify what it was yeah to that's because the testing that they were done the explanation I was given was and I'm sure somebody in the medical community or somebody who knows this more than I do can verify like you go to a doctor you get tested for like Street things um and maybe it's called a pallet or something that they test for I think it's him and I was not testing positive for anything that was being tested you

(1:07:40) know from the I guess what they were testing in the Northeast not to say that it could be something in the southwest that it would have been tested for I didn't I wasn't going back I had no intention of going back um and then again with the hearing you know the the constant hearing that I was attributing to like a a ttis that might you know I kind of processed and you know maybe the best definition was like an audio parodia right where you're you're you start to hear things the same way you have parolia where you see a shape in

(1:08:09) the cloud I'm change sound that's consistent with like radiation exposure so you know that's you gotta realize it's not that simple I gotta like change like three different volumes diagnosis but event eventually you know these these things subsided and I had no intention of going back and I haven't been back in years and um the sickness man and I don't I have no intention of going back I'm not interested um so for whatever it is whether it is paranal bring up this weird paranormal story or

(1:08:36) something in the ground ke start talking more even going to turn not or something like that you can call it whatever you want I was impacted by something um and yeah left unknown to me so even my doctor was had said that it you know we don't know you define it as something alien sure am I saying that yet no but by definition it could have been identified as something alien to what they were testing for um tried that's it I have not I have not not saying you party space if that's your thing then go for it I'm not gonna

(1:09:13) judge but no tell should tell stepen **Green Street** that TJ um I think Ashton had his hand up and then UFO intros okay um so I just want to say just for the record out there that I paid UFO Shane \$50 for his uh buy me a coffee cuz I felt bad for him so I just wanted to say that I bought Shane like \$300 in pizza oh there we go who is Shane yeah explain like why people are giving him money Shane listen Shane is just a me he's a member of this community he's just a he's one he's no different than me or to anybody in here

(1:09:48) who doesn't who's just a user on UFO Twitter he's cartic yeah no he's he's he's a piece of [ ] but um yeah he's somebody that people can manipulate he likes to manipulate people ask for money and [ ] all the time and he's an alcoholic allegedly according to his friend Tiffany who mentioned earlier that's not me saying that that's his friend saying that he's just a guy on Twitter and he's always in he's always in some [ ] hold on Tiff mute up he's always in some [ ]

(1:10:18) and I'm very curious why that a lot of the payment stuff starts with him with this that's what's so [REDACTED] like my husband's a lawyer he oh my God Tiffy there's no Tiffany there's I love you there is no way you're doing this right now there's no way throw your hand up uh Jesus God I love tip a Jesus Christ um uh Kimble you have for interest go ahead yeah I think uh with Shane he's both influenceable and influential and um I don't really have a lot of proof about this but I kind of

(1:10:57) had a hunch last spring that it was kind of like a weird like battle over winning Shane on these two different quote unquote sides or whatever but um too funny why I don't know if you want to characterize this group as like a hate group a lot of them are great people who hold great spaces they're holding one right now um there are a few of them that I think they're afraid of calling out and these people will just on a whn accuse people of the most awful [REDACTED] they'll accuse amazing community members

(1:11:29) who have been around in this on this platform longer than me of you know censoring any dissenting voice like voices in their spaces which is just [REDACTED] and so I just feel uh like they're they are hurting the community and however they're involved with this should be taken into consideration when we're trying to assess what's going on yeah real quick I just want to add in because I add think it have follow my question though that all them definitely love Lu zando like they have like shrines built to him and uh yeah also

(1:12:01) keemstar is definitely feeding off the drama like a vampire Ryan SE Crest just [Laughter] kidding so can someone explain though what these so I understand you know very well aware of these factions or whatnot but what is the current beef or the dividing line people angry all right I don't TJ here's the thing for real promoting something it's it's I just don't understand that's getting that's what I'm saying right I'm not saying that none of that stuff is relevant like it is like I started this

(1:12:42) space whether any of you guys were in here or not I was like listen there's going to be people on this panel who do not get along with each other who have issues in this community and I hope we can [REDACTED] have this conversation but to go down that rabbit hole it's just going to it just opens up everything else and then it's going to come to this back and forth bickering thing and not the issue that at least I'm trying to talk about with you so it's not that we can't talk about it it's just like you

(1:13:07) know what I mean it's like a lot of stuff that's been going on for a while and people have their issues with people and I think there are a lot of Val stuff on on both sides you have people like there's like murder beef it's like some [REDACTED] East Coast West Coast [REDACTED] with some of these guys like and then they don't have to get along like I'm not trying to make everyone [REDACTED] Kumbaya like I'm really not I'm just trying to have like a discourse because this came up right um I'm going to I gotta say man

(1:13:32) I gotta tell you this so I look at this I look at this pyramid right I'm looking at it now which is hilarious and I I I pretty much have good relationships with everyone here that's we

supposed to say much like we're just kind of you know neutral in the sense like he know he's to he's incriminating himself he says he knows everybody on the pyramid that's the guy that look like he's got fangs um I know everybody else and on all sides like I've talked I talked to everyone in this in this like the whole UFO

(1:14:01) Community right is yeah we're empty I want to hear TJ something that can be you know turned into some kind of entertainment property or a television show I always say this into a TV show you know and I told you this a thousand times Sean right I mean you and I know this like I look at everything with a TV bias I look at is there a show here if there is great if not I don't discount what you do I leave space for everyone to talk they can express their you know their feelings their their **truth** whatever you want to

(1:14:28) call it show here all what I do is I look for something that's entertaining that can be turned into some kind of series um and I'm I think even with Ashton like I said the same thing to Ashton up front like listen this is what I do right I look for this things ideas stories I can Elevate I love you TJ and if I can't then God bless you man go go do your thing um I'm not here you know my opinion doesn't matter I'm not here to judge TJ tell us if this UFO community have a uh greenal like **Mick**

(1:14:56) jumped in I asked him to come in he jumped in for a minute he was like I'm not interested in this drama and good on him um but I was trying to get all these other what I thought were the descending voices oh he talked an hour speaking on that right and Mike man I love you Mike I knew you were gonna I knew you would come through and I'm glad you're here with your hand up man um just real quick for the for the room I I'm going to I'm going to reread the the tweets that I saw just so the room get can get kind of

(1:15:24) familiar because people are messaging me like what are you even what are you guys talking about so I'm going to read these and then Sam has his hand up then we're going to get to Mike um so uh Darren Reed Dazzle woke eyye on Twitter he says hey TJ just wondering what is your connection to Skyfire news do you have a hand in that seems very similar to story fire and name and you seem to be pretty close with Tupa and ke they're also a producer with the Skinwalker Ranch show and there was recently a big scandal

(1:15:52) with UFO Shane being paid by someone he thought was from that team have you looked into that at all red panda koala is making a movie about UFO Shane it all seems a bit hokey to me uh here's another tweet that I saw and again I didn't look all into this this is literally what I saw on my timeline uh hello UFO Twitter seems like we have a thread to pull many may have heard that UFO Shane has been being paid by someone claiming to be a representative of Skinwalker Ranch R Panda koala is supposedly making a documentary about

(1:16:22) UFO Shane how are the two connected well keemstar runs Skyfire news which Panda works for Keem is managed by lfm management lfm management person in charge of Acquisitions is TJ Allard TJ Allard is a producer for Skinwalker Ranch it looks like there may be some alleged **[redacted]** of foot my friends follow the money is drama being pushed on this

community for the sake of entertainment is Panda being funded to create this film as a means to sew Discord in the UFO Community who is receiving payment for all this and who

(1:16:55) is paying um so again that's what I saw there might be more stuff out there couldn't tell you have not looked but this basically what we're addressing here I'm gonna throw it to Sam what's up Sam what up man I think this is a really important space that speaks to both the value of the community and the value of spaces because getting the ability to Hash this out and having TJ address these things is is really good I think it's exactly what um that post and Darren uh what he didn't want to happen

(1:17:26) was rational conversation happening over a post that was probably meant to uh distract to be honest and so I'm going to walk you through real quick what I think is happening uh based on my own experiences so um what you just read of Darren's tweet is almost identical um to what I read about myself from this exact same group I'm not going to mention any names but we all know that there's you know there's a specific specific group we're not debating that here's a prominent member of that group here's

(1:17:56) what they said about me after having been in the community for months I'll say it I think Tupa is being paid by alt-right Q people I think he's smarter than that than to say the things that he said I think he was getting paid behind the scenes to perpetuate violence and cause Division I have no evidence this is just what I think he produces videos for alt-right agencies one of them talk [REDACTED] about the Tre project no guys we're just drinking so since I first got in the community I was I was myself from

(1:18:24) these accusations from the same people saying I influence I was analogy Sam my name is Sam go by Tupac Cabra I'm not paid by anybody to push a message uh especially alt-right people like I you know I have a I'm a very real person and so the thing is is that if you come out of the gate with influence or you have any kind of um influence at all these things get said about you if what you do with that influence isn't in line with this particular group's views so what we're seeing here with this TJ

(1:18:57) Allard accusation is that they've been exposed and they've been exposing themselves for months for months in spaces you guys can go listen to it it's been documented it's been posted about if you choose not to look at it that's fine but it's there to look at all right they've been documented they know that something's like they kind of expose themselves for doing something pretty [REDACTED] up with the with a Community member named UFO Shane all right UFO Shane we talked about them everyone's

(1:19:22) shared their own opinion I I would say at the very least what and the very most of what I'll say about Shane because he's not in the room right now is that he was in a vulnerable position and I think people took advantage of them those people literally uh thing that you can watch anyone do if you've seen people be groomed ever if you've ever seen someone be groomed listen to Joe guys that's what happened to UFO Shane he was in a bad spot and they love bombed him they started showering with

(1:19:46) money if you think this is boring then listen to what Joe said if you want to learn everything in the world study people getting paid to do the influence game to actually division he's the person right they're the this is admission through projection the only people recorded doing anything like this are these guys and they used someone who is in a rough spot we've all I mean TJ if you guys if you guys haven't heard him speak if you haven't heard him at his worst when he's down guys why is

(1:20:16) this important the reason why this is important is that this is an information War as much as it is a war about finding the science we're talking about the people that literally are trying to troll anyone to death who finds this science at all on either side it's kind of messed up so we got to learn we got to learn how they operate Shane was ever gonna say h I'm gonna come out with everything they start to call him a pedo they start to call him a rapist they start to call him a drunk every every and this is what's

(1:20:44) really bad is that love bombing right this is when it becomes tragic is because they pull it away and even Shane he thought that he got his [REDACTED] pulled away because he talked he talked about uh Skinwalker with Bartell and suddenly he wasn't getting calls anymore from fogle and I heard the pain in Shane's voice it reminded me very much of of what I saw with Lou Lou Angeles and people brush up against this exact group of people and if they're not pushing that message then they get attacked harassed conspiracy theories world

(1:21:14) around them it's exactly what theza said it's exactly what he said calling his PO officer with fake allegations so that's who whoever did call on um Shane and you know got us got him arrested is is not a good situation um I do want to get to a couple hands real quick yeah I want to because I want to like I like I said because people obviously coming in now um I started this space for anyone who doesn't know Mike see you're in here glad you're here I I wanted this to be like both sides of the coin to be able

(1:21:49) to say whatever they wanted to say um I'm not going to ass assume that I know what you think about this mik because I have not looked um I do know who some of your friends are maybe you agree with them maybe you don't but I am glad that you're here I wna give you the floor and I just want to say to everybody that is Speaker again there's a lot of you guys up here who do not like each other and that's fine I don't I'm not playing Kumbaya like you guys don't I don't care if you guys like each other if we can

(1:22:17) keep this respectful and get points out I would be [REDACTED] very happy as the host Mike what's going on man hey what's up Sean yeah so um I just came back from a space I hosted where we talked to crash retrieval uh research it was pretty cool um anyways I did want to come in here I'm not entirely sure about the whole like Shane thing I will comment though I did hear talking thing at one point okay and it was like a little sus to me and like it reminds me of like working with like all these different like healthcare reps you

(1:22:57) know your ultrasound rep doesn't know much about whatever EKGs but if they see an opportunity they'll throw it your way and like you know it's just like media buddies man works

on to this and at all that's probably why he's here and I don't know that it's necessarily good or bad but I just want news to be news and not dragging vets and uh yeah I mean that's all I don't Michael let me ask a question again only because again I'm [REDACTED] really glad that you're here because I I [REDACTED] hate Echo Chambers I

(1:23:28) hate them um so you said uh you don't know if it's good you know if it's bad is it your opinion that um yeah we need more people in here that it's it's there's like a [REDACTED] hidden agenda behind it like I only saw the few tweets that I saw right I know that Darren put something on YouTube I haven't watched it do you think that this is a purposeful thing that TJ is doing since you know this is about TJ clearing his name or not whatever's going on like do you think that TJ has ill intent with

(1:24:02) what's been thrown out about him um so I I'm I'm gonna refrain from assigning intent what I will say is outrage cells so anybody who's looking for clicks views creating outrage you know maybe sometimes legitimate or not legitimate is what's going to sell so I see a lot of that is what's going on is outrage where there really shouldn't be so that's the big red flag for me as to who's responsible for that I I don't know I don't want to saddle TJ or anybody but it does seem to me like it's

(1:24:38) just outrage culture that's artificial I don't know TJ definitely jump in yeah I want to speak yeah definitely uh so to speak to that so I don't know about the outrage culture part of it but so I have to frame this correctly um Mike was barely is very in right and really branched out of these these very small Pockets that you'll find in social media and and YouTube Med you know like YouTube videos and whatnot and like heid said earlier you know in order for you to kind of get a story or to get some kind of

(1:25:10) information you need like a three-hour video or you got to read a long post of something in the current way that the world works most people don't have the attention spans to do that um and so what you know and and I I credit came for this term was calling the normies right so outside of this world outside of our the Twitter Community the UFO communities and whatnot um the normies see the face of the UFO stuff as uh step Greer right and so when you say that name in the people we all deal with normies too TJ no I understand that but

(1:25:44) the point I'm saying is you know who knows how to reach them because he has I don't know something like uh two and a half million followers teen so if this community is ever going to Branch out and reach a broader scope of people in a big and kind of bring other people into this V I'd rather have keemstar be the face of UFO need someone like to help elevate it so yes I did create Skinwalker Ranch yes that is the most prominent yes I did create sker ranch right now in pop culture you're gonna need other you're

(1:26:17) going to need supplementary help to to try to elevate the topic even greater and whether that's other stories or other television shows that's one thing but the television you know TV landscape is dying it's a DWI it's it's on its last legs there's no audience there what you

now do is you bring in you bring in someone who understands where things are going and how things are how you can reach people now um and not saying guys I'm getting to feel like Mike just wants like a role right Mike just wants to be

(1:26:45) he wants a TV show because U mic show AKA Moonbase mic say like man you see you see something that's what this all comes down to is it get your thing man do it it's a way that nobody that is in this space or in any of these these spaces or even in this you know in this online community has been able to do so there it's not a problem to make the tent bigger right you want to more people come in and then you're going to get more ideas and more understanding and and more involvement um that's not a bad thing let me let me

(1:27:15) give you some push back how about this what what if and again just you know I don't I told you I was going to ask you whatever the [REDACTED] came into my mind my mind y so what if this person uh has a drama background what if this person allegedly goes into communities and stir stuff up and it's just going to get Amplified do you think that that's relevant and again I know you're a TV guy you're a media guy I understand you make it very clear the lens that you look through and you see through are you

(1:27:43) able to see out of that lens in the context of what Mike is talking about so yes and I think that's more us applying what we think to what he's doing versus what he's doing right so if you're telling me so the the argument here as I understand it is because because Keem therefore drama no there was plenty of drama you guys just went you just told me like 30 minutes of stuff about people calling people names and racists and this and that it was always here so to shine a light on it you know like light

(1:28:13) sunlight's the best disinfectant to shine a light on it and kind of root out that nonsense so that people would take this more seriously because when you pitch this and I'll give you my experience anecdotally you know when I would pitch when I initially pitched Skinwalker Ranch uh to Discovery we were literally laughed out of the room and now they've come back since asking for other shows in this IL right but the number one show to represent skin or to represent UFO skiner Ranch I spent I my credibility for 20 plus years and then

(1:28:44) you start pitching this that's the number one show you see like there's another way that you're you're kind of perceived now that the show's I'm just going to say there's for improvement the the topic is kind of being elevated to a more serious heed what's up yes you're going to have these These Old School um ideas of battles and factions and whatnot are going to continue to play out but eventually that will go away that's in every industry and that's going to go away as more light is shined

(1:29:10) on the subject and then it's elevated to the point where you'll bring people into a normaly into an idea of an accepted hey there's something these guys experts um depends on what top Bri in here Brian's a great example of like someone if you think around the box right you don't think outside that box you think around the box to push people to push the box to grow around your thoughts and I think this is a great way to do that increase the size of that

bring in more people bring in more ideas but root out

(1:29:39) that nonsense right this is all people holding on to they've created an identity based on their faction and once you can get rid of that then I think that this can be taken more seriously and grow and I think Keem is a good part of try to bring that to kind of elevate that yeah if I could jump in here real quick uh Mike and his buddies do not want the space to grow they don't want more people here because right now with the current numbers they have which is like 100 200 maybe at most they're able

(1:30:07) to like Bully and harass people but when the space gets much bigger and there's like millions and millions of people in UFO Twitter uh which is going to happen and I can guarantee you that that is uh you know my goal to blow this up and make much bigger um and accessible to more people uh they will not have that power anymore so that's one big fear that they have um Mike Mike's kind of a fraud right came in and he said you know I don't like how uh you drag veterans this is the second time he's made this

(1:30:41) claim what he's referring to is Greenwall pulling some um **foyer** request where it looked like uh David gush was lying all right we covered it we covered that plus Skyfire news covered David gush's response to that coming out Mike then turned that into you're dragging veterans so he is definitely one of these people in the hate group and these are their tactics they're dishonest he said he said outrage sales or what whatever he said he's the one with the outrage right you and your whole group you're manufacturing outrage

(1:31:22) 247 all you have to do is go look at your Twitter feed oh yeah is that why my hour and a half space was just on Research I did not interrupt you Sean you gonna handle your room or what yeah yeah was actually I couldn't talk with you the two of you at the same time yeah like Mike man you are **[redacted] scam** of insults but okay yeah well listen I'm try hold on let's but let's do this Keem cuz like listen everyone's welcome here um how about this nobody has preferential treatment over hands besides t TJ and Chase because the space

(1:31:54) is actually Senator on TJ Keem M both you like again you guys it's a murder beef it's fine I don't care but let's let's stick with the hands uh absolutely UFO intros I think you were up go ahead I didn't finish what I was saying well I mean goad I don't want I don't want to give I don't want to give that's how you run spaces that's fine don't do that don't do don't gas to interrupt guys let me say this I don't hey let me say this that was me all right that was in me all listen

(1:32:32) that's actually true Mike did jump in on Keem let's not jump in but Keem did Skip hands so I'm just as the moderator I'm just trying to moderate like I don't have like so they both **[redacted]** up if we're being real um everyone's welcome to **[redacted]** talk Keem you were in the middle of something if you could wrap it up in 20 seconds and then we'll get the UFO intros let's just do hands please you're unmut I might just I just might hand my time over to keemstar M the room it takes two seconds since I've

(1:33:06) been doing this 15 years um let me give you some advice so when someone's mentioning someone directly then you let that person respond so the conversation flows so basically Mike mentioned me like three different times this accusation that accusation then DJ went and then you were going to go to a hand and not even let me respond wouldn't the room kind of be stumped you want a back and forth conversation to to I AB absolutely fair enough point taken I hear you but listen I'm I'm I'm doing

(1:33:35) you said 15 years I've been doing it for 15 minutes so I'm not it's not going on to be perfect uh finish your point though bro to talk [REDACTED] sorry that I'm coming at you but I just dude it's my my my my my skin is thick as [REDACTED] it's fine I'm not taking a personal at all awesome awesome uh but I would say just go to Mike um go to his buddies and check out their Twitter feeds look what they're replying to all day you know you know calling people liars and this and that I mean it is a hate group they all they do

(1:34:06) is represent hate go look at their Twitter feed and they spend these crazy narratives these crazy conspiracies and um they're mad because they got a Target on their back but that's it uh UFO intros Kimbell yeah um red panda or Tupa did you guys have knowledge of TJ's affiliation with keemstar when you were talking to Shane about uh payments from Skinwalker Ranch that conversation but I'm only I'm just betting into to answer finally got some drama going the conversation about Shane and skin walker wrench took place

(1:34:51) over the course of I think of of a couple months just through the spaces he was holding and the things that he had said so like I you know what I mean that would be that's kind of a blurry area most last week though when you talked to Shane you know did you know about uh TJ's connection with keemstar and obviously TJ being the creator of Skinwalker Ranch well I definitely knew that TJ knew keemstar and I've known TJ for about a year or more just through spaces and through Twitter so like did you anticipate this reflecting like poorly

(1:35:23) on TJ I don't I still don't think this reflects poorly on TJ you're talking about does this conspiracy theory say I'm just saying I'm not saying it's real or legitimate no nothing in my opinion nothing reflects poorly on TJ this is 100% projection from a group of people and in this idea that like oh like this is this is interesting as well right there's this weird pivot that's not naturally happening and that pivot is okay this group exists but what about Keem in his history of drama hold the

(1:35:50) phone everyone in this room knows what drama's been going on for over a year with me directly and tertiarily with a bunch of other community members people have left the community be people have been harassed and docks out of the community it's all the same group doing it and all of a sudden someone shows up and goes oh that's actually drama and that's actually crazy and I'm gonna speak up about it and now he's the drama King and who's labeling them that the same people who were free to rain right

(1:36:16) they were free to roam around the pasture and pick off whatever sheep they wanted to everyone was fine with that as long as it wasn't them now Keem comes in and says [REDACTED] hold

the phone what I'm seeing is well researched what I'm seeing is well documented what I'm seeing is obvious to the to the regular person we've all been in the basement of UF all no offense Chase never had a referendum on this group when they've been doing their sh the past two years you know hard that's something a hate

(1:36:41) group member would say no one's in here making derogatory statements or anything these are just facts Mike I'm sorry no [REDACTED] at you chase but I'm just saying like this I'm guys I'm G everyone's free but we can't like I we can't we can't [REDACTED] just all jump in man like we can't uh uh Sam finish up your not I'm not saying like yo finish up I'm saying continue continue okay so like uh yeah that's that's what's happening I don't see any any conspiracy with TJ even with Brandon

(1:37:11) with Keem like the idea that that's shifting that honestly like it's people who were who were just last month chastising people for quote unquote conspiracy theories and now they literally created a YouTube channel with pyramid connecting dots where there's no connection and there and you know what I mean this is just a defense mechanism Watch What Happens I I implore everybody just you can make your judgments now you can say whatever you tweet your craziness tweet your support I don't care but pay attention and watch what

(1:37:38) happens in the coming months because we all have seen this happen none of us are sheeps we don't need to be treated this way the conversation needs to be open and free and when people come in and Bully it with with intimidation with slanderous remarks like you're dragging veterans what about what about uh Chris in here Chris is a veteran he gets dragged all the time you guys make fake rape and I mean you guys I'm speaking to the hate group members that are in the room right now fake rape accusations are

(1:38:01) one of the craziest things I've ever [REDACTED] seen in any Community this is crazy you guys do it to every single person you don't like I mean the the it's it's rampant it's all the time and frankly and I'm gonna end on this note frankly you guys don't get to pick for me or my community or my friends who's good and who's bad you've proven your your intention you've proven your bad your bad faith it's just not good and so to sit here and think you can still push influence and convince us or the

(1:38:29) listeners what we're going to believe and what we're not with this hateful hateful like treatment is kind of bananas to think that we're that naive it's not you're not respecting our intelligence you're not respecting our critical thinking and that's exactly what we're supposed to be celebrating in this community so we're not all being followed and led around by a bunch of weirdos all right so goad go ahead Chas yeah I want I want to State again I said the same thing about the UFO hate group

(1:38:56) that I did about Darren's uh conspiracy they're individual people who have their own agendas who just happen to align with each other I don't think there's anything more than that um I don't think there's a giant conspiracy around it and um yeah that's that's all I'm going to say about that I think it was Chris and then uh I don't know who's next after Chris Chris and then Ash

Megan also yeah Megan can't raise her hand um just go after uh Chris Megan so yeah uh TJ what's going on uh

(1:39:35) I'm the Chris that Tupa just talked about uh that's been here for about a year and uh came over from Tik Tok because UFO Shane who's been the subject of this conversation uh he messaged me probably for a solid month maybe longer uh you know you got come over this is where TW don't know who this person sounds like just a little background I had a little over 200,000 followers on on Tik Tok so uh I wanted to Branch out and you know when you when you get to that level where you start kind of growing a little bit I was like

(1:40:08) all right well I need to grow my other platforms and so I made my way over to Twitter and Shane brought me over here and Tupa was part of the first tweet that I was ever tweeted about uh in here where immediately drama started happening and I had no idea what was going going on I had no clue about any of this infighting or anything that was going on and somehow I got lumped into something because I guess Shane tweeted and tagged tupacabra in it and then next thing I know there's people talking about racism and all this all this crazy

(1:40:37) [REDACTED] so that's kind of how like I I got introduced and I'm kind of giving you a rundown of a of a guy that came from another platform he been here for a year and tell take happen and so it's just through UFO Shane UFO Shane brought me here and I was in group chats and stuff that's how I met Kimble and a couple other people that are in here and uh you know I started started making a lot of friends and uh chats uh and there there were several that I I've been in and out of come on Chris names kept getting

(1:41:08) popped up you know popping up and stuff like that and the thing about UFO Shane that you gotta understand when Shane is on his [REDACTED] and he's on he is very charismatic deep metad the middle of he never takes a side he's got friends on both sides and mentioned yet so that's how kind of how Darren and that kmf and that group that that that's how he's in with them because I think you know Darren he calls him one of his closest friends and then you got people like me that was on this side before some stuff

(1:41:43) happened um and since then we squashed it the other day real quick Chris do what do you thank you for that what is what is your hold on cuz I want to I I have to I have to Corral this back to like the point what is your opinion what is your opinion on the the accusation that TJ Allard and keemstar are purposely sewing Discord in the community do you think that has any legs or no oh no then then you can go from there I'm just I can't tell when these people their whole life stories yeah no that's what I was trying to get

(1:42:20) but there's there needs a little bit of back story back I think so and I know people have mentioned drama alert uh while everybody was in here you know [REDACTED] going off I decided to go through drama alert's page and I I've noticed that I don't see anything about the UFO community on the drama alert page so ke appreciate that Sky whole purpose and the intent behind this is to create and Trust I'm the skeptic in the room that probably begin with with what I objective um so yeah yeah cry about it

(1:42:56) uh so uh you know I'm sitting here and and so how did mull how did that go yesterday scheme with with Skyfire news um so you know I see an objective with Skyfire where the trolls at one two not aside but just bringing both sides of of a skeptic or a uh Enthusiast noose uh feed right it's everything that goes out in the community you know so that's what they're doing and they haven't they haven't otherwise shut the [REDACTED] up uplifting y i I love you bro you're like I [REDACTED] with you just just throw a

(1:43:35) hand like I just cuz and I'm saying this Sean Sean Sean hold on man this is nonsense like we're professionals we're adults this is nonsense like if we're gonna have that kind of conversation I I'm not going to sing around for that yeah like like yeah let him interrupt I'm gonna leave as well so I mean I can't control someone hold on Chase I got it I can't control someone hitting a button jumping in I can only say something and then I have to go from there I'm trying to [REDACTED] moderate

(1:44:02) this [REDACTED] the best I can I started this if anyone wasn't here I'll [REDACTED] say it again there's going to be people on the speaking panel who [REDACTED] can't stand each other that's fine because it's two different sides but everyone can get their stuff off if you just wait a second I'm trying to [REDACTED] get everyone to hurry up so I can get around to these hands like if we can do know name calling like go [REDACTED] look at my first post like this goes for both sides like I'm not gonna I don't want it from

(1:44:28) either side like it's just just let's let's keep it [REDACTED] respectful like that that's all do you want me to can I continue yeah yeah but then please wrap it up rule let's keep it short and then let's not interrupt you other people just keep it short don't interrupt thank you yeah so okay so basically uh UFO Shane has never mentioned from my standpoint from somebody that has been in multiple conversations with him the only people I know that has paid him is UFO intros which is Kimble and uh I think some

(1:45:03) sporadic people that give him money from here and there right so from there uh I think that there was tug of war with Shane that caused this issue and they there's one side that weaponized this against Skyfire news and then all of a sudden they try to create a conspiracy that Skyfire news is here to create drama and then they they they know they found out that TJ Allard uh is is uh associated with Keem and they're playing off of that and they're trying to say well he's the one you know Shane was

(1:45:32) getting paid by somebody from Skinwalker they made the insinuation that this is TJ Allard this is how this is how it happens this is they they always think somebody's getting paid there's always somebody that's that's being paid under the table to to to spread disinformation or whatever that's what they always say so that's the point to get to and that's great thank thank you thank you Chris Megan can't raise her hand she's had her hand up she's on a computer Megan I

(1:45:58) don't believe you have any side in this I would love to hear from you what's up thanks Sean I appreciate that also I think considering you normally do no hands in your spaces you're

doing a great job uh so yeah and I don't I would say I don't yeah you're great I would say that I don't really have a side in this you're right about that I try to stay out of the murder beef to use your phrase um but so yeah I would say that in general I'm not really like I'm a deep dive researcher even I've heard

(1:46:24) about the UFO Shane movie a whole bunch uh I don't really get involved in that man everybody just wants to tell their whole life stories huh um and we know that Brandon fugle has heard about that movie or about Shane he knows about Shane he's talked to Shane Shane says you know he had DMS with him all that uh so I guess that my point of view is when I saw this is what the drama is about appar pyramid I definitely laughed because anything that puts Brandon Fugal like above no offense TJ your show I actually watched your show since then TJ

(1:46:55) it's great but uh anything that puts Brandon Fugal above other people seems below TJ sorry seems crazy uh but so the thing that I saw when I heard about this like connection between uh like Keem and uh TJ is that Brandon fugle right knows is aware of Shane came into space talk about Shane about this apparently Shane's out here saying Brandon fugle paid him all this stuff it makes sense that that might be something that Brandon fugle would not want spread around Twitter about him uh and that TJ also would have a vested interest in not

(1:47:34) having that stuff spread around Twitter since he's also invested in Skinwalker obviously uh so I guess when I heard about the Keem TJ connection the thing that I thought was this is interesting because if they are themselves business associates have both potentially some vested interest more so obviously TJ uh in the Skinwalker Ranch you know IP whatever you want to call it uh that Keem coming in and partnering with panda who's been working on the UFO Shane documentary that was more the connections between all of that than I

(1:48:10) saw than whatever weird pyramid thing was going on uh so I'd be curious what people think about that c can I please respond to Megan go ahead also she she she did ask for unless you're asking a specific person yeah I mean she did ask a question to whoever so go for it well I I can I can shut down that theory relatively fast um so one skin or excuse me Skyfire news has covered **Green Street** who is the number one Skinwalker **debunk**er plus me personally when **Green Street** came out with his long form video tweeted at him

(1:48:49) and said great video like it's all there available for everyone I'm not an OP for skin walker Ranch although I do love the show um but yeah you know if negative stuff comes out about Skinwalker we're gonna cover it if positive stuff comes out about Skinwalker we're gonna cover it oh yeah I'll just say real quick Keem also I wasn't saying that I necessarily subscribe to that theory that was just what I thought the connections there were going to be so that t like the whole TJ's like Brandon fugal's boss

(1:49:22) thing seemed crazy and I wanted to give you guys a chance to kind of address that more in my mind reasonable angle of connections uh yeah I've seen some of the Skyfire news coverage seems great so far I know you know thank you Megan and we we definitely needed that little in between thing there I appreciate you Ashton I'm trying to do hands in order I'm

trying to remember Ashton I think you're up ashton you there yeah I'm here sorry so one thing I just want to say real quick is Mike said something about medical Representatives

(1:49:58) that's not how any of that works I don't know if he's some kind of fiser salesman but he's definitely a fraud like keemstar said that uplifting tweets person is also just some kind of weird clout chasing loser their name is just like completely oxymoron um uplifting tweets but anyway I just no name Sean I just I just want to yeld again because that's the thing right like I I I I did I did and again I can't if someone says that I can't stop it right it's not like I'm allow sorry I

(1:50:24) was pushing no because here's the thing here's the thing guys like again I'm G say it just the last time a lot of you guys [REDACTED] don't get along and don't like each other it's fine but just if we can get the points across without that that way someone doesn't have to say to me hey Sean didn't you say this and then I have to [REDACTED] jump in again it's like it just makes it flow easier like Keem star was talking about the conversation flowing it just interrupts the conversation because if you call

(1:50:49) someone a name the other person's going to want to [REDACTED] respond to it naturally so it's like and then it cuts the whole build off so Ashton go ahead man no I just wanted to yield the rest of my time to keemstar thank you and I apologize no problem man and I'll give the rest of my time to uh to both I think uh I think we're on I think red I think you're up right now I will give my time to red a much needed joint Chase if I chase hold on real quick real quick real quick hold on real quick I just want just

(1:51:29) Chase I'm about to go [REDACTED] smoke this I'm still here I got one earphone and I'm about to go smoke a much needed blunt with my cousin Chase jump in if if you don't hear from me okay I I got you and I'm stopping smoking so I can go apply for jobs so thank you guys for making me want to smoke and okay here's my thing I wrote out not so I should be quick um real quick everyone go follow Skyfire news for the latest news to recap what we're covering here it's a conspiracy that Darren made that TJ Allard is at

(1:52:01) the head of this uh Skyfire scop on top of Brandon figal and keemstar and Mick West and L reviews and me and uh Green Street and Black Vault these allegations came immediately after the UFO Shane story broke where he was claiming he was being paid to push narratives online and to Haack the critics of Skinwalker Ranch these are his claims and I think these are just classic what we see that group do whenever they get exposed on some things they kind of try and muddy the waters and flip the um allegations uh this is the narrative

(1:52:34) control mechanism since day one Skyfire has been attacked accused of dragging veterans I personally think liso's message was directed at the Wikipedia Scandal and at Skyfire there was definitely like we had that UFO podcast and Stan for better both part of that like greater Network come after us Skyfire and also Ashton are examples of researchers and media that exist outside of this control system that exists within disclosure Skyfire and Ashton should be allowed to exist no different than Liberation times or when

(1:53:08) that UFO podcast DRS photo we're all just people researching the phenomena um and we see what happens to people we see what happens to L reviews to Jeremy MC when you step outside of this thing that they so that's what I want to say okay thank you red um I think UAP Mike is next and then Mr America um I do see Lou down there um if someone wants to drop down so we can get Lou in uh I I want him yeah I want to let him respond to some of this if possible so um UAP Mike man yeah thanks Chase um when I think about again the outrage

(1:53:55) machine that I'm seeing that is completely artificial for the most part I don't see L um I could go to Yankees Twitter and see people threats um go some idiot on this platform said I'm a pedophile and Tupa liked it the other day uh so like you know there's just like you know people are doing dumb [REDACTED] and Tupa apologized to it and I forgave him I said hey man like I didn't take it that serious because I'm not even though that's a pretty serious allegation and uh and I said t I forgive you for liking

(1:54:25) that post even though that was a really ugly thing to like um so you know man like bad [REDACTED] happens for sure Bad Blood happens personal U mic isn't it in my opinion of day this is like the biggest clown [REDACTED] I've ever seen in this community and all of you guys that are perpetrating this clown [REDACTED] are look G to look like the biggest clowns ever so and Mike what what do you mean um I'm just asking what do you mean by uh clown [REDACTED] this idea that like Lou alzado is running some sort of sop to

(1:54:58) suppress keemstar and Tupa and [REDACTED] Lou reviews that [REDACTED] idiot like n none of that's true they're all a bun the common Den look we're all in bad positions because of ourselves not other people start taking responsibility for yourselves so wait I got to say something here like I I I really I'm sorry um you know I don't like going attacking each other and all of this like I get it you know there's a lot of like you know kind of like people staking their ground right it's the thing is it's not anyone's thing right

(1:55:31) and I think that people have taken this on with they defend their ideas and they become those ideas and I think it's the bigger the bigger thing here here is there is something going on in the UFO World phenomenon right there call it however you want to identify a speaker here we go um put whatever term you want on it and this is going to get more dramatic I is the exper gas lighting The Chopping everyone's legs out from each other and insults and this and that like we got to get past this stuff and order

(1:55:58) for it to get Traction in the bigger context of things like these this little stuff and we have to stop attacking each other what we're watching this is a watershed moment as far as I'm concerned that we're seeing like again shining the light on all of this to kind of say like hey this is the problem that the group has as a whole how do we get past this like we all collectively agree like everyone's going to have their opinions and that's great there are no experts here because no one knows anything going

(1:56:27) few people that actually have anything and I've said it on the record multiple times like people like Brandon who are you're gonna have to have individuals not government not

anything put their own time money energy and resources into push the musical and once you can do that people like you need components here you need this core Community you need someone like Keem involved to kind of elevate that Community you need a show that's reaching the current people in their in the way that they have now

(1:56:59) like Skinwalker does you need all of these things and then eventually it's just going to be too much the dam will have to break and information will come out I think Mike just has like main character system Peg after Peg after Peg is not helpful to anyone I'm just saying like I prefer like if we can keep the insult at the minimum and all of that that'd be awesome TJ just sayas see keem's got his hand up man go for it I I agree with you one second Keem I know Mr America's had his hand up for a while

(1:57:26) and he has been requested for a while so I want to give him just a quick opportunity speak and then we'll let Keem go and then uh I kind of lost track of who's next but we we'll go from there so Mr America this is just gonna serve as a pallet cleanser to be honest with you I'm I'm just an observer listening to both sides of this because I don't have a dog in the fight the ad hobim got to [REDACTED] stop like that [REDACTED] is not helpful you got to keep in mind everyone involved in this conversation this space

(1:57:52) we're in this together we can't [REDACTED] count on the government to give disclosure we're the [REDACTED] disclosure so these at homonyms these insults being lobbied back and forth don't [REDACTED] work they don't even they're not even [REDACTED] relevant all it does is it tears into the conversation it's like claws on a [REDACTED] chalkboard and I'm like okay like can we just have some decorum a little bit of [REDACTED] decorum I understand that people are upset with each other for having differing opinions

(1:58:16) or whatever whatever the differences are because I'm new to this I don't know what the deep-seated rooted issue is with everybody but [REDACTED] all that [REDACTED] we're all here for a reason we're trying to get knowledge we're trying to share that with each other need to [REDACTED] tear each other apart that takes away from what we're trying to achieve so just enough with the ad homonyms if you have a direct in uh not insult sorry if you have a direct accusation make it [REDACTED] direct so the person that you're at you're saying that

(1:58:44) to can respond to that directly and we can have a back and forth It's civil because this [REDACTED] don't [REDACTED] work when you're you're like you're a [REDACTED] PDF you're a [REDACTED] idiot you're a [REDACTED] stupid piece of [REDACTED] what the [REDACTED] that's like barroom talking [REDACTED] like that don't work here like like I'm just trying to listen from a a neutral position basically so I want to hear both sides but when you guys start [REDACTED] insulting each other that don't do any good it does it takes away like I

(1:59:07) almost start tuning out when that [REDACTED] starts happening hey Mr America I just wanted to say up in the space up in the nest I threw my research I did a research space tonight this stuff is too much for you I I don't I'm just trying to help somebody who is having a problem there's a research space where we talked about research you can go listen to it if this stuff is too much for

you man I you're missing the point though I think you're missing the point my my point is I want to hear what you have to say and

(1:59:33) so does everybody else hear especially when they don't have a dog in the fight I want to hear what you have to say when it comes down to insults and [REDACTED] that don't work you got to just go back and forth Civ so we can actually hear what the actual accusations are being lobbied that way we can hear the res the the rebuttal to that so we can see what it is and let's hash this [REDACTED] out makes no [REDACTED] sense for us to keep arguing back and forth let's hash this [REDACTED] out all right I think I think you guys hear

(1:59:59) each other I think you guys hear each other um I I wanna I think it was um Jim siman who said um the real problem is uh there's there's [REDACTED] nhi here on Earth um so let's let's kind of keep that in mind that you know there's something going on that's not drama related um I do want to get to I think it was Keem and then um Tupa or red panda I don't remember which yeah I just want to say I promise you I'm not trying to play a violin over here right I'm not trying to give you a sad story right I'm

(2:00:35) not playing the victim but I'm just being factual since I've been in this community I I have been on the defense every single day every single day somebody from Mike's group has accused me of something attacked me for something you know found some old you know documentary where I was getting cancelled like five years ago this allegation that allegation right every single day ready starts with that camp and that camp attacks everyone Mr America came out and just gave a nice neutral speech about hey look we we need

(2:01:15) to keep our eye on the goal All This infighting is distracting us what does Mike do starts attacking him no I gave him a re no yeah I was gonna say Mike was just making a point that he purely he Ted UAP face are you the law for I'm so confused am I a lawyer no I have my own opinions I have no you seem like for the hate group PR no I just think I think honestly all thatas this is why we're here when you actually state facts that just tells you what's really going on here's the thing I I can promise you

(2:01:57) this I wasn't done speaking I can promise everybody this right they can attack me every single day every single day I have enough energy and enough experience that I've done this my entire [REDACTED] career to be able to De deal with all this nonsense and still break news stories and still be wildly active and still grow this community there is no stopping this train and that's what they fear the most they think the tactics they've used on normal nto5 people with with jobs that come over and they have an opinion and they scare them

(2:02:31) off the internet through doxing and harassment and memes and all that that is not going to work here and so they got a big roote Awakening for them in the next couple months Fair news is two weeks old and it's already pulled 7 million views and to address some things I feel like I have been nothing but respectful in this conversation um so uh yeah I just want to state that and I think I have a honest respectful opinion on things and I don't try and attack people so if you feel like I'm being attack you're I'm

(2:03:04) attacking you I'm sorry I'm just stating my opinion um now who's next uh I do I don't know if L raised his hand or not I want to give him a chance to say some things if he has anything to say um if not we'll we'll move on to to the next person yeah yeah just real quick I I think it's safe to say that nobody in this entire room hates me I'm pretty neutral with everyone everyone is very happy with the things that I do so just uh yeah I just want to keep that the same uh and I don't want to ruffle any

(2:03:40) feathers but I will say I find it [REDACTED] hilarious that because TJ Allard and Keem know each other there's a conspiracy now all of a sudden but when Dave Grush is going to UFO conferences and having lunch with George Knapp and Jeremy Corbell no conspiracy there whatsoever so yeah anyway have a great night L reviews comes up big with the big Zinger I love it I'm going to be honest I I did not expect that from L that was like Robert or the last second you got Kobe and Sh in the game oh that was one my that's maybe

(2:04:24) my favorite moment of the space so far that was really good um yeah I think I just want to address one thing and then I'll get to my main point is that like um when Mr America did make his really good appeal to all of us to be just you know to be our best selves so we can get to the better result right um while Mike Mike's comments on its face might have been okay you do realize he cut him off and then he said yeah uh if you don't want to deal with this drama go to my space just go to my I recorded I did it

(2:04:53) you know and that's fine but the troubling part about that is Mike is literally part of the hate group so for him to be like oh yeah I'm above this come to my SP that's like a weird hijacking of of what the intention was and I think that's that's why I laughed about that when I also want to say Chase and Sean you guys are crushing it you're doing a great job hosting the space it's you know it's a big space there's all kinds of people going at each other's throat so uh thank you I commend you

(2:05:18) guys for that um I think we have to to address just the conspiracy right of what the the conspiracy is um really we have two options we have did TJ Allard because this is what um Darren proposed right TJ Allard Brandon Fugal right these kind of really big players people on their own accord very successful have a lot honestly have a lot to lose right a lot I mean reputation wise the show I mean they have a lot to lose um the conspiracy that Darren put forth is that uh these people um paid UFO Shane a guy who gets drunk and high on or I won't

(2:05:59) say high but a guy gets like very drunk like blackout drunk that's part of his shtick like he doesn't hide that but like it's literally part of his shtick like these guys go let's risk our entire [REDACTED] career on UFO Shane let's give him \$800 a month and then uh you know that's that's one option right I agree that's one option the other option um we should start to consider mon we know paper trail between Shane and Community not people in the community and that that was used to push influence we do

(2:06:31) know that there is a group of people who definitely have used and will use and apparently want to use vulnerable people uh just to use them to push this weird kind of petty

the petty kind of influence right like you know someone who works in media this Credence to Darren's conspiracy Theory because I understand like at the level that TJ's at and you know the show's at there's a lot to lose is a big risk while I do understand the value of guerilla marketing um it just never it didn't pass the smell check to me that they

(2:07:04) would do that especially since they're in the community doing all this stuff and if there's a leaky boat out there would be a drunk guy who screams on Spaces in emotional ways you know like but there is a group of people when Shane was was arrested that he was actually on the phone with that he was talking to literally when they showed up to get him for a warrant that he he wasn't swatted he wasn't abused he wasn't a victim of anything how much pay for that how much he pay for while he was in

(2:07:33) jail he spoke very highly said he spoke every single day to a core group of people those people are in the hate group he said you know I mean that's what he said repeatedly oh I talked to them every day they were the nicest people we know that there's love bombing and grooming going on by these people we know that so like you know I'm like okay so you get arrested you're on the phone you're talking you're doing all this stuff like what's more likely right so that's what we're looking at that's

(2:08:00) what we're that's kind of what we're facing here is like if we want to give Credence to this theory of of uh darrens and these guys we have to first know that they P for it over six million if if the finger gets pointed at them for all of their actions they've done over the past two or three years to Men Women children researchers scientists doctors uh NASA government Patrick politicians if they don't want to get the finger pointed of them for the recorded things they've done to all those people

(2:08:29) purchased it in 1996 for, seem like a quick and dirty [REDACTED] uh in the water smokees screen well so they can escape but we should pay attention to what they're claiming because what's more likely here in my opinion because we all know I'm trying to characterize them as fun and as honest as possible Right has just real quick T but I don't know has he given any actual names of the people who were sending him money so Lou he he's given Bitcoin addresses and um Tiff brought up earlier that it

(2:09:04) was he likes to gamble that the address screenshotting or or um his evidence as the the payments towards were actually probably from a gambling site um which because there was 2 billion dollar worth of receipts and I I don't think I don't think Brandon Fugal has 2 billion dollar in receipts towards Bitcoin that's I mean maybe he does I don't think so um I I I don't know maybe TG can help um it seems highly unlikely so I don't think Brandon or anyone from Skinwalker was paying uh UFO Shane to talk about

(2:09:50) Skinwalker real quick Chase does that mean that someone was posing that way or do you think Shane was lying outright or do you think he really believe that someone from the camp or someone from the show or someone from the ranch Bitcoin talking he sounded kind of like super you know he sounded like when he was talking to in that recording again Skyfire news

you got to check that out if you guys want to follow all this stuff up to date but like what do you chase like that is a good question I will withhold my judgment until further

(2:10:20) Evidence comes out but um my my own opinion is that you know who knows U maybe he was lying maybe someone was imitating uh someone from skin walker Ranch and got him riled up can I can I just add I mean look I I've got my issues with Brandon Fugal and some of the things that they're doing but just as someone who's had him on my show five or six times and I've had a lot of the cast members from the show uh on my show a few times I've never once ever been offered a dollar from anyone on that ranch it sounds

(2:11:03) almost like he's jealous so it doesn't track when Shane is making a whole bunch of accusations and then gets asked directly by The Source I mean brandom asked him directly hey who sent you that money so I can nip it in the Bud right now and the answer was uh uh I don't remember it's like well wait how do you not remember somebody sending you \$800 a month it's just it doesn't make any [REDACTED] sense so it's not that I don't I want to disparage Shane or or knock him down I I think I think he is genuinely a

(2:11:40) Believer but I also think that there's a lot of other stuff going on with Shane and and I think people sometimes exaggerate some of the things that are happening to them or correlate things and you know go from a to d without stopping at Big 200,000 I just found so I don't know man I I think I think that's a great Point L that I do want to get hand got a lot of hands up so I think it was Chris and then uh I'm gonna say UAP Mike then screen and then we we'll just have to figure out from there because I I don't

(2:12:15) at some point after after the this run to hands if we can get Brian up here if Brian's available to speak Brian RL is here and I would love for him to put his take on all of this because Brian has an incredible lens to look through this stuff um and to kind of you know give us an analysis in a different from someone who is truly not in this group but is one of these groups that kind of uh you know that kind of overlaps with this um in the tech and AI space and I think it would be really beneficial for take a lot away from that so but

(2:12:46) yeah please and maybe Chris Bartel would be cool to come up if he wants to come up he's more than welcome to request if I kick you down just just know it's it's out of love and it's not because I don't like you so we're just trying to move speak we got a lot of requests so um Chris we had a good exchange uh I think it was yesterday um you wanted to add something you see that message yeah I was I was gonna say basically what uh Lou said um I was on his Show recently theil pretty much right on the

(2:13:19) head and I really do think like like I said I I got to know Shane pretty well and even I would probably AI history hours I'm gonna ask Shane look man there's a good possibility that it seems like you you might have exaggerated or maybe made this up because Brandon fuggle hopped right in the portals come out I that's the one thing about Brandon fuggle that I'm going to say like out of all of these UFO celebrities and stuff Brandon's always the one that comes in spaces and he always is is very

(2:13:49) professional and addresses everything and he does it very well so I do think that there might be unfortunately a little bit of exaggeration to claims going on and I think L hit that on the head might be a little exaggeration coming from a standpoint of a skeptic that I just kind of try to trace the the best way I can that kind of seems where everything's starting to point just from where everybody saying if you were in the space Brandon did ask him and he did stumble and I'm just going to be honest with you if I'm getting paid

(2:14:19) I know who's paying me you know what I mean like I'm just going to know who's paying me and uh the fact that he didn't answer to Brandon uh when Brandon asked him directly was kind of a big indication so that that kind of just what drawn me out of all this but uh want to get real quick to Mr America uh I thank you for what you said earlier and as I don't know how many people I think I'm one of the only few veterans in here I'm G I'm gonna tell you right now man like as as a skeptic I get it

(2:14:46) from from everybody like there's two sides that you obviously heard there's a hate group side and the other side as a skeptic I get it from both sides right um I will tell you that uh I am the person in this room that has been called everything under the book I've been they have found somebody with my S they found my LinkedIn and uh they did share all of my information because different people including Matt Ford was coming out and he was putting my information out there and uh that's the stand for better group

(2:15:17) um and then on top of that I've been accused of things is it's incredibly disgusting as I supposedly raped somebody uh that I got kicked off of Tik Tok for exposing myself to miners uh stolen bow all of these things that like are the most disgusting things you can think of has been said about me and I'm going to tell you right now man this is just coming from a guy that's been here a year I'm a skeptic so I don't really give a [REDACTED] on what side of the to be honest with you I don't care what side

(2:15:44) of the AIS it is it came from a certain group and their here right now and it and and they perpetuated this stupid [REDACTED] and it was really cool because in astral you guys see astral down there in one of his spaces recently just so happens that a woman that was in my live on Tik Tok when that [REDACTED] got taken down uh despite what people have been saying she was there and came in astral space and she said hey uh I was there and actually what what he got kicked off for that is actually what happened and it was one of the coolest things because it

(2:16:17) also brought a long Asal and it was just like a cool a cool really I'm going to tell you man just as a veteran that is here in this community uh the people that act like they do care about veterans okay it's a [REDACTED] front man uh the people that have come at me for the [REDACTED] that [REDACTED] lies uh they they want to sit here and they want to prop up David grush and and say he's this veteran and this veteran but when you go against a narrative like I have they don't give a [REDACTED] if you're a veteran they don't care

(2:16:51) and I'm I'm leaving it at that so you make of that what you want I see you have the American flag there right there I I served that flag so I'm gonna tell you right now this is cold

hard facts they don't give a [REDACTED] about veterans unless you're going with that narrative that's all I got to say I'll even drop down all right thank you Chris for that chis chis UAP mic and then screen cool yeah so just two quick things um and and listen listen close everybody this is some of this stuff has

(2:17:25) been going on for a while and I I kind of saw how crazy it was getting UAP might talk it's a lot of clownery like there's a lot of clowns involved myself included so I decided to make a little wager with a little man who's on the speaker panel and he had to pay me a \$100 because king milk fart didn't go to jail I actually made money because king milk fart is still free so that's that's that's that's funny thing number one all right moving on from that um [REDACTED] yeah that was probably about it

(2:18:02) I just I just wanted to let you know that uh you know I won money off of King milart being free and this is you guys you guys can't take this too seriously like ke's insulting my marriage I mean come on like let's not got to laugh it off a little bit all right thank you Mike um screen you got something you wanted to add uh yeah I uh I I just wanted to add similar to Chris uh I get it from both sides right um and you know we can pretend one side is worse than the other uh but it just depends on who's getting

(2:18:40) it because uh you know I I feel it from the side that I used to be more associated with more nowadays you know so it's uh everybody brings something different to the platform a lot of people are themselves just like they are on and off the internet and some people just think it's a you know area to troll uh you know so it's like when there's not like clear guidelines this [REDACTED] tends to happen right um but I will say I do think uh Shane is probably lying about what was going on I am actually

(2:19:10) the one that uh pushed him the other night over the edge when he was talking about oh I got the Bitcoin address I can send it from my old phone it's my my roommates got it right here I'm like what you waiting for bro go get it and he's like fine and then he goes and sends it uh I I don't think he was planning to do that the whole time and I kind of just pissed him off and forced his hand and uh you know there there is no reoccurring payments those were the only payments there is no no other payments where he's getting paid \$800 a

(2:19:38) month um you know it is it is kind of crazy but uh you know like I I it is concerning when there is uh something claiming to be news that uh how do I put that's not necessarily news you know what I mean the tone let me just mention about those payments real quick because they're relative to them um the that's the second thing I forgot I'm sorry to interrupt I did say I had two things uh the second thing I was going to mention is that there is a person that tried to extort Shane I know the person who sent Shane to jail is

(2:20:18) Fred rers he has a real name that starts apparently I don't know much goes anyways he had sent Shane some sort of thing and I don't know it's [REDACTED] insane uh and that guy has a lot of money to play with and I'm curious if these payments that were to Shane were someone's way of [REDACTED] with him and then they're like yeah go do some [REDACTED] about Skinwalker Ranch right

like it's just this do it's just a [ ] game to somebody yeah but like the push back on that is the the part that chase

(2:20:55) mentioned about uh the gambling website um if you pull up those receipts uh it seems to have been being like had a shitload of money in it be paying people out in certain increments and the fact that he got paid uh like two little payments for that is kind of like uh kind back \$800 my whole point is being that even I don't give a [ ] about whole Space is supposedly about \$800 um about the hate group oras pushing back on somebody's wife uh about being in other people's DM and [ ] uh that that's all drama to me and

(2:21:33) that's the only time I hear it is in spaces when people are talking about it uh having been attacked by both sides it it's like it if you just ignore it it it tends to to go under the radar but when we get in these spaces and do do this right here this is what brings the numbers and this is what people are going to keep tuning into and at the end of the day it's our fault you you're right there screen that's for sure um I'm going to let I was yes I was gonna I was gonna get to Keem and then Ashton then Mr

(2:22:07) America sorry where you are in that lineup but I just want to respond okay I just want want to respond about a couple things first of all uh sky fire news didn't mention Mike's wife at all keemstar did I did right and yes I own Skyfire news but that's two different things it's not like a post over on Sky fire news so uh and the reason why I did is because he's a man I'm a man you know if his wife's being unfaithful uh privately and publicly you know he should know about it so I let him know

(2:22:38) about it yeah that's some f bro yeah but you can't claim that you're separate from your own company bro like so then can do all the dirt you want to as keemstar and Skyfire it gets off scott free that's [ ] let's let's Also let's keep this space respectful you know let's let's not try and you you just interrupted but um those are two different things those are two different entities uh but yeah I mean she was his wife was you know publicly calling L zondo hot and you know he's in marriage

(2:23:14) they had vows and he should know about it not to mention well he knows about it you know whatever he wants to do with that information is up to him um let's let's not put that in this space um I wna I didn't bring it up I didn't bring it up Chase I was responding it doesn't matter um Ashton what's up um yeah thanks I'll keep it brief of course um yeah I just want to say I think that lure views pretty much wants an endorsement from Skinwalker Ranch and Mike wants the uh main character role

(2:23:48) and also just that I had heard the rumor of Mike's wife in the DMS as well I just I just saying I heard that rumor and it's out there I just asked Keem not okay whatever Mr America and then red I'm gonna serve as the pallet cleanser once again don't do side attacks on people's spouses that's [ ] weak bro we're men don't let's not do that like please don't do that that's [ ] ridiculous don't do that um I'm gonna give a back story on who I am and and why when people are bringing

(2:24:24) up substance abuse and we're trying to Black Label someone oh they drink to black out like this space is talking about things that are greater than us that we don't understand I've had at least two or three nervous breakdowns where my whole nervous system shut down because I was being shown too much too fast to where I did do the same thing Jack's my poison so I go to Jack Daniels because it resets my nervous system and shuts it all down I've been in a [ ] shower for like two hours Frozen because

(2:24:54) I'm in a state of like uh uncertainty because of the things have been shown like I'll give you even a quick story of what happened last night just found out what a wolf moon is by the way today last night I'm staring up uh at a cluster of stars I see UFO orbs these white orbs that I see for [ ] ever I've seen them since I was like 17 I'm 38 now and I'm staring at them and while I'm staring at them a [ ] white owl flies over me so people digest information differently so when you try to discredit someone

(2:25:27) because oh they have a substance abuse you don't know why they're [ ] doing that drunk like it's not necessary they're a terrible person [ ] happens man like life is [ ] crazy I hear the this guy is alcoholic learns what werewolf moon is which I don't know what that means and then goes outside and sees a white owl F overhead that that's the story he just told like that's why I'm saying we cannot be divided we can't afford to be [ ] divided on this [ ] and be like oh you're an idiot

(2:25:57) you're this you're that just this shit's [ ] wild to begin with this so we don't need to be [ ] aggravating each other and [ ] throwing knives in each other's backs come to [ ] together be men we're [ ] men for Christ's sake here's the thing I agree with I agree with a lot of what you're saying you got to understand though like if we move this forward um this is GNA be it's going to have to happen we're going to get through all of this that

(2:26:25) was weird that the bigger part of all of it is that if hope you guys like Friday night drama not gonna help the cause like you have to take that you have to look at look at the bigger things that are happening and then TJ's taking it so seriously from like it's a meme we're talking about a literal meme that a literal meme this what I what I really like about this is supposedly what this whole stream's about it doesn't matter like there's no we're showing this is what the whole stream's about you know

(2:26:57) excuse me you see the story but you don't see the context behind the story right it's not the opinion there's no like this happened and this sucks you don't see that I feel like Keem star should be at the top of this pyramid and then TJ Allard down here next to Brandon Fugle you can discuss you make your opinions like another great this is for the I feel like I should be on the third row here I don't know why Shane's on it oh I guess cuz he's right Lou reviews right the way Lou is

(2:27:19) handling this I was really complimentary the way that he went at the whole thing treating it like a news Outlet like a news Outlet editorial to it but you knew that you were getting that right so there was M guys but I think if you build the ecosystem a literal meme is

what our whole Space is about you have the straight news coming from the Skyfire and then the other people who have their opinions can chime in just like a regular news Outlet regular new news Outlet you can add your cont our a little too seriously here you can add

(2:27:49) your take on something and I think that in order to legitimize this again this is professionally expensive when you try to take this to people who are not in this world and it's not always received like as a serious topic but if you can build the ecosystem to become a serious topic now you give it legs and then when more people get involved I I swear I can see these spaces with you know 10x this in the future in a simple very easily because more people understand this and they want to talk openly I've talked to and a lot of

(2:28:20) people in here can attest to this I've had these conversations for the last few years with people that have experiences I don't judge I don't it's not my place to judge but if you can create a space where more people will come forward with information with experiences with things that you have not seen in the past then I think this is how it grows you're going to just like you know a rising Tide Rises all the shift right I think that's what you need to do I mean this whole Space is

(2:28:44) literally about a meme if we can do that and get through about the idea that some reason TJ allard's convincing keemstar to destroy UFO Twitter I think this is awesome first step to kind of move it UFO Shane was paid red and then it's gonna be still not clear screen then America so red what's up what's what's on your mind okay I took notes I'll try and be quick I took notes um there's two people here people are free to start a new space about any UF topic they want everyone wants peace but this group

(2:29:20) attacks anyone and it is counter an manipulation and counter Intel manipulation is a part of the UFO subject just as much as any sighting if not there's more documented evidence of that than there is of aliens uh it was just mentioned by P and Rogan this group um L reviews is perfect example textbook counter Intel tactics decid Voices Love It the implications of what we're talking about regards are secret payments for narrative control he was just one voice um amongst the Sea of of support or desent that we see that bad tactics like

(2:30:01) I'll background locky Martin says I haven't followed along this beef at all science and M and UFO MH370 talk is interesting but from an unbiased view that lure views uh fellow needs waterboarding everyone else seems okay needs a chill payment and dirty payment tactics being deployed and you think they wouldn't if if you think the uo subject is real you think they wouldn't like have some weird control mechanisms on this thing while they're rolling it out look at Macwan look at Green Street

(2:30:27) look what happens to people who talk outside of this narrative um and then I'm actually have a question for Kimble Kim could you just speak to the room of what your understanding was of the the brand ambassadorship Shane had during those months as a somebody who it sounds like was at least a little bit of aware of what was going on there okay red I want to comment a few things you said unless you can prove that there's some monetary

gain or otherwise um influence over the community I I just can't buy into that

(2:31:02) um so unless like reviews what changed in your show in the way you were treated by this community what was that because you were in Center you I I understand that I understand that and I I've heard L speak on this before um I I'm saying um unless there's like some monetary gain or um evidence that shows a direct towards um an influence campaign I I I just don't buy that I think really if anything there's evidence uh it's my personal opinion I wouldn't say there's evidence it's my personal opinion that

(2:31:41) um arrow is kind of an influence campaign um now I don't have evidence for that um Beyond just like arrows and influence campaign if so they're not doing well chat kind of a Handler to Kurt Patrick but that's you know that's simply just my opinion that's not GRE Street was kind of weird ask weird the dodig report disparity with the um Sean Kirk Patrick claiming he's a turn by the way he's out a turn once again's a whole threat account that has evidence of this of connecting Lou

(2:32:15) Alando to these figures got accused of rape when he proved Lando lied louws his show got attacked when they asked Lou that question and everybody gets close to this counter Intel dude and then happen about the sock accounts that he was using to also do this use Target harassments of critics back in 2018 yeah it doesn't surprise me that they do sock puppets necessarily um I'm not going to say I agree one way or another but uh I'm back just letting you know I'm here I wasn't there before that was long that was a long smoke

(2:32:48) break it wasun thank God yeah we can see your message Lobster mostly important conversation we were having and then uh kind of smoked after but um just real quick so sorry I literally wasn't even listening uh is everything good here are we on topic do we need to change the topic we're good we're good we're going all right cool chain is Al's son we just learned no I'm just kidding that's a joke okay um all right now I I don't remember who is next I'll be honest um so if you are

(2:33:23) next if you would just say so yeah I think it was me okay Lou and then we'll go Keem and then we'll go from there um what I just wanted to address some earlier that Ashley said that I'm looking for Brandon fugal's approval um I have publicly very much had a Fallout with Brandon Fugal uh and you know if you guys want to ask him a good question and it's a question he can answer me G if the skinwalker phenomena is real it really attaches itself to people he want approval from is that members of his

(2:34:01) crew visiting and handshaking and hugging people at UFO conventions you know if they're so afraid of it spreading around why are they doing that you know I think isn't it isn't it like the place giv sor isn't it the place gives you a a um I'm sorry I can speak to this a little bit I can speak to it a little bit like the idea of so I think this is just my take from my again anecdotal experience of being out there um and L knows like and I talk you know we have good relationship like my take on all of

(2:34:36) it is it what my experience was it was there um when I was sick when I was like you know I felt I was you know contagious or literally okay one more question then we're going I wasn't doing that and I if we can get to it I don't know I'm not a doctor right so I if we can get to it we're going to challenge the the lons transmissible or whatever but I know that the the the symptoms I had were consistent with certain like exposure or reactions to things whether that is based on being in that place at

(2:35:06) one time um that's what it seemed like and that's what my you know doctors had said but I I understand what your point is you know the idea of is this is this something that's contagious are you spreading it around maybe there's just don't know enough but I get it um and I just don't I I'm going to go and say like I don't think we know the extent of any of this um because there is this weird thing where certain people react and certain people don't what's what's

(2:35:32) TJ talk about something as simple as you know you're susceptible to it your IM susceptible to it again if we want to Define it as like was using the spooky pox we could do that um we just don't know and I think it's okay to not know think it's okay to not know right no no no and and I understand I understand what you're saying but if that is the case then why not have universities come to the ranch and study it why not actually have some science issu how hard is it to learn and connect to various

(2:36:01) series not very hard take a look at my pin if you want to go through the evence 14 pages is pretty long comp it's broken up in categor itself to people's given people cancer it has supposedly killed people it has gone to people's children outside of the ranch so if that is true what are they talking about why are you guys going outside the ranch and doing you know basically Rock Tours around the country you know and in handshakes with people it's it doesn't make any sense I I don't know about I mean and I'm not

(2:36:31) saying that you know maybe that's out there I I don't know anything about that personally um but I'm not saying that you don't like that may have L think that there's a zombie virus quote or somebody said I I just don't know that um yeah the only reason the only I mean I talked to Brandon about this on the phone for three hours you know so like I had a very extensive conversation with him three hours he talk about spoken since so I just wanted to squash the idea of this idea that I'm trying to get

(2:36:59) his approval like I don't give a [ ] about his approval I could give a [ ] you know like all I all I want to know is is the truth about the r you know if that's the case or if like I wants to end you know and I I think you and I have talked about this him and I have talked about this like look dude if this is like a thing that you're trying to do for the state of Utah and make like a new Area 51 or a new Roswell like I totally get it like I [ ] get it fine but just say that's what it is and if it's not

(2:37:27) then actually get some real scientists because I mean again like we had a three-hour conversation like why aren't why isn't the University of Utah or you know BYU or any one of the

24 universities in the state of Utah screaming at the top of their lungs to study this Ranch don't doesn't anybody find that a little weird I think they did though all seriousness didn't didn't they have a a university and this is I feel like I read that recently like because I'm not there dayto day right

(2:37:53) that's not what I do I'm the co-creator of the show executive producer I think TJ in the beginning was saying something about having like long Co or something some kind of mystery you get that no but no I know that I know you're not yet no you and I we've talked like you get it like but I'm saying hate me is because I'm a dolphins fan yeah yes I'm a Bills fan and I understand yes that's the reason I hate you and you never I you know that sky for news he also doesn't pay his employees no no

(2:38:28) hate at all what employees of course not all right we're not We're not gonna get people contact people contact all hold on hold just real because um I literally I'm back I'm here um let's just same [REDACTED] in the beginning nothing's changed let's stay with the hands try to keep it respectful like no no name calling we don't have to do Kumbaya it doesn't matter it could be [REDACTED] the other side forever if you want but let's how do I go back I I really started the space so

(2:39:00) the accusations that I saw could at least get addressed I wanted both sides up here I did not want an echo chamber um I I sent out the invite to everybody um Mike you're still here shout out to you for did we address this though did we address a whole bunch of hands up I don't want to skip yeah so I don't I'm assum question out so so here's the thing the hands could be just from the conversation you guys were having getting high as hell so I don't know but if anybody see um has anything to say I

(2:39:30) don't know who's up make ited we're keeping the conversation here it's like or let's go back to that um and yeah messed up maybe change the resolution i m do you have anything else to say on this like you're a good starting point because I know that you know you came in kind up go ahead go ahead Keem I didn't know go for it yeah real quick uh I just want to address a couple things somebody said that you know my opinion is Sky Fair news no go to go to Skyfire news look at all the content we

(2:40:03) put out uh it just covers the news it doesn't have an opinion I have an opinion red has an opinion tuba has an opinion Sky fire news doesn't have an opinion it just covers breaking news um the other thing is is somebody uh reframed uh the whole situation with Mike and his wife as attacks on his wife that's manipulation pure manipulation there was no attack on I'm gonna I'm gonna ask to just hold your tongue for a little bit and oh is that I was wondering who who that yeah just just listen man like just everybody

(2:40:41) please just let's just do hands there's only there's only one yall were in and it it seemed like you were going at Mike for something him and his wife have problem no that's in that's incorrect I never went after his wife I stated it facts and if you bring up facts right and you present facts what were the facts about her DM why did I get interrupted again who's can we run the space why do I keep getting interrupted cuz you're ins like what the [REDACTED] do you think

this is why do they

(2:41:18) not want me to if I could reach through the phone and punch [Music] your that that was me I [ ] never had to use my [ ] that Sean if I talked about your girl dude listen I am Listen Hold Up calm down like don't take it out on me speaking to you directly listen I am listen I am King I have tweets I am King keep girlfriends and wives out of it I've stated that I can go pull out the [ ] tweets so I'm with you Mike I'm I'm not I'm not mad at you Defending Your Wife I understand so

(2:41:56) please I'm not you know I didn't [ ] start this space for no dumb [ ] I'm not trying to have you feel disrespected your wife hold on so hold on Listen Hold on hold on guys hold on I'm trying to I just got back so I couldn't moderate the past [ ] 40 minutes so my bad we were on a different whole thing we were kind of getting along at least a little better when I left that's why I asked if we were good when I came in so now I'm just trying to get this [ ] wrangled and respect everybody what they have to say

(2:42:27) so Mike I'm with you like it gets it does get like once you bring up someone's wife like you can't get mad at someone for [ ] defending their wife so let's just stay out of that because now we're in a whole different conversation so like can we we of attacking his wife and I'm going to defend myself so hold on so who who said that Keem Fair who said that did somebody in this space say that somebody on this space cammed up and said that I ATT can can I know who that was who was it who said that was that me team it was

(2:42:59) Mike he's probably talking about me or sky so hold on all right so all right so real quick again because I wasn't here so screen like yeah I don't know what came like let's that's what I'm saying like let's not even have the question just trolling them guys so people can respond it's [ ] stop dud I do have a right to defend myself against this allegation right shut the [ ] up stop doing that okay I just muted again because everybody was yelling and hold I got it I got it yes Mike Mike Mike Mike Mike

(2:43:36) I'm with you yes bro listen not they're not listening my God interrupt you guys you guys are killing me here because I don't have a [ ] side and I'm literally trying to let you both sides get your [ ] off so Mike because again I know how it is with the wife thing yes like before you go Mike let me just say this right when on screen you're my guy like I [ ] with you I'm not trying to single you out but since you were the one that said it I'm G to use you an example if you I'm talking to the room

(2:44:06) if you ask a question even like you think Sean I didn't say it like that all right so I but I again did you said I attacked his wife I'm G to defend myself bring up the white thing at all at all who is that hold on hold on hold on I'm I'm going to make a little joke here is that mil fart being the [ ] adult in the room did you hear what he said did you hear what all of you said did you hear what he said he said let's just not bring up the wives at all that's what that was me Sean Mr

(2:44:36) America my bad my bad I'm high as [ ] my stop [ ] bringing up people's wise bro

that means nothing to this conversation going to defend myself I'm GNA defend myself cool but defend your I'm not talking about you whoever up the [ ] wife thing stop stop let me just please if you if you have any respect for me I've never had an issue with anybody on this [ ] panel like please let me just get this out if a person brings up a in any context right and let's just for the sake of the

(2:45:10) conversation someone feels like they're getting accused Keem says like yo you're making an accusation about me of course he's going to defend that accusation and then from that of course hold on of course Mike is going to get mad that his [ ] wife is being talked about like he should be and now it's just it's a [ ] chain reaction is my point so if it's not brought up at all in the first place it makes it a little easier that's my only point so Mike I'm gonna give you because you've been [ ] patient oh

(2:45:37) my God am I gonna get [ ] defend myself or what what is this I'm going to give you did you were you not [ ] listening to every word that I just said that's that's what this is I don't know what did I just come into I wasn't what did I just come into you guys are the ones who have the [ ] mic I didn't get a chance to I was here interrupt it but this is what I'm saying you're the only one that's been talking bro I'm gonna give I'm gonna give you the the floor too like I I was trying to

(2:46:01) moderate this space I'm mad that I'm talking this much like I'm gonna give you both the floor but I'm gonna go to Mike first and then Keem you could actually end I lose my turn thank you Sean you know what you can go now why don't you go now why don't you why see how it chill chill chill like we're not doing this I don't know what the [ ] you guys thought I was doing in here you got the wrong one listen when I'm Keem do you want the uh you want to go first or you want to go

(2:46:32) second like you wouldn't rather like end the last middle of trying to defend so this is what we'll do this is what fine this no this is BR this is my space please can can you respect can respect the space just disres because I I don't have any issue with anybody like I the [ ] yo chill well they're one interrupt you can go but listen that's why bro like listen to what I'm saying I'm Gonna Let You Go and then Mike you're being really patient after Keem makes his point you can respond and then can that

(2:47:08) please be the end of the wife's conversation and then we can get back to what this room is supposed to be about that's all and we can get to the hands that's all I'm saying just drop it and no one talk about wives how about that yo that's a that's a another person interrupted see see this is River this is what I mean and it's like mkar I agree with that I am with you I would rather we let's not talk about [ ] wives That's what I'm saying but what the hell am I going to

(2:47:38) say you got Keem saying I was in the middle of my point and then Mike is upset because his wife was talked about in whatever capacity she was talked about and then Mike's going to get [ ] mad and get pissy at me like oh you didn't let me defend my wife and then

keem's like oh you didn't [ ] make me like me make my point so Keem I'm gonna unmute the [ ] now right you can go since you say you were talking before and then Mike you can respond and then we're gonna [ ] move on from

(2:48:07) this conversation and I'm not like that's that's what I'm saying it's gonna be end of conversation about the wives okay as I was saying someone up here accused me of attacking Mike's wife and even that statement is meant to Gaslight and mislead everybody in here and be dishonest because Mike's wife isn't some hidden person Mike's wife is also a part of the hate group with a very public Twitter and on her very public Twitter she said that Lou alzando is hot and I brought it up to Mike this is not

(2:48:51) attacking his wife this is a fact if facts hurt your feelings where you feel attacked something's wrong with you not wrong with me what does it have to do with the subject matter bro like America let let him finish nope no all right so so I'm gonna unmute Keem Keem are you did you land your plane or you about to land your plane what's up and the final point that I would like to make that wife is in with other men these are facts this is truth all right Mike I'm going to give you the last word as much as you can try to keep it

(2:49:26) whatever for me because I'm not I don't like I'm just enjoying the drama guys I'm just trying to get off this because it's what do you do when two guys are arguing about someone's wife it's like all right I don't know like what are we saying here go ahead Mike so I don't know where you're from Sean but the second someone implies that your wife is like being like promiscuous with other dudes uh that's like fighting words like those are throw Hands words and those are words I don't forget So like um say

(2:49:51) what you will say what you want I heard what I heard it was unnecessary it was uncalled for um yeah and real dirty and my wife is my homie she's been with me for 20 years and she'll [ ] you up I hope it works out for you Mike hold on I'm from Rhode Island and I'm I'm I'm with you I would feel the same way if that was if that was if I was you I don't even know the context but yeah I'm with you let's move on from this [ ] we can't all [ ] kids like keemstar actually I was addressed so I like to

(2:50:23) respond and I was someone say that in the SP really let's lit listen here's the thing right I I can't like cover his cover his mouth but I just kicked him like before you said that I already kicked him because nobody's saying that in my [ ] space absolutely not say the word extraterrestrial night and I kept saying at homonyms stop it's [ ] clawing at the conversation doesn't it doesn't add [ ] and that guy who was talking about his wife he did that disingenuously he knows what the [ ] he was doing and

(2:50:57) that's why I sent you a DM right now Sean I sent you an audio of what the [ ] he was doing [ ] that guy yeah everybody make sure to holy [ ] guys you guys I just spent like a half an hour getting high with my cousin and you guys just blew my [ ] high holy [ ] bro like what are we doing recording in the space that we're in already what the [ ] you Mr America I love that I said was that Keem can't have it both ways right like uh you can't say you're not part

of Skyfire and do whatever you want

(2:51:32) and then also be like but I'm bringing all the eyes to the subject you can't have it both ways that was all I was saying I wasn't saying anybody attacked anybody and gaslighting anybody right the credit we were dating and you were saying that that is you know trying to be unbiased then the news source itself can't say [REDACTED] like Brandon Fugal is pimping UFO Shane David grush is a liar that that's not presenting news in an unbiased way and frankly that's just tabloids but I guess that is news right

(2:52:03) again you're not reading that word for word you just made up that read it word you like would you like to read word for word I appreciate what he's saying at least because we're moving off of personal attacks that [REDACTED] that was talking about his wife earlier was disingenuous Sean if you don't guy out yeah yeah hold on like why does this have to happen you guys seriously seriously man come on like come on you guys know I didn't start you guys yeah you guys know like most of you guys up here no [REDACTED] I didn't start

(2:52:42) this space for that you guys know I didn't like Mike I'm I'm with you on like just I get it like Mr America like we were actually finally getting off that topic I appreciate you for saying it but like you can't it just makes us go back into the conversation like let's let's actually talking the reality the reality is people are going to disagree they have beat with one another that's great and move on we're done so the last thing was screen screen was explaining that he said that he didn't say in that

(2:53:10) way let's go from there how they drag veterans right screen do you do you have the full tweet by chance no but I can go to Skyfire real quick hold on yeah I think full contacts would be a a great solution um while you're doing that I want to get to either UFO intros or ashon I do not know who was up next mine's going back to the TJ and the Shane and the Skinwalker Ranch stuff and I think think Ashton was before me okay Ashton then we'll go UFO intros okay well I just want to thank you for the great space tonight this is

(2:53:53) probably my last one I I just think it's kind of sad that you know you got Joseph Marinello coming in for that other account calling on a Nokia phone there a lot of static you know it's just not a fun Troll and then I just have to say for the record Keem did not attack Mike's wife I mean if I was married and had a wife and she was saying on Twitter she thinks other dudes are hot I mean I would probably feel inadequate anyway have a good night bring not bring that just somebody let's not bring that back

(2:54:17) up there no Way's no way sorry I was I was reading through all the tweets from people saying what the [REDACTED] is going on with these silly children in here and then I just hear something about a wife again are we really we're already already back just move past it UFO intros Kimble what's up I's hot that is not about anybody's wife that's that's that can be allowed to say if that's your opinion Mike that's fine Kimbell you there yeah um red pandaa asked me a question space couple hours April gotta be the

(2:55:02) one person who stirs it way too much you know where after they ask like multiple times said I am an official affiliate of skin walkercom I don't even know if that's how we go okay guys we just had to dunk on them a little bit there that was fun that was a maximum troll space so anyone who's watching this who thinks that there's any reason to take some weird meme seriously like we should be having a space about it well there's no reason to take it seriously and that's the reason why we were acting the way

(2:55:33) that we were and yeah it was pretty fun so thanks guys I appreciate hanging out tonight I got to pass out I got to pass out tomorrow probably going to look more into Amy esre something doesn't steam right there on that and then uh we're going to do a stream tomorrow as well and we'll be doing some investigation stuff I'm probably going to repost the Steve Quast General Lieutenant General Steve Quast because I got pinged on it like 50 times I guess people didn't see when I posted it last time so I'll

(2:56:03) probably post that tomorrow as well anyway take it easy guys peace

Transcript:

(00:00) we are it's almost February 2024 and we're already in for quite a roller coaster with the reports from the government on the topic of UFOs so it's interesting Kirk Patrick wrote this article in scientific America that's gotten quite a bit of attention and and I wrote a little bit of a response to to this on Twitter as well um you know talking about how there were a number of whistleblowers who skipped Arrow entirely because it's its mission was just the wrong Mission I mean this was a anomaly resolution office so what

(00:40) are people who worked on you know the scientists who worked on the reverse engineering program and held pieces of UFO medals where do they go um a lot of them skipped arrow and went right to the inspector General's office apparently and all this was and uh yeah so where are we now with the media um media is not really reporting on a lot of this stuff in the mainstream they've instead you know elected Jeremy Corbell to be the champion of ufology um completely unelected by the the real UFO researchers and and a lot

(01:15) of people in the community who just can't stand him um but you know we've we've talked enough about about about that guy um I want to get into not the people that are involved in this because the people aren't aren't you know as important as the ideas were Concepts and the people involved really don't even want to be involved um you know KK Patrick when we went to the Senate hearing um he quickly got out of there he he spent a little bit of

time but as soon as I I tried to you know get his

(01:48) attention and start talking Mark Mark ruined like the whole thing he went up to him and started talking to about nuclear Dynamic orientation and and I was just like dude you got to like uh he he started hearing the technical stuff and just ran out of the room um but this other guy no no Senator is GNA keep their attention span past seconds when you start talking about nuclear spin orientation you gotta get to the me grit details of this is the place you need to well there are different places where you shouldn't use the nword and the

(02:23) other nword in a place like this never say nuclear never yeah yeah it's just this is not the place to say that word um and but anyways Mark didn't know that um but I I had to think very quickly of you know how am I going to capture this person's attention in 30 seconds and there there we are handing you know our card to Kirk Patrick as he walks and exits out the the room right there so he got the card um that has a link right to Falcon space and Apec conference and all all the stuff so he got the low down on

(02:55) the on the info scoop so you know and I made sure that my Senate hearing UAP technical briefing was the the first thing that came up and there's a lot of people there trying to you know give her give uh Senator Gill brand their book and and tell them about them their lives and you know it was just it was hard standing in line with a lot of these people but you know I I respect all them and their and their stories and the fact that they traveled many miles you know to go to this place and uh good job down

(03:25) there Jeremy I wanted to tell you that no one said much about that you did a good job yeah so I went to the Senate hearing cuz I knew that the the Congressional hearing would just be this giant [REDACTED] show and it was and they and they let Corbell and on a red carpet to sit there you know right backstage at the whole thing and uh hold his hands in the shape of a pent Pentagon the entire time I thought that that was really weird someone someone else pointed that out another another researcher who like sat there and watched the whole thing of

(03:55) of Corbell um but anyways there's the the video here um of of our trip to the Senate hearing and I talked to Senator Jilla brand got her attention for about five five maybe two minutes five minutes but I um I basically told her about uh about the patent holding companies and the the scientific infrastructure all of our national labs are are still managed by this one company that's basically alleged to be the container organization that holds all the UFO files and you won't be able to get access to it

(04:30) through foia or any of your um information because you don't have access cuz it's a private Corporation and that's where they keep it all and she was very interested by that um you know when you start telling people that you know they're not even in charge and that they don't have access to this stuff um they uh they start paying attention so in any case this this other guy uh stepped in and like he he swooped in as as I was uh giving her the card not this guy but there was another Stafford guy

(05:04) this older gentleman and uh let me see if I can spot him out um I have his email big right the big guy this guy with the glasses on um I don't know where he is it's not him it's a younger guy he's bigger man he tried to intimidate you didn't he he didn't intimidate nobody oh this guy too yeah he's trying be like oh you know like dude the southy boy man n not from Boston sorry Jeremy got you yeah so anyways um no it was not a hidden camera we had open cameras in this this meeting so um no it was

(05:48) definitely it was open media to the world there was also a closed do editor hearing as well in that happened first and a lot of a lot of the people that in that room cleared out after the closed door session they weren't even interested in the public session but Jill brand was you know and um but also um you know I look at look at everything that's going on with with this and you have uh you know Sean Kirk Patrick stepping down saying that basically a bunch of these UFO grifters which I warned everybody about this same

(06:25) group of people all these people I've been warning everybody since 2018 about this group and and and saying like how these guys work for the Pentagon to disrupt The Narrative and cover up real UFO stories and one of those UFO stories happened last year and I was just shocked and amazed that the likes of Jeremy Corbell who floats around a jellyfish from Dimension X um won't touch Ashton forbes's video he won't touch it not with a 10- foot pole it was like why was that he won't even touch the hashtag through a social

(07:01) media account like off the article you know it's like it doesn't exist jellyfish from Dimension X I love it I'm using that D and with claims going underwater you know the only important part that would actually verify a phenomenon but oh I can't show you that only the part that looks like it's balloons or a drone like and the part where disappears in the sky too where's that at Jeremy how did you feel about the wasted time so far in the past two weeks in incredible on all the news the amount the amount of news headlines

(07:34) it's it's it's operation Mockingbird in full gear people and they're ridiculing the heck out of the subject all over the media they're using Corbell like a straw man and and just beating the crap out of him like he represents ufology and meanwhile he ignores cases like he does because he's got the TMZ contract all right it's what stream on tuby and cowbell on Netflix yeah he's got all these shows on on um TV and distracting so many so many people with nonsense but he yet he won't

(08:15) touch why because it leads to the esper the infrared okay space-based infrared satellite system that they had that they had to film this thing with that's a real system that's classified information they won't they don't that's why he won't touch it the other one is the um the issue of the Edward Lynn the guy who allegedly leaked the tape and the 20 free scale semiconductor scientist aboard that plane all right they want that's always been weird the semiconductor guys so weird that George knp has everybody

(08:51) digging and asking the government for that other half of the UFO video where the jellyfish goes in the water that's where you need to be looking that's where the evidence lies it's

like this is scops 101 it's operation mon why for it if uh cowbell already has it and it doesn't release it to us that video for a year supposedly he couldn't have dug that up this whole time or gotten it you know Jeremy and I have been studying this for years George knpp is the center of the Wagon Wheel he

(09:22) really is he is the center of the Wagon Wheel if corbel didn't work out trust me they just would have moved somebody else in there um it's very weird how it keeps going on on and on and Corbell just loves being in there boy he loves that Spotlight and how about when he's going up the street chair and he's going like this and he's like I don't you know I don't like UFOs I don't that was so funny that part of the movie you showed that to me I was sitting here I laugh so hard man uh some of the stuff he said

(09:49) was just so bizarre man um do you mind uh re going over those emails again in bit further detail was it originally John leer that forwarded them first to you Dan or was it uh I'll put it real quick listen just just hold on a minute there first of all let Tanya it's nice to see you down there how are you doing dear good how are you I'm doing great we doing great now you're here all these crazy guys in here we need we need a beautiful woman in here to to stir things up okay um Emmy by the way how

(10:26) are you doing are you all right I'm good thanks for asking okay okay all right I just want to make sure everybody's okay because uh some people you know you never know all right here's what happened Bernie and this is very important a little bit since I'm 90 since I'm 90 years old I knew John leer for 80 years no I'm not 90 years old but John Lear had knew me so what happened was it's very weird man uh Jean Huff had got a a an email from Jeremy for names Corbell we used to call him Jeremy for

(11:01) names corbel because his real name this is no lie his name is Jeremy corbel Kenyon Locker uh what is it was it Jeremy Corbell Kenyon Locker or something else right no it's Jeremy Kenyon Locker corbel so it's real last name right he got the two middle names Locker yeah it's four names it's funny so I get a message from John leer and it says hey Dan uh four names is sending this around like oh boy I got to check this out this is from Jeremy Corbell because we all call him four names and um so I'm I'm reading this thing and

(11:38) it's it's out of this world it's from Jean Huff and he wants to talk to me and Jeremy and uh I was blown away I'm like oh my gosh man this is great you I never was expecting to get this and um man we get a all Jean Huff and he starts talking and we read that damn thing where he is trashing us and saying hey it's mainly about Jeremy Jeremy's filled with hatred and he runs around with this hoodlum Dan Banker sometimes he's talking about me I'm a hoodlum and stuff a biker dude or something he calls me I

(12:09) forget what man and I was just like this is crazy so anyways read it and then sit it down next day open it up read it again because it just had to go over it so anyways man yes he four names got us involved in this a long time ago threatened his life I don't think my life was threatened was it uh Jeremy my life wasn't threatened was it well I remember one time you

called me with the you said the guys in the black SUV that you that chase you inside you had to stick your head inside the freezer at the grocery store oh yeah

(12:48) that that is a absolute true story and I believe that was the uh air I think that was Air Force intelligence like a Richard Dodie type thing that was going on they were very tall and [REDACTED] that was so weird that to this day have no idea who did that to me but anyways no what I was talking about was this attack they threatened I mean core Bell threatened like you didn't he he said something like he wanted to do something yeah you mind uh bringing it up Jeremy and rereading it for us I believe it stated that it was from Jeremy Corbell

(13:21) to Bob Lazar telling Bob Lazar that when he sees what Jeremy Reese has documented against Lazar he is going to want to physically kill Jeremy as if it's like notifying him that he's probably gonna want to kill you because I would out there on my bike and beat the crap out all of them go ahead Jeremy yeah he said he want physically he makes me want to physically kill me and and that um I shared that email on Twitter and you know what it's it is what it is I don't I don't like yeah he did got

(14:01) he's got a whole backstory man we went over that whole don't start sharing his emails every night man he'll get pissed off but um okay let's just talk about this real quick so that's what happened do you understand what happened there Tanya because you came in a little late Emy do you understand what's going on these people oh yeah I'm I'm fully tuned in to this I don't I'm not sure what that means that's a pretty cool name a Jenna toic does that mean your girlfriend's name's Jenna okay

(14:30) um I don't know I don't know I'm looking at that but uh anyways yeah so that's what happened Bernie you know and um so anyways we go from there John leer calls me on the telephone I [REDACTED] you not I still have voicemails from John leer on this phone I can play for you ask Jeremy calls me on the telephone and says hey man um cor Bell's mad at you I hate Corbell uh your name came up I like my name came up he goes check your emails because I check my emails like once a month my emails old [REDACTED] I don't mess

(15:00) with that I get on email and there's a thing on there man this is from like 2021 20 somewhere around there it's it's it's I was like wow I can't believe this I thought Le was losing it because Lear sometimes is was losing his mind at that point so anyways yeah I get on there and it's Jeremy Corbell talking [REDACTED] about him and I and I get a hold of him right away I'm like you're not going to believe this who cares about what Corbell says Jean Huff wants to talk to us man and he's like oh sh I'm like I'm serious

(15:30) because I said his email is Jean Huff cox.net I'll never like Jean realized that like I was a scientist who was really doing a lot to try to figure out the science and that I just had I had when we had really good questions about the Lazar story and he's like wow you guys have really done your research on this case and he was impressed so and you know I I guess Jean Huff absolutely hates Jeremy Corbell so um that's the oh talk to us it's because Jeremy sent that email telling him not to talk to us so he's like well who are

(16:05) these guys so he was so blown away that Jeremy Corbell just moved on to John Le's couch listen to this not for six months not for 12 months not for two years five years uh he moved on to John's couch lived on John Le's couch for five freaking years man I I'm not sure about you but I'm not leaving on anybody's couching something in my life man I'm I'm changing [REDACTED] you know he claim that he did nine years of uh research to before he made the the Bob Lazar flying sa yeah that was a [REDACTED] lie because

(16:44) man five of those sleeping on half true but it's said it's really John Le's story and yeah it's not true Bernie I listen you don't understand something I ran the living [REDACTED] Moon living moon.com is a form okay with all these guys Jean or I mean uh uh zorgon which was Ron Schmid he died John le we were all on there we were moderators everything we all used to talking [REDACTED] I know I knew the inner circle like you wouldn't believe okay ask Jeremy I know I can get it on there listen to this we hadn't had that form

(17:19) running for nine damn years and four names didn't come around till about 2012 until I start hearing this guy named for names is obnoxious and all that [REDACTED] and here's what happen one night at 2014 2015 is they said just email just message John's messenger and see what comes back I'm like okay on a Friday night I'm sitting here I think I was putting a couple beers back back in the day and uh I messaged John Le's messenger and all of a sudden immediately John an he never it takes him like three days answer right and

(17:50) there's this answer come back don't make a damn bit of sense when it comes to John leer because I knew John le in a way he would talk to me had nothing to do with way that [REDACTED] thing was answered right I'm like this is weird man so I kept messaging I'm like to the guys I say hey man is that his daughter doing that what's going on did she lose it or what no it's this guy living on his couch name for names I'm like a dude why they call him for names they're like he's got four damn names and I'm like oh

(18:16) boy man so that is about the week when the guys all started bitching and said we need to get four names off his couch and he refused to leave so we basically started making phone calls and stuff like that and when he found out there was five or six of us were going to come down to John's house and physically throw his ass out even though he did martial arts he started getting nervous and [REDACTED] we were we we were pissed off and um he he intended on selling John's house didn't he uh Jeremy he was gonna sell John's house

(18:53) remember it was ridiculous what he was going to do man but uh yeah man he's a [REDACTED] jerk I'm sorry he was just the way he acted was terrible I tried to message him and he would message me back and I'm like you're not John leer man I said I know John for a long time he didn't even talk like this and um yeah when did when did he film that Immaculate deception uh tape about John it's like a 20 minute video have you I I tried minute video try if he try if he put it together it'd be 20 or 30 hours minimum uh and that's

(19:30) edited yeah um he did that video from I would say 0 11 until probably 15 something like that filming him at night all the time John was so sick of having the camera in his face that he

started going nuts and [ ] he's like I want that guy out my damn house man and John we all know John pop pills and [ ] like that party and [ ] so they finally got him out of there and um you know they had him to the point where you know John was getting ride homes and all that stuff it was very bizarre dude they got

(20:15) Corbell out of there finally and um it took a long time it took I think it took five years man um that was his ticket to meet Bob Lazar and that was his ticket to meet George knp and getting on where he like it to he he kind of admitted in that that stupid movie they making about him on the uh oh so then um what happened with George knp after the Bob Lazar thing back in the 80s because didn't George knp took a nap no um George knp the US government picked him to be the guy to release all of the ussr's UFO

(20:52) files to the American public that's a weird story because how did they get the picture of Papo L where the fake uh base was where Bob Lazar kept the had the alien spaceships guess what **Russia** just handed them over because you know they were doing this work with **Russia** remember that was such [ ] they they got them pictures they paid 10 grand for them John fat paid for them a guy that Bob and them know John farhot it was his name I know the whole story man didn't he do special effects for a movie did special effects and he's

(21:24) the guy that is in the video with Bob well my hat I'm sorry with Bob when Bob uh um it's crazy Bob is showing off his Corvette car and they're filming it they're trying to say that runs strictly off hydrogen that he just made out of his own gasoline and stuff like that and it ca still cost him how many more a gallon to run off gasoline because he had to buy the gas to convert it into hydrogen but yeah that was uh that was John fat and um yeah he did the special effects for Forest Gump yeah he's actually he's really good with

(22:02) uh special effects um Bob's not but uh yeah um that whole thing was just crazy man I got involved in this so long ago 2002 I was very young when I got involved in this and I can't believe how old I am right now I'm still involved in it I'm just like it's unbelievable the only it's changed is Edgar fuche is dead and John Le's dead and zorgon Ron sh's dead um yeah zorgon ran the living moon for him right that's yeah zorgon was great man he was very smart he was a Freemason and stuff and he was really

(22:40) cool he was a nice Templar I'm sorry he was really cool and um I'm the one that tried I I'm the one that told him to go to the hospital he was not feeling good went to the hospital called me on the phone he got back hey I just went to the hospital I got a phone call next day and it was his daughter she said hey I knew you kept tabs on my dad I found my dad Dead uh on the floor last night that's sad all these people died um sucks je Jean Huff's getting old you know and Jee Huff is gonna Ratt on all these guys

(23:13) the bobar stories a bunch of [ ] one day man the SPO just take alien out or uh Jeremy out where'd he go uh I don't know Jeremy oh there he's back he's back you okay wor about you I'm checking out other stuff back was asking us to um go out and uh and set off a firework with John Le's ashes in it oh yeah that's what he wanted us to do I just I who lives does any of

you people live in Vegas out there um is anybody from Vegas any any of you no one I guess I've been out there a lot though

(23:48) you're not near Vegas anywhere no three hours away maybe oh okay no we can't say anything now I'm just kidding Emmy you're not near Vegas where are you at I'm right by right Pat Airbase me you're near me I we're [ ] um you live near me a pool yeah we know where you live you live in a pool near Livers um like London right now yeah I uh I would like to do that thing with John L's ashes but maybe we should put him like in a bowl or something and smoke them I don't know maybe that would be

(24:24) better all um just kidding Le was uh quite the party animal if anybody would like to ask some questions about the days with the John le stuff oh and you know the whole thing with Bob Lazar and then there's a real crazy part of this story uh the Bob Bazar brothel I know a little bit about it um I know I know some stories about the Bob Bazar brothel Bob did Bob was a Pimp Daddy from Cincinnati I [ ] you not he had had a brothel and is it is it legal in that state though no it's there's no legal brothel and how many places you know in

(25:06) the United States you got whouses man come on RH Island all do you well the day I have to go do something like that I'm in trouble okay but um I am getting old there so maybe who knows but let's what it was leg it was like here in Las Vegas were the only two places in the country that were legal prostitution it's because of the mob okay all right oh it's because of the mob yeah you had the gambinos up where you were at they they ran the damn government you know but uh hold on the government is built from the mob don't

(25:42) kid yourself there wait what did you just say about what what did you just say there dude the government's built the American government is is a mob but there you go well of course look what the [ ] look what's going on a [ ] pack of gum cost \$48 um gas uh you have to take a loan out to get gas like and you go get gas and [ ] there's there's gu a loan there's a guy sitting there and [ ] you know you fill a loan slip out and [ ] to get gas now dude it's so expensive you have to you

(26:13) take a loan out to get you know did you know that uh Master Eon ion did you know that [ ] it's just mystan mystan I remember see that the gangsters in America are you and in competition with the government who were just more powerful gangsters remember those nuts the other night first there was a guy that was talking to a [ ] 9 foot tall alien that took a picture of it and then that kid said people were following him 500 to a thousand miles around the United States I I roll man I got out of there when that [ ] was going on but oh

(26:48) well we know you talking JW and I didn't put description into Ai and got it to produce AI pictures of JW as he was telling us the story and then putting them up on the page and it was shutting him up mate it was really illustrating what he was saying didn't make sense this guy right said hello how everybody's doing this is all he said and it was a group like us he would not let any of us talk it was incredible how he took over like he was an alien how about Jeremy got pissed and left and it was his show he had he had

(27:31) Pune SpongeBob or whatever you want to call it or pageb hairstyle went down like this and it curled up but that wasn't his hair it was a picture of him because he said that right there's an eight foot tall alien that I took a picture of he goes that I've known for 30 years he said and that alien what did he say that alien I still talk to this day and I'm sitting there listening this I'm like wow this is a fascinating story but then you just realize it starts to really fall apart you start asking

(27:58) questions and [REDACTED] the guy was so bull I had a guy that had me going for a little while um he emailed me and he said that he had found some um missing book from the Bible through his scriptures research and that it was a book how to summon aliens and I'm gonna find a picture of him for her and he he sent it to me with all these things you have to like lay out the the burning ropes and stuff and like oh my God and then he says he then then he started telling me he went to the Vatican and they started trying to set it up there in the middle

(28:28) of the plaza and and they all got arrested by the uh the Vatican police what was his name again swim Jim or trying to summon an angel or demon transdimensional entity like the Mormons or John D or who else has done that through history can someone tell me what name did it did it with another bloke locked into a room and apparently when they open the room was it Slim in a corner shaking bro what was his name it was Slim Jim or what was it man Jim I put it in the chat VI oh okay hold on okay go ahead I'll find him you're it was Bim

(29:10) Jim Bim Jim something it said snaap into a Bim Jim and [REDACTED] he got pissed off and then he was gone like five oh here's the picture of him anybody wants to see it listen anybody wants to laugh this was him and he swore this was an 8ot tall alien with a mask on here's the link down in here it's his YouTube channel and it's a picture of an alien with a mask on I just posted it below this Bim Jim Click on that link if you've ever watched someone interview Michael Horn it was very much like that because as soon as you

(29:44) disagreed with him he called you stupid look at that look at that YouTube page and that blond hair guy says an 8 foot tall alien funny as hell man why is everybody so obsessed with aliens and crafts like shouldn't it be about like the science that would change the world like that's something that bugs me out about all these UFO celebrities and everything it's like that's what are you ason you're the one that has the [REDACTED] MH370 Channel How could you [REDACTED] about other people are bitching about or talking

(30:19) about it's not that I'm against the idea of aliens that just it seems so inconsequential to my life it's like sure if they're out there are they GNA come down and get me a new job and they're going to gas prices go down like you know uh what will change our reality is if we have different sources of energy that we don't need gas anymore right like to your point before um I don't know but I hear a crow how how free energy is rolled out to human beings is very difficult because obviously you can't give humans free

(30:46) energy because there are lunatics out there that will use it to hurt us with exactly I like you flying cars flying cars the SE the 911 incident proved that's why we can't have flying cars

everyone buildings what is this these are the symbols that summon the aliens thank you for that this symbol that summon the aliens oh my God I know that girl I went the high school not high school I met her she's from the town I'm in that senten to Beth I [REDACTED] you not listen me and her met on here she literally lives in the town I live

(31:22) in and and Bernie showed some Canada that that is crazy dude ask her that sentence to bet that's crazy man I met her like a month ago on we're getting thirsty in the chat here I see some good stuff in the chat but there's you know stuff going on yeah this is the crazy stuff I get sent dude it's it's pretty nuts where is this show at uh I don't even know what this show is called let me see they call Bernie hi Bernie love you book of alens or something oh look at hery s to Beth all there's apparently a the book of

(31:58) Wars which was taken out of the Bible the book of Wars we're not allowed to see that where that other girl at she was well how about the book of Wars by Smedley Butler Tanya what is Tanya name Schneider like what do you do Tanya tell us a story have you seen aliens and stuff um I've seen some pretty crazy stuff but um right now have a really big meteorite that do yeah and um I wanted to see if you wanted any of that material um Jeremy um oh yeah of it because I'm on my way right now telescope T that stuff's worth money you

(32:45) know if you can catch yeah I know about to who because I can't sell any of it right now um I don't know I just get shot down everywhere I go but I have test results and um okay good um the analysis but I just haven't been able to read it myself of course I don't know how to read that but um I wanted to see if maybe you wanted some of that Jeremy and the analysis and everything else because it's too big I'm getting tired of babysitting it it's huge well there you go dude check check she's got all this

(33:22) stuff was you you were on the other week weren't you I think I think you were on the weren't you were you on probably in the chat watching you great she's got parts of uh freaking my meteor dude you got to take her up on I I put all the elements and as far as I know AI said it is one so I don't know is there any um platinum and stuff in in those things so we there's some backstory here Dan let me just uh because we already did um we had a video on this a while back and I interviewed a media scientist who looked

(33:58) at a piece of this too and and he said it was like a piece of um steel and it came from Miraloma which is like where there's a lot of steel yards and stuff so I to the conclusion that it was it wasn't a actual meteorite it was just a piece of slag iron from a a steel yard so no well she grabbed it from the ground it's probably hard how can you differentiate where did you get it at um my dad got it my dad a long time ago and um I accidentally uh hit it with the magnet it's stuck and um and that's when I

(34:41) started checking into it and Jeremy I sent you some pieces I thought you guys did uh some test on there didn't you you know I I you ran test right yeah I ran a couple different tests on it and uh you know I did I did uh what's called uh spark plasma um spectroscopy on it and I you know so I got the the results from that and it and it didn't look to be anything you know

from space from that test that we did and then had another test that had been done um we had had sent some pieces to that um I forget the name of the uh I I can

(35:25) go look this up this is a this is a while ago yeah but you haven't you've sent it to you've gone to other um scientists were experts in meteors right and you no I didn't I actually didn't I had it tested up in San Jose and um it came back with they couldn't give me um a direct answer because um pretty [REDACTED] good there was uh properties in there that were unrecognizable that they didn't know what they were so um I mean I have the analysis from it but like I said I can't read it but um

(36:07) unrecognizable stuff myself is there any way you could take a good quality picture of it email it so that we could all take a look we got people I have some of the pictures that you sent me from a couple years back pictures of the analysis I'm assuming you have a printed copy or you have a digital cop of course I could do that where do you want me to it Jeremy you want to I just send it to you we can pop them up on screen because here's the big thing about meteorites it's very difficult to tell just from metallurgical analysis to

(36:35) identify the elements you can't simply tell by looking at what metals are in there what you can do is look at the crystalline structure see there's a particular structure that we cannot make on Earth it's a um it's a triangular type of um threedimensional uh sort of hexagon Point Crystal and it only forms in zero g we cannot make it on Earth Graal gradi so if that crystalline structure is inside there we know for sure it came from space I know that there was a metallurgist that um Bob beish was

(37:07) talking to that said it came from Mars so um that it was a Mars media right uh I never sent you that picture did I Jeremy I know oh the other thing too to look for in non-terrestrial objects is the isotope ratio it doesn't matter if it's 100% iron because iron on Earth is going to have a certain um spin isotope abundance ratio of its odd nucleon spins and so if that ratio isn't the same as our Earthly iron then it indicates it's from somewhere else and that works even structure and melt it down you still

(37:46) have that isotope for argument's sake so it's the isotope it's not just the spin so for instance if there was um a high altitude plane explosion and metal was melted on the plane which which was spun off as it's molten and spun would that not create a similar if the metal was molten and it dropped to Earth it could create the same crystalline structure but it would still be made only of the abundance ratios of say like I I have to look at the chart to figure out what the abundance of iron is but some materials

(38:17) have 100% odd nucleons meaning that there are more um in the nucleus there are more neutrons than protons or less neutrons than protons generally elements they're balanced but a lot of elements have a percentage of their content of their mass that has an extra Neutron or lact Neutron and so we have an we have a pretty good idea about what materials are on earth say if our iron is 98 98% one isotope and 2% the other just as an example that's not what it is if we got something from space and say it's like

(38:47) 40% one isotope and 60% the other that's not going to be famili unless of course it was concentrated from materials on Earth but that's not something that you can do without with any of today's technology you would have to have something that could literally sift out through same mass materials and isolate just the nucleons that were were different have a way to do that yet welcome Tim hey are we talking about UFOs I heard nucleons I think you're letting pop drag you off on a tangent again I do have a tendency for that yeah

(39:26) let's let's welcome to all you guys how are you all doing tonight is there the morning better now are there new Congressional hearings or or are we just talking about the ones that have already kind of come yeah we've we're discussing the ones that already have come and we're projecting and aiming what we want the next ones to be and you know that instead of it being George knap and Jeremy cowb B we got Tim ventur and Jeremy Reese there doing the actual reporting right yes Tim ventur is my mentor in

(40:07) anti-gravity [Music] biology you need better Mentor sir I want conspiracy hearings into the technology isn't that better than alien bodies well you know it's interesting thing is that Kirk Patrick said that most of the stuff is classified programs he didn't think any of it was aliens he said most of the stuff looks like classified programs which again they didn't Arrow did not have title 50 Authority which means they didn't have access to like nro or CIA projects or any of that stuff and I'm sure there's

(40:43) people like me and others that approach them and were like hey you know there's this project going on there's this project going on there's this project you got look into this stuff and and he realized you know very quickly that you know there's crazy technology there's trillions of dollars missing from the American budget and and and nobody knows where it went so like the technologies that we have out there are uh you know probably more responsible for for what's flying around in our skies than than um

(41:12) aliens the people saying it's you know it's aliens so that they can get another TV show on TMZ or or or whatnot dude let me tell you something Jeremy that shit's all bit the shark not bit the shark jump the shark people are not looking into the TV shows or any of that [REDACTED] anymore you didn't notice that doesn't look like it to me man well they're grifting it they're they're grifting it like in the same fashion as like TMZ Netflix sort of thing it's the same uh individuals the

(41:46) same faces that have only ever been allowed to bring the story in that they're claiming they're bringing the truth when in fact it's like oh look I'm Lou alzando I'm an actual intelligence a agent you know well he [REDACTED] he ruined himself bying all that dumb [REDACTED] man right didn't you think he ruined Lou ruined himself right I mean well so Shan Kirkpatrick is is he he left arrow in December right I think and so uh so then I think C is Kathleen Hicks I think she is the interim in charge or wait she she there somebody

(42:21) was appointed to take his place weren't they yeah yeah you're you know you're right Tim Tim I hate to say is I don't follow that stuff because that stuff is just such a bunch of crap but yeah somebody did um yeah and I forgot I believe it was like the second in charge of the

organization temporarily was promoted and they're taking it's always something going I think it was Johnny is that Aiden oh that is Aiden yeah it is he went he went with a oh that's the one from last summer okay oh look his hair

(42:57) is all pulled back and [REDACTED] that is him um I think Johnny Depp is taking the field over in here oh and there's Jeremy right there this is last summer yeah that actually went really good Jeremy because you thought they were gonna come to tackle you and stuff remember that I was like dude you're all right man you had to piss real bad too didn't you I wish I was dressed like in a suit and tie you know cameraman in 2024 you will be and this year you'll be back and what was the what's the main company that you

(43:31) told the senator that he needs to look into that has all of like the Nan he told him to go to right P or wait a minute he said go to uh you told him what school to go to that school Jeremy it's right next to right parison what's it called you're always talking about it um this is the one hold up never mind you know what I'm talking about you're not talking about Batel Memorial are you Batel he said and that guy looked at him Weir exactly because Jeremy his favorite word was Batel for like six months man I'm

(44:04) interested if there's links between battel and Diego Garcia contracts potentially battel and uh Antarctica contracts as well as Batel and Hawaii uh potential contracts Jeremy really hit it out of the park with this presentation didn't he I mean this is big like you know it's awesome but it's like big there's like to this oh okay you mean he was down there okay I didn't know what was going no no this is the one I put together for the Senate intelligence uh select committee on intelligence where I said

(44:41) you know we're gonna you know because part of the big thing is how how do we how do we brief our Senators on on what's going on you know because we have um we have guys like Dan Warren who went down I don't know how he did this because I've called my Senators up you know I got to call them more they were waiting for you to come in dude I'm serious I just gotta keep calling him and bugging him and be like look we need to set up a meeting because like you know Dan Warren can get in there and and

(45:12) and go to this Senator and get him on the map you know do an hourlong interview with him man why can't I go in there with a with a I have a pile of documents I'll have this whole thing this whole presentation printed out in a pile of documents where just every everything is there for them and all the sources you know and uh you I'd have to print out a thousand papers too to give him the whole drive and um the whole you're right man everything but man could you imagine me going to uh my local Congressman or Senator and and uh

(45:48) dropping off a package and and doing an an hourlong briefing discussion with them you know a package what if you save it save it as a PDF PDF or if you can load an hour video that they can stream through tub that pops up next to the stupid TMZ as an actual you know Citra uh Pack video for them right like there you go there you go check Bernie out he's something's up there he's got it I would do PDF that's that's the safest for distribution right PDF is the standard

I'm sure is email distributable

(46:27) what do you do my friend from Ireland over there I haven't heard any much from you tonight normally you're filled with answers what what do you do do you PDF or do you [REDACTED] throw it or what do you do Bud over there in Ireland PDF the way to who's who's in Ireland uh what's his name over there I can't see his name now I know it NE or he he's probably mad at me because I [REDACTED] his name he's not from Ireland I bet you I can't anymore the my British friend Ian who I he was from Ireland man I'm sorry

(47:03) doel CL not from to be sure what's that I knew I [REDACTED] up I'm sorry what happened now you haven't [REDACTED] up you're all right man you don't have to answer me dude I insulted you I apologize no you didn't to Beth out there knows I don't sleep much since I my finger chopped off and and and the neighbors and [REDACTED] tried to shoot me the other day with a machine gun there's a lot of [REDACTED] going on over here all that's a lie except Cho my finger off um what were you going to say now uh uh the

(47:34) GU well we still have you I'm very interested in your guys' experiences with John le with Jean Huff and what like because in the emails you read before it was like it was Jean Huff that he was excited was it of the guy that was building the 3D Area 51 so it's like like does he believe this is true as well or like who was intentional guy and the 3D Area 51 thing is a guy named Luigi you can look his uh Facebook or YouTube channel up right now I'm not kidding you with Bob Lazar if you type in Bob Lazar and I'm pretty sure his

(48:16) name is Luigi he's got they've got over a million dollars just to the website alone and they're creating a 3D if you will with goggles and [REDACTED] S4 that you walk in there and stuff like that and um you know they're going for it and supposedly they're you know they think they're telling the truth but everyone knows it's not but uh yes this guy is like they were on one side of of of Papoose Lake and then they went to Ho side it's crazy what they're doing but man it's it's it's going to be a lot of

(48:51) money but it's going to be really cool because being done the computer and it's being done with the the goggles that make it uh what are those goggles called VR VR virtual reality yeah yeah virtual reality and stuff like that because if you ever see anybody run around look like they're on assd and [REDACTED] and people wearing them it freaks them out well wait till people start seeing alien spaceships and [REDACTED] flying all over the place some get hurt before yeah you know um I'd like to see it but again there's been a lot of stuff

(49:21) that's happened and we just don't know if this is going to fly through because do you think the government it's really going to open up S4 for Christ sakes if it exists I don't think so hey you know what's funny right is that um we know that Jean Huff was interviewed for like three hours because he told me this he was pissed off the interview was so long right so he told me he you know what he said he said he the only way he would do an interview and be part of this film is if Corbell wasn't involved in any in any way at all

(49:56) and he is he's involved in all aspects of it it's a shame yeah huh I wonder so I I my my prediction is this is going to be a giant year for UFOs and this may even be the year for disclosure and the reason I say that appreciate that well so what I what I've kind of noticed right is we seem to have some kind of a something every every three or four months it seems like you know and and so this last one this last one was uh the UAP the ndaa 2024 testicles we don't know they're going to shoot an

(50:35) extra testicle down during the Super Bowl and here's the thing dude it's all turning into cartoonish like [REDACTED] and nothing is going to be real I honestly believe the sons of [REDACTED] are going to have a ride down at uh at at uh Disney World here soon probably well okay but I think that's what they're shooting for dude the guy spent a million dollar Luigi spent a million dollars of his own damn money down there how much meth and [REDACTED] he could have bought he could had a hell I would be down for Disneyland

(51:06) transport but my so my my thought though is is that this this year it looks like it's G to be Trump versus Biden again and and so it's gonna be so crazy that UFOs will be the most sane thing out there the media will run to that they need something that's normal right so UFOs are real that'll that'll be like the puff piece that normal piece right you know exactly yes because this year is gon to be freaking weird yeah yeah it's already gotten weird and weird jellyfish UFOs I mean come on now I'll say this much that's I

(51:47) was getting ready to say guess what the tempo of the year is always started out by Jeremy Corbell if you think about it every year that guy has something going on right the year they set the tempo they set everything and everybody else can go [REDACTED] themselves and I don't understand it something weird is going on again with those clowns I don't they're not they don't care about the Grassroots they don't help you know chel it's all about them and his not part of this community they're like they're

(52:18) these big Outsiders who think they're better than everybody else but really they're they're behind the scenes not they're behind the scenes they're they're talking all about us but they won't mention us publicly that's the that's the thing they get George called me on my yeah and I got off and started talking to him and it was all about Jeremy and me against him and Sh and and and cor Bell and I was like dude and it was all about it was so stupid it was about what was it about Jeremy it was

(52:45) about eating like uh something stupid man it was like I forget it was like peeling something and eating something I forget a contest or something it was ridiculous man um they would have won probably but know it was something ridiculous what was that Jeremy I called you remember I don't know but um stupid dude it can't be worse than you know uh George knap covering desert Blast for three years and then pretending like he didn't know bobar yes and you know what they all have to what's that guy saying r s

(53:24) taking a nap dude I did get at at 5: and went to work um but I don't take naps for anybody um now I'm I lost my damn train of thought go ahead people bitching me to take a nap

[redacted] ridiculous go take a George nap man no I get pissed off you know let me ask you something Richard win or whatever your name is why don't you come in dick win and uh you know have a good time come on in talk to you know we're trying to keep some [redacted] going here come on in dick win you can dish it out you can take some abuse too

(53:55) come on you can take some abuse too Corbell come on Dick come on in I took a [redacted] nap earlier I need Nap that last piece of information you gave Jeremy about uh George and uh blast and wrong with me you wouldn't say uh anything to me like that man I I have some physical [redacted] going on right now so yeah there's some weird stuff going on there man because you know they were they saw you know it was LE and it was uh Jean Huff and Bob Lazar and they were watching K getting all the attention you know and

(54:39) they were like holy crap you know this UFO stuff so they were all into it too man um anybody Tanya if you you want to send me the new uh [redacted] data that you got um please you know you can email it to me I'll take a look at it and anyone who else has any uh information or evidence uh you can please send it to us we've interviewed more scientists more the real people um and we're going to continue to dig into this topic and give you guys you know the real scoop you know yeah and sorry while I uh have

(55:21) yall here Ashton and uh Tim uh that the work that Ashton has done connecting with c p Bob Greener Dave Rossy and all of the what they put forward in regards to the orbs and this technology and that it's potentially also this Tic Tac drone technology uh I would recommend or suggest maybe we can do a full uh Apec themed with all of those guests and uh each one with their info on it possibly yeah maybe well Ashton do you want to maybe if you could shoot me kind of an email let me know we could try and pull something together

(56:02) absolutely um I think I think I'm following you on Twitter I can DM you you can send me your email unless it's public yeah and let me apologize for not I I kind of dropped the ball and fell behind on the MH370 thing also because I know that was kind of a big story and I just I I just got behind on no don't take it I don't take it personally at all I'm sitting here talking about planes teleporting away I don't really expect a lot of people to take me St L but big point I I'm I'm in post holiday

(56:30) recovery mode man what is it is January 25th I'm slow but you know I appreciate you love Tim I've seen a lot of your work and uh you do good stuff man well thank you thank you yeah I during I mean over the break like for a lot of I was just like you know because it's so quiet during the holidays right so it was like okay I'm trying to get this scheduled and that scheduled and then everybody responds all at once so for like the last three weeks I've just been like Dr in and emails and stuff like that but

(56:58) there's a lot going on and I have a feeling I mean again I I bet you probably March we'll see God knows what but it'll be something you know yeah I think it's been pretty incredible just connecting with all these scientists engineers that I've been talking to about a lot of this stuff because I've been watching some of these Apec presentations and I'm going wow like it really

feels like this technology is just out there and the Public's just completely oblivious to it because

(57:24) everybody's too busy talking about jellyfish aliens and stuff like that yeah yeah it's easy to get distracted the city monkey and I think it's exactly part of the plan uh for you know to keep I mean it's just this Congress is just a crap show and these politicians in general it's it's to it's to try to keep them coralled in an information quarantine and keep them far away from the realization that hey you know there's trillions of dollars missing from the budget you know and every year it's like

(57:55) it's billion it's in the billions and uh if you don't count the money that they launder through the drug cartels in the banks you know the banks wonder billions and billions of dollars they get caught they they pay a couple hundred million dollar fine it's it's like a it's like a slap on the wrist it's it's like the price of doing business it's called so Jeremy Jeremy we're being massively distracted at the moment a lot of the rich and the elites have bunkers being built at the moment with a completion

(58:21) date of November 2024 with something called the event happening in early 2025 so lap up all the UFOs you like cuz yeah if I was gonna take a if I was gonna take a guess I I mean I I've seen things going both ways but um it it looks like war is coming our way I don't like to say that but that's no they're calling it The Event they're calling it the event and it might be a freeze off that's what they're they're thinking it's things are getting I vote no for nuclear winter no nuclear winter I'm not

(59:03) I'm not saying nuclear but you know nuclear winter so like three days ago uh three days ago flip how about the pp well exactly yeah yeah maybe well yeah it could be something like that calling it the event and you try Googling the event 2025 you just get every single dance event every Club event every and it's so well masked it's horrible sorry W be a conspiracy but it's there's a six-story building built beneath Denver airport and there's tunnels out of there going somewhere so I know that funny they make fun of it

(59:37) I've flown through Denver a lot of times but I have a quick question for you guys in terms of like do you guys try to reach out to the congressmen and senators in general because I feel like that's an Avenue that's untapped right is I've seen some of them now they realize that this topic is something where they can get some publicity I saw Congressman B uh beris we've seen brette out there a lot like to your point Jeremy it's like how do we get them on board to like realize hey we need to be

(1:00:03) looking at these black budget projects like I feel like the information's out there to like push that ball forward but just no one's picking it up I I think that my feeling is they're well aware of it I've tried to reach out to my senators and representatives um the problem is like I live in Washington state and that's not a focus area for them right and so it's it's not that they're against it it's just that that's not their priority and they're just kind of like you know you get you get a pat

(1:00:28) on the head at the most right they're like okay good boy you know go home we heard your email but but like now if for people who are in burette's District and things like that that would probably be really valuable because it's a vote of confidence in what he's doing and I'm sure that people who are in those districts and in those States probably are reaching out but then my my other thought too is um there's a lot going on behind the scenes and there again last year I mean this is just my perception

(1:01:01) but I I David grush was a shot across the bow and I don't know what that means but I know for me that was pretty mindblowing you know it it was like we had this UAP narrative and Tic Tacs and nits and we're kind of everybody's kind of moving forward and it's like you know it's like hahaa could be aliens but maybe not you know and and then all a sudden put on the clock like the official clock that hey yes they've shown up it's actually true they came throughout history at the nuclear

(1:01:32) warheads like it's beyond our technology it's actually really been going on for decades sort of thing M decades and and I I you know it's I don't think it was ignored I think it's well you know government is slow as heck to do anything but you know but then I mean I I have a feeling that more is coming and you know and again just based on what I've seen in the past it seems like every three or four months about once a quarter we have something you know I mean last year we had the balloon shoot

(1:02:04) Downs earlier in the year remember that with f-16s shooting down Chinese spy balloons more drone like than any jelly fish balloon that the cowbell put forward right like why didn't we get a single picture or video of those one sounded a couple sounded like right I if you're being conspiratorial right there there people have said there's a disclosure timeline if if we're taking the conspiratorial view you you could look at this and say okay they're letting this out at a pace that people can absorb you know and that

(1:02:39) would make sense I mean because last year it was definitely a buildup it was like boom boom boom boom then drop the bomb you know and it's it's gonna take people time for that to kind of sink in that or if you're not conspiratorial you you still have like you still have a lot of folks out there who like you know in Congress and people who are pushing on different things it's going to take time for them to kind of percolate through right like 233 days 233 days since Gish announced and still no evidence so exactly what

(1:03:16) you're saying there Tim well and and you know supposedly all of his evidence is there then there's this question of who can see it and that part I don't get but yeah I talked to the AO representative and they actually the person told me because we had a conversation and I asked about the shootdowns in February and he kind of gave me the same cck Patrick line that you know it was just balloons or something and I'm sitting here going like I heard the NORAD Commander literally say they weren't calling them

(1:03:46) balloons because they didn't know how they were floating but so it's just like I can't tell what the scops are and who telling the **truth** anymore regarding to any of this stuff the um

this the cube within the clear balloon sphere yeah radi refle ran graves right apparently radar reflectors yeah it's an existing design um Jack sarfati said that that was also similar to what's called a viscer sphere so you know I I don't know yeah I do think that going after the government in terms of the politicians

(1:04:23) is a move that I mean people in the going the politicians can't do anything whatever but like what they do is they get in front of the media right like we're seeing more and more media attention on it and I think you know even to Tim's Point yes they kind of like Pat you on the head and they send you on your way but like if you kind of use them against themselves which is what do they want they want to be reelected they want attention right it's like there you go we we're getting this thing that's starting to get into the

(1:04:45) public sphere people are starting to pay attention to it and you can kind of attack it that way we like hey you might be able to get a little bit of clout here if you you know make a statement on this do an interview with somebody who like knows what they're talking about and then we can guide the discussion away from jellyfish aliens and whatever problem no one knows what the [REDACTED] are talking about they just don't nobody knows anything they just don't the Private Industry don't know anything

(1:05:09) even the whistleblowers don't know anything anymore they have to ask [REDACTED] questions about what happened 25 years ago it's ridiculous man I don't know where we're headed somebody I politicians are sponsored aren't they if a politician wants to run um a big election rally they have to pay for that rally as long as they mention them or make um you know the suggestion that Ian when's the best what's what's the best whistleblower that you ever can recall in your lifetime because you come from

(1:05:40) ever across the pond I'm very interested to hear this I can only go who I've met and I've got to say Gary Gary McKinnon Gary McKinnon Lads to have found what he found he wasn't looking for that he was just I'm Blown Away by that officially acknowledged as the largest US like data breach governmental data safety breach in history to this day was still McKinnon what about uh what about that other guy when they made the movie about he's living in **Russia** now you're talking about Edward Snowden one UFOs

(1:06:16) and the other one is uh let me let me just can I ask you a question Ian are you saying that because you met him on the show or do you really feel that I mean be seriously I really I no I really feel that I really feel that I think he's massively undervalued for what he picked up on and the deal that it's not a glamorous thing that they're like submarines basically it makes sense it makes sense that if the milit like look at what happened with the ocean with the um Titanic submarine thing recently yeah

(1:06:47) the entire world was on the edge of their seats waiting to see whether these guys would live or die they've only got 13 hours of oxygen they've only got seven hours of oxygen will we find them in time yeah can you imagine talking about this submarine that didn't sink is that what you're talking about vels AR basically it's long I mean it was them guys were dead for a

long time they lied about it they should so what if we have the same thing happening what if we have the same thing happening

(1:07:18) and it's a covert mission to to Mars to to check whether the Russians have got a base on to check if the Russians have got a base on the moon or the Chinese or whoever our competitor is at the time that's why the Space Race exists and why we send people up there but we don't tell the public everything because if there are there's some are better off did you know that there's some things that the public are better off not not knowing yeah ex I know some [redacted] that they don't know that

(1:07:49) surprise me I'm like they don't know that no don't ever say and it's just like to me it's no big deal but um there are some things that the government does not allow the public to know you know the dog got killed in space was it Leica Leica the first you mean the one that that damn uh that Elon Musk put Russian dog one of the first animals in space Leica it was called and she died so she got up there everything was fine they recorded all the dog in space bit and on the way down the oxygen

(1:08:21) failed and she got toasty on re like that much so you forget about it you know what I mean if that happened today we would have animal rights protesters up in arms and there would be no more Rockets going up because of w I mean did they show the thing like burning up and everything that's awful it's fur and stuff I didn't see it I didn't see it I apologize I don't know about I don't pay any listen I used to watch TV and stuff all the time all I I watch the news and stuff I don't get

(1:08:52) into the craziness anymore because TV has gotten so awful because the internet's taken over and there's got what I want to see I don't need to watch Being programmed on me well if you have a chick over or something helps [redacted] TV yeah I if I could add briefly to that in terms of TV this for me this this goes back like 20 years but I'm sure you guys probably remember after September 11th right they ran the towers on every News Channel over and over over and over and over yeah they did and my

(1:09:27) uh my my ex-wife and I ended up watching Food Network because that was the only thing that was like peaceful and relaxing you know and but I I think it's really important stuff like again especially this year with this election cycle coming up and all of the crap that's going to be on TV like you want to take care of your mental health right you don't want to hard brother go ahead stop consuming entertainment and start creating entertainment you brought something up interesting I've had a lot

(1:09:56) of mental health issues in ever since the co thing went down because so many of my friends just don't even come out of the house anymore it's like what do you do man what do you do are you guys experiencing this stuff I know Jeremy has had friends don't come out stuff anymore what do you do I mean it's crazy man you have to get out and Hike yourself and video call them from the top of the mountain be like yo you got to be here on the next one right you got you got get shot go ahead uh Tim I'm

(1:10:28) sorry I I think I think you've gotta support I think you've got to emotionally support the people around you try and get them engaged I mean you know I'm like I'm so I just turned 48 and and so I'm I'm middle man well thank you and and but you know one of the things I'm seeing bro we're up there yeah and you know when you get older right like you start to see I mean people start getu oh you're gone dude it's all over so you guys know what I'm talking about it's

(1:11:00) it's like e even if you're doing great the people around you are struggling and that's something that I'm seeing and it's like what can you do all you can do is try and support them and try and get them engaged because a lot of folks are strugg they're struggling with depression they're struggling with medical issues they're struggling with like cancer things like that and you know I mean it's like what can 2024 we have to make the year of the blue orb and F figuring out that plasma that

(1:11:32) supposedly heals cancer let's let's get that one very our society if when you are well you are living with with ease and when you are not you are living with dis ease you know Tim I had a I'm sorry Tim I had a serious accident Jeremy I'll tell you um last year dude I was doing great at my job I loved it and last year dude the most oddest [REDACTED] thing happened I had a trip scheduled to go on this \$10,000 boat ride with this chick I was dating and on the 9th I believe it was of December last year or

(1:12:13) the 10th I can't remember chopped my [REDACTED] finger off on at work at 10:25 at night man and it took this damn thing uh a I can explain I guess like if you look at both these fingers right okay you can't really tell there I mean look how much thicker the other one is you see that you can see how much is missing it's insane right oh but but they were so they were able to reattach though well it it was it never didn't detach B up in the air and it was just devastated look at this guess what ask Jeremy I

(1:12:49) what 30 guitars Jeremy at least okay I can't [REDACTED] play my gu guar anymore because I'm a shredder and stuff like I used to it just completely destroyed my free time I went into a bald depression I want to blow my brains out and I I don't want to kill myself anymore but I'm still suffering from massive depression I can't do what I used to do my hands I'm a [REDACTED] mechanic for Christ sakes I'm screwed in so many levels with my left hand and it just I I I Marshall when I when I have my DMT

(1:13:20) experience one question that I did ask them or one bit of information they imparted to me was that people that commit suicide are chucking themselves in the void and they really don't like it because the possibilities that that entity creat bro you don't never you're guessing man Tim I want to hear what Tim had to say because he knows I mean so one thing I I've worked out for a long time but so one of the things I started doing last year was walking more and and that might be I mean right now I man I

(1:13:54) know our weather sucks everywhere right it just sucks but like just getting out you know leave the phone at home go for a walk like you know I'm I'm up to I'm doing I'm trying to

do like three miles a day with the dog now and and it helps you know it's just that physical activity you know there's it's it's easy anybody can do it I mean it's just walking right it's not not high impact or anything like that yeah just stuff like that that that's a start you know that's a

(1:14:25) start I've done that just go walk I've done that let me tell it'll blow his mind ask Jeremy I ride Harley's right well guess what man last February this happened [REDACTED] December excuse my damn [REDACTED] language um this happened in December and I go out to get on my favorite bike I have two bikes and ride it okay well and I could I couldn't I couldn't pull the clutch in dude I couldn't pull a clutch in dude Rehabilitation will take time your Rehabilitation don't do nothing there's

(1:15:02) no muscle or anything or tissue left in his finger you don't understand burn you don't listen don't accept effect direct your epigenetics to regrow it and you know be the one in I don't cor my [REDACTED] to marijuana listen Okay it took the other two damn fingers and took the tendons and snapped them backwards to this way and they're destroyed and other with than having like three or four surgeries to try and fix it I'm just saying my hand got totally [REDACTED] up I can barely bend the anything in these three in the middle

(1:15:39) what do you do you have no clue what this has done to me bro I hate life it's [REDACTED] me up man and then I bastard in the crowd I'm sorry about bitching that guy in the crowd bitching about me being tired and stuff like that now maybe you know why I'm tired dude you know just to sleep when your finger destroyed and it feels like a 10 20,000 paper cuts are on is there an alternative way to to wire your clutch because let me see so I mean oh yeah I could hand clutch It On The Ground I mean I mean on the I can put

(1:16:09) what's called a hand clutch on it and pull it and then use my foot my left foot to push the clutch into is the cable and then hand clutch it like this but you're creating what's called a suicide shifter and around here we have really shitty roads Tim California you're at it'd be great but we have really shitty roads it' be super dangerous okay okay I get what you're saying I don't have a clutch on my car I just have a no he's talking about you've got so on on your bike

(1:16:37) I and and on the on the right hand you've got your your uh your throttle and then above that clutch throttle yeah my throttle my clutch is pulled out the and the thing is man listen I even went and and and switched it over to a hydraulic clutch to make it much easier now listen I can pull that in easier but every time i' Pull It in this finger bust completely open again the skin would rip off of it and it was just hell last year I was on worker's comp for six or seven months I [REDACTED] hated it man

(1:17:07) and then there's always that one jerk at work goes he stuck his hand in that engine on purpose you I like are you [REDACTED] kidding me dude I almost ripped my entire hand off you know it's like and I huh de Glo it's called de gloving is the common thing and it goes to your elbow did you get um electrocuted was electrocuted electrocut now remember I got shocked first on on working in the same Department okay check this out dude I'm wiring this I'm putting these two starter cables on this wire 24 amps and

(1:17:47) I think 24 volts DC I'm sorry 24 volts DC and 30 amps okay I I'm hooking these wires up right and this chick came up she just didn't know any better they didn't train her or anything they just put her with me I need somebody with me to make sure I wasn't laying on the floor dead she just comes up and thrs these switches man and made the damn uh uh uh oh she turned it hot lines hot and I was yeah and I had this 3/4 inch 12in ratchet and I'm tighten the one up dude and as soon as it got anywhere near grounded part it

(1:18:26) arked the whole way over and took the socket and turned it into the most incredible shade of neon green you ever seen in your life and melted engine dude and it shot Sparks all over me I still have the shirt and there's a thousand holes in it and I still have my pants and stuff that happened first and then like three months later I got I got I got the I got the the other injury with the with the with the hand man it's just it's unbelievable it's and I work for a defense contractor man okay so walking

(1:18:58) walking is good but wear a safety vest dude yeah safety well you know what man I used to love uh running walking the treadmill uphill real hardcore you know that used to always get me in really good shapes if I had if I was in New York I'd be running up and down Steps step running is great for you we don't have anything like that around here I'm in PA man um you know it's just boring around here Jeremy's been here it's right Jeremy be honest well any this time of year anywhere this anywhere this

(1:19:28) time of year I mean yeah man I'm in the same boat I hopped in the car earlier tonight I'm like I just got to get out of the house I ended up buying chicken at Costco and Lunchables for the kid right that's my night chicken Lunchables so but you know you're 48 right I'm 52 it's tough getting older these young cats don't get it man it's not easy guys wait you'll see Bernie you'll see all this [REDACTED] a joke and you'll be all right Bernie I'm about reverse aging and

(1:19:57) finding you know that thousand years or something get the M materials M you're still making M materials listen here's what I hope for these days Tim this is no lie because remember I knew Ed fuche real good and I'll never forget I I met you through Ed you know what I hope for these days I just sit here and I just pray that that they're gonna and I should say I say CNN and you know you people hate we all probably hate CNN I just hope that CNN comes on one day and there's that tr3b just sitting there on this giant tarmac

(1:20:31) dude and it's opened up and heads in the damn thing and or somebody you know and it just opens up and we'll be like man we were right you know and that thing's there I pray for that but you know what never see it it it kind of seems like that's where things are going I I don't know I'm not holding my breath but it yeah it's that's what happened with the stealth Fighters remember but they weren't talking about UFOs back then they but they were they were in parh Nevada and they were out there they just

(1:21:04) weren't around here um yeah this is this year is like a hold your breath here I think you know that hold your breath the Blackbird and before like the wingcraft one there was that other other one could fit in like the tr3b any Jeremy is saying he's got to get to bed it's for everyone if

want to wrap it up and my wife is calling me at the point that I have to drive and pick her up from work so thank you guys for inviting me it was good it was good to talk with you again and and thank you for having me on I should apologize for

(1:21:46) interrupting Jeremiah earlier I was just teasing him and now now his blue orb is quiet no no it's okay it's okay I guess I'll just mention this one last thing as a another side tent to prove your point right Tim where I'm going to squirrel less so I did just um I did just finish the 3D print that uh Simon made for um this very interesting device called the Morton effect pulse device and it's based around the uh scaler discharge topology of a close parallel plate spherical capacitor that drops its

(1:22:21) energy in an extraordinary short period of time we're talking probably less than one Nan and then what it does is one side of this capacitor plates connect to an antenna so you could never pump you know like a say 500,000 watts into an antenna beam about 5 inches long but in this case it's being done electrostatically so here we're we're looking at the effect of what happens when you increase the scalar potential in some unit of space by a insane amount over an incredibly short period of time

(1:22:52) and what due to Epsilon and we're looking for those with falive effects so I just got that part printed it looks gorgeous Simon did a fantastic job and I've got the cup hammered out the ball with its braze time terminal and uh soon I'll be mounting the antenna and putting this all together so I'm pretty excited that we're going to maybe have a gravitational false device that's way simpler than po off way simpler well you you know and and actually and before we go that's one of the things that I am

(1:23:17) seeing right because I'm not actively building stuff but this is one of the things that I'm seeing and I'm sure Jeremy riss is seeing this too is um Jeremiah not only yourself but the people who are building things this year it seems like um everything is moving forward and it's moving forward really rapidly there and so that's really again I'm I'm kind of a bystander but I'm just like I love looking at it right and so you know I just cheerlead you guys you're you're doing amazing work and

(1:23:45) it's just getting better and better and better and better so that's really exciting I'll still give you the credit where it's do you're the best mod that anybody could have ever asked for dealing with these derel people like me that like to squirrel and people like Jack that like to curse and you know people that are really really too quiet or whatnot you can deal with them all and you can do it elegantly and professionally which is certainly a talent that I do not have well I appreciate you're saying it but but

(1:24:09) trust me it's it's I I'm just being a fan of watching I'm just watching everything that's going on you know and it's it's it's wonderful it is wonderful Tim you're not you're not related to Jesse Ventura are you it's you know what that's not his real name I didn't know that that I I saw that a while ago yeah I know what it is I know his brother legit ventur Janos did you know that that's yeah that's not his real name he's he's actually a Polish guy who uh

(1:24:40) Jesse Ventura Jessie Ventura's last name is Janos yeah brother he has a brother named Janos too listen J Janos and Jim Janos they are both Navy Seals and uh that true they were Seal Team guys they weren't in long one was in six years one was in eight years um yes Janice was last name actually believe it or not that's Greek so yeah oh and as a moderator yourself you know it makes a lot of sense why your initials are TV seeing as you do have that what did you just say what the Yeah I don't know I don't know guys I'm you

(1:25:16) know me I'm not exciting but again I chicken and Lunchables you are I have a feel you're one of them guys that are I'm sorry one thing I want to say real quick is that the information Flows at the at a slow rate to get out to the public right like I think we saw this a lot of us are old enough to see the beginning of social media and how social media has grown and I I feel like Once Upon a Time social media was a thing where you could get the **truth** before it got onto the news and now it's reached a point where it's almost

(1:25:45) inverted and so like it for the people like Jeremiah out there who are doing experiments you know alien scientists all the rest of you guys that are out there doing it like I I think that Tim and honestly myself I want to be somebody who's helping getting that out to the public in a way where it's digestible to them what I say is keep doing what you're doing guys it's amazing yeah yeah and there's a lot of fragmentation too and that's one of the things I'm seeing it's a lot harder

(1:26:07) to get stuff out there because it it's just fragment there are a lot of people competing for mind share there are a lot of different channels and and so you know but it's it's making a difference you know Tim I never really got a chance to talk to you but you know watching the compartmentalization and the disinfo aspects ofces every **[redacted]** time I got to say something to Tim I get cut off sorry about that Tim uh I didn't mean to get cut off sorry well you have my you have my email right I just want to say you do

(1:26:41) a great job on Saturdays with the uh oh well thank you thank you yes because sometimes I don't think you think you're appreciated and there's a lot of people watch that and you don't you don't realize that I sit here a lot and watch and it goes on for hours the apack and uh thanks for doing that appreciate that thank you yeah it's yeah and you know I mean all I do is play traffic cop that's that's it and and that's that's enough there's so much going on there by the

(1:27:08) end of those conferences I'm like dead exhausted most the time oh I can tell I know when Jeremy's held him uh yeah Jeremy will message me be like man they keep me awake or something it's got to be tough to do that uh you guys have a lot going on with that stuff um you know you guys got you guys are the head of like euphology in a certain way but you're the head of it in like the honest way um and that's that's important dude um what who wants to be known as the cheater or the you know

(1:27:40) that's called Integrity yes having integrity and stuff it's like Jeremy you know you're doing it the right way it's going to take a while it's going to take a while but you know what in

the long I appreciate you're saying that but yeah I know for I Jeremy is he's like I mean just look at his subscriber base 100 120,000 subscribers now so yeah yeah you for for me I just yeah I I'm just trying to I'm just trying to get people's message out a little bit you know so if you a s foot tall alien ask him if they

(1:28:13) can fix my back please you probably have you probably have injuries you need fix I got you know what I got something to try Okay I I don't want to um okay I I I so I had a buddy and and he's he rides Harley too and his girlfriend got him into yoga like six years ago and at first he was like there's no way I'm getting into yoga right because he's kind of like a biker guy but but but he did it for a couple of months his back was so locked up he could barely move because he'd had an injury and and like

(1:28:44) I didn't see him for a while the next time I saw him after that like he does yoga every day and he says if he stops doing yoga it starts to lock up again but he's like it cured me he's like I quit going to the chiropractor I quit taking medicine so I mean I don't know right like your mileage may vary but but it might be something to look at and it's basically stretching so so that would make sense why it's helping it just works out those tendons and stuff guys I gotta drop out but I just

(1:29:13) want to thank everybody for being here uh Tim I followed you on Twitter maybe can reach out to you and uh thanks everybody for you know the chat tonight and I'd like to you Jeremiah at some point as well I'll try to reach out to alien scientist Jeremy appreciate you guys everybody Bernie have a good night guys thanks real quick thank you for having balls dude I mean you you give them people you don't let them talk down to you and stuff and you've impressed me because I thought a lot of times them

(1:29:39) bastards can harass you to the point where you're back out and you didn't let that happen man and and me and Jeremy said that I don't give a [REDACTED] if you're wrong you know why I like the fight you're in okay thanks man I'm not saying you're Ro some people have steel balls Ashton has four orbs of interdimensional makeup all [Music] right it's a tough life for us guys who are talking about teleportation out there you know what I'm saying you said early on Ashton like what you said was absolutely critical

(1:30:11) why are we focusing so much on what on who might be making these things and we should be focusing on how we can utilize what they've made we should be building this technology we should be focused on the tech on the implementation on how us human beings us little creatures on this Earth will be building these things and that was absolutely something that I think is the biggest point of contention for me personally in this community so many people want to try to delay and defer the focus away from what we can

(1:30:39) actually do as Jeremy has said best actionable intelligence if it is not actionable it is worthless It's Entertainment appreciate you J I'm gonna try to get in touch with you buddy I'll talk to you guys later send my number and uh by all means sounds good have a good night everybody on Twitter and YouTube and uh also M Mysterion on Twitter and I don't know if you

had a YouTube channel as well but I know I do have yes mron on the I think Steve's on his way to say hi at the moment just to uh oh is there

(1:31:14) somebody coming in come on in whoever yeah yeah yeah Steve's on his way be right guys I'm gonna jump off I appreciate you just letting me uh sit in here and be there a good night book bring him in whoever just wants to hang out and nothing to sell that's always a good thing man guys you can Che bring him in Steve C in oh yeah bring him in I used to talk to him a good F my boss I'm going to uh I know what's up bring I don't see him in the background I actually emailed Steve cambian earlier I was planning to shut

(1:31:56) it down right now but Hey listen Steve I'm sorry we can do another show another time and uh he won't backstage after is he on his way you want to put that [REDACTED] behind us I guess oh well that's s right me we'll have we'll have you got you on another time and I gotta get John gold on another time coming up soon so thank you all hey look who it is Bim Jim don't come in Bim Jim at the uh things are messed up

(00:43) malan 370 Contact 120m 9 [Music] night breaking news tonight A Malaysia Airlines flight with 239 people on board including four Americans has gone missing [Music] sing I remembered the line from the Hindu scripture the Bhagavad Gita Vishnu is trying to persuade the prince that he should do his duty and to impress him takes on his multi-armed

(01:52) form and says now I am become death hi chat the destroyer of worlds yo yo yo welcome to the stream hey PJ Mike hey Sandy hey just Jeff hey Arwin hey station Dorian webc Aron Wiki's watching did I miss anybody UK how we doing we uh insomnia up hey Cipher oh maybe I can get Lulu to come up today we'll see hold on let's see if we can do it he we got the Lulu we got the Lulu she was not too pleased but we we got her hi oh we've got a dog folks we've got a dog she's

(02:59) chilling she's a lap dog now folks she's a lap dog now you guys can't see her but she's right here she's right here oh no she's getting up okay here we go see if we can not get bit oh okay okay Jess is alive yeah it's funny in the mornings now she wants to be picked up it's weird in the morning she comes and jumps on me when I'm at work when I'm working and tries to get in my lap it's like really bizarre and then at night she doesn't want to be touched just like a woman oh

(03:44) [Music] Bazinga I don't know if that even works okay guys um we're going to do science today uh let's see any Recaps um so I did post uh I posted I don't know what this one is right here I posted that summary that we did yesterday on Twitter okay I'm not revealing any DMS great great great oh I forgot I posted this we can probably undo that so I posted this uh letter breakdown I edited a little bit pretty interesting I love how why do so many people get so angry like you're hurting your credibility guys we're talking

(04:37) about teleporting an airplane you can't really hurt your credibility man like even even phds can't deal with this kind of information the Bunker's Minds have been broken by it like this idea that we're hurting our credibility it's almost the silly is hurting the families I still haven't heard back from a which is a little odd but not really government's super slow like that I should email them back again but just been lazy hey Jess welcome welcome back um so and I've been sneaking into Chris

(05:15) melon's DMS or not DMS but his replies Chris melon oh I'm following you Chris melon I'm Coming For That Ass I'm coming for it it's kind of crazy he's only got some of these people don't even have that many followers we have almost 880,000 followers Chris melon has 116,000 but people listen to him way more of course but he's just going at people today huh he's just straight up going at him huh I wonder if you get more engagement if you don't post that much maybe I am Ashton destroyer of his brand

(06:00) uh yeah let me see I think we should be at the top here Chris melan tell us about the implications of the technology stop distracting us with aliens and crafts this technology can change the planet there's hundreds of thousands of homeless people in the United States alone so why are we hiding this advanced technology is it doomsday weapons I don't know what that means but I like that guy but I mean we just need to force somebody to make any kind of statement instead man it's just what's what's the

(06:37) Dio yo what is the Deo oh I don't know man people send me so much stuff I can't can't keep it all straight guys we just have to take it piece by piece where is where is I I was I was trying to get Mike AER to say something what's this stop ceasefire and Gaza I don't know what that means but stop murdering children sounds right um H sacred geometry huh oh I think I know what I want to look at today I was seeing if Mike AER replied I uh I challenged Mike AER to a one on one on however many they

(07:28) want this is a ridiculous Rabbit Hole me I would take on Victor Victor Mike and Don of the independent group three-on-one in in a debate I'll take all three of them on at the same time I want them to explain to me how all the pieces sank but all then some pieces also washed up yes I'm aware that the thunderstorm generator literally teleports matter in the same way that the portal does very very aware yes I'm aware it's one thing to be aware it's another thing to be able to digest it and and describe it in a way where

(08:14) normies will be able to comprehend it okay so what is it how do you spell simatic simatic simatics videos science versus music oh wait is my sound even on hold on a sec yeah I don't

mean to be rude but everything you guys have could think to send me is already been uh sent to me in the past so it's pretty hard to send something to me that I'm not fully aware of at this point uh well that's not what I was looking for there this is what I want uh I at simatics yeah of course I'm sold on plasma stuff man I'm already sold on so

(09:16) okay science guys um I want to talk to anybody who believes in plasma technology as well as the electric Universe right electric Universe I think the universe is electric uh even well before I looked into this case I was already speculating that magnetism could account for dark dark gra or yeah dark dark matter and the gravity that it makes and now after looking into the electric Universe stuff I think I gave you guys the the homework to look at that that video that absolutely I think it it perfectly explains it I think uh

(10:03) electromagnetism explains the missing uh dark matter as well as just complexity in general so simatics is interesting here we go Sound by basically vibrating a medium such as sand or water as you can see there so if we have a quick look at the history of simatic using a metal plate okay so what is simatics um now simatics is essentially putting vibration sound vibration on a metal plate that has sand on it and then depending on the frequency it creates a pattern why does it do that and look at these patterns holy

(10:48) smokes so I think what I want to find out first is why does simatics create these elaborate patterns what's the actual explanation right and when I think of sacred geometry this is one of the things that I think of covering it with sand and then bowing it um to create the cadney patterns that you see here on the right and then bringing us into the present day is a fellow collaborator of mine and simatics expert uh John Stewart Reed and he's kindly recreated oh look at that so right away I mean watch it

(11:24) change like the the Plate's just vibrating and so the sand just moves directly into to a uh specific orientation for the clad experiment what we can see here is the metal sheet this time connected to a sound driver and being fed by a frequency generator and as the frequencies increase so of the complexities of the patterns what this just seems like magic right doesn't this just seem like magic uh oh oh you guys don't even see the chat I was wondering pull that over here let's go make this a little bit

(12:05) bigger is that pair on the plat as you can see for your own look at that what the and I'm going to reduce the sound a little bit yeah it's too loud for you guys okay look at that Jesus what the hell I mean so I remember we did this back when I went to the Science Museum when I was a little kid and it just seemed cool but I didn't know what it meant now I still don't know what it means now I now not only do I not understand what it means but it also seems like it could be the secret to the universe well for me simatics is an

(12:53) almost magical tool um it's like a okay well this isn't what I want to see I want to see sound plate here we go there we go this is what I want look at this this is what I want to see one minute video okay the first experiment vibrates which forms different shapes depending on the frequency of the sound whoa holy crap well we blew up a lot of speakers um with the with the

Kad plate so there was a lot so they tied the speaker to the plate is that how they're doing it nowadays lot of experimenting around the

(13:42) cadney plate primarily looking at how much volume we can put through there how much sand to actually put on the plate and the different shapes of plates and what different patterns would be created because of those shapes um but what we were really testing was what frequencies creat the most interesting repeatable patterns because that was a key point so we ended up playing pretty much every audio frequency through the plate to see what different shapes it would form and for most frequencies it doesn't really do much but when it hits a

(14:12) frequency that resonates with the plate it form so resonance wow once it resonance resonates then it creates the pattern huh and everything really is waves huh waves and frequency and resonance it's a really nice pure shape so we out what those tones were and those were the tones we used to dve the plate dur the video and this is also everything I'm not going to say everything's connected but what we have is the same types of science are can be used in different ways right um one of the other ones as

(14:48) well is uh the overunity devices right when we looked at the overunity devices like the dread Co perpetual motion machine the answer is magnetism but it's not just magnetism it's magnetism with a specific resonance magnetism and resonance and then that's how you can create a perpetual motion machine or over Unity device if you would want to think of it like that same concept here right is once you get the right resonant frequency then you start to see the [Music] patterns that's when the I mean this

(15:24) looks like magic to me damn that's cool whoa look at that in the [Music] water holy crap that's [Music] cool oh that's pretty sweet okay let's see what else we can find Yes Man everybody just quotes Tesla I find the smartest people to get it quote Tesla right think of terms of energy frequency and vibration [Music] yeah it's funny because people also link this to the building of the pyramids which maybe it is maybe it's not who knows I think the answer is that the Ancients definitely knew more about not

(16:22) more in some ways they knew more about the universe than we know now even though their Material Science was not nearly as advanced right [Music] yeah alien scientists has a lot of good interviews he had a really good one today I watched most of that had to do with the frequency of Bob lazars thing does anyone do we have that link somewhere let me pull that I'm going to think cuz I want to go to that next I if someone in the chat can explain to me this here it is I found it we're going to take a look at this oh yeah Ricardo

(17:07) storyy he was the one who was on alien scientist earlier we'll look at this after okay well [Music] cool yeah Alex I think you just H the nail on the head Alex says I imagine finding the resonant frequency of certain elements causes their electrons to move in these patterns would like the answer to that that's why I'm looking at this I what I'm trying to figure out what I think we need to be trying to understand and figure out is and this goes a little bit to Zak's Point as well it's not enough

(17:51) to realize that plasma plasmoid technology can produce the same effects we have to understand how to manipulate and control it right so to answer the question why am I not more aggressively hunting down Malcolm bendal because Malcolm bendal has engineered potentially the technology that we need we need to understand like the letter told us the more rudimentary approach to it we need to understand why it works at its most basic form and this is not going to be a situation where you can't skip right to the end we

(18:25) have to slowly build up to this as well right have to slowly build up to it I think that um to Bert's Point people that want to try to put people down because of their credentials credentialism as I like to call it that's your classic CNN brain right is that only somebody with the right credentials can speak the **truth** the reality is that's not how it works at all in fact of the people that I've talked to people that don't have phds seem to know way more than the people that do because it's not about where you

(19:01) went to school or who taught you it's about how um you know how dedicated you are how dedicated you are and how much uh effort you put into it just the same way that I put in the effort into this case right I would argue and this is definitely a little bit egotistical but I think it's also true is that I'm more of an expert than most of the independent group is at this point I know probably more about MH370 than they do right that's and I can explain what happened to the plane using more evidence than they have I

(19:35) mean that does sound a little bit egotistical but it's because I'm more dedicated than they are right I put more time into it I learn I don't try to throw out evidence unless it just makes no sense whatsoever from a scientific perspective uh Hey slam dunk hey alien girl hey James hey Bernie what's up oh you guys want to multistream yeah we can multistream if you want send me a link I probably only going to stay up for I'm not going to I'm only like an hour at the most I'm just super tired but yeah that

(20:14) would be good I I'd happily uh join you guys just listen and what have you I've got a lot to learn I don't know who solar um solar Marshall is other than one of the moderators though oh yeah that's the other thing too about Bob Lazar is um and yeah it would be good to go in there because I'd like to them to explain to me what the deal with the this frequency situation is this weird frequency in this paper it's the only thing I didn't understand about this paper is this uh 7.46 htz frequency

(20:48) it made no sense to me um so yeah Bernie send me an email I'll take I'll take a look and uh so the thing I too is like Bob Lazar went to to school like how old is he 60s maybe almost 70 dude went to school in a time where your uh computer there weren't even computer records like all you have to do is throw away a file and now his schooling records are gone right how do you delete a diploma I mean you just get rid of the records you throw away a piece of paper my man out here is thinking that they had like computer records in the

(21:23) 60s and the 70s maybe even the 80s it was just it's all paper dude somebody goes there and they go pick up the file says Bazar and they throw it out or better yet I I worked in

healthcare guys like when I started in healthcare hospitals still had filing rooms full of uh full of medical records paper medical records and they would get lost all the time man because it's just a p piece of paper paper chart like people I think especially nowadays don't realize that we've only been digital for like

(21:55) the last 15 years everything else before that it was all paper um I don't even know where where my diploma is I think I'm sure I have it somewhere but be easy to forget it somewhere oh hey hey Jeremy I watched your uh interview today with uh story uh storyy it was pretty good Buckingham piie Theory huh yeah I mean it's very possible that Lazar lied about some of his uh educational background but doesn't matter right who cares let's judge him by the science that he puts out there not based on his supposed credentials

(22:36) that's my opinion on Bob Lazar anyway I want to I want to watch this thing real quick because I mean look at people like Bob Ross or Dave Rossy man Dave Rossy is uh could probably be discredited the same way right dude's only 25 doesn't even have a PhD but he's a DOD contractor doing some pretty crazy stuff right this is this is what I want to understand I just can't wrap my brain around this this is so [Music] loud this just seems so wild I'll talk about Bazar right after this video I mean look at these patterns this

(23:36) is just absurd the thing about these patterns that's wild to me is that it's not like it's just a repeating pattern like look at this one it's symmetrical down this axis but it's not symmetrical along this axis isn't that bizarre that just seems so weird to me and then it's like lines and [Music] circles the other thing this reminds me of is um crop circles crop circles also a lot of the ones that have more credibility than the the fake ones seem to have specific patterns I don't know I just love this for some

(24:35) reason I think the universe is all about resonance seems to make sense I don't like particle physics anymore I think waves and resonance seem to be the secret to everything it's just my opinion I'm not an expert but man look at that look at some how elaborate some of these patterns are and then like it'll go from circles and then it'll just go to straight lines bizarre look at this one it doesn't even feel like they're building on each other but they just this is sand Sandy so they're literally

(25:17) just pouring sand on a metal plate and then they're uh passing vibration through it that's it that's it you can do the same thing with this by taking like a um what do they call the thing when you you brush on a violin the like pick or whatever it's called I don't know what it's called um and brush it against there okay cool yeah I got it okay yeah I'll join um just send me a ping when you're like a couple minutes before you're stared I'll switch over damn look at that this one that one look this one

(25:55) looks ridiculous look at this one holy SM look at this Jesus yeah I think you can use salt I mean the idea is just something that's light right yeah table salt or sand [Music] yeah damn look at that one look at this pattern what the heck I just don't it's crazy definitely feels like something like just deeply Primal right whoa and then it just shifts to this bizarre man yeah 36 or 9 yeah

yeah can't rule it out yeah

(26:59) and even the Hertz that it's at is like really odd right like 5,201 I wonder if these are divisible by like 3 six or n though no idea yeah to Amanda's point we'll talk about that in a second and then we will talk about my opinion on Bob Lazar since I guess people care for some reason um man wow so cool okay um so yeah to Amanda's Point imagine what imagine how this relates to music right people wonder like why does Music get your emotions up or whatever right like because of frequency and vibration right

(27:53) I think that that ultimately is the answer for why music's even a thing sound is um the uh just waves passing through the medium right and they can have an effect on us even my talking right now can have effect on on you um and think of what it takes to get my sound waves to go through this microphone and appear in front of you in front of your speakers anywhere on the planet right now right this is all electrical engineering all of it is now with respect to Bob Lazar I've been uh I've always been pretty clear

(28:28) and open about my opinion on him I believe Bob Lazar uh I just I don't get a vibe from him uh my personal Vibe when I get from him is that he's being honest with what he believes to be true um there are newspaper articles of him literally making a jet car or whatever so it doesn't seem weird to me that I me know I think he was probably working at Los Alamos for sure uh it seems it would seem like too Fantastical to make up a whole story about uh S4 I mean we wouldn't even know about area 51 if it

(28:58) wasn't for him so to me I think he I believe him um but I've come to realize I don't think that element5 is required for any of the anti-gravitational technology that's out there so some people say well maybe he was just shown some misinformation maybe like I said my opinion is that he believes what he saw right but he's also somebody as well that when I watched I watched several like interviews with him or whatever uh you know the the documentaries or whatever and he's also like you know

(29:31) it's not like he's out there saying oh this is exactly how it works and how you have to believe me he's just recalling what he saw and what and you know what he was told so yeah I mean doesn't mean that it's necessarily the answer to the to the universe and anti-gravity no no but I think that he seems like he's an actual scientist um now you did he get discredited yeah he got discredited pretty hard uh but yeah I mean it's not above I don't think the government to discredit people I mean people argue the

(30:05) government's killing people out there and that's not something I really subscribe to but I think there are some cases where it's pretty odd what's that Amy erson I wonder if Jeremy knows about her Jeremy do you know about alien Amy Eckerson Amy Eckerson I think was her name Emerson I thought it was erson uh like she got like suicided I think I think she was like anti-gravity research or something oh Emerson maybe no I don't know I got to figure out what her name was Amy something or other yeah layered bsouth zinc magnesium

(30:52) charge electrically at terahertz frequency um oh ESD there it is Amy ESD thank you you guys got it I mean I've heard independently that she got suicided but that doesn't mean that it's true or anything like that it could just be getting fed disinformation pretty bizarre though pretty bizarre story and I wonder if this is similar to the Ning Lee thing I've also been told that the Ning Le stuff is true potentially as well man this was recently the thing part of the reason why I'm a little skeptical is that it

(31:39) seemed like she was posting pictures thinking that she was getting hit with some electromagnetic device or something seems a little too elaborate zix I'm giving you a time out till tomorrow man you need to change your attitude bud I don't know you you're being you're being too weird man too aggressive and too hostile in my [Music] chat okay um anyway it's pretty bizarre the Amy ESD story in general so I think did anything else I need to speak on The Bob Lazar stuff so apparently there's this

(32:16) paper out here that you know argues that what he says is uh you know the science checks out theoretically I'm GNA probably have to talk to alien scientist about it a little bit um but what I'll what I'll glean what I've kind of gleaned from watching him earlier today was that uh the idea is that you know basically what we've been kind of talking about is that you can manipulate the quantum vacuum or The Ether or whatever you want to call it and if you hit the right frequency and resonance

(32:51) that magic can basically begin to happen it's pretty much what I understood but a lot of it went right over my head so yeah don't be aggro in my chat guys and I just I don't do well with that kind of stuff man um you know if you want to be here and learn or whatever but you know don't tell me what I'm doing and and and act like I owe you something in my chat prefer if not I've been pretty clear this is going to be a science related um night tonight so I'm going to probably switch over

(33:22) to um to alien scientists in a second and then what I'm going to do is uh I think co-stream so that you guys will be able to watch on this channel but I'm going to go it'll go dark for a minute as well yeah I was watching the alien scientist interview about it but again it's like Michael Peron is so smart those guys are they're way over my head I'm trying to understand it like just on a basic level guys yeah the havan strum stuff with Amy esgd the thing about that is like I feel like they would use that on me I feel

(33:59) like they would use that on me I feel like I've been talking a little too much if they have some Havana syndrome stuff now this isn't a dare like I'm not daring them to use it on me I'm just just saying yatsi there you go I gave it to you I like how people are uh connected to me to the yatsi thing pretty funny pretty funny yeah I don't know about the um the notification stuff a lot of people say that okay um so I'm not sure on this paper in general um a little too deep I like to watch the videos as well okay uh William

(34:38) Wallace we'll do you we'll do you a solid here and then I think I'm going to switch over to the other one simatics experiment Mozart oh okay this is going to be good 500,000 views okay

here we go yeah yeah yeah yeah yeah you're right quiz aot the only thing hurting me would do is prove that I'm right it's probably why they can't I mean it's true but also like I think that the um I think that the approach if I was the the intelligence Community I would just try to tell everybody not to talk to me

(35:23) right and hope that people ignore me and then just let let the troll and **debunk**ers like go at me right like that's the move and that's what it feels like has been happening and like no none of the main ufologists will touch it no one will look at the evidence even people who are into like completely esoteric stuff like astral projection and psychic powers and you know all that stuff nobody will look at it it's pretty bizarre to me but the alternative media has been pretty good I did do a podcast

(35:52) earlier today guys uh with Mel she's got a pretty huge following on Rumble so I think that'll be going live in a couple days I'll post that it it was a really good one and we actually talked about the science mostly I think that's the first podcast where we actually talked more about the science than anything else so that will be a great one when that comes out I'll see if I can post it to Twitter for you guys um how far did I get in pal world not that far I kind of gave up on it a after like an hour it was it was

(36:22) okay but for some reason it's just not as exciting as advanced science for me okay here we [Music] go okay so what are we sound made visible hopefully this is the right link [Music] guys oh W what was that did I miss [Music] that what the wow yeah so you can actually like tell the moment that the resonance happens right with this like the moment the resonance is happening is when we see the pattern [Music] form so imagine if you took just that

(37:29) note with that resonance and you just blasted it right you would cause vibrations to like happen maybe that is how they use the pyramids I don't know pretty [Music] interesting [Music] interesting [Music] okay I want to now that we've looked at that a little bit I don't know what to make of it exactly with all the catic stuff I do think it's pretty interesting um I downloaded this okay let's do uh what did I want to look up Casmir effects oh we already looked up Casmir effect yeah I forgot I wonder did we already look at

(38:25) videos related to it as well let's look at this one two minute Casmir effect explain hello it's in 194 okay she might be a left-handed witch guys I'm just saying hey what's up you okay what did I just do hello it's I in 1948 a certain HRI kazimir predicted the existence of a curious phenomena why are European people so much smarter at science than we are in America someone answer me that plates she seems like she's just like a random woman on you know at home and she's like oh guys I'm

(39:01) going to explain the Casmir effect to you she's like I'm just in my living room explain the kmir effect placed very close to each other Kazmir predicted that the two plates should be attracted to each other we call this effect the kmir effect so two plates close to one another should be attracted to one another after its inventor but it was considered a fun slightly useless I can't stop looking her wondering if she's left-handed or right-handed now we see if we can

figure it out fact at the time now with the development of

(39:30) nanotechnologies and the shrinking of electronics the kimer effect is now an important factor in industrial manufacturing and a few teams are working on the creation of low power Nano switches to revolutionize the field but let's see what the caser effect is vacuum is okay let's see what casm effect is not just empty it is quantum in nature as a result our experimental results so vacuum is not empty it's Quant quum in nature guys so why is this important because this is the basis of everything we've been talking about is

(40:02) that as long as the vacuum is not actually empty then that opens the door to the idea that we have a projection upon our reality are we each time we repeat an experiment we cannot repeatedly get the same result for an experiment performed in the exact same conditions this phenomenon is called vacuum fluctuation of one we can't get the same result I did not know that that's what the vacuum fluctuation stands for uh I don't have my Scarlet clone yet it's not fair guys it's not fair fluctuations I keep telling the CIA

(40:36) I'm I'm willing to sell out man come on I mean you made a plane disappear you got you know billions of dollars on the line you can't throw me like a couple million throw me a couple million I can sell out and then you know I'll just go back and say that the VFX is a perfect match I'll just flip sides I'll become a **debunker** you know what would be fun that we should do let's finish this first field and it naturally occurs whether we observe it or not some explanation use the concept of virtual particles which

(41:04) is very useful but please be aware that the particles are not really created they simply help us with computations on our understanding if we place a plate in the vacum see French vacum and take measurements very close to it we observe A reduced amount of electromagnetic fluctuations because of the presence of the plate if we place a second plate very close to the first one the space between the plates is affected andless Quantum fluctuations of the electromagnetic field will be measured between the two plates in the rest of

(41:36) the vacuum however Quantum fluctuations remain the same as a result the plates receive more force from the external fluctuations than from the internal ones and they are pushed together the vacuum is made up of fluctuating wow I just realized that I just realized something super important electromagnetic waves a big like the waves in the ocean and like with the ocean waves cannot be stopped we can push the analogy further to illustrate the Kazmir effect let's say we have two ships driving parallel to each other they each block some of the

(42:09) waves that would hit the other ship and they receive less waves on the side close to the other ship than from the rest of the water as a result they get pushed towards each other a more physical illustration would be of two mirrors placed close to each other if the waves are created with variable wavelengths the external space can create waves of any wavelengths but the space between the two mirrors can the wavelengths limited between the two spaces only create wavelength that can fit as a result the external space has

(42:37) slightly more energy than the internal space and the two mirrors push together if you learn something please huh so I just realized that for our experiment to work with the Bismuth plates and the magnet we have to have two magnets cuz it's the Casimir effect so the reason why the plates are going to get stuck like this is because the Casimir effect is going to take over and then you've got the magnet inside which is repelling them I'm almost 100% sure that's what the situation is uh bismuth plates magnet

(43:16) floating pretty sure this is the Casimir effect yeah I think this is just the Casimir effect okay so that's this tiny magnet the size of my finger okay so I need to get a smaller magnet I got to get a much smaller magnet damn I want to do this so bad those plates are pretty big though and are they melted I guess they are melted right yeah it doesn't look like it's that big right there bismuth becomes one of my favorite elements previously I created a video about how it can be used to make beautiful metallic crystalline

(44:16) formations thanks to its loaded air below another okay let's see what they say where one magnet will float in midair below another no matter how careful you are it will always either fall to the ground or fly upwards and smash into the other magnet a diamagnetic levitator like the one I'll be building in this video diamagnetic forces produced by bismuth to counteract the exponential nature of the magnetic field from the magnet above rather than getting much stronger as we get closer weaker as we get further away the bismuth

(44:49) intervenes on both sides of the balance point preventing our levitating magnet from moving too far off center all right all right that's enough Theory let's get started so I know why it has to be concave now as well it has to be concave so that the magnet doesn't flip out the left or the right so if you make it concave like this then the magnet will get stuck there in the middle okay I got it I had a prototype design in my head as I began this project and it started with melting down some of my old bismuth scraps from

(45:17) my last video to cast into ingots in a small ceramic dish I preheated the ceramic so it wouldn't crack when the high temperature metal was poured in this is dangerous I don't recommend casting Metals in this way for yourself yeah no I used the actual cast with the ingots made I moved on to building the frame for my prototype constructed from wood planks and which will allow it to be made in plank made to hold the lifter magnet placed above a bolt goes through the center hole with a nut that can be tightened to raise the head or loosened

(45:54) to lower it when a magnet is placed on the underside this should allow me to get really fine adjustments for the lift oh the levitator is fully assembled now I just have to get it dialed in I missed I have a variety of magnets to try as I wasn't sure what would work okay I missed a super important element of this guys yeah be very careful about Diamagnetic magnets best all very strong neodymium magnets yes finally neodymium the combination my last one in magnet so here's the key I missed out guys is you have to have a

(46:32) magnet up here to levitate it I use the fireplace so if you put a magnet here now what's going to happen is it's going to find the exact point where it can levitate now I get it paired with

a smaller 1/8 in Cube magnet from here what took the most time and then the magnet how does what's this magnet doing here is it what's this plate doing is this plate connected here was to determine the best spacing for the bismuth plates to obtain stable levitation if they're too far apart it almost looks like it's going to work but

(47:08) the magnet eventually collapses to one side or the other it took some trial and error but eventually I did figure out the proper adjustments and it works really well so I need smaller left Disturbed the magnet would float for more than 100 years before it would need Readjustment to compensate for 100 years not bad so now that I know how to make this work I'd really like to turn it into a more attractive design I started by remelting my ingots this time outside since they still have some epoxy on them and I wasn't sure how bad the vapors

(47:40) would be it didn't end up being a big deal as the epoxy just floated to the surface once the bismuth had melted and I just skimmed it off with the rest of the slag from plates for the design I'm imagining red too quickly and from the bottom up I'll try this again and this time slowing the cooling try using the Melting Pot itself how do you do this soor paining really nice crystals this should work I realized with my prototype that the lower plate doesn't have to be adjustable all the fine tuning can be

(48:15) done by moving the top plate and the lifter mag top plate causes the the lifter magnet is held with a similar board but to this one I've glued a piece of sheet metal so the magnet can be repositioned anywhere along the surface potentially interesting as always you can check out all of my own projects on my YouTube channel okay I'm going to switch over to the other one I think guys not bad um any other questions yeah go ahead and you can screenshot [Music] them okay guys I'm going to switch over you I've already made one bismuth

(48:52) plate but now I'm realizing that how this is going to actually work is that I need to have the strong magnet up above which I might be able to use the strong magnet I have right over here I'm going to keep this kind of away from my electronics this magnet does not mess around folks you can see I already chipped it this is why when you have two of these things keep them far away from one another and keep them far away from your electronics the thing is not messing around folks okay I'm going to join

(49:20) alien scientists guys uh the stream will come back up in a minute I'm going to go join the alien scientists probably hang out with them for like half hour or so uh so thank you guys for jumping on this stream tonight check out the alien scientist live stream if you

MH370x - **Debunk** Drama & Diego Garcia Letter 1/24/24 - YouTube

Transcript:

(00:29) for for Malaysian 370 contact 120m breaking news tonight A Malaysia Airlines flight with 239 people on board including four Americans has gone [Music] missing [Music]

(01:49) I remembered the line from the Hindu scripture the Bhagavad Vishnu is trying to persuade the prince that he should do his duty and to impress him takes on his multi-armed form and says now I am become deaf the destroyer of worlds yo what's up chat how are we doing tonight welcome uh sneaker Grails on the Elon Musk website he says okay I messed up on my alignment here oh hold on a sec chat okay guys gonna keep this short tonight yeah try to clip it for me or something man uh I looked on the Twitter website there

(02:54) for what you just mentioned so someone in the chat uh was uh just mentioning that supposedly they there is proof of the physics working or something of the orbs uh this is a this is a sneaker this is somebody's sneaker Twitter so I don't know that that one you mentioned oh go to his replies okay we'll take a look at that in SEC so guys what's the on the agenda for today uh again first thing I'm trying to keep stuff high and tight with respect to the streams because we got people who are watching the next day

(03:28) I don't want them to uh uh oh here it is right here yeah um I don't want them to get uh bored or whatever so we'll start with this uh this post here and the rep supposedly that we're going to take a look at and then let me see what we got on the agenda here for today we're going to go through some **Reddit** drama because oh boy it's spicy out there spicy ever since the cloud rebunk it's getting spicy my **reddit**ors out there losing their minds my man losing their minds um let's see we're going to have uh

(04:05) we're going to call out some UFO Twitter people not like really call them out in that way we're going to try to get them uh we got a little thing planned there I want to get your feedback on some stuff we're going to post a satellite video um and I we might do that first actually I think we're going to start with a satellite video after we look at this and then we're going to do a little bit of the breakdown of the letter again so that's what we got in the agenda for today let me see if I have the letter

(04:32) breakdown notes about letter to me I do okay sweet okay I think we're good also just in case you're curious I did I jumped on a space today with uh Jacob Chanley uh for not too long like 30 minutes or so spoiler was about it was about Co and stuff like that so if you're interested in that actually no it was it was about like censorship and stuff like that but you know that leads to that one thing leads to the other so to speak um so I can't wait for people to start clipping that um okay let's jump

(05:08) into it folks full screen here we go let's get it started uh so this I think this is the video he's talking about here I'm not revealing DMS am I no okay pretty bad at that is this the one I don't get it it's a drain what am I missing chat what am I missing is that is that the video uh is that the video well whatever okay that was something that that was something folks okay oh

oops forgot um okay so we're going to post the satellite video next so quick satellite video Let's post okay high quality satellite

(06:18) video wants me to zoom in on the bubbles man I don't know man that it's a little little much man not sure about all that okay so yeah no we're not going we're not going back to that sorry that that was it for that that was it for that guys um let me see so God jeez what is going on with the cords here can't type got satellite video analysis what I want to point out here uh so on the satellite video analysis what I want to point out is that the coordinates in the bottom left uh if I were to make this go

(07:06) full screen the coordinates on the bottom left are not moving when the satellite moves right so this rules out that we're not looking through a satellite simply not what's happening here right they're not changing the satellite the satellite wouldn't react that quickly it's not just moving around there when somebody shifts it around that's not how it works so uh um what do we want to say here we want to say that um uh what I want to say I'm trying to think out how to phrase this so early on

(07:43) in the investigation uh people were speculating that the satellite was moving here now uh I'm going to get rid of the Bold here so uh this is because uh roing into a central actually that

(08:49) sounds really good and I gotta get rid the Bold here okay so so notice in the MH370 uh video that we are the coordinates sha change uh when the perspective of the view shifts this is proves we're looking at a computer program consistent with the user logged into a citric session remotod into a satellite database uh if we were looking [Music] down through a satellite low earth orbit Leo

(09:58) low okay sweet yeah it's a Ultra wide view as well yeah we know that because maybe I'll even add that in six okay I think that's pretty good so

(11:05) notice MH370 satellite video that the coordinates change when the perspective of the video shifts this proves we're looking at a computer program consistent with the user logged into a citric session remotod into a central database if we were looking down through the satellite in low earth orbit I didn't say anything about the mouse yeah if we were looking down through a satellite in low earth orbit then the coordinates would be constantly changing because of the speed of the satellite the speed sat let's say is

(11:38) very fast uh let's say because let's say because satellite very quickly cuz the satellites move very quickly like satellite moves very quickly low ELO's orbit the Earth every 90 minutes we also know it's an ultra wide field of view because the mouse goes off the screen top right and the bottom left this frame rate 6 for seconds y I think that's good right how's that yeah the mouse is scrolling through the capture exactly exactly chip Messiah it's got a huge field of view right it's

(12:33) it could be very big I we have no idea how big it is really right we just know that the

mouse is they're looking through the screen capture um I think we'll just leave it at that so UFO Korea if you're out there I guess I'm giving you credit verbally on here for your guess you deserve the credit I don't know why you're being so he's being so weird about this he like blocked me after that that stream the other night I think he blocked me before that cuz he was so upset that I went on

(13:01) a a podcast where I didn't give him credit for for this even though we had already speculated this it' be one thing if you like put it in a writing or something and like wrote a document and had evidence to support it but if you just coming up with ideas like don't think you should really be expecting that everybody's going to Source you on your on ideas that contribute it's a little weird man apparently Jeremy had a falling out with the guy too he's just a little little out there man okay um we also Ultra

(13:33) right field The View CU mouse goes off the screen bottom left let's say it okay I think this is good okay I'm just going to go over it one more time notice that through s videos the coordinates change when the perspective of the video shifts this proves we're looking at a computer program consistent with the user logged into a citric session remoted into a central database if we were looking down through satellite and low earth orbit then the coordinates would be constantly changing because the satellite moves

(14:21) very quickly Leos orbit Earth every 90 minutes we know it's Ultra wide field of view because what it goes off the screen to the top right and the bottom left the frame rate of the mouse is 6 2 seconds but the background is six frames per second six frames per second because of the large amount of computer processing okay these are very weird details to fake right um yeah I'm I'm kind of I've been off the stereoscopic thing for a while I mean we have two satellites that are there so just in case people are new and

(14:51) they've just been catching up and they're not there I mean we have two satellites that can create stereoscopic view I mean they're there there so if the reg side one like I don't know how to tell the difference between stereoscopic imagery and if like it's been converted stereoscopic I I don't know we can prove it one way or another I just doesn't matter the reason why I'm posting this one is because this one's higher quality you can actually see the coordinate shifts so this one is high quality so

(15:19) you can clearly see the coordinate shifts this is actually the best one I I'll pull it up over here hold on because you can clearly see the coordinate shifts in this one right look at those in the bottom left you can see it super clearly it's not cropped at all it's harder to see in the reg side of non on which tells us again that this is like another somebody else is is putting up there but let's post this C capitalized okay okay add to Highlights Post in the chat Brigade it folks Brigade it we're brigading

(15:58) guys uh satellite video analysis it's weird all of a sudden when I post these in my Discord now they they do like the whole embed thing without me having to do anything the before they didn't do that I I don't get it maybe Discord did some change maybe they updated okay Brigade

it up so yeah hello everybody who's out there nice to see you guys thanks for jumping on I'm going a little quick today cuz kind of want to go play some video games actually I got a irking ever since that Pal's World game came out you guys know

(16:36) I'm a pokemoner although I haven't played Pokemon in a while but supposedly there's a what are you doing Lulu supposedly there's a game I want to check out so okay o yes guys **Reddit** we haven't been to **Reddit** in a while I mean technically I posted the the um the conspiracy post but so we **Reddit** it has been having a meltdown it's it's entertaining folks it's entertaining we got some I don't know what's going on but it's a straightup war between the people who are trying to Pro prove the cloud uh

(17:18) images fake and the people that are trying to **debunk** the videos it's it's a straight up War so if you weren't here uh last time then oh I'm probably G to be on Kick by the way but I I haven't set that up yet uh if you weren't here last night then we there was a **debunk** that's come out and it's it's probably been out for a couple days but I just finally reported on it and that **debunk** is that they found the an image that has the **Jonas** uh Cloud image in it and it's the exact same angle and the exact same

(17:56) sunlight on the on the the Mount Fuji like exactly the same guys exactly the same in fact we'll just scroll down and it's somewhere down here here so even is this I think this one's Punjabi Batman I think he's got a few accounts banned but I mean it's exactly the same when it's flipping back and forth like that that's actually going between the **Jonas** Cloud picture and the one they found on Flickr I mean it's how many pixels match like all of them all of them right all of them and it's not a matter of having to

(18:28) like change it around from black to white and and anything like that it's just straight up perfect match it's too funny chin Pokemon duck Vision thank you very much buddy uh where's the other one where's the other one this one I mean it's a perfect match even the cloud the Shadows are an exact match as well I mean it's a perfect match so I can't get enough of this because what can the **debunkers** possibly say Well they're doing exactly what you would expect are they admitting that they were

(19:04) wrong about it of course they're not so if the if we just flipped roles if we were trying to say that those images were real the **debunkers** would look at this and they would say it's 100% been disproven just based on this image and the fact that it clearly came from this image and they added the clouds to it right like that's the argument that we're using here right is that the flicker image they found the flicker image the flicker image is from 2012 they found the flicker image added the clouds to it and used that to **debunk** the

(19:32) videos right and and why is that a compelling argument is that we already proved the clouds were moving and evolving in the video we already proved the clouds were moving and evolving so we had already ruled out 2D assets but the **debunkers** just ignored that right they said oh we could add visual effects to make it work it would be easy you don't know how VFX works so now the tables have been flipped tables have been turned folks and what are the

**debunk**ers doing are they admitting they were wrong no oh of course they're not

(20:00) of course they're not now they're going oh well any two any two uh pictures of Mount Fuji look the same any two pictures of M Fuji look the same now they're trying to say that uh oh and the best part is that what's the one where is it oh here it is look at thisy this guy's having a total meltdown this wear in Texas guy total meltdown look at this it doesn't match it's been Blended and it's been stretched you mean like they did with the clouds you mean like they did with the VFX the VFX has been totally manipulated

(20:34) somebody would have to spend hours moving the pixels around to get it to match I mean and it would be impossible if you didn't have something to compare it to this one you can just literally overlay it like you don't have to do anything you can just I mean if anything maybe change the darkness in the background slightly I mean that's not even anything at all though that's not changing we're not changing the color of the mount Fuji or anything so just a remind let's just remind how hypoc how hypocritical these

(21:03) people are they claimed that this what we see here was the same as this completely different color different shaped and this they resized it before they even put it on here and it doesn't even go off the screen here either so they're just saying that somehow somebody decided to cut off and make this image they say this is a perfect match but now they're saying this where is literally a perfect match is not good enough and he's saying that oh it's been edited uh guys uh this definitely doesn't match

(21:40) like the whole argument was that it would be easy to edit it and it's not actually easy to edit it it's easy to edit I guess if you're looking at it side by side that's like saying I can make an apple into an orange or an apple into a banana sure if I look at it side by side and change it I can make an apple into a banana now try to do it without the banana okay now take your Apple and turn into a banana without knowing what the banana looks like not exactly the same that's not even required on the Fuji one

(22:08) the Fuji one's just straight up exact match he stretched it and blended it Guys these guys are the biggest Hypocrites on the face of the Earth this honestly proves how dishonest the **debunk**ers are I can't take them seriously I can't take them seriously too busy they're too busy editing Wikipedia this just completely blows their nonsense out of the water he's creating false and misleading information guys you mean like taking a non-matching VFX and claiming that it matches on one frame even though it

(22:45) doesn't even match on a single frame and if you look at the whole thing it doesn't even match at all it's not even close misleading like that misleading like saying oh one frame is similar therefore we're going to throw out your whole two video videos you mean like what you did oh my God too funny man I can't get enough of this the meltdowns that they're having and I think the anyone who's going to reply in here the only should reply should be like like you know stuff like cope or like it's over

(23:20) or give it up those are everyone should just reply give it up give it up to this guy right just give them back exactly what they would doing to other people give it up man it's over we in Texas if you and your buddies are watching give it up it's over you lost bud it's over move on to the next **debunk** oh my God too funny AF when Bonkers over this rebunk in his stream last night he keeps repeating that if you repeating the false notion if you're using stock effects and you wouldn't manipulate it

(23:58) just use it as it is so like what this guy's doing right now these guys have no no shame whatsoever like no sense of uh of irony whatsoever like they just don't even realize that they're doing the literal thing when you put an effect on an asset of course you have to tweak it a little he's arguing against the guy tweak it a little tweak it a little man it's not even close it's not even close man tweak it a little what are you talking about even on the one frame I I just want somebody to try to

(24:38) do it without comparing it to the background that you see here that's black without comparing it **I want you** to blindly try to modify this until it exactly matches the background stream it that's the challenge stream it any of you **debunkers** out there stream it not record it ahead of time and say you spent I only spent five hours on this I'm a **redditor** I only spent 5 hours we know you're bullshitting man just stream it live so we can watch like I'm doing right you claim you're an expert you

(25:06) claim it'd be easy to modify this go for it and while you're doing that **I want you** to then admit that you wrong about the **Jonas** picture because we don't even have to spend any time doing that it's an exact match just overlay it it's exactly we don't have to change it and we don't have to change around little dots and stuff like it's just an exact match too funny man oh and good point where is that hoaxer this the mythical hoaxer has not come out of the woodwork yet still guys man

(25:37) it's amazing they they can't find the hoaxer right you would think that these **debunkers** would be trying to collect that 150 Grand try to find that hoxer right nope nope they're not worried about that let's see I thought was there any other I didn't even notice that comment there before bro it's over there it is there's the comment bro it's over bro where in Texas it's over man what are these other downvoted ones you're lost dude I love it's too funny man when the **debunkers** get it back

(26:12) at them it's just of course not a single one of them was sharing that right they're not posting that on Twitter they weren't posting the uh this this is they're not posting this on Twitter and sharing amongst all their **debunker** cultists of **mcwest** nope are they is **Mick** West coming out and apologizing for being wrong is he uh looking at the more evidence that he wanted of course he's not of course he's not now they're just completely being as big as Hypocrites as they can planes here we go guys planes

(26:41) do take common routs and altitudes of between airports pH photos of Mount Fuji are common oh guys now look what we got you mean you mean like how blast waves are common

blast waves are commonly found you mean how like Taylor set off blast waves are common about how we can get the edge of the thing to match any number of things remember when they ignored this too could these people be any bigger Hypocrites guys pictures on airplanes from the exact angle with the exact light with the exact Shadows are common guys it's

(27:15) common but this this when we have blast Wes where we can literally overlay it with like three different effects and make it perfectly match then that's not of course not common this is It's Too Close they were how many times did they say to us it's too close it has to be a perfect match even though it doesn't match too funny man too funny dispersion patterns are different but cloud pictures from an airplane at a specific altitude at the specific time of the day those are totally common totally common

(27:46) folks look at this they're just having a total meltdown guys this is this was they the **debunkers** prove proved my point they're complete and total Hypocrites they're not trying to solve anything they have serious issues in terms of these videos being real that they can't deal with they don't hold themselves to the same standard at all when the roles are exactly flipped they completely change their arguments completely change their arguments once the the roles get flipped hilarious man the best part is I didn't

(28:23) even come up with this **debunk** of this uh Mount Fuji thing I didn't even come up with it I didn't even care I was already fine with the **debunkers** moving on which of course they didn't move on but now we understand why they didn't move on right now we understand why they didn't move on and this one's Punjabi Batman he's saying that they morphed they morphed a snow drift into a cloud here which actually looks pretty weird does look like you might have morphed a snow drift into a cloud anyway I don't even care

(28:49) what goes on with this I'm just enjoying the ride on this one I'm just enjoying the ride too funny guys [Music] oh man look how mad ship Messiah is he's so mad dude they're so mad oh my God I'm definitely not laughing at the plane and the victims guys that's not who I'm laughing at right [Music] now bunkers po the bunkers total meltdown they're having a total meltdown it's funny cuz if the roll reversed of course this this uh Mount Fuji picture would of course **debunk** the images that of course can't

(29:36) be in our videos because it's a 2D image and we've already proven the video the clouds are moving and we've proven the clouds are evolving and we have a we require a 3D rendered environment to get two angles from two different videos so there's no way it could be 2D picture anyway so I didn't care anyway oh my God back to the drawing board **debunker** go fabricate a new **debunk** what's I can't wait for the next one I can't wait for them to pull out the uh they're going to like airbrush out I can

(30:07) already see what's going to happen next the same guy that that pretended like he remade the videos where he just did like a screen recording and copied it he's going to airbrush out the plane or something or airush brush out the orbs and then he's going to say that I he's going to claim to be the hoaxer I can already feel the next fake **debunk** coming guys I feel it

coming he's going to be like I didn't want to catch I didn't want to collect 150,000 in the last three months I just

(30:35) I I just wanted to wait for three months to collect it or what better yet it'll be like a three-day old **Reddit** account they'll be claiming it right I just I decided to make a new account to get on **Reddit** to claim the 150,000 and of course it'll be through **Reddit** right it's going to be a brand new account coming out of nowhere they're going to have some elaborate fake story they're going to have airbrushed out like the the orbs or something like that and they're going to go they're going to

(30:57) going to ask for kim.com for the thing it's going to be great I'm I'm here for it guys I'm just riding this wave no matter what no matter where this leads us at this point okay deers can airbrush out my orbs uh Dorian I love you bud hilarious yeah I mean at this point I don't even know this has just been such a wild ride I did not expect for some people to find the exact picture on on Flickr and flicker is a much bigger website than textures.

(31:34) com you know in terms of uh you know it makes sense to find something on flicker on some textures.com website and and only find and then then somehow figure out that it was those pictures were supposedly there on the old website that didn't even exist the whole story makes no sense at least flicker.com it's like okay well you're checking a a big website and finding it and it took and the difference to is like how long did it take it took us or took them I mean I was not I'll be honest I was not part of finding these these images in any way

(32:03) shape or form uh like I said I didn't care uh over six weeks six weeks to find the matching images but somehow some guy found matching images in 20 minutes looking at a website with thousands and tens of thousands of pictures on it where the or where the the clouds had to be resized reshaped some random Six-Day old **Reddit** account just uses his super Rainman abilities to find to find the uh the clouds that had to be inverted and resized and and stretched out okay yeah so anyway pretty funny let's see was there anything

(32:46) else oh so this is Tony Adams by the way guys so Atta Adams or whatever at Adams this is the Tony Adams guy on Twitter so anything this guy says is [redacted] no matter what this this guy post it's [redacted] 100% [redacted] he's already outed himself just to be 100% clear I I took screenshots to make sure that he wouldn't be able to delete it or anything like that nothing this guy this Tony Adams loser post is has any credibility whatsoever nothing at all guys is a complete fraud and a liar calling it to his face Tony Adams you're

(33:17) out there you're a fraud and you're a liar and you made a fake **debunk** uh nothing you say has any credibility go back to whatever tweeting about football stuff or whatever it is here it is 80% of my time was trying to match the original so I track the cursor in the original and use an After Effects function to adjust the coordinates if I was doing it from scratch I'd use a screen recording app to track the mouse movement and function it that's not that's not how you recreate it man it's

(33:50) not how you recreate something that's how you copy something that's how like I could take a screenshot of the monol Lisa and then post it that doesn't mean I made the monol Lisa doesn't mean the mot Lisa is fake Jes oh man no wonder they can't like do any credible Recreations right and of course that's pinned the the **debunker** mods pin that to the sub**reddit** they pinned that to the sub**reddit** why haven't they pinned that these satellite images have been these uh cloud images have been **debunked** why

(34:21) didn't they pin that that's surprising they were so quick to pin this they pinned this within like an hour they pinned this these cloud images have been **debunked** for over a day already still hasn't been pinned yet almost as if the moderators of this sub**reddit** aren't really uh aren't really neutral at all aren't really trying to solve it at all almost as if they're just trying to **debunk** the videos okay so we're good on that right okay guys I think we're good with the **Reddit** stuff that was

(34:59) fun oh yeah no they they have been Banning people they banned uh I think they banned this no fakery guy I think he's WS WS something Wall Street something on Twitter they already banned one of his accounts because he he he found this stuff like they've already been trying to ban him and trying to delete his stuff too it's hilarious dude hilarious yeah zix we're going to talk about that I've already addressed it you can find my old post you can watch my old stream but we're going to address it

(35:29) again we're going to go to the letter to Ashton is that what's next on the agenda oh guys pal World pal world I gotta get I got to finish this up guys I got some pal world to go play I got some po world to go play guys okay next **Reddit** drama the **Reddit** drama was that was spicy I like that guys I can't wait for what comes next it's just it's so entertaining this is why I like keemstar because I like the drama too the drama is just entertaining how can you no one can deny that the drama is entertaining guys you can't deny it how

(36:05) am I at the center of this amazing case out there I don't know how I'm so lucky to be at the center of this amazing case give me a second I need get some water definitely this is easily the most dramatic conspiracy of all time right like this is hilarious how dramatic this conspiracy is guys I'm gonna I'm going to catch the fake Pikachu this game just for the record if anyone needs me to go on the record uh in like a court of law this game is definitely a ripoff of Pokemon like 100% I played enough

(36:43) Pokemon to tell what a Pokemon ripoff looks like this is like straight up total ripoff oh we're having a good time tonight chat okay so if my uh if our counterpart Parts the lons guys the lons where are they let's get them some let's get some them some attention guys let's not let them Fe be left out tonight okay we're having a good time I don't want them to be left out guys **I want you** to spam what's his name UAP Mike guys the luon the L crew we call them the lons right like a qanon but a

(37:21) lanon because they're just like obsessed with their cult hero right like to a weird degree like I even if I like like I respect Tim bersett right and Anna Palina Luna but I'm never going to call

myself like the bers crew or the bersett hit squad or you know some lame name like that like you don't you don't hold people up as like their cult leader right and I would never want anyone to do that to me too if people were like if I was Lou Alando and I had this crew of weirdos like obsessing over me i' tell

(37:52) them to stop I'd be like yo chill just chill out you're being like too culty I I don't want that right so anyway no no offense to Lou or uip Mike yo we just want to be friends this is a message from keemstar keemstar told me to relay this to UAP Mike we just want to be friends man we just want to be friends um so we're gonna we're throwing down the gauntlet we're throwing down the gauntlet we want to do a five on five five on five Family Feud style debate The Winner Takes UFO Twitter no I'm just

(38:31) kidding no but how entertaining would a five on five with the luk crew and then on our side we have red panda koala tupacabra uh Chris the **debunker** keemstar and myself oh that's our five right there those are our five Champions guys we got tupacabra red panda Chris keemstar Ashton lons pick your five champions pick your five Champions luon you've been called out you've been called out lons Winner Takes the internet folks Winner Takes control of UFO Twitter D on Spaces we're going to do a space I want

(39:10) to we can do a space we'd have like hundreds of people listening we'll pick some topics we'll talk about the jellyfish and then we'll go back and forth and we'll decide is it real what does it mean right maybe even MH370 videos will be one of the topics ooh ooh can you Imagine Me versus King milk fart or me versus uh I don't know who else is in their guy's crew uh some I don't know noncredible UFO reports I think is one of them or whatever guy who smoked too many blunts and forgot where he was can

(39:41) you imagine him versus me and the MH370 video debate o sounds good guys guys everybody would be watching UAP Mike don't back down man don't back down we're calling you out we're calling you guys out L crew lons do not do not whis out Skyfire news versus L crew let's make it happen okay that's enough for the the that so make sure they get they get that message guys I know there's some of them out there probably make sure they get it make sure they get it okay we're having a good time tonight

(40:24) folks we're having a good time I'm having to I am having too much fun tonight guys the **Reddit** stuff has me just cracking okay so somebody got mad and left cuz they I wasn't addressing the uh part where the creepy stories part okay so let's um let's address the creepy stories where's the creepy stories guys I have to watch some I got to get my Advanced tips for pal world I got to watch my Advanced tips for po World guys man 24,000 views guys I'm in the wrong I'm in the wrong topic here man pal

(40:57) world's getting 24,000 views MH370 is only getting like a few thousand damn guys I might have to switch over to Pal World streamer gez okay real world creepy it is oh yeah I've stopped I stopped using **Reddit** folks I'm way ahead on that one I I make like one post every six months now um okay in The Whistleblower letter to Ashton Forbes and let me pull up the notes

okay where are they where are they I swear I pulled the notes up I swear I pulled the notes up  
guys is it this one okay I had the notes no that's CH that's the Adam and Eve

(41:47) stuff what the hell where'd it go God damn it I don't know where it went hold on guys  
hold on I'm bringing it back up I'm bringing it back up okay okay so in this letter uh it's Ashton  
Forbes they talk about following the gray bearded man and they're talking about people in the  
chat were able to figure it out really quickly it's guy named Randall Carlson I had no idea who he  
was people are like how would you not know who Randall Carlson was like dude are you being  
serious man like am I

(42:23) supposed to know every single person who's doing the uh sacred geometry and  
plasmoid research and all these other like really Niche topics of course not man I didn't know  
who Bob Greener was either before this stuff I didn't I didn't know who anyone was in the UFO  
Community as well except for uh like you know some of the big name people but I didn't know  
any of this drama or anything like that who's Rachel matow that I do know who Rachel matow is  
um so we followed that and that led us

(42:54) to Malcolm bendal who turns out that he's hanging out he was hanging out with Bob  
Greener and Malcolm bendal has been in the malds for like seven years doing his own research  
on his own which people say that he's like he's got I don't know some they say all the same [REDACTED]  
they say about everybody scammer grifter or whatever like seems pretty committed if he just  
went out to the Mal Dives to go do his experiments by himself right that's some like island of Dr  
Monroe stuff right yeah thunderstorm generator guys

(43:28) I've looked in the thunderstorm generator as well you guys are you know I'm not try  
trying to be rude you're a little behind the curve on this one I've already looked into all the stuff  
right and so yes I think that the Plasma Research stuff is very interesting right I think it's very  
interesting I now see why Bob greener in our one-on-one in our hard truth podcast was talking  
about how he thinks that the orbs are Just Energy right he's he's thinking about the  
thunderstorm generator he's thinking

(43:54) about the the ball of plasma now the reality is that I don't necessarily agree there I don't  
agree I think that there's got to be an object inside there that's just me though I don't I don't  
care about the Freemason stuff man I don't know weird guys all the Freemason and somebody's  
whatever I just listen to people's ideas man I don't I don't care who they're affiliated with or  
what people say about them right like I'm not interested in any of that stuff okay all interested  
in

(44:27) is uh what they're saying what they're talking about so yes I'm familiar with that part um  
any do I have to follow up on that again guys like I think I've addressed it now yes it's compelling  
yes it's very interesting yes I do think that the Plasma Research might be the answer for uh some  
of the technology related to the orbs 100% I do the reality is I'm not there scientifically yet I'm  
working my way up guys I'm working my way up okay so relax also people got to relax about  
telling me to watch stuff and

(44:59) whatever like you can send me stuff send me clips but like I'm on Cosmic time I'm pulling a Jeremy Corbell I'm on Cosmic time guys I'm taking it Pace by Pace this is not a race we're not trying to Sprint to the finish here we're going to slowly understand it I'm going to do so at a level that I'm comfortable with okay tomorrow will be the science stream guys tomorrow we're doing a science stream okay so if you want me to watch videos stuff tomorrow related to science that's going to be tomorrow come check

(45:29) out the stream tomorrow night and we will do the science stream tomorrow okay Zex you're good Zex but tomorrow we'll do the science stream folks and don't even joke about that man that actually really happened to me once already and I don't think it was a joke if you just this is a little bit somber note I I plan on making a post probably tomorrow morning by the way guys where like self harm is not is not funny man there's a lot of people out there that are struggling with mental health just to be serious for a

(46:03) second and the reality of what we're disclosing as well is that we are disclosing that we live in a simulation we we're disclosing that I mean if you look at the double slit experiment That's The Logical conclusion is that we live in some type of Matrix which means that you could uh say that our lives are an analogy to a video game that it is uh that is a holographic principle in theory that does not mean that your life does not matter look at it this way this univers and reality that we live in that we

(46:35) share together is a gift right this is you only get one chance at it make the best of every single day man appreciate every single day that you have on this planet it does not make life any less worth living um it does not diminish the sanctity of life in any way if anything knowing that the universe is a simulation I actually respect life even more and not just human life but all life animals Etc now I still like stake but I would feel really bad if I had to hurt a cow so okay so I probably will make a post about that because the reality is I

(47:13) did get a letter where somebody was potentially committed self harm and I never heard from them again after that and that's the last thing I want to have happen to people and that's the last thing I want revealing this information to lead to anybody to do so let's just remember for a second here that there are other people out there normal people that do suffer from that type of stuff and if anybody's ever feeling down I want to be the type of person that will lift them back up that's the type of

(47:45) person I want to be right and sorry if I was smiling there I was thinking about the **debunk**ers and whether or not that applies to them but yes **debunk**ers that applies to you too I don't want you guys to I don't want anyone to harm themselves nobody okay okay yeah this community is awesome too this is a pretty sweet community so yeah uh let's skip this ad I I just happened to catch it right before it was going to drop okay um now letter to Ashton Forbes here um if you want to take a look at it you can take a look at it

(48:24) here now let's think about how we break this down okay I'm going to do so from memory from looking at this so I think the way to break this down is to break into chunks and I

don't know if I'm going to have time to do this between now and tomorrow but we can get a start at it but I want to break it down potentially into individual posts that I post throughout the day on one day and I'm hoping I can break it down into three or four posts the thing is super long uh in fact what I'll do is I'm

(49:00) going to pull up the transcript I think instead of playing the video or should we just should we just play the video again let's just play the video again let's play the video and let's compare it to the notes that we have I'm going to mute myself and finish eating my soup while we listen and we'll pause it here and there okay yeah we can we can turn the **debunkers** towards the light guys we can turn them towards the light oh no wonder okay well I realized okay no wonder I never noticed something but

(49:48) that's fine okay here we go this is a submission sent to us January of 202 it's a letter to an start it over this is let's turn it up turn it up soup noises I'm muted myself too quick too quick here we go let's do it yeah okay quick let's do a quick introduction to this letter okay so for the background for people who are brand new here this letter appear January 9th I was informed about it January 10th on Twitter somebody I think it was in yeah we found out who it was somebody in the MH 370x Community tagged me so I found

(50:30) out about the next day I looked into it turned out this Twitter account or this YouTube account been created on on January 7th and there was like three videos about the ma Miami aliens and then this video or two videos about the M I'm not sure how many and I started listening to it and right away I was kind of creeped out because I could tell it was AI voice but like it was a really really good one you guys are going to hear it yourself here really really good one and I've listened to this at least 30 times now I listened to it probably

(50:59) once a day still maybe not quite but somewhere like that and it was the pro the part that bugs me out is how there's so many details that seem like they're unique that somebody had to invent but not just invent them out a whole cloth but like invent them and they align with the case that we've been presenting right and somebody just a few people were like oh this is easy to fake or whatever somebody actually put another video out there where they used AI to create the script and you can tell within like 10 seconds they used AI to

(51:33) create the script and the voice the AI voice they use is also really bad so like I couldn't even finish that one so compare this where I've listen to it like 30 times because if this was like in a movie I would watch it in a movie that's how good this is compared to this random AI voice that's out there like I still don't even know how they created this like that's how Wild this is here we go let's get going going this is a submission sent to us the 8th of January of 2024 it's a letter to an Ashton

(52:01) Forbes telling a new story of what happened to Malian Airlines MH370 that disappeared back in 2014 and as always don't trust what you read on the news trust your own capability to see the world for what it really is here we go I work or have worked at a military base in the Maldives and I know exactly what happened to Malaysian Airlines MH 370 this is all also a letter

to Ashton Forbes you are not wrong and what you do are much bigger than you even can imagine don't stop what you are doing I won't tell anything about myself more

(52:38) than that I currently or in the past has spent time at a military base in the Maldives that I have done this type of work since I joined the military when I was young and that was many decades ago still in the game but the years are starting to get to me I write this this because I want the world to know that most of the trouble on Earth are created for political reasons United States or at least a covert administrative Elite of the US has at will complete control and this has been true since the 60s Flight MH370 arrived at our Base by our

(53:17) hand at 1856 UTC after we picked it up midair outside the island of great nicobar just one of many many things we do we can pick up anything anywhere and deliver it in an instant like a magic FedEx some facts about why it happened MH370 had defectors on board they were running to **China** with American Technology they are Chinese by Blood and had gotten themselves into a situation with the Chinese regime who got them to choose to defect the whole play everything and I mean everything about it was a political play to show the

(54:00) Chinese who's their daddy that's us some facts about how it happened all passengers are dead all but the handful of defectors the plane did not crash the plane was on fire we know because we started it the plane was picked up by us on fire midair right in front of the Chinese the Chinese regime knows exactly what happened and that was the whole point of the operation okay this is what I want to share with you as I said I have been doing this for a long time I know the technology and have been a part of

(54:41) hundreds of operations so let's start with the tech the foundation is not superconductivity superconductivity is a product of the technology we have had this since the 1960s and from that first day we have used it to make sure that no one else can have it the big breakthrough to apply the tech as we do today came in the beginning of the 2000s with quantum computers and by this the Paradigm for AI technology what we had to do programmatically before we now can do with something akin to machine quantum computer breakr to apply the

(55:20) tech as we do today came in the beginning of the 2000s with quantum computers and by this the Paradigm for AI technology what we had to do programmatically before we now can do with something akin to machine intuition this lets us operate in fast-moving environments where event-based logic in linear programming was very limited as I said what you have found is not the technology itself it's just one of many derivatives of the technology I encourage you to keep on with what you were doing but you should also be aware

(55:57) that there is a deeper layer that you could focus on instead of the Miami aliens that I see you have been posting about I will give you some pointers for this at the end of this letter call out the products or okay so real quick we're almost halfway through and we've already gotten a lot of crazy stuff um he doesn't say teleportation okay I mean this sounds pretty legit man sounds pretty damn legit it's pretty elaborate man if somebody's faking this can you just come

out and tell us and tell us how you came up with this please

(56:41) it's pretty creepy okay so first one I think is don't stop is probably what we're going to call it probably just going to call it don't stop because they say they tell me not to stop what I'm doing now here's this is right away pretty much rules out the debunkers right debunkers are never going to send me a letter that says don't stop what you're doing they're never going to do that right they're giving away their intentions right away um yeah we'll get to that part Alex

(57:11) but you're 100% correct on your comments there in the chat most of the trouble on Earth are created for political reasons so the yeah so the other thing that I've noticed after listening to it for like 30 times this is somebody who is from Asia I'm almost sure they're from Asia the person who sent the letter at least because they mix up R and is several times they don't use the in front of the United States in one of the sentences there's there's like five or six instances where you can catch them using

(57:43) the wrong um the wrong word uh for possess is it possessive R versus is has versus have stuff like that right um now I'm not going to search for hidden messages uh so they say most of the trouble on Earth are created for political reasons which that's a pretty interesting thing too right if they're talking about you know this is like the idea that everything that everything that happens is bad is happening for political reasons and like the rest of the world just doesn't even know about it so they're already setting us up here

(58:14) in this very first paragraph in the first sentence for what they're going to drop on us later that the United States crafted the whole the whole scenario with MH370 then they say the United States has a complete control since the 60s this is also very specific and it sets them up later on for when they talk about the technology right it it coincides with what they mention basically they're saying up here that since we uncovered this technology in the 60s which is 20 years after we dropped the bomb then we've basically had complete

(58:47) control pretty scary as well now makes me wonder about the Cuban Missile Crisis were we really afraid of that not sure then they dropped something completely original they say they arrived at their base at 1856 UTC now the problem here is they're not specific to claim that they're at Mal they're at Diego Garcia when this happens we don't know if this time they're talking about Diego Garcia or if they're talking about some other location right we there's no way to know for sure I've listened to it a million

(59:17) times the reason why this is important is because our time frame thinks that Diego they arrived at Diego Garcia in the early morning enough time where it flew past the Islanders who see it at like 6:00 in the morning so this time would have to be meaning that it would land first they would put out the fire make sure everyone's legit and then they would fly the plane to Diego Garcia this might even mean that the passengers did not land and go to Diego Garcia they eventually they made it to Diego Garcia later on and then they say they picked

(59:49) it up outside the island of great nicobar so this is now indicating our coordinat right and

the weird part about this is that we never mentioned great nicobar we've never mentioned great nicobar not one time I didn't even know that's what the island was called I thought car nicobar I'd been mentioning several times nobody's ever mentioned great nicobar and then they talk about the part about picking it up like a magic FedEx now this is the part where they are talking about teleportation right cuz FedEx of course if you know

(1:00:18) the history of FedEx uh I think that FedEx the person that started FedEx actually got like a on their entrepreneurship paper or their business paper when they promoted FedEx there's like the story about that not sure if you guys know about that and uh the idea is that they were going to try to beat the postal service and people thought oh no that's stupid no one's going to ever pay that much money to send a letter when you can just put a stamp on it they were wrong okay next paragraph then it's the next one's the

(1:00:48) defectors right so they were Chinese by Blood now the freescale semiconductor scientists we know there was eight of them that were Chinese they never mentioned that in here they now he breaks out that it was a political play to show the Chinese who their daddy is you know referencing back to the earlier part then he makes the big claim that all the passengers are dead except for the handful of defectors now this is interesting because I've been out here saying that the passengers are probably alive I've

(1:01:14) been saying that saying that they probably lived somehow now this might be an inconsistency because this basically also tells us that this person whoever made this story up or whatever thinks that they survived the teleportation event because there's only in my mind you can't protect just the defectors like unless the defectors are all sitting in the same spot on the plane or potentially unless like let's say the Iranians are part of this plan they would have to group The defectors together and surround them in some kind

(1:01:48) of Shield or something like that right I just don't see all that happening too complicated for me so to me what they're saying here is that the whole plane makes it and then they take care of everybody else as uh Dave from the alien addict podcast says they give them the special pancakes right eat the special pancake and then you go to sleep and then you don't ever wake up pretty pretty scary stuff and then not only do they say that the plane was on fire confirming our Theory which we're the only people that

(1:02:19) proposed this Theory now other people have talked about the fire we've seen that out there but very rare and nobody has that no none of the major investigators have been going with the fire Theory just us but it adds the part about we started it we started the fire on the podcast that I've gone on to I've people whenever people would ask me I'd say it doesn't make sense that we would start the fire because we could just teleport the plane from the South China Sea but maybe not maybe that's too close to

(1:02:48) China maybe they really did have to fly it and divert it towards the uh where the assets are where the cop tiger exercises are going on there is that's the part where it's like wow this is bringing in something that I would have thought is very low likelihood and now establishing a

full story for why it's more probable this is where uh you know Leonardo DiCaprio at first you had uh uh first you add my what is it attention what's the one God dang it I butchered it uh first you had my curiosity but now you have my

(1:03:20) attention like that's that's what it feels like right there uh and then they say not just that though now they straight up say the Chinese knew and the Chinese saw it happen that we did it right in front of them and that's wild because I had been proposing that the reason why you would teleport a plane is to hide the plane but they're going n we just did it just to show them how powerful we are just just to have their just for them to watch their plan burn up right holy crap that's dark man but it also is

(1:03:52) consistent with all the stuff they've said beforehand we have complete control all this has being done for political reasons it's hard for me to believe it's really hard for me to believe cuz I I don't like to think of the evil in the world but I think the people that are conspiracy theory minded people have no problem believing this I'm probably one of the people has a harder time believing this and then of course this brings up in what we're going to get to in a minute which is the satellite images

(1:04:16) right satellite images and it brings on that **Russian** that **Russian** thing as well with the shipment that's wild I think there is a likelihood there could be or chip look at it this way what if those were the batteries that were set up to go off at a very specific time and what if those were the batteries that were set to have a specific burn rate on them and that's why they had to have those batteries get on board the plane because otherwise they wouldn't be able to be assured that the batteries were going to explode and

(1:04:47) that they wouldn't destroy the plane that's what bugs me out the most cuz a lot of people in the fire scenario go no no no the fire would have engulfed the the plane but not if the batteries had a very specific load and were set to directly cause a minor event no I've never done DMT I I've never done any hard drugs in my entire life okay the tech Foundation is not superc conductivity super conductivity is a product of the technology now the reason why this was wild was because I had been speculating this thinking about

(1:05:20) this but never mentioned it directly like this the way that I would proposed on my podcast is that super conductivity is what enables everything but in my mind I'm going no like the coherent matter wave beam creates super conductivity and this is where like Dave Rossy uh Bob Greener into a lesser degree Salvador Pas were trying to correct me and say like every time I'd ask them about super conductivity they'd be a little bit standoffish about it right um so this part is is wild because it's what I had was thinking and then

(1:05:48) they're basically just saying yeah no this is how it is now this is a really specific thing to throw in here because what if you're wrong about this right like you have to have some science background to make this statement I had never made this statement never claimed this this is somebody that I think is knowledgeable enough with the science that knows that no it's not a matter of superconductivity just allowing us to teleport is that you allow the super conductivity

to take to be the key using

(1:06:14) the technology like you create the super conductivity and this is what's consistent with what Salvador Pas said right Salvador Pas told us we don't need meta materials we can induce super conductivity Dave Rossy told us that we can it doesn't matter what the material of the plane is we can induce super conductivity around it that's what they're saying right here how could they know that unless they're following the case and they have as good of a grasp of science as at least better than

(1:06:40) me okay then again they reaffirmed that they've uh it's they had it since the 60s and made sure that nobody else could have it this is spooky this is really spooky who's making this claim like is now the person also like has to be like a ufologist because like one of the things that I asked some people I don't know if I've asked it on stream but I've asked like how long do you think they've had this Tech and people say well decades but like how far back right and then the part about quantum

(1:07:12) computers is also wild because quantum computers were technically I think the Breakthrough started happening in the early 2000s it makes sense that the military would have them decades before we do and now they're saying I still don't even understand this I still don't even understand the quantum computer part where they say that machine intuition allows them to operate in fast moving environments where event-based programming was limited this is this reminds me of the sentient program the the one that's

(1:07:40) monitoring the satellites where people say oh it's predicting the future that's exactly what I think of when I think of this machine intuition part how do they know so much stuff this is not something that the you know an AI is going to prompt this this out right you've got to actually have the background to get this to develop this story and then lastly I say what we are talking about the teleportation is one derivative of the technology one derivative of Technology this is not a replay we're live right

(1:08:12) now David welcome to the chat um and so that's the part that's interesting as well because I mean I think they could deduce that I've mentioned that many times is that we could create force fields with this we could I mean might even have be able to have Advanced Medical healing capabilities with this we could have cloaking with this uh we could have Annihilation with this we could create doomsday weapons fusion power you know over Unity devices uh free energy is all possible with this so this is also

(1:08:41) consistent what we've been disclosing so some of this is brand new stuff that they're bringing out but some of it's what we've been disclosing let's keep going application you are now working on is correctly based on super conductivity the number of of orbs you've been speculating about is correct the fourth orb decides where the object ends up the technology is based on structures simple and beautiful structures that lets us use the unlimited power that is everywhere and step outside what I would

(1:09:11) like to describe as perceived reality the structure that is used for what you are looking at is a meta structure that creates a low complexity and relative low energy phase transition the beauty of this technology lies in its elegance and simplicity the structures are inherently stable and self-regulating and the earlier challenges to conduct operations were 100% based on the limits of man with the same technology just a slightly altered mono structure gives us an infinite power generator that without maintenance

(1:09:47) can run forever combine structures to a meta product again and you have the propulsion for a trans medium object moving faster than light it's the definition of magic there are endless applications and the **truth** is that it would change the world in an instant but that won't happen I bet yourself or at least most of your audience have heard a version of the story that the aliens are here and they want to bless us with new clean and revolutionary technology but we are a too young and Rowdy civilization and

(1:10:22) would not be able to be respons responsible enough with the gifts from them that's probably made up but that is at the same time completely true it's just not aliens saying this it's us again the technology is infinite in its power and if two rivaling parties had access to it this world wouldn't last a day the same technology with a combination of mono structures makes a terrifying weapon that turns any matter into dust and that dust turns turns into air it does not matter if the object is a small bird or a aircraft carrier it

(1:11:00) cannot be stopped it does not miss and when the object has been hit the phasing cannot be stopped okay so back to MH370 we knew about the deflectors as soon as they made their decision well before that but then they weren't deflectors anyway we knew when how and why back in December and as we do we made it into politics we let them go we took them back and sent the Chinese a clear message of who is in control and we did this with a brilliantly produced show that is fit for a Hollywood production any good movie has fire

(1:11:40) desperation regret and drama and every movie villain should see their plan fall apart and in really good movies just when the villain has accepted that the plan has failed the heroes of the movie steps in and makes it worse this is what happened as soon as we knew what plane was the last leg of their Journey we planned and delivered so the plane was loaded up with lithium ion batteries built by us for this occasion lithium ion batteries cannot be put out has a predictable burn rate and we made sure that the volume was just right for a

(1:12:19) long burn that would allow for a fulllength show the Chinese were following the plane since it was on the tarmac and got to see their most close to success operation go up in flames and just as all hope was lost we made it worse right in front of their eyes 2 hours and 13 minutes in they saw the plane get phased out of there by the same technology they were trying to get access to and 5 days later the Chinese officially made a gesture of submissiveness by publishing a frame from the satellite of the phas moment

(1:12:54) via the state Administration for science the publishing was talked about in American newspapers as a possible debris field but when you know what you are looking at it's clear what

the frame shows the aftermath during the 5 days after the show the Chinese found out about the batteries that we both made and placed them on the plane they accepted that we have been playing with them the whole time and at the same time could accept that the people they had convinced to deflect did what they wanted it was us that stopped them the defectors had a

(1:13:32) good corrective experience when it comes to staying loyal and were back on the job as usual but with a new understanding both of their importance and the consequences of their actions what was nothing more than another Friday at the office for the administrative Elite 200 people had the most confusing death experience you could imagine 1,500 people lived a tragedy losing family members in a mystery and 10 thousands spent months searching and millions speculating for years then in 2014 military footage of the event got

(1:14:08) published on YouTube not our problem the person responsible for the leak was identified and taken care of not by us not our problem then came you hi Ashton impressive this is what I want to leave you with there was a guest on The Joe Rogan podcast that was talking about sacred geometry and Jesus man when he says High Aston [redacted] creeps me out man that that's not something an AI says like that's just like okay this thing is this thing is so wild this thing is so wild this letter is so nuts man I I honestly hope this is the

(1:15:01) weirdest thing that ever happens to me in my life because it's just that weird man yeah when he says hi Ashton dude it's like I'm watching you right like Jesus yeah makes it personal I want it's really I'm going to listen to that part again tragedy losing family members in a mystery in 10 thousands spent months searching and millions speculating for years then in 2014 military footage of the event got published on YouTube not our problem the person responsible for the leak was identified and taken care

(1:15:44) of not by us not our problem then came you hi Ashton impressive this this is what I want to leave you with but so it's like hi Ashton and then impressive like that's just oh that's weird man my hair stands up on my on my arms when I hear that dude even after hearing it 30 times even after hearing it that often okay so we're going to get to the last part let's just break down what we heard there though from the second part the four orbs part so then straight up says we speculate correctly with the

(1:16:18) four orbs well that's weird because Dave Ross is the one who came up with the four orb thing I would never have come up with that he says there's four orbs he says I remember in our interview he says it makes sense because of the geometry or something like that that the fourth orb makes sense entanglement is the key there now that part yeah the not our problem part we're going to get to that creepy too um now I know it's not Bob Greener Bob Greener is adamant that you don't need a fourth orb and we also

(1:16:46) know it's not anybody who follows Roy D Herbert because Roy D Herbert also says that we don't need the fourth orb the Tex is based on structures yes like people put in the chat it does make us think of uh meta materials it makes us think of sacred geometry it makes us think of toroids that are out there that's what the tech based on structures makes us think of and

then it talks about overunity unlimited power everywhere I was just talking about this yesterday with alien scientists in the chat also hey Bernie hey Emily Hey Hey

(1:17:20) Ocean hey Nathaniel hey Amanda hey guys um where and this was Dave Rossy as well where he talks about opening up Pac-Man's mouth and creating a system where you're borrowing energy from the vacuum of SpaceTime that's how you create over Unity that's what free energy is like uh Jeremy said from Alien scientists there's really no such thing as free energy but if you change your system and open your system up now you can be borrowing the energy from the planet itself from space time itself so

(1:17:49) that's what they're saying there with the unlimited power The Meta structure this next part is very weird cuz I don't have any basis for this The Meta structure creates low complexity and low energy phase transition this sounds like Jax are F now now I'm sitting here thinking like is this some CIA thing because this is I think Jax are f is the one when people are talking about low energy phase transitions uh if you go read jackar fat stuff which I don't generally recommend anybody do but he's the one who's

(1:18:17) talking about doesn't take a lot of energy to cause this type of stuff that it's about efficiency and the Loc complexity part is basically saying like well we just need the right toids right maybe a fractal toroid and then that it doesn't take a huge amount of energy to pull this off now everybody else is talking even sad Pi is talking about breaking the Stringer limit which I think means it would be a high energy phase transition but this person is saying no it's a low energy one so now this is an

(1:18:41) interesting point because if we can verify this one way or another if this checks out then it might show there to be some authenticity to these video to this recording inherently stable structures and self-reg now this goes back to Bob Greener so it's almost like it's being information like the weird part is this is information that's pulled from different uh scientists that have contradictory viewpoints so it's almost this is the part also where it starts to become pretty credible where it's like they're

(1:19:09) taking a little bit from everybody a little bit Dave Rossy a little bit of Bob Greener a little bit of Jack sarfati a little bit of Salvador Pius right and that's where I'm like huh cuz I always like to think that you usually the answer is somewhere in the middle right so inherently Sable structure this is where Bob Greener would say and he said on our podcast the structure can stay out there for several days this is the part where I'm surprised Bob Greener wasn't more creeped out by this he

(1:19:37) thought this was a big joke I'm going dude who who faked this man you got Psychopaths who know this much science that would fake something like this it's creepy if so that's even creepier than the videos being real um and then he talks about the infinite power generat that's another call back to Bob Greener right Bob greener on our interview and I think also on the alien scientist podcast talks about how with the right structure you could just flow water through it and it's going to collect energy and just

(1:20:06) build up even in his presentations that I watched which weren't even with me he talks about that that's how you get the infinite power where just basically you have the right structure you run electrons through it and now it's going to accumulate and accumulate and accumulate and get higher and higher and stronger and stronger and then this can be converted as well the propulsion that can lead to faster and light travel he essentially says uh trans medium craft that can achieve super high speeds

(1:20:30) this is pretty much now he's doing it talking about what we see in the mh37 videos at least what we think stroking someone's ego I mean I'm not sure of anything man I'll tell you this I'm not sure of anything this would be a really really weird way for someone to stroke their ego they're saying a lot of stuff in here that's either verifiable or uh be able to be proven wrong and we can't really prove any of it wrong there's a couple things that like kind of are a little bit red flags but

(1:21:00) not much and then endless applications I agree there's pretty much endless applications on this people ask me what can we do with this we can overclock our computers thousand times over we can get medical healing potentially has is one of the capabilities cloaking force fields all this stuff right mag trains hoverboards like super conductivity will change everything and then the big part this is the where I've been heavily promoting this idea even today I was posting on replied to Chris melon and said Chris melon you know man anyone

(1:21:34) who's in the know anyone who's talking to Hal POF and um Eric W Davis they know this technology can lead the Domsday weapons and they're and they're just not mentioning it why are they not talking about that right and this is the answer right here because with two Rivals that have this technology we are not going to last a day the world's going to be destroyed and uh if terrorists were to get this the world's going to be destroyed right this is just 100% true now the weapon can turn matter into

(1:22:05) dust and dust into air now this also kind of is a call back to Bob Greener again where Bob Greener says we could be looking at Annihilation where uh you know you can't create or destroy energy but you can transmute it you can teleport it somewhere else so this part I'm a little I think this is like somebody who's like looking at it and describing what they would see visually not necessarily trying to be a scientific on this part now the next part two is interesting which is something that maybe we could we could confirm which is

(1:22:35) when the object is hit the phasing cannot be stopped now I don't know what that means I still don't know what that means I don't know if that means that once the orbs starts spinning there's there's no going back or if this means that like once the phase transition begins you can't undo it I'm not sure now defectors part two says we knew in December that they were defecting that's weird that's a pretty bold claim right that we knew three months ahead of time what they were

(1:23:07) expecting uh Richard man I need you to stop concern trolling man otherwise I'm going to give you a **timeout** uh let's just like I I'm not I'm not trying to have people buying that when

people are like just for the record guys if you're out there and you're trying to convince me that it's fake or it's real just don't do that if you want to just enjoy the ride enjoy the ride I don't know what's going on I've been clear about that nothing you can say is going to make me stop looking into it or whatever

(1:23:32) we're just going to let this play out okay I'm GNA I'm going to make my own determination on whether or not I think it's real or not real I just I just I don't need every like all the comments from the peanut gallery on what I should think okay now they say that they know in December let them go and set up the plan they basically say that this was like a basically like a movie now this part it's just like okay now you're starting to really stretch what you want me to believe here because you go to

(1:23:57) this elaborate movie analogy about fire desperation regret drama like a movie because now you think about this in order for this to be real there's got to be some Psychopaths out there like in the CIA or whoever's coming up with these these Nares like can we imagine like Ronald py is out there going okay we know about the defectors so now we're going to go and and set up a fire scenario on them and like have this all blow up in their face like this is this is dark man this is super dark but it it

(1:24:28) almost feels like what the like a movie impression of what you think the government would do but maybe they do do stuff like this that's the scary part if the government's doing stuff like this that he talks about in this movie I'm very afraid I'm very afraid because that means they have a plan for me too for sure that's why I'm hoping the movie thing is like not real cuz this is like where you're really stretching it for me at least personally and then they talk about the the heroes

(1:24:55) cing in and stepping in and making it worse like is this a reference to anything guys has anyone ever heard this reference where like the villain has their scenario blow up on them and the then the hero makes it worse cuz I've never I know a lot about pop culture but I've never heard anything like that right so this seems like this is something original that they created here where they talk about when the villain's plan blows up then the hero comes in and and makes it worse that's something that I can't quite get over

(1:25:28) like is is that anybody know that that comes from any movies or anything like that like is that an actual reference to anything or is that just a completely created made up like little thing and then they throw in some more verifiable information they knew it was the last leg of the journey if we could somehow prove that all those people grouped up in KL and then flew off to Beijing that would be be pretty big because I have no idea if that's true or not but it's verifiable then they also claim that we

(1:25:59) built the payload for the batteries for the long burn for the fulllength show and that **China** tracked the plane the whole time that part's easy to believe the **China** tracking the plane this could also explain why we forced the plane to burn and turn around because South **China** SE that **China** is definitely tracking it there so they're trying to get it to go away from **China** and

then we read the Russian thing which somebody was mentioning earlier the Russian uh intelligence report the Russian intelligence report says that

(1:26:28) Russia was tracking it they told China about it and that China was planning on diverting the plane like that's weird so that's even lining up and I didn't even I never even knew about the thing about China diverting the plane I remember reading that Russian intelligence report and just dismissing it thinking it must be Russian disinformation but now I'm going what if that that Russian intelligence report's real what if it's not disinformation then it lines up entirely with this weird recording um and then here's another

(1:26:59) piece of unique verifiable information although we can't really verify this but they say 2 hours and 13 minutes in the plane gets phased out why are they giving us such a very specific time this this coincides with the Chinese only Mayday call right that they intercepted a Mayday call at 1843 could that have been could that have been another uh spycraft thing where China reports the MayDay call and they reported at 243 because they know that's the moment when the plane disappeared oo that's spicy that's really spicy maybe like God

(1:27:39) dang China's actions after this are so bizarre it actually does feel like it could be Espionage they hack Malaysia they steal crisis meeting minute notes and they steal classified information and they drop a Mayday call that they intercepted from Taiwanese Embassy saying that the plane was disintegrating attempted emergency landing at 243 a.m.

(1:28:01) which you convert that in Malaysian time that's 1843 that's the same time this person is saying the plane disappeared the part that's bugging me out about this is I've been saying the planes disappearing at 1840 not 1843 so if somebody was pulling my information into the into this using AI they would have used 1840 was the time they would have come up with to try to have it link up with what I've been saying they wouldn't say 1843 then China submits when they published the satellite images were I

(1:28:30) think only we have speculated this right nobody out there speculated this except for us that the Chinese satellite images were spycraft we speculate the Chinese satellite IM are spycraft because we're looking at three orbs in those Chinese satellite images right and it doesn't even look like they're in the water it looks like they're by next to and there's cumulous clouds in in the background of the Chinese satellite images man that's weird so then China supposedly figures out that the

(1:29:00) batteries were rigged and that they got played with and they figure out that the defectors didn't turn on them so this person in this recording claims the defectors didn't turn on China that they were the defectors didn't even know the defectors thought they were defecting at China then they get their whole plan blown up like imagine how scared those people would be holy crap you imagine you're defecting the China and all of a sudden you're plane starts on fire and then it gets teleported away to like

(1:29:25) Diego Garcia or something so and then the that mentions The Defector having a

corrective experience hell yeah that's a corrective experience are you kidding me if somebody teleports my plane away if I go get on my next plane and I get teleported to Diego Garcia yeah I'm not going to be talking about MH370 anymore guys I'm done I'm done especially if they let me especially if they let me live after that uh so yeah if I go dark guys you know why I'll have quote unquote had a corrective experience uh okay and then and then

(1:30:04) just because it's not wild enough then he he says that okay the defectors lived but the other 200 people had a confusing death experience what the hell does that mean does that mean they didn't survive the plane because you think your plane's going to crash and all of a sudden your plane disappears or your plane disappears and then you show up and then you get fed the cyanide pancakes and then you just and you die at some military base like God I don't know no matter what it's freaky and then he mentions the 2014

(1:30:36) footage published on YouTube I was trying to think is there's something we can catch him on here right can we catch him on something here but no like I was thinking well maybe they're wrong because we are speculating that the footage got posted on a on a forum right but they don't talk about the for Forum where it got **leaked** they just talk about it getting directly published on YouTube I don't know what this this I don't think there's anything we can verify or disprove on this part and then

(1:31:02) they talk about the personal responsible being taken care of I don't know what that means do that mean they killed them does that mean that they it's Edward C Linn and they put him in prison and then they say not by us not our problem and somebody I was initially thinking that maybe this is like a different now it's a foreign country right maybe it's in this person's from India or they're from from Taiwan Taiwan is the one I keep thinking of because Edward C Linn had links to Taiwan so

(1:31:31) Edward C Linn actually had links to Taiwan and in his case they try to like prove that he was talking to someone from Taiwan or something like that so I keep thinking maybe it's someone from Taiwan or people pointed out to me it could be that it was just a different department like maybe the FBI and NCIS had to take care of it so therefore it's not their problem it's you know problem for the FBI and ncas to figure out I'm not sure mosad interesting thing about Israelis is that their English is

(1:32:03) usually pretty good like they're I don't think they're going to mess up like I've had a lot of Israeli friends especially when I lived in Singapore and they don't mess up the the language things here as as much as people from Asia do like this this screams to me I lived in Singapore where everybody there is basically uh Chinese and they most people speak Mandarin and when they speak English they make a lot of the same uh grammatical mistakes that this letter does so to me it screams like whoever

(1:32:33) made this is is from Asia and potentially even of Chinese ancestry doesn't mean they're like Chinese like CPP but uh or uh CCP I mean but it does mean I think my the Israeli friends would speak English as well as like an American would so I don't I don't know anyway

let's move on okay let's get to the last part the last part right is is really wild too there was a guest on The Joe Rogan podcast that was talking about sacred geometry and some new technology his friends had discovered on some Island

(1:33:07) somewhere he did record another episode but it never been published doesn't the wording sacred geometry remind you of something if you choose to spend time on this which I think you should instead of maul aliens just real quick twice in this letter do they just rail on me for talking about M aliens that's bizarre to me it's bizarre for two reasons one because this this account published three videos about m m aliens before this and second it feels like they're really pissed off about me recording

(1:33:40) talking about Mall aliens my Mall aliens post got 10 million views 10 million views so it feels like they were upset keep in mind that your case is one product of the technology what happens on the other Island you will understand this if you pursue it is another more rudimentary product what if those in combination could lead you on the right path to the actual technology the gray bearded man is the key and he probably has no idea that he is finally I want to say this how do you defeat someone who can turn skyscape ERS to dust

(1:34:23) completely erase whole neighborhoods in an afternoon and steal a burning Boeing 7 midair someone who when needed has the complete control of all media and crafts the perception of events and has most of humanity eating from its hands after almost a full life in their service I think I know the answer you talk about them and you don't stop talking God damn that's that's just straight straight up creepiest letter uh I'm ever going to get in my life at least I hope it's the creepiest letter

(1:34:57) I'm ever going to get in my life if I get a letter creepier than that then I'm probably going to get disappeared that's definitely the creepiest letter I've ever gotten in my life just absolutely that last paragraph is chilling let's listen to the last part one more time this last part is just is finally I want to say this and right here when he goes finally I want to say this right after this it gets like angry right it gets angry here how do you defeat someone who can turn skyscrapers to dust completely erase whole

(1:35:34) neighborhoods in an afternoon and steal a burning Boeing Triple 7 midair someone who when needed has the complete control of all media and crafts the perception of events and has most of humanity eating from its hands after almost a full whole life in their service I think I know the answer you talk about them and you don't stop talking God damn that's weird man God damn that's creepy folks God damn that's creepy yeah the only thing creepy would be if I get a letter from my future s hey cadon I'm uh I'm trying to get I want to

(1:36:12) do oh sorry ad just went off man God dang that's creepy folks yeah the fact that they but they did this through a way where they couldn't be tracked right like if you're going to send me a letter like this you can mail it to me even the debunkers have my address if they wanted to troll me they could send me a letter like this right but no they don't want anything to track it it definitely feels like it would have to be somebody from outside the country right so weird man

they actually send this through a weird YouTube account

(1:36:48) they knew I would I would see it eventually but they didn't seem to care like like they didn't send me they didn't send it to me on like January 9th they didn't like Ping me they waited for me to find it a day later yeah the AI is reading a letter I think you're right Eve people have said oh AI can do the angry stuff there's too much stuff in there where it feels like they're reading a letter through a voice uh changer there's a lot of stuff where it seems like they're yeah how is the vocal

(1:37:16) tone so perfect exactly Alex so this is what I was saying ear on and everyone was yelling at me going no no the AI can can do all this cool stuff I'm going dude you have to program it to do that like to me the easier way to do this is you have a letter you uh translate it using like Google translate and then you have somebody read it using a voice uh voice modifier that's what it feels like but I I just don't know I still feel like I'm missing something still feel like I'm missing something with regards to

(1:37:50) it and yeah hey kadana hey um so yes for people who don't know I I thought maybe it could be Punjab actually did I ask Punjabi Batman I think I did ask Punjabi Batman he was one of the people that I thought could pull this off because he seems to have enough technical background but he said he doesn't have it I I also don't think he's like I think Punjabi Batman's uh dedicated let's say but I know some personal information about him that makes me think it's really unlikely like it's too

(1:38:24) this is too detailed I don't think he has the scientific background to create this letter in terms of like he could technically do it but I mean like the scientific background to do it I don't think he has it I there's a few people I've suspected but I just I even thought maybe Bob Greener did this but there's we've ruled him out too uh I even asked Dave Rossy even though I thought there was a very low percentage chance but I've asked a few people honestly if they made this cuz I it's that we weird and that personal

(1:38:53) like it feels like it has to be someone like very close to me um or or it's just some scop right so what are the options could be a scop could be a scop from another country could be a scop from the United States uh could be a stalker who's been following the case really well if it's so they have to know quite a bit about science um keemstar made a good point it seems like it would have to be somebody young in order to be able to pull it off but I actually don't think so I think that if we go with the Google translate

(1:39:23) plus voice changer then I think that that doesn't that does that could be somebody who's old could be somebody older to pull that off that's not too complicated and they could be using an intermediary okay so here's another thing also if you're going to send somebody a letter like this you don't really send it to somebody who calls themselves a citizen investigator citizen journalist because if I can figure out a plane being teleported I can probably figure out who's sending me a letter like this right like we're

(1:39:49) doing right now right right we can we can kind of figure out like we can deduce a lot of information from this from the inflections from the grammatical mistakes uh we can even I think get pretty close to how they created it as well um so you know I don't know I don't know what that all means but I think there's more to be figured out for here um okay and if it is okay so anyway so it could be a stalker it could also be I don't know what are the other options um honestly right now that's where I'm

(1:40:24) leaning I'm honestly leaning either towards some kind of weird scop from either a foreign country or our own country or my own country United States or some kind of stalker those are the things I'm leaning on right now it yeah I don't think that the **debunkers** care enough and the parts about how it tries to encourage us and not talk about Maul aliens like that's the part where like I think it rules out the **debunkers** somebody asked about the mall aliens so the mall aliens was I want to say ear

(1:40:51) early January like January 7th so this was over two weeks ago or actually no like January 5th uh no no no CU January 5th like January 6th is when it started happening I made the post like January 7th it was a Friday I think let me look at the dates because I know exactly when I made the post because this is the thing too we can narrow down how quickly they made this because I know when I made the mall alien post February 5th because was the day I was on Tim pool that was the same morning that I made the mall alien post

(1:41:25) it got 10 million views it's my number one most viewed post I don't think I made any money off of it if anyone wants to yell at me because I think that they got uh I think it got community noted so you don't make any money if you get community noted so no one has to worry about me grifting people about mole aliens or whatever um I did not expect it to get that many views and it turned out to be some [ ] like I think that it was like this weird viral sensation cuz I heard uh the thing that ended it for me in

(1:41:54) terms of like you know there was nothing going on there it was very weird all these all these cop cars to send on this mall like not just a few but like 60 to 100 cop cars like way too many and it was supposedly just for some kids fighting with fireworks didn't make any sense so that whole Mall aliens thing made like no sense and I was already suspicious of the mall aliens thing because I had seen a post on conspiracy like a couple days before about how many weird cop cars there were and so that's

(1:42:21) why I made the the uh Twitter post about it it blew up got huge um and that's the story of of the M aliens thing now so they say there was a guest on The Joe **Rogan** podcast talking about sacred geometry uh people who followed were able to figure out right away that that was Randall Carlson somebody who I had never heard of he said his friend discovered something on an island somewhere that's Malcolm bendall we've talked about that and he was actually on uh I found out the story story of the uh The Joe **Rogan** podcast as well

(1:42:56) with Malcolm Bendle so um I talked to somebody who was there and they said that he and Joe **Rogan** gotten a little bit of like got a little heated during the interview and that the

producer then um was it Jamie Vernon like I guess looked up a bunch of information about bendal and there's like all this disinformation about how he was like a scammer or something like that and so Joe Rogan like just didn't air the episode but Malcolm Bendle has been on an island in the malds for like seven years so if the guy's a scammer he's

(1:43:30) pretty dedicated to his craft uh in terms of like you know the plasmoid research and stuff like that I think he's probably legit if Bob greener's hanging out with him he's probably legit at least he thinks he's legit um I haven't got in touch with Randall Carlson it's not because I'm not interested I'd just have been busy but yeah I do have some interest if he's out there if people have connections to him I may try to reach out reach out through George who knows him I was watching a

(1:43:55) stream with them on it um but really I think the person they're trying to get me in touch with is not ma uh Randall I think it's it's probably Malcolm uh but you know either of them would be interesting to talk to but the reality is I'm not sure my scientific level is high enough yet to really to understand all that at the moment and then so then it says does sacred geometry remind you of something so so the visus the Visa Pisces or whatever it is there's two things that reminds me of or maybe three toroids in

(1:44:28) general like a toal shape a donut shape the other thing it reminds me of is the Visa Pisces which was like the interacting Fields where uh Bob Greener said like the safe spot was like below the middle it reminds me of that and then it also reminds me of the uh I think I have it up actually the NASA scientific report I'm just looking to see if I have it maybe I don't have it up anymore I don't think I have it up anymore but yeah so it reminds me of those three options and I don't know which one they're trying to get me to

(1:45:14) think of probably toids would be the ones I would guess but not sure and then they say that our case again is one product of the test what happens on the other Island so initially people were confused here thinking maybe they were talking about some other Island in addition to Diego Garcia but I think that what they're mentioning here is Malcolm bendle's Island being the original Island and that this is this island is Diego Garcia and when they talk about more rudimentary what they're saying is that I think it's a call back

(1:45:43) to their elegant mono structure from up above they're saying that yes it's similar to Randall Bend or Malcolm bendall's Tech technology but more rudimentary AKA rudimentary meaning like it's more simplistic but then again it can be built upon to lead to other technology and then what if we if we follow that it could lead us to the actual technology so basically what they're saying there is if you follow Malcolm bendal then in the Plasma Research then theoretically we can figure out what research and Technology United States

(1:46:15) government's using that's how I interpret that um and then the last paragraph right is super weird where it talks about like basically like how do you how do we beat the United States government how do we get a statement out of them if they control all mainstream media which they absolutely do I had already concluded that and you know the craziest part about the last

thing is if you had talked to me six months ago I would not have believed that the United States government controls all the all of the

(1:46:43) media I would have thought they influence them but through the course of this investigation I've reached a point where I absolutely think think that the United States government completely controls the media like 100% controls what is it project Mocking Bird I think it's called right is that what it's called that the one where like the CIA controls the the media yeah yeah Central Intelligence Agency manipulate the estic American News sources for propaganda purposes exactly yeah operation Mock I'm sorry as I've

(1:47:26) never looked it up um but yeah I I truly believe that they do control it so like what they say in that last paragraph freaks me out like it's like yes they do control the media we know cu no mainstream media have talked to me which like this should be something they would be like a big story that they could talk about right and they and they won't and it's also weird that none of the ufology people like the celebrity UFO people that are all on TV every day none of them would even make a statement on the videos

(1:47:57) think think of this guys Ross kohart has never made an official statement on any social media about the videos Jeremy Corbell has never made an official statement on the videos he's followed me for months he's never made a statement about the videos George knap never made a statement about the videos Lou alzando never made a statement about the videos Chris melan never made a statement about the videos how have none of them not even to come out and say no they're not real right if if like we came out and showed

(1:48:37) some stupid fake video wouldn't all those people come out and say it's not real to all their all their fans are watching it they're asking them something is wrong so anyway the last last part when they say you talk about it and you don't stop talking that that message received message Reed scary Dan or whoever sent that letter message received I got you loud and clear I hear you loud and clear so okay guys pretty bizarre man pretty bizarre so I think tomorrow how many posts would this be I don't want to do

(1:49:15) five posts I'm going to combine these up somehow I think we can do one post post about the tech call this one for orbs I think we do three posts three posts one can be about not stopping so you take the first paragraph here and you take the last one and combine those together and maybe we post that one at the end so that'll be the third post the first post is going to be about the defectors and we take the F this part up here defectors part one and defectors part two combine those together the second post is the technology where you

(1:49:54) do these two paragraphs together and then the last post is about not talking about not or continuing to talk and The Joe Rogan stuff I think that's I think that's the what we do yeah craziest part is six months ago I would have said the project Mockingbird stuff's fake and now I'm sitting here going it's absolutely true that's what the I've had the biggest red pill in potentially all of history I potentially had the biggest red pill in all of history man this case is just and keep in mind

(1:50:29) guys I was never an investigator or even a citizen journalist before this I just call myself that I'm just a normal person who is now like sitting here wondering why on August 14th I remember the date because I researched it I was begging mainstream media to pick this up I was begging them to pick up this up I I'll show the videos one more time before we go to sleep here let's show the thermal because we've already showed the satellite I was begging the mainstream media to pick this up guys and report on

(1:51:01) it and they didn't and I'm sitting here wondering why they won't report on like what seems to be a huge huge story even if it's fake it's a huge story right but they won't report it at all yeah no I know and once you unsee it and I mentioned this before but there's a South Park episode where Stan wakes up and all he he sees everything is [REDACTED] all the music is [REDACTED] everything is [REDACTED] and that's what my life is now it's like once you unsee it at the end you think oh is it

(1:51:35) going to go back to normal form it never goes back to normal he always sees everything he just learns to deal with the fact that everything he sees is [REDACTED] that's what I feel like right now that's what I feel like and it's like okay well now what everything's [REDACTED] now everything I hear everything I see is fake what do I every every message I hear on the news and from mainstream media is fake like how do you how do you go back after that you can't right you just have to learn to deal with every knowing that

(1:52:06) everything in the world is fake I think some people Googled the email address I don't remember what they found I emailed the email address myself like right after I heard this for like I listened to it like third or fourth time and I went what the hell is this is this a joke no yeah I think that if you think of movies like um Eternal Sunshine of the Spotless Mind it's like man if I could just wipe these memories out and go back to sleep thanks skinny Bob that means a lot man it really does skinny Bob says You'

(1:52:40) created the greatest community that I've ever had the pleasure to be a part of I hope that if we have to eat some cyanide pancakes that we can all eat those cyanide pancakes together community we'll eat those pancakes together chat no the ontological shock I I've gotten over the ontological shock the ontological shock struck me for like two weeks two weeks I woke up every day I I couldn't even sleep I couldn't even sleep for a couple of weeks I kept waking up in the middle of the night for weeks and just thinking

(1:53:16) like how is this all real how how is teleportation real and the problem was that I I knew it could be real you can actually just see the smoke Trails evolving like I think Punjabi Batman pointed it out you see the smoke Trails here shaking I guess they'll say that's compression artifacts but they actually separate a little bit and begin to dissipate you can actually see it right there look at the smoke Trails up here they're starting to dissipate there's expanding as well I think the smoke trails are actually

(1:53:47) accurately expanding no they definitely are right you can see them very narrow right here and they get wider right and it start to dissipate this might be the best frame for it right

here I mean you can clearly see it and people are saying these are coming from the engines no I don't think so I think those people are disinformation they I don't think I think it would be wider if they were coming from the engines huh yeah and right there as well where it gets lighter there huh bizarre man yeah if this is V VFX that's some pretty

(1:54:20) darn good VFX let me play My pretty darn good clip yeah I love you too Sandy they send themselves out the air lock if these are effects they pretty darn good Avenue five man that show is hilarious too funny you can uh you can definitely see some smoke the question is what kind of chemicals right so the disinformation that the debunkers came up with there and that one was I think a corridor crew thing that they came up with and then the the lore Lodge guys just pretended like it was their idea um you can't see

(1:55:20) smoke you can't see smoke and IR like obviously whether or not you can see smoke and IR is going to depend on what chemicals you can you can see right if you can see exhaust why would you not be able to see smoke so it seems like if it's lithium ion battery fire with deadly toxic chemicals spewing out personally I'm I don't even think it really needs to be addressed it seems very obvious you should be able to see it in IR I mean you can see uh the exhaust from like even just from gasoline getting poured into a car you can see

(1:55:57) that in IR so like hydrocarbons are going to show up in IR I think we researched it actually after that you guys can look up some videos on it for sure though I think I was just clear about that right guys like the funny part is I think the corridor crew saw like they took some like water vapor and they said oh you can't see the water vapor and IR okay that's not the same as lithium ion battery smoke but it' be something to look into hey Jeff dude Jeff uh I appreciate that man um n it's not the third orb I know

(1:56:41) what you're talking about it's not the third orb so people are getting confused because there are like white caps down here here these White Caps are not orbs Guys these aren't these aren't orbs so don't get yourself confused when you see little dots some of this is clouds and some of its white caps on the on the ocean potentially waves and stuff like that it's hard to differentiate but you can clearly see orb number one here I'll show you when orb number two shows up so orb number two is about to show up right

(1:57:11) where my mouse is it's going to come out of the water right here shoot on this way and then shoot up and orb number three comes in from the left okay so this is not in debate this is that's what's happening you can see them okay so anything else you think you're seeing or whatever is not the orbs so there's the second orb just shows up right there I'll go full screen just so we really I I want to you know I want to put the nail in the coffin of this a lot of people think they're seeing like also the black thing is not

(1:57:38) a bird that's the mouse so second orb is about to show up right here where my mouse is there it is so the second orb is actually right here through this Cloud now it just skim across the water shut up now this right here is the mouse guys this is the mouse right here okay this is not the orb this is mouse okay and the third orb is coming right now from the top left side of the

screen okay so hopefully we're good with all that so if you're confused this is the mouse down here again so just I mean you guys have access to the videos I

(1:58:13) just posted this video you can watch it yourself a dozen times I just I don't want anyone to be making more claims that about where the orbs are or whatever I mean you can I don't really care but just just be clear I've addressed them so hopefully that helps you out Jeff yeah yeah and uh it yeah all those all those YouTubers and stuff are connected to one another as well it's not random that these people are all coming up with the same exact arguments either I mean Julian Dory and Danny straight up told me they

(1:58:54) are right they're friends with those guys like that's why they did all that stuff that's why like Nico was a big wuss and like wouldn't face me face to face none of those guys would ever debate me face to face no chance right because they they deal in propaganda right they deal in propaganda I deal in talking to people on stream face to face I'm a public speaker you know there are people that make videos that laugh on couches and then they never address it ever again in right they're clowns

(1:59:21) they're just clowns okay guys I think we're good on that Walter Bosley about oh that would be sick I don't know who that is Walter Bosley but I'll I'll look him up later Bernie but yeah Bernie anytime you want me back on you guys have you got me on speed dial you know that appreciate it I also appreciated the email you sent me the other day uh um yeah anybody who's who's cool with us and has been nice um you know of course I'll go back on them but anybody who is rude I'm never going to go back on

(2:00:00) their show again I mean that should go without saying right just you had your chance you know you should never be rude to your guest as a podcaster that's just silly it's a lot takes a lot of ego to be rude to your guest okay um oh yeah and then the last thing I want to say before I go to sleep here which we're going to I've been on for like an hour longer than I thought I would be tonight wow yeah it was a long podcast or a long stream tonight was that I'm gonna I think I want to do I'm

(2:00:30) going to see if Chad and Sherry from investigate Earth want to review the letter I was I was scared about going through the letter because I thought maybe it was fake and I don't want to get caught on something and doing podcast about it but even if it's fake it's super compelling right even if this letter is fake it's ridiculously compelling so I think I I'm going to see if uh investigate Earth wants to do one last MH370 interview with me where we play the whole letter and then I talk about it and I can break it down the

(2:01:00) same way I did with you guys I think that would be really compelling because I just think it's a crazy story right and they were fine with doing that for the Y files I was thinking maybe it be a copyright problem but they didn't have any problem playing the the wi file stuff so I guess they're not afraid of that so we may do that as well if so that'll be a really good that'll be an awesome interview if we do if we play this and then go through all this I think that would be a good like night that' be like a good cap of the

(2:01:30) whole MH370 story to where we've gone now okay guys I hope you guys have a good night uh we will be talking again tomorrow tomorrow I think the plan is to do oh hey Diamond how's it going buddy I'm a big fan of diamonds work as well he's been somebody who's been really awesome to us I do plan to do more thank you um thank you messages to the podcasters who have treated us well and you know just our cool people that I like hanging out with I think that I've learned so much just real quick I'm

(2:02:02) going to do my little soapbox thing I've learned so much just from talking to all the different podcasters and seeing everybody's different perspectives and point of views it it's actually changed me as a person it's changed somewhat my political beliefs but also just my beliefs about human in general there's just a lot of awesome people out there and that's part of the reason why I keep doing all these podcasts because I just want to try to support alternative media as much as possible especially all these

(2:02:29) people who I never knew they existed before right so thanks man thanks everybody have a great night love you all thanks MH 370x I'm out

MH370x - Cloud Rebunk (We're Back) 1/23/24 - YouTube

Transcript:

(00:47) malan 370 contact [Music] 120 breaking news tonight A Malaysia Airlines flight with 20 39 people on board including four Americans has gone [Music] missing [Music] I remembered the line from the Hindu scripture the Bhagavad Gita Vishnu is trying to persuade the prince that he should do his duty and to

(01:52) impress him takes on his multi-armed form and says now I am become de death the destroyer of worlds oh I was muted guys sorry about that okay let's start over let's start over here we go sorry hey everybody out everybody who I just said hi to I just said hi to like everybody out there so let's just skip that part say hi to everybody in the

(02:55) chat appreciate you guys appreciate you guys are here tonight um so we are going to do a short stream here tonight I sorry I'm just not going to go too late because a little bit tired uh but I want to cover the cloud rebunk guys so Cloud rebunk I want to get through here tonight just real quick because it was a big thing that came up over here today yeah we got to start all over because wasn't we were muted got to start all over n okay so let's just jump into it um actually before I do that let's uh do a little recap of what

(03:29) happened here so two I think two big things that were today um this morning I did post

the uh **Reddit** conspiracy I called it United States took MH370 um and uh it's gone pretty well I think I'll pull it up here in a minute um see where we're at with it but I think they got a lot of positive attention I wasn't really sure where how it would go uh I was a little worried about having all the **debunkers** and what have you like try to spam down voted or whatever but that did not seem to happen so that's pretty

(04:04) sweet oh yeah it's pretty popular right now um it made it to the top of the sub**reddit** as well uh which was pretty nice probably probably the last post we do on **Reddit** I don't know if we'll ever do another one on there we might but pretty unlikely yeah thanks guys for the support on there as well and then the other thing was that there this Cloud rebunk came up so I've had just to lay the the groundwork I've had several people uh reaching out to my DMs ever since that cloud **debunk** came out saying that they knew it was

(04:38) fake that they are you know um I don't know analysts experts or whatever and reality is like I just don't care that much in terms of the **debunk** the cloud **debunk** thing because we had already pretty discredited it pretty fully um you know we had already gone over the fact well we'll go over it here in a second so we're going to go we're going to do whole breakdown of it the whole situation as well um just to make sure that people understand you know what that situation is and where we were

(05:07) at before with it but it got to the point today where the analysis had has been so like they found the pictures in a flicker uh some kind of album from 2012 from February of 2012 and it seems to show a picture of the Fuji mountain that matches one of **Jonas**'s pictures like exactly like the angle's exactly correct and exactly the same like there's no way that there was somebody else at the exact same angle on an airplane that took this exact same picture I mean it's exact it's the same exact argument that people have about

(05:44) why the clouds are are perfect match there's no possible way that the clouds could not be a perfect match right same idea with the picture of the mountain right it's what they had the exact same lighting and the exact same angle uh okay as as the **debunkers** would say it's too close to be a coincidence right so I I can't wait for all the **debunkers** to come out and admit the pictures must be fake because we found the source for them which is too exact to be to be a match not be a match right I'm sure that they

(06:17) will be scrupulous enough to admit that right just like I was when I found the cloud when when the cloud pictures initially came out let's like you guys are you guys holding your breath to see if they do so let's go through it okay also just as a quick update I just posted out here uh 15 minutes ago the UN uninterruptible autopilot so we the thing that we finished last night if you didn't check out the stream from last night highly recommend checking it out it was pretty insightful I guess we'll just start with

(06:47) that real quick um with respect to the uninterruptible autopilot it actually had quite a few things that I thought were interesting so not only did I find the piece about Hugo tesso who basically proved that you can hack an airplane using a application on a phone was really easy um

I found that I didn't I didn't post the link to it cuz it was really long PDF link but I did post a picture here showing how they would manipulate the flight management system FMS and of course you can manipulate I mean it's an autopilot system of course

(07:18) you can manipulate it it's like it's like saying you can't hack a computer of course you can so then I mean and if some random guy can do it then of course the military can do it as well so I didn't even put in all the patents and everything into this piece CU I was already convinced that right at the first page I mean we're talking about teleporting a plane so of course they can uh you know hijack a hijack an airplane seems ludicrous they wouldn't be able to now some of the other points

(07:46) that I put in there from the piece so I kind of summarized some of the points that weren't as huge but I think we still interesting is the idea that the officials were obfuscating information right away which they were we know they were we've watched the press conferences we've watched I've clipped a bunch of that stuff where they admit they were in communication with the uh spy satellites and Rolls-Royce and Rolls-Royce didn't put out the data and that they lied about the plane they didn't mention the

(08:11) plane turned around for like five days they're like Sting searching the South China Sea while they knew the plane had flown Back to the anamon Sea it's like the biggest red flag ever uh the sacom is not necessary when it's being remote controlled by a transponder so that was interesting as well it means that even if the satcom was turned off they still could remote control the plane uh the officials didn't release page one of the cargo manifest so this goes to our our point about the cargo and this could

(08:37) also feed I don't know the date of this so I don't know if they're talking about the the batteries that they later admitted were on the plane or not so the thing is too is we know they lied about the batteries the Malaysian Airlines CEO didn't admit that the batteries were on the plane till the 20th that was a week after they had invented The Narrative of going to South China Sea or South Indian Ocean so why would they lie about the batteries the answer is simple because if they if they say hey there's

(09:02) dangerous lithium ion batteries onard the plane everybody in the world's going to go oh it was obviously a fire right obviously that's the by far the most plausible explanation so they had to lie about that and then they admit that free scale is the most likely motive now I have a summary piece that we can post tiny microchip was the likely motive for the hijack the for Pentagon hijack of MH370 this is dated March 25th 2014 pretty nice so I might be posting this [Music] followup at some point I don't know

(09:42) when um and then the last one's the they even mentioned GA tell us is buying the copy of the plane in 2013 so that was interesting but the real meat and potatoes is the log on request at 1825 UTC which makes no sense but what if they hijack the plane at 1825 UTC what if they hijack it because they know they're going to orbit and they need to have it under remote control or what if you know maybe the plane's flying automatically at that point not sure right so very

interesting and that location is right next the

(10:18) Cobra gold cop tiger exercises right next to it so it's the perfect location to hijack the plane as well now field or um Dan Hanley uh they argue that there's two intercept points right they argue that the plane might have been intercepted in the uh South China Sea and then that they argue it could have been second abduction would have happened at 1825 in the anaman C the reason why this is important is that those spy planes I remember looking them up they don't fly as fast as the Boeing 777 so in my mind you have to intercept

(10:55) the plane halfway through you can't track it that whole way so I actually think that it makes more sense that the plane was on fire then goes to panang doesn't land to panang and then that's when it gets hijacked after that or not hijack but remote controlled right no the pilot didn't this there was no indication of pilot suicide pilot did not do this pilot has actually been ruled out just as FYI for people who think that go read the official reports Pilot's actually been ruled out of being um involved it's only

(11:27) narratives that that believe that the pilot was somehow involved in this you can't also can't turn a Plane off the way that it got turned off by with one person um so I'm not I'm not going to address some of that stuff let's go to the next stuff here then we know that KT saw two other planes at cruising altitude with navigation lights on and we know that the French dad I'm going to butcher his name g slain Westeros what what gin W Watros God I cannot pronounce this guy's name pronouncing French names is hard anyway

(12:00) he was told the Americans know full well what happened to the plane um yeah as a quick just a quick reminder we're not going to be probably doing any science today I'm just going to go through some uh uh recap and then probably going to cut it short tonight we'll see yeah the pilot suicide narrative is also massively disrespectful guys there's actually no evidence of it whatsoever so if you're going on like it's a literal conspiracy theory to claim that the pilot was somehow involved and Malaysia's covering

(12:27) it up that's a literal conspiracy theory and the difference between that conspiracy theory is that there's no evidence for it you're just literally vilifying somebody with no evidence just to make yourself feel better I guess I don't know why people would do that um now the final most compelling piece of evidence in the 911 Pilots report and I don't know if it's 911 or 911 it might just be 911 anyway whatever um is that they argue that a positive FBO correlates with with the plane flying

(13:00) West as opposed to flying south and that a negative FBO would have indicated a Northern or Southern Direction so what do we mean by that we mean that this is the FBO burst free or bfo sorry bfo did I say FBO oh I think it's supposed to be bfo I think that's a typo I don't know it might just be frequency burst offset it might be interchangeable actually I don't know but notice how all these are positive right you can actually have negative burst frequency offsets so why is it not negative if it's supposed to be going north south

(13:38) are they just making this up here like this literally seems like they're just reading the tea leaves right here right really seems like they're reading the tea leaves here um and then the last part too is that the final two pings are unusual there should be no final to pings so this idea that it crash in the South Indian Ocean they just make up some stuff here they just go okay 811 is the time where the plane starts descending or runs out of fuel and 819 is the time where the plane crashes into the ocean

(14:15) alternatively it makes much more sense that the satcom Ping to an on on ground flight mode as it landed and then when the engines get turned off 8 minutes later that's when it gets a login attempts so that that to me is very compelling it might need to get added to our evidence that's huge so the reason why we have these extra two pings in the iMat data at the very very end not because it's crashing because it's Landing apparently that's consistent with the landing yeah um and so anyway I thank them for

(14:54) that uh once again for Bert in the chat there's literally no evidence of Pilots suicide there isn't any evidence it's not a matter of fitting the evidence there isn't any evidence you understand what I'm saying there's literally no evidence of pilot suicide it's just a narrative invention invention in your own head like that's how easy it is to lie to people people believe it just because they're told it doesn't they don't believe it because there's any actual evidence for

(15:19) it so and then you might go oh well what about the what about the fight flight simulator that I was told about on CNN Well turns out that was just mh150 that he was actually scheduled to fly on February 4th yeah the videos actually have no **debunks** now there's actually no **debunks** that we haven't addressed anymore even the cloud ones I mean we've already kind of addressed it but now we've really really addressed it so let's get into that next thanks once again to Captain Dan oh spelled his name

(15:49) wrong o oh boy okay well maybe he'll forgive me I spelled it right down here maybe maybe he'll forgive me God typo chat do I edit it oh feels bad chat can I will even let me edit it uh I don't want to I've already got too many replies and stuff oh feels bad anyway okay yeah it's silly man flight P stuff so there's just no evidence okay now let's go into the rebunk guys yeah the **truth** is I don't know so real quick as well I'm probably going to do another followup on no I don't want

(16:45) to edit it there's too many replies and and retweets everyone wants me to edit it no because it'll mess up all the replies and retweets I'm just going to leave it it's fine guys it's not the end of the world I spelled it right at the bottom and I tagged him and in the tag I got his thing spelled right it sucks but it's whatever he'll forgive us okay um now let's go to the the rebunk so and if you want to check out this is also interesting as well Dan Bonino actually did a thing on the a uh Aguadilla UFO

(17:35) Aguadilla UFO whatever one this one's really interesting there in the background which who okay let's put on the headphones okay okay um and that's interesting because uh this is one of the weirder ones so I just thought that was kind of a I'm surprised more people didn't like

that I he's huge like he's one of the biggest streamers uh uh out there period so I just thought that was interesting okay let's get into it though Cloud let's get into the cloud uh thing yeah Captain Dan

(18:08) uh Sandy yeah I just think more people looking at the UFO phenomenon in general is pretty interesting yeah exactly that's why I thought it was pretty big yeah why are we back on white and blue Twitter good good call let's switch out of that uh here's the images as well I think this is one right here as well so just to familiarize yourself this is the matching image with the Shadows matching and everything I think so there's really there's no chance man the the Shadows match and the uh and the angle matches

(18:49) exactly seems seems very unlikely folks okay uh actually I'm going to PO I'm before we get to that real quick I'm going to wait wait why yeah why is my black oh no okay that's not this isn't my Twitter is why I was confused for a second this is my uh this is the **Reddit** so this is the post I made on **Reddit** I added a bunch of images for people uh not g to actually you know what let's read through it real quick let's read through the **Reddit** and then we'll go to the **debunker** stuff okay so I said United

(19:20) States took MH370 if you're not familiar Malaysian Airlines flight 370 disappeared on March 8th March 7th UTC in 2014 there are many commonly known Nar about its fate including the idea that it was a suicidal pilot that b flew by his hometown to say goodbye and took the plane on a six-hour joy ride this narrative is false and there's no evidence to support it that's how easy for the me it is for the media to convince people of a lie the official story is that we don't know what happened to the plane what really

(19:46) happened is the United States took this plane and lied about it to the world mainstream media is under complete control by the US government and that's why they didn't press the fact that we have surveillance satellites scanning the entire Globe persistently with a system called cbers There Were Us tie exercises going on in the andman sea where the plane flew directly past we also have bases such as Diego Garcia that have capabilities to trct the plane from takeoff to disappearance there's no possible way the United States didn't

(20:11) know exactly what happened to the plane we know a plane the size of a 777 can't disappear without being tracked and can't crash into the ocean without leaving a debris field every **foyer** request into the plane uh to the plane to any agency has met with a 2009 uh Obama a exemption that withholds the information uh this is supposed to be interest of National Defense or foreign policy including one by ailly Bates in 2014 to the NSA this wouldn't be the case if there was wasn't something to hide and then I spell interest of

(20:42) National Defense and Foreign Relations correctly here at least so what happened to the plane we can say with a high degree of confidence that it was a lithium ion battery fire related to the 487 pounds on board two pallets of which were unscreened were in the forward cargo way near the Main Equipment Center also known as the electronics Bay 19 Witnesses corroborate this invent and have all been discredited to invent a phony Narrative of the plane

flying into the South Indian Ocean this includes Mike McKay who saw the plane on fire when the

(21:10) batteries first ignited nine Witnesses along the coast who hear loud noises at the same time eight fishermen who see the plane flying low as the crew battles the fire and the pilots try to keep the passengers alive and finally K T who an hour later sees the glowing orange plane with no navigation lights spewing dark smoke the orange glows due to a chemical reaction from the hon 1301 releasing bromine a halogen gas and there's the letter to Mike McKay or Mike McKay posted the plane didn't fly for eight

(21:42) hours to fuel exhaustion and that's why the official search didn't find one piece of the plane above or below water any black boxes and why there was no radar signals or acoustic detections anywhere in the South Indian Ocean if the plane crashed at 15,000 ft per minute as Mike exner of the independent group is claimed to me me it would have shattered into a th000 pieces he claims all the pieces of the plane sunk but that's not how it works much of the plane would have floated included all the plastic the luggage flotation

(22:08) devices bodies Etc the debris field would have been miles wide and we would have seen it on satellite the next day here's the the search where you see they literally just searched everywhere above water and Below water over a year later a few pieces of the plane a few pieces linked to the plane washed ashore the media doesn't report that no unique serial numbers used the unique serial plate was missing from the flaperon instead they used part numbers only a tiny fraction of the plane is accounted for with all the

(22:37) combined debris found a couple of these pieces have clear Scorch and burden marks on them not uh not reported is that a b77 fire suppression device washed up in the malds just weeks after the plane disappeared and was ignored despite having visible serial numbers on it right so we've got the burn marks here which I don't know how people are denying this is burn marks how are people denying the burn marks that we're seeing on this thing you can even see where it like this is like when something's on fire right like part of

(23:08) it burns more than the other because that's the part that's got the heat on it like this is what you're seeing here these are heat and burn marks all over this piece how is how did they ignore this and then how do they ignore a b77 fire suppression device washing up with a serial number on it right here how does this get ignored I think it got ignored cuz people didn't know what a b777 fire suppression device looked like right but this is what it looks like they're staring at it and presumably it's been cut here because

(23:39) it's been falling off or disconnected like I just I don't get it okay it was this plane due to the 20 free scale semiconductor scientists on board far too many for a commercial flight free scale was linked to room temperature superc conductive microchip development by a 2005 National Security Agency NSA report they had just developed a microchip so small that fit in the gimple The dimple of a golfball the company was linked to us Aerospace and defense if it was a fire why cover it up enter the MH370 videos there's not a lot

(24:18) of reason to create an elaborate cover up including multiple countries in all Western media unless whatever is being hidden is for National defense purposes the United States Andor one of the defense contractors such as Lockheed Martin use advanced technology unknown to the public on the plane two perfectly in sync videos dating to just weeks and days after the plane with missing corroborate this event the event we see could be cloaking or Annihilation but both are unlikely due to the Smoke Trail stopping and the lack of a larger

(24:45) release of energy respectively the event seems to be despite how hard it is to believe a super luminal event teleportation of a macrosized object the MH370 videos are the reason for the cover up because this technology is not just about there being a unification theory of quantum mechanics and general relativity epr or ER equals e it is because this technology can be used to create a doomsday weapon that would destroy the entire planet in an instant well so why wouldn't **Russia** and or **China** blow the whistle on this first

(25:15) because no one would believe them second because this is spycraft at the highest levels of geopolitics and third they did **Russia** put out a report not covered in Western media that the United States put a package on the plane from the Alabama MK where two Navy Seals were mysteriously found dead both overdosed at the same time just two weeks after the plane went missing that's weird **China** hacked Malaysia government the day after the plane went missing and stole crisis medium minute notes and classified information about the

(25:46) plane why would they do that what is there to be classified the day after the plane went missing they also released satellite images 5 days after the plane went missing which seemed to show three orbs in a triangle formation if it was reported as debris in the South **China** Sea but none was found but in reality it was most likely spycraft a message to the US government we know what you did now here is I put a just a screenshot from the uh supposed **Russian** report or a summary of the **Russian** report and then the picture of the uh

(26:18) the three orbs and these are cumulus clouds in the background as well here right like it matches the clouds at least the types of clouds in our videos it's hard to line them up we tried but I've been investigating this case for over 5 months and done over 60 podcasts including Tim p and Alex Jones I'm absolutely certain the United States is lying or withholding information that would reveal the true fate of MH370 you don't need to believe me or trust me because I've made the evidence

(26:43) publicly available to all even if you can't believe in advanced technology kept secret from us please help get the **truth** for the families and the victims of the plane then I have a link to the all all evidence here lastly I want to send a message to a man named Lieutenant Commander Edward C Lyn thank you for leaking these videos and revealing the **truth** to the world despite the fact that we ignored them for over nine years you are not a Trader you are the hero we deserve and then I posted a link to the Strange Case of Edward C Lyn or picture

(27:14) so yeah pretty pretty spicy pretty spicy I liked it okay now let's any questions on that before we go to the next one I didn't obviously I didn't add everything if you guys are um let's

give a like if you guys are like up to date with all the stuff that we've been going through you know there's a lot more evidence than that that I didn't include there but I had to you know summarize it a little bit Edward C Linn hero huh well look at this does this look familiar it looks totally fake anyway oo

(27:55) oo I mean my money this this fake tattoo puts on Dr Greener or Dr Greer I'm definitely taking Dr Greer in this one Dr Greer is jacked dude real jacked Lu zando I never trust anybody with a soul patch never trust anyone with a soul patch folks oh okay anyway let's get let's get focused let's get focused okay take a look at the evidence B I'm not going to go through everything you can find the link right here in that post on my profile you'll find the you can find the evidence I'm not going to

(28:33) recap it all for every individual who comes he's the guy though I'm 99.9% sure oh one thing I will say is that in the caption on the Edward C Lin thing I sent he got nine years with a plea deal for two charges of dissemination of classified information right just for two charges of classified information now why would you get n years in a plea deal for just two charges of classified information when your defense attorney says the evidence and questions available on the internet well we got uh you know what I'm not

(29:12) going to bother it's not real Danny Jones is it no it's not just fake just trolls in the chat no it's just trolls guys okay now let's go to the rebunk explainer so the yeah the the **debunkers** are in full meltdown mode right now guys full meltdown mode because their own arguments got used against them and they can't deny it look at this the Shadows even match the Shadows even match anyway let's get to it first okay so we already **debunked** the cloud thing how did we **debunk** the cloud thing right so right

(29:54) away I I was pretty much forced to put out a statement because somebody finds these clouds you got every single **debunker Mick** West everyone on Twitter spamming it ha Ashton we found the cloud we found the clouds somebody found the clouds so a six- day old **Reddit** account in the middle of the night argues that they found some cloud images with their Rainman skills spending 20 minutes on a website where not even the person who took the pictures could find the images in question where we can all agree there's no chance somebody's looking at

(30:24) some pictures of clouds going oh those are the clouds in the mh3 70 videos all I have to do is invert them and resize them and and spread them out and then it matches no chance only way that somebody's going to be able to do that is they know what they're looking for right so once we realized that then we said okay something's not right about this right especially because days before we had already proved that the clouds were moving and we proved they weren't just moving they're evolving naturally this is not a

(30:56) what they what do they call it after effects this is not after effects this is not you don't know how CGI Works yes I do know how it works you don't uh meticulously make the clouds evolve in your your janky supposedly you know video that you you make in one day or whatever

people think they can make them in right that's definitely not how it works at all um so the condensed explanation six day old **Reddit** account claims to have found mirrored resized stretched out whatever you want to call it images and

(31:27) 20 minutes on obscure website photographer gets an anonymous email being told where to find the files so that a real person could be connected to them because the anonymous person doesn't want to be the person tied to it because again Anonymous people have no credibility but so they wanted **Jonas** the person who found who supposedly took the images to be the one to put his name on him and he was happy to do so he gets an anonymous email from somebody and goes oh yep I'm going to go make a **debunk** video now and then you know by the way

(31:54) after I make my **debunk** video I don't want anyone to harass me or bother me like okay that already red flags everywhere turns out **Jonas** is an expert at photo manipulation what a surprise the guy who makes a **debunk** video is an expert at photo manipulation oh not just that it turns out that the GU he knows the website owner aware the website where the pictures were found wow coincidence is degree and they all know the corridor crew and the guy who supposedly found them the Six-Day old **Reddit** account only gets on because he got upset that I

(32:25) dunked on the corridor crew those idiots who sit on a couch looking like morons so already we've got a lot of red flags guys but it gets better the images on the way back machine only go back to 2016 and as we've known from the **debunkers** it's easy to change metadata and we know firsthand because when we got **scam**med they changed the metadata on all the files all of them they wouldn't give us any information about who bought the pictures between March 8th and March May 19 but they had supposedly folders with

(32:59) the images in them going back to 2011 2012 somehow the guy who owns the website's like oh yeah hold on let me pull up my 2012 11-year-old file from when **Jonas** sent me pictures called **Jonas** Japan doesn't have a year on it his folder is called **Jonas** Japan already seems super sus dude so then we say okay let's go look at the Torrance let's go because this website **Jonas** told us the website would get pirated and they would steal all the pictures so we said okay then the pictures are going to exist in the

(33:31) torrent right so we find the two different torrent on the torrent websites neither of them have the pictures in them neither of them do okay now I'm very very skeptical right oh well it gets better the data elements for the pictures in question were modified December 4th 2023 6 days before that the the **debunk** came out exactly Co coinciding with the Six-Day old **Reddit** account okay so now I'm already it's been **debunked** right but there's more uh we've been able to show that someone can use AI to upscale images

(34:09) like this in less than a minute and then lastly it's not list oh no there it is there it is I forgot this one we also checked reversed image search the images in question the ones with the clouds in them don't reverse image search back to the website how is that possible if the if the images are 11 years old 11 years [Music] old images are 11 years old but they don't reverse

image search back to the website even though other images do that makes no sense whatsoever so so the the images had already been fully **debunked** but people

(34:51) that wasn't enough for some people some people out there wanted to prove that they had been fabricated technically prove they've been fabricated I didn't care anymore at this point right so just to really put the the nail in the coffin for the **debunkers** out there somebody today actually it's been happening for a few days and I just haven't been reporting on it cuz again like I just said we already **debunked** it I just don't really care anymore right but just to really show how nutty the **debunkers** are and how

(35:25) completely disconnected from reality the the **debunkers** were on this one and of course the **debunkers** didn't put any scrutiny into this any all you point out all this stuff to them and they just ignore it right I'm a **redditor** right just completely ignore it well if that wasn't enough we found the exact images they used to fabricate the pictures right now we've we've found the images they used to fabricate the pictures here's a link directly to it this is the image that was used to fabricate the uh the Mount Fuji picture

(36:01) and how do we know well you do an exact overlay turns out no question same exact same exact thing same angle same Lighting in the in the clouds on the cloud as on the mountain as well I mean it's an exact match guys right just like the **debunkers** would say it's an exact match right so um I want to give credit to yart warney who is the one who was able to show that you can make a higher quality picture from a lower quality picture using AI within under a minute and WS advisor who he had been messaging me

(36:45) very skeptical of the images even early on and I think he someone said on I saw on one of my replies that they had banned this guy from **Reddit** they wouldn't let this guy post on **Reddit** because he started **debunking** the the **debunk** so they banned him of course of course they banned him so this just again show goes to show how off The Rocker that the **debunker** sub**reddit** is like anybody who goes against their narrative and tries to uh you know prove their **debunks** wrong they get banned right um and finally when I saw this

(37:14) image and saw some of the additional analysis which I'll click to later on some of this technical analysis goes above me I'm not going to lie guys but when I saw this where it just matches exactly I figured well this is the perfect um this is the perfect angle of attack against the **debunkers** right because this is their argument remember when they were arguing with me about how a non-matching VFX is too close to not count they didn't even disagree that it doesn't match right so we pull up so one frame one frame is is similar

(37:51) but clearly doesn't match and the argument was it's too close not to not to be it right this was conclusive just to remind the **redditors** who are watching this was conclusive for them what we're looking at right now even though it doesn't match even though it's not the same color or anything this was conclusive so by their own arguments this is 100% conclusive this is Pixel Perfect this is actually Pixel Perfect Right the the mountain is exactly right the clouds were just photoshopped in and

(38:24) people go well why aren't the clouds there because the clouds are photoshopped in that's exactly what our argument is they used AI or photoshopped ad in the clouds right bye Poppy have a good one bud stick to CNN they're mad guys they're pretty mad folks you know why they're so mad because they know they don't have any counterarguments right they don't have any counterarguments their own arguments got used against them that's the best part about this that's why I posted it I

(38:58) don't even care I was already fine with the dunkers Moving on but this also explains why they didn't move on right why when you go to that subreddit or you go to the Don like a lot of them have not moved on like they're jumping on every single person's comments right and the reason why is because they knew they fabricated the debunk most likely right they knew it wasn't a real debunk they were just trying to trick people which is pretty alarming how like off The Rocker some of these people have gotten

(39:25) right they they have no problem fabricating fake debunks just because like they just are super mad right like this was this was perfect for them this was close enough this was close enough you know it's not not at all the same and this is just one frame and when you show the full thing you can tell right away that it's not the same like not and that's why they fabricated another debunk right cuz I made them look stupid I made the corridor crew look stupid I made Danny Jones look stupid I made all the

(39:55) redditors look stupid you know and it's not my fault they're the ones who were coming up with dumb arguments right and so of course they fabricated another debunk it makes absolute sense right I don't think that the government did this I just think that redditors and I don't know if Jonas was involved I don't really want to accuse people I just know that this is a perfect match and the whole story didn't make any sense to begin with based on all this right so anyway let me know when the debunkers

(40:24) want to address any of the arguments uh they don't see to ever want to do that right I imagine their next move will be to fabricate another different debunk um if I had to guess what would they do next because they're going to be upset at this right they're going to have to try to clap back that's how it works right they're not going to admit they were wrong they're not going to admit that yes has been debunked they're going to just try to come up with some other way to clap back they're not going to

(40:45) address anything that we've said they're going to probably my guess is that somebody's going to try to like that the one person that uh oh and also I want to show this because I want to get ahead of the next f debunk real quick um okay this guy Tony Adams this guy's a reddit so anything that he says automatically has zero credibility if this guy posts anything 100% zero credibility 80% of my time was trying to match the original basically he copied the satellite video when he made his Recreation he just copied 80% of it the

(41:23) only thing that he made that was original in that video was the orbs and the plane and they don't even look close to the same and the portal and that also doesn't even look close to

the same either all the rest of it the mouse the frame movements the coordinates he didn't create any of this stuff he just copied it directly that's not a recreation so the next play is going to be that he's going to do some other Recreation where he like removes the plane from it or something like that and goes oh I'm the Creator I

(41:50) made it up I'm the I'm the hoaxer that's their next play I'm calling it right now so when that happens I want you guys to already know lead and clip this segment right here that we're talking and show it to them and say I already called the you were going to try to pull next I know you're mentally ill and you're like doing weird debunk stuff so if this guy and he's a redditor as well he's been confirmed he's he's the one that did that with satellite Recreation I tracked the cursor in the

(42:14) original and used after effects to adjust the coordinates so he basically copied everything he didn't recreate any if I were doing it from scratch I'd have used a screen recording app to track the mouse position this is not how somebody would have been able to recreate it he's literally saying that he's copy and pasting it and then claiming that he recreated it that's like me taking a picture let's just do it where's where's the where's the uh image here we go that's like me saying I'm going to

(42:40) recreate this picture and and doing this doing this and going oh guys I recreated the picture guys I recreated it it's obviously fake like what are you talking about dude I tell you what you recreate the satellite thing accidentally you know figure it all out this is the same thing where it's like well I recreated the uh I was able to copy let's see you know they I looked side by side on the VFX and I and I modified this to make it match it's like well okay the person who created it would have had done it from

(43:10) scratch like doesn't prove anything anyone can copy something and take a screenshot of it and make it exactly match it's that's simple and that took him days to do it took him days this guy he does he wouldn't even say how long it took him because it took him several days to even just do that now imagine somebody trying to do it from scratch and having to make the coordinate program so that they have an accurate coordinate program guys gez man so okay I think we've addressed the next debunk that's going to come out so

(43:43) I'm already even preemptively debunking the next fake debunk they come up with so redditors you lost that one don't bother with that one if I see it I will call it out and I will clip this segment to prove that I called it out before you guys even did it okay I think that's about it for tonight guys uh I want to go to sleep early tonight so JK Philly fans the next debunk is to generate the layer somehow change xif and save it in a video editing for yeah so that's the problem with how uh how much time we've given

(44:22) them now right they've had so much time to fabricate debunks where they can start getting pretty elaborate with it and that's why like we've already especially if it comes from Reddit especially comes from the debunker subreddit you know uh it doesn't really have any credibility they've already banned Punjabi Batman like I think he's on his like second or third

account he reached out to me and told me I don't even know if I have his third account on on Direct message anymore um and then uh they just

(44:50) admitted that they Bann That Wall Street or WS advisor guy as well like they're you know nothing they say can be taken seriously they don't have any credibility whatsoever not to mention they committed felony fraud against me fabricating evidence too so honestly they're just they're out of the game they don't matter if they want to come help solve the case please do please help solve the case as opposed to trying to **debunk** something that you should have no invested interest in trying to **debunk**

(45:20) anyway it's easier to do something from scratch it's definitely definitely not man definitely not yeah so I think that the problem is like some of these people just don't have any logical thinking skills whatsoever right yeah yeah and I'm sure like just think of the like a lot of them like the only ones that we've seen are there really bad crappy attempts like imagine how many of them have tried and failed and don't want to admit it right probably a lot okay any questions you guys want

(45:52) before uh we close out for tonight yeah so quiz AAL gets it that's why Recreations mean nothing because they have a reference The Originals have no reference it was really hard for the c or the uh what was it the lore Lodge guys to understand this which they just if you can't understand that then like I I question your your mental faculties right it's not a complicated idea it's not a complicated concept is that the person who created doesn't have anything to copy it from so if you say oh well I just I I looked at

(46:24) that one and I matched it and I copied it yeah okay that doesn't prove anything cuz the person who supposedly created the mythical hoaxer that we can't find that doesn't want \$150,000 they wouldn't have had that luxury right if you're trying to convert this thing in the background or this thing here to the thing in the background you can't look at it side by side that's the whole point they wouldn't have had that benefit and they go uh but uh uh that's literally what they do right they just

(46:54) get mad because they don't have any actual arguments yeah the Gorgon stair seems to be a groundbased surveillance so I I I think that we're we're pretty firm on the idea that it was must have been an mq1 C with aerial surveillance cameras yeah thinking and basic logic is not what the **debunk**ers do best at that's for sure and uh the maximum irony of course is the the **mick** West comment to uh was I streaming that I don't think I was streaming that uh what's his name um Let me let me look real quick what was his

(47:35) name the Skinwalker Ranch guys guys we're back we're cool with Skinwalker Ranch again guys Brandon Fugal right so Brandon Fugal followed us the other day and when he and **MC West** went back and forth he he impressed me I didn't even know I had no idea what I would imagine what Brandon fuggle would say i' never interact with him ever and he basically said that yeah the **debunk**ers they just cherry-pick what they attack right like they cherry-pick literally one frame and they try to **debunk** something based on

(48:04) one frame mck West goes well no you need to give me more evidence right dude I I unfortunately the space ended one minute before I was about to just bury mcwest CU I was going to say you literally ignored 14 pages of evidence and decided some videos were debunked because you thought one frame matched which didn't match like it literally proves that they're not trying to look at the evidence at all what they're trying to do is cherry-pick something they can argue against and ignore everything else

(48:33) and that's what Brandon Fugal was telling them about Skinwalker Ranch it's the same thing they do there as well and then mcwest says oh well you should give your evidence over to Reddit and metabunk and I sit there laughed I'm like oh my God that's the those are the last places in the world that should be analyzing anything there's nothing valid that comes from Reddit uh metabunk is even worse metabunk is just literal cultist of Mick West and that stream yesterday where they were talking about

(49:00) it's all just Mick West cultist modifying Wikipedia no wonder Wikipedia is such a piece of crap it's just all his cultist sitting there and like modifying it making him look like he's good and then just like editing everybody else to make them look like crap like no wonder Wikipedia is just trash right it's a bunch of CNN brains just like Pro posting propaganda on Wikipedia yeah he's not even worth talking to but I did want to like I wanted to address the stuff like Brandon fugle didn't even

(49:31) do that good of a job he like should have cut him off right away instead of like letting him go on and on and on and on just repeating himself over and over and say well you have to give me more evidence to look at as if he doesn't like just ignore all the evidence that he gets right um I don't think your stuff's getting deleted I might not be I didn't have it on live chat okay yeah Bert you're right it's not a good look nobody nobody thinks it's a literal 100% match Bert yes they do they say it

(50:02) all the time they say it all the time it has to be a 100% match that's how it works how else would it work if it's not a 100% match doesn't that mean it's not it doesn't if this doesn't exactly match how is it in our thing how is that our effect if it doesn't match how I'm misrepresenting the argument they literally only argue one single frame that's it I I'd say the only people misrepresenting the arguments are the debunkers I've been clear from the very beginning even going back to August that

(50:38) I said what the standard of evidence for the debunkers is come up with a full story for how the videos were faked including beginning with regicide andan being in on it because reeside andan would have to be in on it otherwise when he says received March 12th 2014 he would have no reason to lie because if he received it March 12 2014 then the videos are 100% real there's no debunking them no one's creating a fake video in uh 4 days with when there was literally we still think it's in the South China Sea we still think the

(51:11) planes in the South China Sea and we've got coordinates of it over in the Andaman sea doesn't there's just no chance it could be debunked if you got it like that so this is like again the

debunkers don't even address the first point there argument about it needing to be fake needs to start off with the presumption that reges sideon non is somehow in on it so tell us the full story about how they faked it like the whole full story not oh I'm going to address one point and poke a hole in it and try to poke a

(51:38) hole in it until I'm satisfied and claim everything is debunked that's lazy that's misrepresenting the argument that's cherry-picking I've got a full story of the plane flying off the flight path the fire scenario the person who leaked the videos you know everything all the witness wies Etc right I've got it all out there you know so the debunkers have what oh one frame looks similar one frame looks similar one frame looks similar uh what's wrong with metabunk is it's a bunch of people who have

(52:17) confirmation bias who as I just mentioned their whole goal is to ignore everything they can't address and to try to Cherry picked something people on metabunk are the types of people that think nothing can be real nothing can be real and they think that if you poke a hole in it in something even if you don't prove it right because again here's the other thing about the debunkers they have just speculation on their side they haven't proven anything ever all of it's speculation even going back to the jellyfish their main

(52:49) argument is they think it's a bundle of balloons that they CGI together that doesn't even really exist this I'm not joking that's I lit what they believe if you go to metabunk they'll say that oh I made a CGI bundle of balloons this is what I'm looking at a bundle of balloons that doesn't even exist that's purely 100% speculation purely if you go to the most almost all the debunks are like this just something they've invented that's completely speculative and yet they have the G and audacity to claim

(53:18) that we don't have evidence on our side that we're speculating absolutely not the problem is that both sides need to hold themselves to the same level state standard if you're going to hold me to a level standard where 14 pages of evidence where I go through the witnesses the leaker all the evidence for it if that's all not good enough then you need to hold yourself to the same level standard when you're debunking it that means that look what we're looking at here is not even remotely close you need to have like

(53:41) this for every single frame in both videos like that's the equivalent of how much evidence we have if like you were able to find a matching bfx for every single frame in both videos then I'd say yeah that's pretty convincing right just like I'd say if I got 14 pages of a whole scenario Narrative of a fire event with the batteries where the location of the batteries is in the right location where we've got 19 Witnesses or real people who are supporting it you know okay no this does not show that it's

(54:15) altered once again it's not how it works man this VFX the the Pyromania VFX has been used many times and as far as I know it's never been altered and it's been used in movies such as Starship Troopers I want to thank the debunkers for showing us that because it actually debunks the VFX debunk Starship Troopers didn't modify the VFX they didn't change it they

didn't move all the pixels around they didn't make it black or anything like that they literally just put it into their movie because that's how VFX really

(54:46) works you don't modify it especially when you've got all this extra stuff here that's not even in there so someone was like Hey I'm going to remove these little lines here all these little blur lines these these barely visible ones I'm going to remove all that I'm going to remove these dots over here I'm going to realign the edges for some reason why would you even do that right you wouldn't and the funny part is sometimes when the **debunkers** are lying what they'll do is they draw lines around

(55:12) here so that it hides that it doesn't match they'll draw a line where it covers this up so they'll make it look like it matches like they're just so dishonest it's it's really embarrassing really embarrassing okay are we good so I think is that enough I don't really like addressing it too much okay so let's let's address one more of Bert's questions it's hard to prove something when you can just say it's shadowy authorities faking things like the debris and the simulator data

(55:46) no the simulator data literally doesn't match like again that's not even my analysis that's Victor Ananello of the independent group even the people that even the people that believe the plane crash in the ocean know the simulator doubt is fake the debris is consistent with my scenario I haven't ruled the debris out whatsoever and then with respect to the shadowy authorities you could hold yourself to the same argument this is how easy it is to prove you wrong Bert you're the one making the

(56:10) argument that some mythical hoaxer made these real videos and you can't prove it you can't even find them even for \$150,000 I bet you if you offer \$150,000 for a whistle to come forward we might actually get a real whistleblower maybe the **debunker** should offer \$150,000 for a whistleblower who knows that the videos are real to come forward maybe you should put yourself to the same standards this is the irony this is the hypocrisy Bert actually showing us right now the hypocrisy of how they don't hold themselves to the

(56:44) same standards they're the ones making up fake stories they don't even make a story up they just claim oh some Bitcoin billionaire made this they're the ones literally just making things up too funny man okay Cole let's see what you got bud looking oh yeah the the jellyfish honestly I don't know what the jellyfish thing is I could probably **debunk** the jellyfish thing better than they would I would say that if I'm **debunking** the jellyfish thing I would come up and say that it's a drone with a

(57:21) with a tarp over it cuz obviously it has some weight to it even **Mick** West proved this the other day is that the balloons are going to be floating up into the sky if they're filled with helium they should be going straight up it has to have some weight to it um I would say it's like a tarp or something like that I'm just making that up the reality is I don't care about the jellyfish thing cuz it just it's not it's not verifiable it's just like something you throw out there where you're like hey here's a

(57:44) three-headed dog it's like okay cool that's pretty weird it's not going to like change my change my opinions on anything right I mean we don't even know know we can't even say if it's a UAP or an alien and and to me neither of them mov the needle at all in the discussion for me for me it's like okay I'm not seeing anything anomalous here I'm not seeing like you know I'm not seeing a teleporting plane right like part of the the crazy part of the MH370 videos is the forward- facing gravity engines we

(58:17) see on the orbs and the fact that we're literally seeing macroscopic phase conjugation if I saw a jellyfish and I'm seeing it with this Trail in front of it and it's moving in like train tracks then I'm going to go holy crap but if I'm just seeing the jellyfish thing just floating around the sky like going normal speeds what am I supposed to believe that the the alien jellyfish are attacking us to be honest with you it's like the least threatening Alien Invasion ever if I just see some jellyfish slowly

(58:47) floating at me I'm just going to go huh guess I'll go get the shotgun am I am I supposed to be afraid of it like I just don't get it man so the jellyfish stuff just doesn't do anything to me and you guys know my opinions James it was a flying Mike Obama dude don't we're gonna you're gonna get me uh Shadow band you're gonna get me shadow band man um I couldn't believe when he why did the 911 report have to have that in it dude the the Mike Obama thing and the the 911 report I want to pull that

(59:27) back up cuz the uh the Dan Hanley thing it's like he's taking shots at 911 in the uh in the uh MH370 911 Pilots report and then all of a sudden he's just talking about Michelle Obama B born Mike Obama I'm just going dude that is not necessary in your MH370 analysis not necessary man this too funny dude too funny um but yeah so I don't know man the jellyfish thing like it just doesn't move the needle for me it could be something cool it just and and like and the last thing I'll say and this we're

(1:00:05) talking about the jellyfish thing is like I think some of you guys said in the chat like where's the second video where's the video of going into the water and coming back out right cuz then you can rule out a balloon or something like pretty unequivocally right like I don't think a balloon is going to go in the water and come back out and where's the the video of it like going off in the outer space or whatever they said it happens right where where are the videos of all this stuff you just give me the

(1:00:29) video of it floating around in One Direction like if there's some video show me the good stuff man it really makes me question people like Jeremy Corbell although I have nothing against Jeremy nothing against them man they're just floating around I just don't get how people like Jeremy Corbell are like oh I'm going to show a floating jellyfish that's not doing anything normal but then I'm like dude uh here I got a video of plane disappearing out of SpaceTime with some orbs and the gravity engine in front of

(1:00:55) them spinning around on their axis showing a heat signature he's like nah that's not that's not not good for me he doesn't want to he doesn't want to expose this video look what

we're looking at here man how does he how is this not good enough for Jeremy Corbell floating jellyfish are but this video is not good enough like I I don't get it what what do these people want what do they want what are the UFO people want if you're a UFO person out there if you're Ross kohart or lousian

(1:01:25) or Richard Dolan Richard Dolan's out here talking about advanced technology teleportation what do these people want this is it you're looking at it right here here it is this is what it looks like poof plane gone I just don't get it I just don't get it what do they want man it's a military video it's a mq1 c Gray Eagle it can be verified like yeah yeah JK Philly fan dude we need to change so **debunkers** help me out man I'll join your side guys okay let's let's extend an olive branch to the

(1:02:00) **debunkers** guys do the **debunkers** want me to switch like like the Dave Chappelle racial draft it's like they the de bunkers choose Ashton Forbes I got to switch sides guys okay if you guys uh Photoshop or whatever all these orbs into jellyfish then I will come out on be on the **debunker** side from now on for all future videos it's been promised it's been promised guys you guys want me to join your team all **I want you** to do is turn these into jellyfish so I can post so I can post an MH370 jellyfish video bonus points if you add heat

(1:02:36) signatures into the jellyfish oh man honestly I will join the de bunkers I'm I'm almost ready to join the **debunkers** guys there's so many people in the UFO community that like I just can't I just can't I can't with them I'm just going to make if I join the **debunkers** I'm just going to make AI images of uh of uh Chinese lanterns for everything though yeah if I turn these if I turn these into jellyfish then Corbell is going be like holy Corbell is be like whoa some jellyfish you got rolling

(1:03:15) around there okay let me let me go show this on uh what's it called weaponized podcast let's get this on the TMZ we got the we got the jellyfish on here folks we're going hard I just don't get it I don't get it guys yeah it does feel like it's it's a matter of marketing for some of these guys right like what if i cho this up what if I chop this up into like 10c segments and I slowly released one one 10c segment every every week and I'm like guys wait for next week and you get the

(1:03:53) next 10 seconds okay next week I'll give you another 10 seconds of the of the MH370 video guys it's like like nah man I'm not trying to Market something here I'm just trying to get the information out there right the **truth** is not like clean it's dirty man it's ugly people don't want to accept it right away because it's hard to believe hell you think it was easy for me to believe that some orbs can circle around a plane and make it disappear hell no man hell no it wasn't easy for me to

(1:04:22) believe this the only reason why I believe cuz I'm sitting here talking to physicists and Engineers are going that's real and I'm like oh I'm like oh this is real okay well wow and I'm also going well I've never seen any forward- facing gravity engines in any videos right thanks Mustafa appreciate you buddy one pixel per week I'm going I never seen any for non-radiating barriers

and the other part too so just for the people out there the reason why I think the videos are real cuz I was

(1:04:50) already saying all the stuff about it like the super conductivity like when I went on confessionals podcast that was the first podcast I did in person like one of the first ones ever and I hadn't talked to any scientists or experts or anything like that and I'm sitting here talking about this is a satellite video this is how it works here's the orbs I don't I even said during that that I didn't think this was a metal ball I thought this was just a plasma field like I guessed all that stuff from not

(1:05:16) like guess out of nowhere but like I'm somewhat familiar with science um and that's why all the experts are coming to me because they're like oh this guy's guessing correctly and I'm sitting here talking about superc conductivity right and all this stuff and like that's what it takes and then all the experts come and they're like yep you're right that's superc conductivity that's a non-rating barrier uh we're looking at the monopole in here like with Bob Greener I didn't know who

(1:05:36) Bob Greener was dude I didn't know who Bob Greener was like like a month a couple months ago before that so that's why I think this stuff's real cuz it's like it's like if if you were like guessing the lottery tickets and then like you're like okay I'm going to play the lottery for the first time right and you're like I'm going to guess the lottery tickets and then you guess it you would think you have psychic powers now maybe not a good analogy because people are going to go you don't

(1:06:00) have psychic powers but it's it's an educated guess right like I knew about the double slit experiment so the idea of teleportation is not completely outside the realm of reality now a 777 teleporting is that's pretty wild but when you see it in two simultaneous videos of this high quality then yeah it's pretty damn convincing right okay oh one other thing because it's on the same line yeah we need to see some new jellyfish videos folks so here's something else I'm going to tell you

(1:06:37) guys here as well where is it okay so just a few these are some more reasons why now this is not hard evidence just to begin right away what I'm going to tell you guys right now is not hard evidence I don't have any proof of it right but but just some more of the reasons why even though I'm already 100% convinced the videos are real just some anecdotes for you guys I've had a person come to my DMs just one time ever and say that they work for NASA and they showed the team and they think it's real I had another I

(1:07:12) think I had two different people now come to me and say they work for major Studios major Studios they're talking about movie studios and they think the videos are real as well and they're not faked I had one person come to me my DMs and say that they have a friend that works in the military and they asked about the satellite stuff and they said well that's satellite technology from 10 years ago that this current stuff they have is even better than that I had another person once telling me that I'm

(1:07:43) not going to name or pull up my DMs on any of this stuff I'm just again just anecdotes but these are more reasons why I'm like 100% sure somebody else who's got a military friend who they told me a story about how their friend was super drunk and would call them like 15 years ago and called them up one night super drunk and went we have the ability to teleport objects and they thought like they told me they had hung around with them for so long that until I started reporting on it and they realized holy

(1:08:13) crap that person was not just drunk and full of crap they were really spilling the beans right not to mention the whole Source about General **Dunford** as well right so if you got all these people coming to you in your DMs and they're like I don't want to go on the record but I want to tell you that this stuff's real it's like man Jesus and those are just the people that that just don't want to go on the record I mean think of the people that we already have on the record we got salvator PI right I don't remember

(1:08:42) if he exactly said they're real but he doesn't even need to the fact that the way he approached us like I'm not an idiot people like Salvador Pas only approach random people like me nobody's like me who have tells me to make a podcast so I can interview him obviously he thinks we're looking at something that's real right Bob Greener sitting here going this proves this proves his uh whole plasmoid monopole toroidal fractal moments right we got uh Roy D Herbert in our repli going this proves

(1:09:14) my time my dilation Theory my physics dilation Theory unification Theory and we got like my best bud Dave Rossi he's a do D engineer he came out and straight up said he thinks the videos are real on our podcast I remember that so it's like damn dude mic drop yeah exactly right so how would I not think they're real so you think I'm going to believe some fabricated **debunk** attempts that somebody says all one frame looks the same of course I'm not I mean listen to what I'm dealing with in terms of the people who

(1:09:47) are coming at me with that not to mention that we've got the Marvel VFX expert Jeffrey Ford who came on the record saying with take at least four to six months and we got the top gun Maverick post on red or people like oh you can't verify that since when do Skeptics in the bunkers care about verifying anything they don't verify anything it's all speculation from them at least the person the the top gun Maverick person like they actually explain the argument which it makes sense I don't need them to be verified

(1:10:16) because their argument is that the hardest part is getting the plane speed to match like that right to match the real capabilities of the plane right so it's like man so for me guys the reality is you know I'll give the Skeptics in the **debunker** one piece of credit they're right there's probably nothing that can push me off these videos because that's what's on the other side we got the scales the scales are like this man one frame looks the same oh somebody claims to have found some clouds versus the

(1:10:47) huge weight of evidence of first of all I can just tell when I'm looking at a real video here right I can tell from the shake and everything else that this is a real video um but you know

also the way of the evidence of the experts who are like saying yeah so any last questions guys before we close out tonight so we addressed uh we did some addressing of **debunks** tonight what was this one no link no matching pictures oh and so already I was reading through some of the comments on the uh I was reading through some of the comments on

(1:11:22) the cloud thing and at first the people on **Reddit** were going there's no link there's no link to it and then people provide the link to it and then they go oh but none of the pictures match none of those pictures match and then somebody proves the pictures match and then they go okay the pictures match but it doesn't matter anymore that's that's their argument if you guys go read like I was watching it from uh last night when this started coming up and getting posted on there and then there's more

(1:11:44) and more threads on it and I didn't want to report on it right away because a I just don't really care but it started to get to the point where it's like okay we can't it's awkward if we're ignoring this right um yeah so it's funny to watch their logical progression of NOP there's no link to the the flicker okay there is link but none of the pictures match and then it goes to okay well they match but it doesn't matter yeah too funny and the ones like also the last thing I want to say too is

(1:12:10) the other argument that I find hilarious is where they go well how many pixels match well like all of them unlike their **debunk** the pixels actually do match this game and the funny part of that is like who do they think are the Hypocrites in that scenario if going to go how many pixels match H who's the hypocrite in their mind my favorite part is when people prove themselves wrong and they think they're making a point against someone else if you come out and say how many pixels match you're dunking on

(1:12:35) yourself man you're basically saying that you couldn't address how many pixels match and that you were wrong previously and then you're singing that's like a some kind of like own on me like I didn't even need the image to match but it clearly matches way more than the VFX does so hopefully the **redditors** and **debunkers** aren't dumb enough to stay that like if you're a **redditor** or a **debunker** and you're going how many pixels match then realize you're just dunking on yourself you're

(1:13:02) basically admitting that your VFX **debunk** didn't match you're the only hypocrite in that scenario it's pretty funny yeah or the people who was the person in the chat earlier who was going nobody thinks that the the image is an exact match the corridor crew literally said it's a perfect match and then in the next sentence says it doesn't have to be a perfect match yeah Emily McKenzie VFX from the 90s perfect match **Jonas** photos I've literally never seen two more different photos or the other thing they're saying

(1:13:35) is like oh well well somebody just took the another picture from the exact same angle at the exact same location what okay they took an exact same image amazing and only like what a couple weeks later as well amazing two weeks later someone takes the exact same picture of Mount Fuji incredible from the exact same angle with the exact same Lighting on it incredible

yeah yeah the Coro let's let's play that one we haven't played that one in a while guys where is it what would I call it I don't remember

(1:14:26) what I called it guys I have too many videos now also okay so just real recap while I'm pulling this up and we're going to we're going to play it out here uh I don't have any good science homework for us for tonight but man I found some good videos actually you know what I will we're I think that you guys should watch the one that we didn't get through last night I really do believe that the universe is electrical now I do believe that the universe is definitely Electrical uh I'll post in here

(1:14:55) again I think this is it yeah this one definitely watch this it's worth watching several times it's only like 10 minutes long definitely worth watching and anything from Ken wheeler is probably going to be pretty good as well um so Bert ask actually a pretty good question how do we know the flicker images came first Well turns out that the flicker images are dated with 2012 so if you want to make the argument that maybe they been me uh you know that the metadata has been changed on them or whatever go

(1:15:30) nuts go nuts man I guess that makes you the **debunk** you make makes you the conspiracy theorist then right maybe the uh the Chinese intelligence uh fabricated those images and postdated them on Flickr uh in 2012 go nuts uh okay so there's that uh what was I going to say crap I forgot what I was going to say you got me sidetracked um one of the things that I want to do next I think is I'm probably going to go back through and do an analysis of the letter to Ashton Forbes piece by piece because it's pretty

(1:16:13) wild uh like the the account has kind of just gone dark and somebody tried to recreate it but the recreation's terrible like I couldn't even get through the Recreation it was so bad where they like clearly used AI to write a script and read a script and it wasn't very good at all um oh I was looking for the corridor crew thing thank you that reminded me so I think that what I'm going to do is I'm going to do the the whistleblowers letter to Ashton Forbes I'm going to do a breakdown maybe not

(1:16:41) paragraph by paragraph but like several posts that explains to people why I found it so compelling and what parts were unique versus the parts that were original cordor is proving why everybody to everybody why they had to be YouTubers instead of a real VFX agency I honestly don't think those guys are even VFX artists I don't even think they're VFX artists I've never has anyone ever actually seen them do VFX before it wouldn't surprise me at all if they're just like producers and that they don't

(1:17:14) actually do any VFX at all and they just like have like their servants in the back they their lowly paid like interns do all the VFX I'd almost guantee it is in fact we may like expose them on that I want to see like actual them sitting there streaming doing VFX and doing work because I bet you that dude and Jordy lege or whatever his name is and Nico i' almost guess anything that they don't do any VFX at all I'd almost guarantee that they're Contracting out all the real work and then they just reap all the benefits

(1:17:52) right almost guaranteed that's what's going on with them I just have Spider Sense goes off with them whenever you see YouTubers sitting on a couch you know and not actually doing any real work or whatever High makes me highly skeptical okay um so yeah the letter to Ashton Ford is pretty wild man I don't know the other thing about it so I there's the yeah that Nick Nick obar yeah so s23 the nick obar one is the f one and that's what got me more convinced that the letter to me is real cuz it goes to show it's not

(1:18:28) as easy to fake as people think which is ironic because same thing to do with the videos right everyone thinks oh the videos are easy to fake everybody always just a really good lesson for everybody out there is that people always overestimate their own skills always even I do it at work right they say I could do that in an hour I could do that whatever right and then they get in there and they realize oh no this takes actually work work as hard everybody work is hard it's never as easy as you imagin it to be right oh I could have ai

(1:18:57) do that and AI read it first of all like the AI that they tried to create the one is like really bad The Voice they used was really bad the recreation um it just goes to show that the real one out there was like they put some they definitely put some time into it or some thought into it whatever it is like I'm I'm now actually leaning a little bit more towards it being some kind of foreign agency scop maybe I I'm still don't think it's real but I'm leaning more towards some kind of weird foreign agency side up

(1:19:27) it's just too high highly produced and at this point I'm I'm almost 100% sure it wasn't the Skeptics **debunkers** that made it because there would have been some gotcha at some point right they wouldn't have just gone cold with it they would have tried to kept us going with it or try to do something to to dunk on us or whatever right they wouldn't there's just no payoff for them and they keep trying to say that I made it or something which I just just tell you guys straight up I I could not make that

(1:19:56) I absolutely could not make that I would even know where to begin even know where to begin with that I wouldn't even be able to create just the graphical images just the still images they have in there I wouldn't be able to recreate I don't even know how that one dude's making all those images of like KT and all that how do you even do that how do you even make one like I saw an alien uh scientist had one where he's got like long blonde hair like I don't even know how to create an image of myself an AI image with myself

(1:20:18) in it I'm sure there's a way but I just don't even know how one day I'll find the corridor crew thing guys one day I think I'm close right here's the tailor set off blast waves so for the people that think oh that VFX was close well you need to watch this so let's just take this blast wave here and realign it over the VFX angle perfect match right perfect match here's another one perfect match so it's really easy to match especially on the blast on the outside really really easy and here's the third

(1:21:02) one right here right really easy uh we haven't we are so I'm going to probably make posts tomorrow I don't know what I'm going to do tomorrow we'll see uh but I'm going to

probably do an analysis of the Dan stuff probably several posts breaking it down because it's so long nah creepy stories is not battle grock the reason why it's not battle grock is because battle grock like flipped out when I started reporting on it like lost his mind battle grock's account got deleted by the way so I don't know yeah

(1:21:41) I was looking for the jury duty meme I've got it somewhere it's right here I found it finally I found it finally you guys I have so much stuff now so much video now I had to buy a 5 tbte uh hard drive to put all my stuff into because all my streams and stuff are like huge and I'm running out of space on my on my hard drive actually now um but yeah no it's not battle grock that made that cuz battle grock freaked out went like total psychopath on us after we started promoting it so there's no way there's no way it's battle grock

(1:22:17) although that's the kind of skill set you need somebody who knows how computers work in order to pull it off that's why I don't know that's why I keep thinking I'm leaning towards like um it being some kind of scop or something from a foreign intelligence Community which uh Chuck Castell video was it a lot of Chuck stuff gets uh Community not Community notes is going off the deep end man Community notes is becoming uh like fact checks now Community notes should not be used for speculation or opinion

(1:22:54) Community notes should just be used for factual related content like if I post a video of like the weird fly over I shouldn't be able to get community noted right because I'm literally just saying what is this I don't know what it is I'm not saying that it's aliens it should just be like if I say something that's factually incorrect that's when you should get community noted right Community notes have definitely been gamed it's sad and the problem is the way the community notes work is that

(1:23:25) once you if your post gets too high levels of visibility like once it starts to go over like a million views then you can't do you can't fight back against the community notes like the once the community notes hits the threshold you get community noted that's like I literally know how it's gamed now because I've seen it with Chuck's post like once his stuff goes like over a million or two million the community notes takes over and there's no way to make it go away super bad they need to

(1:23:49) definitely need to fix it okay let's close out with uh uh MH370 vers Coro crew s23 man yeah I don't know man I you got to realize like I'm a busy person I cannot I do not have time to address every single person's direct things that they want me to watch and see like you got to you people got to not be so parasocial about some of this stuff guys like I have 70,000 followers and I get spammed with so much stuff man I know everybody thinks their thing is super important um if you send it to me and I

(1:24:27) can see it I will try to take a look the best thing you can do though is try to clip it Etc anyway here we go yeah when you get noted you don't get monetized I found out too so that's really scummy no I'm gonna I'm gonna do it directly from uh this guy so as you can see here uh my client showed up for work on the day of the incident look at at that and perfect Recreation

this is just a second uh I'm going to have to have a talk with my nephew wait whoa whoa you know what I want to see it the

(1:25:05) video is not show it to me it's not it's not working here I don't I don't understand it's perfect exactly the same this what the jury just saw um I'm GNA that's the whole thing unfortunately yes that is not what the whole thing was supposed to be Not only was the animation so poor but it glitched and just froze up um so again we only saw like five I love the clip where you you see the dude with the J Forge glasses crazy it was absolutely crazy it's like the the defendant is getting hosed he's showing very clear

(1:25:35) frustration he's banging his hands on the table when the his attorney can't present a simple video you should have put Danny Jones's face on the defendant guy then that would have been the that would have been the Cuda gr dude but yeah that was uh that was pretty good so I love that yeah s23 uh uh oh your spirit of an anodos okay I'll take a look at that after this man so anyway guys have a great night yeah jury duty if you haven't seen the jury duty show I think it was on free you should definitely

(1:26:05) check it out it's one of the funniest shows I've ever seen that that clip in the in the show too is hilarious I couldn't stop laughing at that clip that's the part where I thought he was for sure going to figure it out it was so ridiculous okay guys uh have a good night we will talk

MH370x - Remote Autopilot then Science 1/22/24 - YouTube

Transcript:

(00:59) for malan 370 contact 120m n breaking news tonight A Malaysia Airlines flight with 20 39 people on board including four Americans has gone [Music] missing [Music]

(02:05) I remembered the line from the Hindu scripture the Bhagavad Gita Vishnu is trying to persuade the prince that he should do his duty and to impress him takes on his multi-armed form and says now I am become death the destroyer of worlds yo yo what's up everybody how you doing tonight welcome to the MH 370x stream guys so first thing right off the bat just want to say hello to some people alien girls Sue Kathy my channel rip zip Cosmic Alex hey look Bernie's there thanks everybody yeah smash that like button hit that subscribe button

(02:59) appreciate you guys a a lot uh I'm going to I am trying to increase the production value of my streams in the sense that I don't want to just be doing random stuff with you guys on stream I want to kind of keep it kind of focused especially so if people are watching these afterwards that they don't have to sit through too much downtime they can really get to the

good content watch the investigation unfold okay now that we've said that uh I want to throw a little shout out to alien girl out there uh alien girl has

(03:27) uh been you know in this UFO Community for a long time she's been putting the work in she's got her own stream I've been seeing her on Twitter posting her stuff so if you guys want to follow somebody follow alien girl don't get parasocial with it I know how you guys get with these uh with women online so let's not do that guys let's just be normal people okay now we've dressed that hey Ellie hey Sandy hey Lang yeah appreciate you guys um and so what are we going to be going over today

(03:56) first of all I just want to do a little recap of some stuff that I posted on Twitter uh so let me pull that up and let's get this show on the road after we do the recap then I'm going to go into we're going to read through very quickly we're going to go in through some of the 911 pilots.

(04:13) org stuff with the remote autopilot actually I don't need this on do I and then after we get through the remote autopilot stuff we're going to go through some science as well tonight okay probably yeah so we'll see we're probably going to get ourselves copy right strike but don't really care it's worth it trying to get through the stuff here um okay so first things first I posted I've only made a couple posts today uh first thing I posted this weird UFO video I'd never seen before it's rare for me to not see

(04:48) a UFO video yeah 10 year anniversary is coming up real quick so hopefully we'll see some people may want to reach out maybe not don't know we'll see we do have uh I think there's a stream uh podcast coming up on Thursday maybe another one on Friday so we do have stuff going on guys think there's a pretty big one on Thursday should be good but I don't mind having a little bit of downtime to work on some of the other stuff that's out there hey cryptic conversations welcome buddy and hey Emily I see you

(05:21) too uh no I haven't been contacted by Joe Rogan would be of course I'd be interested in doing Joe Rogan guys of course that's the dream the dream but I think the reality too is that we've got to start to realize that we've done some pretty huge shows guys so people out there are definitely familiar with us if they're not talking to us it's probably for a reason and that's okay not really uh that big of a deal you know I think that we can't can't be forcing the issue with people what I would really like to

(05:47) do is to increase my podcast uh like uh production value um get them edited better get some more like intros stuff like that better thumbnails get them loaded on to Spotify so people can listen to them there and then I would like to be interviewing more uh serious people serious people people who have either done out done the research out there themselves uh have very interesting topics or people who are like in Congress right I think that talking to people in Congress is really big so I have reached out to some

(06:19) representatives and their staffs and hopefully they will take us seriously um I think that

we represent uh a younger blood and a little bit different take on phenomenon and the topic in general whereas everybody else all the UFO researchers out there are super into the aliens and the craft like we're into the advanced science that's out there right and the conspiracy angle of it who's hiding this stuff from us we know that we haven't been doing nothing for the last 80 years you know we've been doing stuff for the

(06:47) last 80 years so hold on I just realized before I show this that I was like about to reveal my DMs so let's see if we can avoid doing that we'll do our best hey Amanda see you too see a lot of the the frequent followers out there okay full screen um also I was watching a pretty interesting podcast right now that was going over the manipulations in the UFO Community uh and how these uh Skeptics have been manipulating Wikipedia which doesn't surprise me because Wikipedia is awful um but so we might be doing

(07:22) something on that a little later so first thing you may notice is we got a little Skyfire logo up here ooh Skyfire logo logo that's because I support Skyfire news I'm not ashamed to say it I think that you guys know I'm unlike the uh the detractors and the haters out there that are all trying to keep their little clicks hidden even though we can clearly see them retweeting one another and hating on people uh I don't I don't hide who I support uh I keep it right out in the open I'm a big fan of

(07:52) keemstar even though I know he's into the whole drama side of it I want to try to bring the uh discourse in the UFO Community up a notch so that's the reason why I've uh aligned myself with uh Skyfire news who's got T pabra and red panda they've been putting out amazing content guys amazing content so this kind of Skips ahead a little bit but I want to take a look at that so here's the post I just put out I told you guys yesterday I was going to make a post like this talking about what kind

(08:20) of stuff I'm going to be posted on Twitter I just felt like it might be important for people to understand where my mindset is in terms of the content I post on Twitter so we're doing a little real quick recap here guys then we'll get into it so of course most of the stuff's going to be related to MH370 these streams are all going to be related to MH370 unless you don't see the MH370 X tag on the stream okay I will be talking about some other conspiracies some of the ones that are out there that I want to post um in the

(08:47) near future I have two one I'm going to do a thing on the chant Thomas so I'm probably going to do a follow-up tonight as well about the investigate Earth podcast I did and when I do that I probably or I I don't know if it's going to be tonight maybe tomorrow but I'm going to post some of the evidence that I found around predicting of earthquakes and how the US government is like actually monitoring the magnetosphere so that's a pretty interesting topic and and it's funny because it links to that

(09:13) YouTube channel I haven't looked at that YouTube channel a few days but it's kind of weird they just went dark all of a sudden as well very odd stuff um in addition to that I will be posting UFO videos and news occasionally but only if it's something that I find pretty compelling

or interesting sometimes it might be stuff that's silly like Miami aliens other times it might be things that are a bit more serious but I'm probably not going to be like the UFO news guy right that's for the Skyfire

(09:39) news that's for all the other boring ufologists that are out there that just retweet one another at least Skyfire news packages it in a format that's uh you know easy to digest and then of course I will potentially be doing some offbeat stuff some of the joke stuff that I do about **debunking** and what have you as well as some political content here and there although it's not going to be a lot of political content I mean I'm just not really that invested in the political stuff I am invested in some of the

(10:07) conspiracy stuff which of course goes into the political stuff but um I don't know we'll see how that plays out no no promises on that uh acrona hello acrona says real creepy stories said that they'll be preparing something a little different in the next video take longer to publish interesting I'm interested to see it I'm also will probably be doing another followup on the real creepy story stuff the more time has gone on the more credible it's seemed they haven't like tried to force the issue or anything I

(10:38) kind of ignored them for a while and the chantas stuff was weird and then somebody else tried to do a recreation I'm going to show you guys that real quick **I want you** guys to to see this other Recreation uh where is it here here's here's another one okay so **I want you** to see how bad a bad Recreation is with using AI guys cuz some people said they could make it in in 5 minutes or whatever well listen to how awful and obvious a bad Recreation is the mystical the Enigma of Flight MH370 disappearance plunged the

(11:19) world into uncertainty Ashton Forbes a season investigator with an affinity for the Arcane embarked on a quest to unravel an affinity for the Arcane I can already tell within 10 seconds that this was written by an AI within 10 seconds guys I can already tell that this was written by an AI so and they use this silly this background of my VFX comparison which gives away the fact that this is probably some **debunker** person or something right so the cosmic tapestry surrounding the the cosmic tapestry you can really just tell right away that

(11:55) they fed some information into an AI and told an AI to tell them what to say right the AI voice is also terrible as well right plane cities of sacred geometry the Department of Defense and international agencies alarmed by Ashton's Pursuit orchestrated psychological operations with orchestrated psychological operations like this is just it's it's awful like this is honestly the best I even like I I can probably just stop right here right like when I heard this I went wow this brings even more credibility to the

(12:25) other one cuz now I'm sure the other one wasn't created by AI social Engineers to thwart his progress social Engineers manipulative tactics sought to Cloud Ashton's mind and SE Discord among those aiding his quest no one talks like this yet undeterred Ashton pressed on deciphering the intricate Taurus shape formed by the orbs Quantum dance the orbs the orbs Quantum dance it's like they had grock on fun mode when they FedEd the AI That's like what to

say on this led him to the enigmatic nicobar

(12:56) islands in the classified Diego Garcia base okay so that's enough of that it's uh I mean it's really bad so it goes to show you how difficult it would be to make the letter dashton Forbes where a it doesn't have any obvious sign of being written by AI um you know like that one is so obviously to be written by AI right there is nothing yeah like the word choices it uses the way it phrases everything like not even close not to mention the a the voice sounds Terri terrible as well right so I don't

(13:32) know anymore man it's like I I go back to the video I'm like damn that letter to Ashton Ford is actually pretty damn compelling now I listened to it a couple more times and I'm going it's pretty weird guys and I think that also you've got the fact that the **debunkers** are trying to say that I made it that's also a big red flag big red flag to me that says that they're scared about the letter too that it see that they think it's very credible too cuz that then they if they're saying that only I could make it

(14:01) then and I didn't make it then uh oh boy then yeah it does must be pretty damn original so okay so content announcement again the reason why I'm supporting Skyfire news here is a they're my friends I there's some of the people like uh red panda and tupacabra who have really helped give us a voice even early on in some of the spaces some of you guys probably don't even know this but some of the the Twitter spaces where I first started to get a whole and UFO the UFO Community was with those guys and

(14:32) they were some of the nicest people ever and the moment I promoted them at all and I did like a co-host with uh Tupa I had like a million people like Bots like ragging on me it was super weird so anyway make sure you give Skyfire news a follow guys they deserve it 100% let's build this channel up and then we can have awesome content you know like they put they're putting together some pretty cool stuff out here that I think is you know and like look how much stuff they're putting out huge amounts of

(15:04) content right definitely deserves more attention out there especially compared to some of this other stuff that's out there right um I will talk quickly about the Bismuth in a second let me get through the rest of the things here I'm going a little slow I also put out the video that I made with the personal statement earlier this morning here as well so I I stole this from the letter Dash and Forbes you talk about them right like if you think about it that really stuck with me how do you expose a government with nearly unlimited power

(15:32) and Technology who has full control over the mainstream media I didn't put mainstream in here because there's like a connotation of you know conspiracy people when you talk about mainstream but let's be honest we're talking about mainstream media here right uh you talk about them that's what you do you talk about them you talk about it you make sure it's out there in the Z that's why I mentioned we've already won in a sense right because we've got it out there when people talk about MH370 it's awward

(15:59) AK if they don't talk about the fact that we're sitting out here exposing these videos okay um again I also posted this UFO video this is the one that I was showing before I had never seen this apparently goes back to 2008 I I it's surprising because in the last like five years I feel like I've seen so many um so many UFO videos and somehow I hadn't seen this one now why do I think this one's interesting you see what it just did right there it does this it does some pretty anomalous moves this is not a satellite

(16:30) okay no there that's not the right one this one is just camera moving sorry there's one that does later on here though where it seems to be moving pretty fast now like here I think is the one now maybe it's hard to tell if it's just a camera moving or not like right there maybe it's just the camera moving and I'm just being silly um but anyway I thought it was an interesting video to post so posted it uh obviously didn't get much traction but I don't really care I'm not doing this for clout

(16:59) okay uh so I haven't posted much today I was pretty tired whatever blah blah blah yesterday make sure you catch the big pieces on the suspicious deaths of these um these uh seals it's kind of interesting that they reported today these other seals died as well now it wasn't they're not connected let's be honest but I mean it was 10 years ago this happened but it surprises me there I don't think there was any ever investigation into this into the seals so if you want to watch yesterday's

(17:29) stream we went into that as well okay uh the Bismuth I did uh I did take a first shot at the bismo stuff uh I went to my parents place went used their fireplace cooked the Bismuth down a little bit I forgot the plate I left it there so I think you guys were right I am going to need a lighter magnet I didn't realize how heavy these magnets are they're really heavy I'm going to need a lighter one and I'm going to need thicker plates of bismuth probably but we'll see I took a first run at it I

(18:00) made a plate that's like pretty thin probably about the width of this phone maybe a little bit less and um yeah the story yesterday was sad and disturbing and then I I threw the magnet over it just to see if I felt anything and I didn't really feel anything so I have a feeling that it's going to have to be pretty thick the Bismuth in order to make it levitate like that and I think the magnet's going to have to be pretty small so I may have to buy a new magnet uh we'll see but it was really cool really fun so when I

(18:30) melted the Bismuth down it was weird like it wasn't even like water it was like it was almost like what I expect like a Bose Einstein condensate to be like where it first immediately like shrinks a little bit and then it becomes just a straight up Liquid where like even in The Crucible where I'm rolling it around like it doesn't get stuck to the wall or anything like it's just like a solid liquid like a ferro fluid or something it was it was really cool that was really surprised especially because

(19:00) that bismuth is so dense so thick it was bizarre so more to come on that you know I did the first did the first thing on there uh first go at it and we'll see how it goes uh going forward so

that's the bismo thing okay uh let's dig into the uh I think I did I take a video of record melting let me see I took a couple videos I don't know you can't really like take a video of it melting but I did take one of it in the fireplace yes um but yeah it does look like Mercury actually it's exactly what it

(19:42) looks like when you think of mercury that's what the melted bismuth looks like what I'll do next time is I'll take a video of it when it's melted you can't it's not like you watch it like melt all of a sudden it's just like shrinking and then all of a sudden there's just liquid in there and then you'll see like a little almost looks like a little iceberg in the uh bismi like liquid just sitting on top and then it's just it's gone and it's just liquid and then when

(20:04) you take it out and pour it it's like very it's not viscous really it's just like really uh like thin liquid almost would be like how I would think of it very very bizarre it was really cool though really cool so okay let's dig into the rest of the stuff let's get going with it here pull this over pull this away over here I have so many windows up for stuff that to like look into um and and stuff to post and what have you not going to be shy for Content okay the next post about MH370 I want to be

(20:42) about the uninterruptible autopilot that's the next thing I want to get into with this yeah I think doing the science experiments going to be fun but I don't know if I have the production skills sorry about that the um the video production skills to like make it into be something really cool but we'll see I'm I'm going to try I'm going to try what we really need to do is I need to be able to get it to float on the magnet or or whatever but maybe the key is it has to maybe I really need two plates

(21:08) maybe that's the answer like maybe you actually have to have two plates and then that's what allows it to float between them not sure hey Pamela you're not too late you just missed the recap so you can go back and watch it if you want now we're going to start in the middle of the report here page 36 there's 30 pages we're going to try to get through these pretty quick and then I want to jump into some science today uh the first thing I want to point out is what did we miss before you get

(21:34) to page 36 here is it pretty much goes over all the patents related to the interrupt uninterruptible autopilot for Boeing and there's a lot there's a lot of them so I was already convinced on page one but it goes on for like another 30 pages so if you guys don't want to believe that then it's out there I think that actually reminds me I have another thing somewhere I'm trying to find it I have something somewhere not sure where I put it sorry I'm looking real quick I thought I had a link to something somewhere that

(22:27) talked about how somebody had used a cell phone to take over a plane let me see if this is it just see if this is the one no not h so this is the one it talks about the fire scenario a little bit the electrical fire yeah why elt not be transmit I don't know okay let's just get into it I I have to dig for it later um Let me let me just Google it real quick as well uh cell phone autopilot if you guys can find it and send it that'd be good take over plane there was definitely a story out there

(23:37) of that happening and I wanted to add it onto my thing so I'm going to probably have to dig around for that we'll see I may have to just post this tomorrow okay so uh we know qualm po took off there was 238 people on board uh we know that the planes can be autopilot maybe it was in here no I don't think so okay okay this just talks about the flight path we've already gone through the flight path a lot if you needed uh a refresher on the flight path take a look at my video on the YouTube related to

(24:08) the flight path explainer you can pull that up right now while we're going through this if you want um it goes to the point where there's the weak point in the uh I need some caffeine goes to the point where there's the weak point in The Radars between hoi Min and uh qual andur Malaysia and that's when the pilot disappears or the plane disappears and the last communication good night Mion Airlines flight 370 at least the last public one okay they talk about the location I want to to know where they

(24:59) think it was taken control of so the failure of the officials to disclose the turn should raate suspicions that the information as received by the public has gone through a layer of filtering I like that we're going to take that so oh we also are going to make a **Reddit** post tomorrow as well not going to promote it too much though cuz we know the **debunkers** are going to be trying to make alt accounts just to down vote me even though I've blocked most of them okay save this real quick autopilot okay we're going to grab

(25:54) certain Snippets out of here I like that one that that's a really interesting one right so there's so much obfuscation that happened after when this was going on this is why if somebody's like too young and they were a kid when this happened like you're not going to have the insights that are required to understand why this is such a big mystery and I don't mean that to be rude to anybody but for those of us who are adults when we were watching this happen the plane disappeared like none of it made any

(26:23) sense at all not just for days for like weeks and months and they were obfuscating so much information it felt like something was not right okay so it made this this turn uh ascended to 45,000 ft then dropped to 29,000 ft I don't really believe the uh radar data though why did I get banned I don't think you are banned are you switch it over live chat for people rip zip I can see you think people can see you bud for people who have oh okay yeah there's nobody out there who doesn't know why I've blocked them you really

(27:23) have to be just a douchebag to block me or to get blocked by me on um on Twitter yeah I ditched I mean I ditch rdit guys I I did ditch rdit guys I did I dited dread it pretty hard but I am going to make a post tomorrow we'll see um okay so the beop the B hop is the Boeing uh Honeywell uninterruptible autopilot okay so what we want to figure out is when does he think it's happening okay so blah blah blah was there so I oh we would contend that this retic trajectory was aimed at simulating an inflight emergency

(28:26) huh the S Mode beap completely cuts off satcom Communications hello let's take that so this can to be an explanation for why sacom went off theoretically if we believe that it went

off Okay blah blah [Music] blah yeah I mean I don't think they simulated an emergency I think it was a literal emergency that's the difference so what I'm trying to figure out I'm going to grab some water but what I'm trying to figure out is why they uh when they picked up the plane if they autopilot it when did they pick it

(29:28) up with autopilot I'm definitely not ruling autopilot out uh but I think that it's a question of when they picked it up with autopilot if they did use it I personally right now I'm not of the opinion that they autopilot it from the place where it turned around you wouldn't autopilot it to panang airport right if it's going to panang airport that means it's an emergency I'm going to be right back okay Malaysian officials will not release page one of the cargo manifest that's interesting guys this

(30:26) connects we better we better take that I don't know if that's true when was this report put out does anyone know when this report was put out yeah free scale is the most likely motive yeah everybody agrees right okay that didn't work what the hell whatever copy there we go okay so free scale is definitely the most likely motive you could say stealing the cargo but there's easier ways to steal cargo without stealing uh three nearly 239 people uh I don't like linking Israel to this

(31:35) seems just like needless and the 911 stuff linking that we're not going to be linking 911 to this there's just again just to be clear like there's no reason to even do that from the conspiracy standpoint when you start linking your conspiracies together now you are opening your stuff up to scrutiny on a level where it's not necessary right like the moment you start using arguments like oh it's been proven that 911 was done by uh actually in this case he's not really going all there but the moment

(32:12) you start talking about 911 conspiracies and trying to link it you're you're just opening yourself up to scrutiny that shouldn't be necessary um ga tesis oh look he mentions it right here he mentions the ga tesis thing in there huh mentions the G tesis interesting let's type that yeah we got enough to work with we don't oh there look there's even the screenshot that we use right here okay so what's the connection here the two Iranian passengers are interesting as well this is interesting

(33:13) how much of the same evidence they're using right you don't need to talk about 91 to talk about the the technology though right that's the problem that's that's what you shouldn't do right never link your conspiracies together it's just not worth it let let your 9/11's conspiracy stand on its own let your MH370 conspiracy stand on its own right I mean you got to know the media is going to use that link against you 100% doesn't matter if it's true or not anyway after the facts about tell

(33:51) been widely available they faked a press release admitting to the purchase of the little aircrafts yeah like this right here it's to totally unnecessary man totally unnecessary I'm not even going to say this out loud cuz I'm afraid YouTube is going to strike me this this is all unnecessary you don't need to have anything about you don't need to take swipes of Michelle Obama in your

in your red text funny though okay um so they potentially faked a press

(34:57) release about the image I'm trying to think does that matter what Big Mike say yeah that the nicobar one's fake s23 I only needed 10 seconds to listen to it it's all fake it's somebody who's trying to pretend like they could recreate the real ones don't don't waste your time if anything they lended more credibility to the real the real uh videos the the person who made the second one was trying to get us to go all in on that to try to show us how try to show people how gullible we are it's very obvious

(35:39) their their intention everything's very obvious about the second uh video that we played earlier today uh don't waste any time on it it's a very very very poor AI Recreation that is uh they thought they were going to try to prove how easy it was and in fact they like the **debunkers** and Skeptics usually do they did the exact opposite proved how hard it was to create the AI the real AI one that we got Mike Obama guys you guys are gonna get me straight canceled man uh Co cop tiger did I skip ahead here yeah I don't know about this press

(36:22) release thing I don't know it seems kind of bizarre Michael too funny too funny man guy's got good sense of humor out there yeah everybody's been going off on Michelle Obama huh uh okay two the cop tiger awax used flash override authority to electronically disengage the beab okay now this is I like this I like folks I wanted to understand why supposedly the aircraft would ping at that time so this is a this is an explanation the awax and why is this important because Katherine T at the same time sees the

(37:12) awax what what is this there it goes okay Katherine T sees the awax roughly around this time probably within like 10 minutes I don't know the how to say the French dad's names Barry S Soro guys you guys are GNA get my YouTube channel struck imet have themselves said that the behavior is highly unusual the as reset allows for the awax to control MH370 while seeking further instruction and then 3 minutes later communication is lost again yeah see he's trying to link it to 911 again not worth it man not necessary

(38:15) more importantly okay I found something crazy especially reading the article about ebo scientists you should show us day please please watch the interview Dolores Canon it will blow your mind guys I just so I don't want to be rude people but you got to realize man I don't have time I don't have time to be watching hourlong interviews with people that aren't related to the case I wish I did I really don't I don't even have at time to be answering all my emails right now related to the case

(38:41) right so I PE I get probably 20 different requests to watch uh hourong YouTube videos every single day on Twitter and what have you uh I was eating dinner with my parents today my mom asked me how do you respond to all the people people and I just told her I don't I can't I literally can't like not even I can't even come close I've already reached the point where I just too much stuff so the way if you want to get me to see content what I need you to do is I need you to clip the exact segment you want me to

(39:13) listen to so you can reply to my Twitter you can say here's a YouTube video listen to it at 1 hour and four minutes or whatever right clip the stuff you think is important better yet you can download it clip it yourself post it on YouTube and then tag me on it right that's what I need from people okay cop Tiger's annual military exercise yes blah blah blah that's true so March 10th is the official date cop tiger 14 annual M multilateral yes it takes place at the karat Thai Air Force Base in Thailand okay where's that dude why is

(39:57) my copy paste not working I promise we're going to be getting into some science here Mike Obama man the Mike Obama thing is cracking me up man okay so this is way over here H so as potentially would have been over here I mean they would have been the right spot to intercept a plane from when it first goes dark I haven't watched all of L centry yet but I know about it and without even watching it I know I already agree with it I know I already agree I've seen enough in talked to this Dr Steph Greer enough to know

(40:44) that totally agree uh I saw Mike Obama during Ripple Moon I hope they put out some more space fence stuff man I love space fence Spain fence is the silliest idea ever but I mean of course it's got a rational useful idea but it just seems so absurd we're sitting here cutting down real fences but we're putting up space fences um so 76 aircraft were used in the uh cope tiger the flight path would have taken it right past cop tiger military exercise well there we go let's go ahead and clip that well we just take this whole

(41:45) paragraph damn this uh Auto interruptible autopilot thing is going to be pretty good man H if we were to presume the awax or similar electronic uh equipment from cop tiger were to use defense red switch Network flash override sounds made up but I'm sure it's real facility to reset the aims and initiate a second abduction we would see a similar looking lock wow Bingo guys okay everybody who's watching look at this so now we just develop we have evidence here now so what if Dan Hanley is slightly wrong what if there was a fire and they

(42:42) didn't pick it up right away they pick up the plane at 225 that's when the connection happens again or 228 if we were to presume awax or other simil electronic aircraft from cop tiger would use their thing to reset the aims and initiate a beip Abu abduction we would see a similar log on request so 225 is when he saying that we would have seen the awax take over the plane wow ch- Ching oh let's go ahead and take that let's take that this is what I was looking for guys this this was the spice man I should have skipped through the

(43:28) first 20 Pages he had me at page one I didn't even really need to finish the first 20 Pages that's big guys this is really big they really could have taken over the plane here what if they take over the plane because they've got to have the plane under control when they orbit wow what if they have control of the plane wherever it goes as well yeah we got to add 225 to the timeline 100% uh yeah we should Pro we need to add this this is very interesting this probably needs to get added to all evidence as well this is

(44:11) this is huge I mean I knew about the 225 login but I just this is another one of those things where it's been out there I've known about this the whole time but I didn't have any

connection to this to the the rest of the plane rip zip yeah chill out man uh hope you didn't get banned there oh who did I just block oh I didn't mean to do that dude sorry Barry I literally mislicked can I unhide that I can't unhide your message man I'm sorry I was literally just trying to make sure this guy didn't get blocked

(44:47) and I accidentally blocked Barry my bad dude my bad hopefully Barry tell me you're live Barry tell me you're alive yeah that's huge right there oh no what did I just do so that's huge so yeah here's the hit right here oh we're we're screenshotting this interesting we would contend the location would logically be Diego Garcia Barry are you still out there Barry guys do we know if Barry's okay oh man I don't know if Barry's out there hopefully he didn't get Perma baned from a

(45:52) misclick the remainder of the journey okay so they what are they going to do with these rest of these pings right guys that's what we want to know um I'm going to put the link in the chat so you guys can follow along yourself dude I'm getting worried we're not seeing want have a drink with Mike Obama oh okay Barry's there he's there guys he sees Bright Lights guys okay uh the receiving satellite records of the time the pings were received using the difference between the pings the speed of light air density

(46:25) okay what we can work out how far the plane was from the satellite when the plane was still missing on Sunday the day after it disappeared our Engineers looked at the network data and realized that the plane had been sending signals we couldn't say what direction it gone but the plane wasn't standing still because the signals were getting longer okay let's pretend someone from IM iMat has been waged wagged by the CNN dog waged from the first principles all this constant is the speed of light likely

(47:03) the speed of mh7 Zer on the time the S ping saom pings hourly okay well I've got some evidence for him that says that another somebody had made a post saying that apparently iMat was argu iMat had pings go off oh I just hit the camera am said had pings go off and the plane was on the ground a different plane was on the ground guys are going all in on the Obama stuff [Music] um the black boxes are still collecting data which is why the ooi system is still operational if we were to implicate lmad in a cover up yes I like that which we

(47:54) are the timing within the original data can be faked to reproduce a southerly track April 1st the F final ping locations are released to the public the seventh radial had gone to be replaced by an easterly turn countered to the satellite radial and to also counter the curvature of the earth which projects a straight line when filming to Latitude okay well let going to go ahe and take that I like Parts how if we were to implicate imrad in a coverup which we are exactly dude exactly okay notice the routine hourly

(48:48) pings from west of Singapore until the second to last ping saom recognizes the plane is in cruise and just maintains hourly contact hm this is why they're trying to say the plane goes south wow oh okay yeah no I'm even I'm 100% convinced now that's when the plane disappeared 1840 or right afterwards so this is why the reason why the the data goes dark there

is because the plane teleports and now the satellite pings are being faked or or fraudulent or like he's going to argue here that the plane is just flying somewhere else

(49:27) towards Diego Garcia we're going to argue maybe it is but it's not flying from here it's flying from like the Maldives the last ping is delayed because between t plus four hours 40 minutes or something or t plus 543 the aircraft was descending as it is not in Cruise the sacom doesn't routinely ping every hour if there is a change in Flight P phase remember all the other systems communicating with the AAR systems are off so the sacom is just using its own software to trigger an hourly handshake so under the assumption the

(50:05) speed of light hasn't changed the ascent Ping times were not manipulated let's assume that the average speed of the plane Cruise was 330 knots can be suggested that the match the matches the observed ping habits of the Saum system it makes it to the Garcia in time for the final on ground ping incidentally it ties in with the time MH370 was seen in the malds roughly 6:45 a.m.

(50:40) this is where I agree pretty hard our difference right is that we're teleporting from up here over to here and then they're flying down this way that's the difference proof over to here fly down he thinks oh they fly here and then they go over this way but this is the first fake ping 341 a.m 341 is 1941 ping okay 1840 is the one right up here this is where plane disappears and all the rest of the pings after this are sketchy they make no sense so this is where the plane they're using the teleportation or whatever they're doing to it and then somehow

(51:22) it's lining up with this Maldives I mean it's crazy how similar this is to our thing this is really similar I sent the uh letter to Ashton Forbes to field McConnell and he was pretty compelled by it apparently I heard back through an intermediary by the way I I haven't told anybody this until just now it was several days ago though and when I talked to him one of the things I asked him about was the technology and he said no I don't think the technology is real I know it is that was his response holy

(52:06) okay um emmer set's further calculations using the known speed of am zero can create enough of a Doppler shift in sacom uh that they could calculate the direction aircraft was traveling take claimed this is the first time anyone had done this calculation this way calling it novel called frequency burst analysis this is the that Mike exner and Victor elano just made up with the burst analysis has to be corrected by the satellite system to resolve the Digital Data encoded with it so it automatically corrects for

(52:50) satellite position and motion H so wait does this mean it's flying a positive a positive FBO correlates with the plane flying towards the satellite where's is JK Philly fan in here I'm trying to figure out right now if the iMat pings actually are just wrong in terms of how they analyze them the burst offset is always positive whoa

(53:57) they do not show which satellite recorded the earliest pings mh3 s a constant frequency error in the transmitter around 90 Herz greater than the frequency was meant to transmit on or

satellite had a frequency err consistently 90 HZ lower than the frequency was meant to transmit on MH370 was consistently traveling towards Diego Garcia's the last burst offsets are increasing I always wondered about this where's the part I think we're going to clip this you know Mike exner and and Victor

(55:17) they might get tagged this IMAP dad is total guys 100% I'm calling you out iMat your dad is I know it's the amide dad is presented by them in the graph above supports a flight route towards Diego Garcia not parallel or away from it this is completely beside the fact that we believe their time had been altered to fly the plane South wow oh hello I I don't know if you needed to write this in all caps but uh hello uh yeah so basically uh Sergio cavello and these guys are are are right it's the independent groups are the frauds

(56:07) the independent group are complete frauds I want that to be 100% known right now the independent group are frauds no one should be listening to anybody who's affiliated with the independent group their work is fraudulent and uh that's the reason why they didn't find the plane yeah emad's and guess what guess what hinges on everybody's scenarios the amrat data amr's fake all those other scenarios going south Indian Ocean are fake wow even if you swap the polarity of the burst offense between point8 and 12 to a

(56:50) negative this would still be at odds with the flight confirmed flying towards Diego Garcia between Port four and five which again confirm the trajectory according to the data even giving the odd error let's go and take another screenshot here did we take a screenshot of this move my water bottles in the way no we need a screenshot of this can I not can't take this exactly it's kind of small we'll just take this one this is going to be a good post guys this is going to be a good post I wasn't

(57:47) sure how good this post was going to be but this is going to be nice now yeah yeah I wish we had figured this out earlier but this is why they couldn't release the information earlier right we might have been able to triangulate the phones if we had known it was all bullion in the first four days right yeah they gave F fake data or they Le at minimum they misinterpreted the data but they may have also just fake the data as well seems very likely now looking at this okay where over here okay wow even given the odd air that can

(58:35) occur with assumptions a western flight track still has a better fit with the burst offset data than a track to the South wow they retracted that data whoa the last one was an unusual log on request at 811 which is 011 UTC I think the sacom system p to send an on ground flight mode change as MH370 landed at Diego Garcia and the way the aircraft armed the squat switches in the landing gear the fuel flow switches would be a

(59:44) trip to that caus another ping W take that that's pretty big so basically he's saying that the reason why we had these unusual pings is because they uh they were landing and the they couldn't disable the automatic pings and so they had to just make it seem like they were just weird not explainable I mean this pretty much proves the plane landed take gar okay it's possible that the ax hit the US plane and cop tiger as was anticipated was anticipated and

needed by the perpetrators nah the US is the one who

(1:00:51) took the plane I mean we' got them on two videos I wonder if the letter to us is trying to implicate Israel not our problem interesting you can't purchase super chats is that true have super chats been disabled is that why no one's uh been able to do them recently monetization might be turned off I don't know let me look I don't really pay too much attention to these things let me take a let me take a gander no it's turned on

(1:01:58) not sure man not sure hey Arwin hey guys okay we're almost done with this part and then we're going to get on to doing a little bit of science tonight so they anticipated that it would oh okay now it looks like it works guys operation Northwoods thanks guys hey Parish hey rip zip okay just for you operation Northwoods I've heard this I don't remember which one it is bombing civilian targets blamed on by Cuba by the United States okay us wanted to provoke war with Cuba yeah interesting okay well thank you I

(1:02:51) guess you thanks guys thanks Sandy appreciate those donations guys awesome appreciate you okay okay now you guys are okay thanks benator appreciate you buddy um so they anticipated they would have dumped the plane now the reason why they wouldn't dump the plane is that you're going to find the black box and if you find the black box it's all over right they're never going to find the plane because they're never going to find the black box if they do they'll have to pretend like oh the black box was mysteriously

(1:03:23) missing which I mean come on that point because the problem is the Black Box stuff will always always be there oh so now we're already to the appendix part so that was it pretty much okay again linking to 911 shouldn't be doing that just no need okay unable autopilot system patented by Boeing will connect the ground controllers let's go ahead and copy this now the one thing we will talk about with 911 is we'll say that after 911 they developed this system right which makes sense \$30 I think it was \$2

(1:04:17) but watch what segment oh Ryan C I don't know what segment you're talking about Buddy Ryan tell me what you want me to watch Bud okay um passenger monitor device One Security news wire what is this a bone where does this come from let's talk this yeah this so I mean we found some good stuff in here I I'm not sure about the cockpit

(1:05:21) doors being secure either this plane was pretty in 2002 that's not a lot of time after 911 to upgrade the doors and it's not an American plane okay what's this one talk about I just want to see if there's any more so if you read the first 22 Pages it's it's mostly about all these different patents in there yeah so they're never going to Anthony points out they're never going to find the black boxes there's two of them definitely going to find it

(1:06:29) any computer system as it's out there can be hacked that's just the Simplicity simple answer to it this is a report from 2003 this is 10 years before the plane went missing talking about the system uh the Airbus Honeywell system cockpit automation take control of jetliners help them fly natural M obstacles here's the flight management system Ryan C what were you

trying to get us to watch Bud even though I didn't see your donation we'll still potentially watch it if you let me know what you're trying

(1:07:18) to get me to watch and this this flight management system would have been software like this wouldn't have been something you have to install I don't think not sure though no we can't see your links man you have to tell me what you need me to search for can't post links in uh YouTube chats like this I don't have any control over that by the way okay is that it huh he put his table of contents at the the end probably should have put this in the beginning this would have saved me a lot of time I read all 23 of these pages of the

(1:08:05) patents and even the 34 and then it gets into the juice down here okay it's a pretty good report guys I like it page 37 not really this is the this isn't the patent it's fine though okay so let's take this make sure we get this done now I got to figure out where I left that other thing alien Chronicles who are the gray segment man this is not really on topic

(1:09:35) [Music] here we go what are the Grays are is this what you want buddy the little weird I'm going people told me they have seen like tall blondes in their room but usually they have a see-though this is because it's not really them it boy she wrote a lot of books God Wikipedia can we trust Wikipedia that is actually pretty interesting yeah thank you for doing what I asked and gave me the clip pretty interesting especially because it syncs up exactly with what ebo scientist was saying right ebo scientists was saying

(1:10:21) that they're biologically constructed organisms yeah I try not to judge people by how much into the woo they are right until they start attacking me then then I'm going to judge them just kidding uh hypnotherapy oh so she was doing some of the hypnotherapy stuff cool cool writer [Music] okay you guys ready for some science okay speaker and a teacher what's her inside knowledge about all this just talking to people central figure in conspiracy theory communities huh huh star seeds huh I like a lot of her stuff here

(1:11:18) difference is I don't believe anybody's more special than anybody else just think we're all the same get into that Bigfoot next guys if I saw compelling Bigfoot video maybe okay guys I want to spend the rest of the time on uh science stuff we promised we promised um let's look at this this real quick sensor systems and methods using entangled quanta oh look locky Martin again 2010 what a surprise entangled Quantum sing Single using signal using a plurality of entangled Quantum a carrier signal generates a

(1:12:16) carrier sign carrier signal generates a carrier signal seems redundant that uses electromagnetic field puls the power of the carrier signal is less than the power required to ionize propagating medium through which the carrier signal is traveling a beam combiner is configured to Output a combined signal that in includes the Quant signal entangle Quant signal and EMF pulse on the carrier signal Quantum detector is configured to detect or return signal based on the combined signal being this is almost like is this how you teleport an

(1:12:52) object I want to see what I'm looking for some things that are being bounced off one

another huh determine characteristics of a Target to be detected determine the frequency for entangled photons based on the characteristics to be detected generate entangle Quant at the desired propagation frequency amplify the number of entangle Quant to achieve desired resolution frequency generator carrier signal combined with entangle Quantum waveform doesn't this feel a little bit like a teleportation device guys transmit the combined signal

(1:13:44) receive return signal containing entangled Quantum reflected from the target separate Quantum and measure the attributes condition return signal process this is like basically teleportation what we're reading right here holy wow oh yeah there it is beam combiner okay oh boy they don't just straight up say teleportation right but they don't really need to positioning system feels like we're going to get killed for talking through this stuff feels like we probably mess with locky and might be might be one of the

(1:14:40) bigger mistakes I've made in my life just don't care though that's pretty interesting that's pretty interesting okay let's look at some other fun stuff I don't know if I'm going to post this as a thing so let's take a look at this oh Department of energy [energy.gov](http://energy.gov) tamax Central solenoid JK Philly fans in here probably like this magnetic field you can see the green is the magnetic field this is probably the electrical current will be our pointing Vector I think so we have a toroidal electro

(1:15:22) magnetic field I mean to me this looks like a fusion device right here this is literally a Fusion Energy scientists for uh leading plasma confinement Fusion future plants or F uh future Fusion plants this is a fusion generator right here I was right this a fusion reactor I'm going to save this for later I don't think I have anything to to put this with right now but I'm going to save this in my sciencing of course everybody's using toroids huh oh there's JK Philly there he is I just I uh summoned him I was

(1:16:10) looking up toroids which toids are definitely the secret it's not that it's a to some degree You could argue that it is sacred geometry but it's not even a good way to put it the reason why toids work is because that's how we can control the flow of electromagnetics right electric Fields magnetic fields just like this image right here the magnetic fields are propagating around this way and using the right hand rule right using the right hand rule we're able to generate our pointing Vector so what's the pointing Vector

(1:16:45) doing it's curving in a circle am I saying that right I think I might be saying that right scary scary guys right hand rule so you follow the gold lines here with the right hand rule your fingers and then your thumb is the pointing vector and the pointing Vector is going to be the the pink I'm stealing this picture this is the most comprehensive picture I've seen explaining this so far or maybe I'm just starting to understand it either way scary guys can you imagine Ashton Forbes learns how to do electrical engineering

(1:17:19) uh oh uhoh whoopsie it's my favorite sound bite from Mortal Kombat whoopsie so this is what Bob Greener would say here is you're looking at the face right the face the next thing we need to figure out how to create a magnetic monopole that's the last thing we have to figure

out I think this is like two magnets right two magnets and then this I think it is induced magnetic field around the current loop what comments did I miss sorry I can't read and read all the comments at the same time if you want me to address something you have to ping me

(1:18:14) on it yeah hey look magnet there you go right hand rule yeah okay yep I was right magnetic field of the straight wire yeah right hand rule that's exactly it holy crap folks starting to make sense to me starting to make sense no the theories it's it's important to know how this stuff works just because everything's a wave and not a particle doesn't mean electrical engineering is incorrect just means it's you have to look at it through the right lens I actually agree with Ken Wheeler about every you have to look at things

(1:18:55) in terms of waves and perturbation or is that right perturbation perturbation I don't know how the doc says the word correctly through the medium yeah these coils are the answer to everything guys and it's look how simple it is this is you just wrap a coil wire around a toroid and now you're creating a pointing vector here right it's really that simple this is why we don't need uh materials to induce super conductivity we're just abusing planar shapes so Bob Greener says you do this and you do fractal toroids so you have

(1:19:33) you have a donut and then you take your donuts and you layer them into a bigger donut and then you layer that into even a bigger donut and then now you start to break uh break the limit of what we think is possible and so energy is now going to be focused onto a single point supposedly I think there's something else we're still missing there but pretty much um so let you guys want to look at some cool videos we're going to get ourselves started doesn't matter let's watch a little bit of Ken Wheeler guys it's going to probably get

(1:20:10) us probably get some people judging us based on this but it's fine yeah that's what I'm going to show us uh Hermes you're going to like the stuff I'm going to show here I think H where is it that I really not save it not like this chat not like this okay um damn it was one of Ken Wheeler's videos somebody sent it to me but I don't have it up so let's look at let's look at his other one then so hello author of now I'm just going to explain this to you so we don't have to watch 15 minutes of this here I

(1:21:05) don't want to say oh alien scientist here yo yo Jeremy yeah man dude you know what's scaring me Jeremy like how long have I been even looking at this science probably three months or less and I haven't even spent that much time on like maybe one out of every three days doing the science it's already starting to make sense to me a little bit like I'm not I'm not an expert by any means but like I just explain pointing vectors so yeah starting to get to the point where I'm like damn it's

(1:21:36) uh like people should learn this stuff man it's important it's really important to understand our reality so I'm going to explain this experiment here why this one's important right so Ken Wheeler is about to explain why magnetism isn't what we think and what he's going to do is he's going to show that the time factor makes a difference where's my magnet one sec let me grab it right same magnet that he's got right there right and he's got it over uh one of

these pin things right with was got

(1:22:11) iron he calls it Ferris right which is just it's the Latin for iron and what he's going to do is if he puts the magnet slowly drops the magnet slowly onto the the nails here then a lot of the nails will come up and stick to it but if you do it very quickly then only the nails right underneath it stick and then there's a bunch of nails along the side that don't pull get pulled up and you might say well why is that going to happen and the answer is because there's an invisible magnetic field around the magnet and if

(1:22:46) you put it down there quickly this magnetic field is like basically warping or it's changing however you want to think of it but but if you do that very quickly then the nails don't have time to kind of react and get sucked up that's my stupid Layman's explanation for it I should be very careful where I put this magnet by the way very careful where I set this down in fact I might buy one of these things so I'm going to show it to you let's let him explain it uh can we do subtitles okay so slow versus fast this

(1:23:18) is the part I want to show you them came forward okay so here here's a slow approach you see I only get a few Nails lifted up so slow approach all that happens is a few Nails go up okay when he does it slowly now let's turn it upside down and when he turns it upside down after the slow approach look how many came forward like a lot of nails come forward on the slow approach so he sticks it slowly then a few Nails come up and then he spins it over now all these nails stick up to it right now watch what

(1:23:51) happens on the fast approach very few didn't you see there's about five times as many nails so when he does it fast more Nails stick up why would why would throwing the magnet on there quicker make more Nails come up than doing it slower that's interesting right it up as well as a periphery we got a great deal of dielectric displacement we're getting activity not at 90 Degrees here we are along the dielectric this way in the ferris iron nails but we're getting reaction at 0 degrees from approach this

(1:24:27) way obviously the nails and obviously applied field quote unquote is occurring at 0° so let's try the same thing turn it upside down and see what we get this time oh look there's a ring let's try it again little faster this time ready he shows it here and turn it upside down now look look at that look at that chat look at this huge Dead Zone here around the magnet why are these all not pulling getting pulled forward because of the giant magnetic field around it right the displacement of SpaceTime if you want to

(1:25:11) think of it from the magnetic field you would think that all the stuff near it should get pulled forward but it doesn't there's a huge ring look at that hug around the magnet that did not approach why is that the case when I dropped all the nails forward this ring shouldn't be here what is happening let's do that again it's real slow and real fast slow approach this is a really smart approach this all upside down shake it really good look bratic I want to hear exp TR again really fast Boom turn it upside down

(1:25:51) again and look there's a huge ring that hug ring missing out of the center here what happened from a fast approach that didn't happen on a slow approach or vice versa czy what's happening is upon the fast approach in the nails what it's doing is it's taking that every atom of course in the ferris material I.

(1:26:12) E these nails as well as any effects feris material that can have applied fields to it the fast approach is causing dielectric displacement just like spinning up a gyroscope it's causing an electrical actually specifically a dial yeah so if you spin a gyroscope right imagine a gyroscope spinning like it's creating like some electrical it's cleating a displacement around it right so I I guess Field's not the right way to place it but yeah uh dielectric displacement electric inertia to spin this way at  $90^\circ$  so we are

(1:26:47) getting a  $90^\circ$  reaction on a fast approach what we're doing is we're not changing and the 90 reactions on all sides of the magnet right so that's why it's it's going all the way around it pretty wild huh yeah so exactly so you uh speed pushes the magnetic into a tus shape deflecting the nails away from it in donut shape yes exactly a curl around the magnet entirely crazy huh so I want to see if I can find the other clip from him oh here it is Boom no wait is this it yeah this is it that was easy I'm

(1:27:21) going to save this hello everybody was save this one I didn't have this one but I guess because I watched it recently it was up there okay so who wants to see what the Taurus shape looks like folks a even more power just looking at the number we go card right well a true art hologram which most people have never seen is about so basically he's putting ferof fluid so what he's done here I'm going to explain it to you guys he is taking two sheets of glass with ferof fluid which is a iron fluid right Pharaoh

(1:27:55) again and he's sticking it very just a couple drops between two plates of glass with the lights coming off the side of it so we can see it and then he's putting a magnet underneath it right and look at so this what's this doing this is allowing us to see the magnetic fields and it's it's basically apparently the same as a hologram structive and destructive interference between the magnetic and dielectric I'll explain this in other videos and I have yeah I imagine the Earth does have a

(1:28:22) taus field because the Earth is a giant magnet right we have a huge magnetic field over it as well I have in the past but also in my book you see these little bright spots right here so you see these bright spots he's talking about here so we're seeing constructive and deconstructive interference so everywhere where you see the darkness that's going to be your destructive interference and then elsewhere where it's bright you're going to be seeing your constructive interference pretty wild right but this is actually just

(1:28:48) there's a literal magnet underneath faer fluid here that's what we're actually staring at here there's little tiny bright spots along the lines of intersection yeah very powerful magnet probably a DI n little bright spots right diminum I don't even know how to say it right you notice they OCC NE D I don't know whatever I Google that later now this super cell is so sens there's a

dipole relaxing moving the magnet burn in you can see like I think he's actually using a donut magnet here

(1:29:19) I just call it bird because it's uh it's so sensitive the powerful magnetic field even though it's a weak yeah he's using a weak magnet he's using a weak magnet here that it's uh but look at that destroying the supercell like I said that's why I've got it taped so I could take it apart really quickly let's go top down look at that kind of looks like a black hole huh does look a little bit like a black hole here you see the hyper how Wild this looks kind like you seeing a dream catcher look at this a pattern

(1:29:46) you see in so just to reiterate for people this is literally just ferrofluid between two pieces of glass that are stuck together and he just putting a magnet underneath and there's just light coming on the side so you can see it center of a dream catcher is a hyper trail pattern yeah let's actually take uh the uh the speaker magnet out and let's magnetic field penetrates through absolutely everything look at that absolutely everything but let's place it underneath also too I could place it on

(1:30:16) top place it on top for a second look at the magnetic field placed on top here we go look at that does that look like anything for you guys I mean that looks like just what we were looking at before right with the two with the eye shape thing and you can see that the line's going right through here in the middle you got your eyes here and you got another one on the other side man and do that huh super sweet doesn't matter whether look at that right there holy crap wow look at that place it on the top of the box looks like an owl's face

(1:30:50) doesn't it look at that this is the secret look like an owl this is the actual construed destructive this is where if we were to show this Bob Greener he's going to start doing the circle thing for us right he's going to say look at this guys interference here's one pole here's another pole but a magnet doesn't actually have poles what it has is the oh so these are the poles the North and South okay inverse of counter space which is specifically force in motion see Center Fugal Divergent magnetic field he starts

(1:31:17) getting a little bit too much into it here where I don't he starts losing me speaks in too many big words but the way that I think he describes it here is that I could be wrong clarify me if from wrong chat but that uh electric current and magnetism are almost the Opposites of one another where magnetism is the absence of an electrical field which is causing inertia which is why things will then stick to the magnet could be wrong but that's how I understand it which of course is not literally being emitted

(1:31:45) from the magnet it's literally The Ether itself under polarized decoration from the field of the point source Singularity that is what defines the magnet because a magnet is not defined by what is quantitative rather by what is qualitative and I've explained this a thousand times and also to including my book Let's show you one pole oh okay so he flips the magnet over so that we can just see the North Pole or the South Pole one pole by itself compared to the other angle when we flipped it over then

(1:32:16) we're seeing both sides huh so we can see it from different different perspectives here right the magnet here let's zoom in yeah in inductance Theory indu induction yeah so the thing about induction really then is it goes back to waves we don't want to think in terms of particles we want to be thinking in terms of induction through a medium and why is that important guys so it's important because if you were to take a laser you're going to see a laser beam going straight now the moment you put a glass of water

(1:32:46) there it's going to get bents why is it going to get bents because it's a different medium because it's induction through the medium I'm sorry about that shaky video but if you if I zoom Dave Rossy mentioned this on Tim Po and he mentioned this in our in our interview as well now you notice how small the black spot is of course where it's black is a dielectric this is constructive destructive interference between the magnetic and the dielectric this is literally the Lotus Blossom it kind of

(1:33:14) looks like a Lotus Blossom doesn't it but specifically from up above it looks like a dream catcher it's a hyper tral pattern of constructive and destructive interference L the interplay between magnetic and dielectric because magnetism is the dielectric field how Wild is it in the middle of it right where the pole is it's just all black right I guess that's because that's where you've got the the magnetic fields are coming right out through there right so if we were to look at our Earth think

(1:33:39) of like our Earth as a magnet that's why on the North and South magnetic poles you're going to have the magnetic fields coming out just like that see and this is destru like the cheap man's ver field around it in other words you have to get a lot closer to a piece of metal to see how huge the black hole is or the black section of the dielectric portal is so I'll link this one in the chat if you guys want to keep watching it see if I can get a little bit better focus the concentric circles you actually see

(1:34:08) Shades it goes from black to dark red to orange you can see the shades there too yellow this is the magnet that will vary quickly also too you can see these bright points right here you see that you see how quickly destroying the cells this is what I mean by burning oh wow look at that burning it's not literally burnt it's just literally causing this is why I have to take the supercell apart when you use really powerful magnets yeah wow but uh really cool stuff pour over a little bit anything else you want to get on this one I can't

(1:34:41) leave it sitting take a look as I scoot it let me get deep uh low on it right here one more take another one look at this flat earther a this yeah it's already freaking me out a little bit it's important to understand this stuff when we're thinking about the chant Thomas and the pole flipping theories right magnet but you still see the dielectric portal this little black spot right here in the middle the Earth itself is not a toid but perhaps magnets by the way do not accelerate towards one another what they do is theyel when you

(1:35:17) were looking at there we were looking at one of the poles right acceleration let's actually place the ring magn underneath the supercell and show you what is yeah I I probably

need to look more into MRIs and how they work okay let me zoom out a little bit look at that this ring magnet will quickly fry this supercell big deal like rebuild it but look at the Magneto holography if you actually had this in your hand though you don't have this in your hands you can't see what holographic depth you actually have

(1:36:01) this trough yeah you can see the depth in here is pretty wild right point where the entire and of course the magnetic field so what he's talking about there is he's talking about how you can see these fields go towards the middle here towards this Middle Point right you can totally see it you can see them and get smaller like looks like you can see three dimensionally right larger and more perfect and they're both toroidal the ring magnet of course is a toroid but the magnetic field is also a toroid and that's

(1:36:28) actually one of the reasons why ring magnets destroy um so now this is why **I want you** guys to imagine here imagine we're looking at the flow of electricity somehow here right and it's all focusing on a single point right here in the middle now it's not going to be able to do that with just this shape but in my mind that's what I imagine the fractal toroids being be able to pull off if you get it to a point where everything's focused onto this single point in the middle now this is where you're going to

(1:36:58) start to create energy levels that are going to be able to break the swinger limit and maybe like Bob Greener said if you get everything so that it it perpetually flows back towards the same point where now you can get this increasing unlimited energy source like if you're having you run water through it and just per perpetually builds up right the water doesn't come out the bottom or something I mean that might be a way to think of it the supercell so quick a black hole is where dielectricity just like this super powerful magnet except a

(1:37:26) really poor analogy this where dielectricity overthrows magnetism's ability to keep something within the visible Universe if I were dial electricity overflows magnetism's ability to keep something in the observable universe to so the dial electricity is the black part right it's O it's overwhelming the magnetic part in the middle which I can pump up the dielectric power of this little tiny magnet like a billionfold it would literally vanish from the universe it would not be there anymore I would

(1:38:01) actually still have the same field well it be a lot different than this it would actually all look black with maybe some light fringes around the edge but yeah it's not 3D just looks off of course the super would get sucked into it right because it would be a black hole it would not be there because the only thing that actually keeps this physical magnet okay interesting okay so I want to do some other stuff we're not going to go too much longer tonight but I want to look at some other things here as

(1:38:25) well uh this is one I haven't really looked at yet quantized gravity so let's skip tend to move in a straight line at a constant speed now this looks really similar right all of a sudden he's talking about inertia and not so much talking anymore about particles you you push on them so if this star moves in a straight line it will follow the red arrow shown here and it will end up in

deep space that's the same uh so this is the centrifugal force matter in the galaxies lit up to to hold them in if they hadn't

(1:39:05) yeah so what he's saying here is he's uh **debunking** uh Dark Matter he's explaining dark matter I guess is the answer and I'll answer that question in a second I'll let Enchanted kniper but um so the thing is we see these Stars moving very fastly around the outside of the galaxies where if all the matter was there is all there was then what should be happening is the Stars should be flying out into outer space but they don't they have more centrifical Force so they're staying here so we know

(1:39:36) there's more mass but somehow warping them to flow along the curvature here to keep spinning around even though they're going very fast so this is what we call Dark Matter this is where royy Herbert would come in and say the more complexity there is the more Mass there is the more gravity therefore there is as well and that's the reason why we don't see more is it's the complexity itself that's allowing for the additional amount of uh gravity that we don't see it explains dark matter um okay so I'm not going to go

(1:40:09) too much problem with dark matter don't care uh oy here ship analogies I think we've explained all this already let's go look at the horiz an analogy so I'm going to try and explain it again using an analogy so imagine that you're you're so shocked let's look at Quantum waves instead let's just skip ahead so it works for for light and for other objects as well so here I've shown what's wrong Michel ball which is exting to the right yeah don't don't spam guys and relativity tells us that information

(1:40:44) speed of light so just like you running away so real quick I'm going to address two things in the chat first the sacred geometry angle okay guys so and again I'm not trying to be rude here I'm trying to help out and when I say this don't try to link everything together don't try to link this conspiracy with that conspiracy don't try to link science with every single geometric shape and numerology that's out there you're just discrediting yourself when you do that when you want to explain the

(1:41:11) science explain how the science is real we don't need to understand all the the fact that these uh shapes are in our face you know to I Love Bob Greener but like when you starts talking about the shapes in your face and stuff like that like this is where you lose all the CNN brain people immediately the moment you do that they're checking out the moment you talk about the numerology and the three sixes and the nines people are checking out and it's not necessary we get that it makes you excited that every

(1:41:37) you think that everything's connected and we have this unifying theory of everything that's not what we need when we're trying to prove the science all we need to do is prove that the science Works no matter what shape it is doesn't matter we don't need to prove the 911 theories are true in order to prove the MH370 theories right keep everything separate if you do that you'll have a much higher degree of credibility yes maybe the toal shapes are uh sacred geometry maybe the patterns are sacred geometry we don't

(1:42:07) need to combine everything together we don't need a unification theory of every single thing in order to understand how the science works so that would just be my advice to people that are out there right um and I'm trying to get the stuff out there in a way where we're going to get normal people to take it seriously right and then to Enchanted nerd's question why aren't we using this Tech uh why aren't we using this technology today greed or control right and the answer there is probably both so first of all this I

(1:42:42) think that truly the most logical explanation for why we're not using this technology is the National Security implications just like the person said in the letter to as and Forbes this technology you can create a doomsday weapon you can might be able to create black holes with this right if you can create black holes with this like we just heard Ken wheeler talking about you if you power this magnet up you're going to create a black hole where it'll no longer even be in this universe like there you go guys that's

(1:43:12) the answer that's the simple answer it's not about religious people think that they're they're Angels or whatever it's just much simpler than that we're going to destroy ourselves and if we're going to destroy ourselves now you understand why the luzos of the world are hiding this information even though they probably know about it because they're hiding for National defense purposes and then really what it comes down to is this it comes down to a philosophical question is are you the type of person

(1:43:40) that believes we will destroy ourselves or are you the type of person and that therefore it needs to be hidden or are you the type of person that believes that we drive our own future it's up to us to determine and if we destroy ourselves then we destroy ourselves now you understand why the question that I ask all ufologists out there the question that I ask everybody is would you still want disclosure if what it meant was the end of the world and I don't mean nuclear weapons I mean literally the world being completely

(1:44:14) destroyed but esoteric gold that's what free energy is all about free energy leads to Doomsday weapons there's no getting around it either and it's a Pandora's Box the moment you open it up and you tell the world we have free energy now the Doomsday weapons are coming with it right that's why they're hiding it that's why whoever controls that technology controls the world that's why the tyrants and the elites know about it and they don't tell anybody else about it because if you

(1:44:43) know about the technology and you know the implications you want to abuse it you don't want to get wiped off the planet thank you Paul I appreciate that donation so so hopefully I I think that answers the questions in the chat good questions though guys and I think it's important that we address that right because that's my angle of pushing the conversation forward right but there is alien scientists there is a way to do it now it's not technically free energy but what it is is you open up your system to the out to

(1:45:16) the energy of the Earth the energy of SpaceTime itself right we know we're sitting on a magnet right we're sitting on a giant magnet we know that if we go up in the sky that we're

going to have More Voltage right so instead of thinking as a system is a closed loop like Dave Rosy would say the Pac-Man scenario and sure if your system is closed you cannot put out more due to the first law of thermodynamics you cannot get more energy out than you put in but if you open your system up you're not really generating free energy what

(1:45:47) you're doing is you're borrowing energy from the outside that that's how a perpetual motion machine can work that's I think how the what is it the dread Co one Jeremy you should check this this this out I I'm curious as what how you think this is working it's not batteries I'll tell you that much right away why is this not the dread Co perpetual motion machine I'd be curious if you were to check this out what you would think here only a couple people know how this works and I think it's going to be end up

(1:46:20) being a very simp answer and I'm almost certain it's going to be around related to magnetism right some people argue oh no he's cheating with a a battery or something that's not going to be what it is it's these are magnets and he's got it set to some kind of vibrational or some kind of um resonant frequency or something related something to these magnets here and that's keeping it going forever okay I got the wrong one second law got it yeah yeah that's and you're right so

(1:46:51) you know it's really a matter of how you phrase it right is that everything comes at a cost right and even in a system where we have free energy where we're taking it from the vacuum of SpaceTime there's still a cost there for sure right so you know just to be just to be really clear and accurate out there I'm not saying that we can just create something out of nothing what I'm saying is that we can borrow from the vacuum and from elsewhere but even when you're borrowing you're borrowing from

(1:47:17) somewhere right so something's happening there the wouldn't hear me this object and that's why we might want to be careful around overunity devices as well if everybody's Now using overunity devices are we going to have some kind of impact on SpaceTime itself I don't know but it's a question we should be thinking about probably not at small scales but what about at large scales right anyway let's look more at the at uh this Ted Talk quantized inertia by Mike mlo so this is a yeah so I totally

(1:47:51) agree with you Jeremy what you take from the vacuum you must give back right it's like Karma it's like Karma it's got to come back somehow right ship example that's why we got to be very careful about overunity devices even if they are real right these aren't oan waves like in the example these are quantum waves and we know these somebody told me I should listen to him so far it's kind of boring aete vacuum these waves exist control in pushing object from the right hand side but then there are few of them on the

(1:48:18) left hand side because only C wav exist were there some adult ads that showed up so the object is going to be pushed back against acceleration and this looks very we're not going to get we're going to get demonetized anyway on this one I don't careel alien scientist is is Jeremy Jeremy Reese you guys should follow alien scientists you haven't we were going to look at the

APAC one of the ape presentations as well but I don't know if we're going to get to it and put them back yeah welcome Enchanted night bird

(1:48:49) this is our science stream trying to do at least a couple sign streams for week hardic Edge this is because there stars are moving away from as faster than the speed of light so we just can't see them so there's another boundary to information okay so going to skip ahead here because stars in the center of the Galaxy are accelerating very rapidly going around in circles very rapidly but those at the edge slow curve so they're accelerating slowly so you would expect from this theory for initial Mass to drop and the Cent Fugal

(1:49:22) force to be less so I've shown here the the white Arrow was dotted so it's very long but now it's shorter so it's it balances we're going to keep going so quantized inertia I guess would be the same idea that you have this inertia at the quantum level which I think is similar to the idea that complexity increases morec more gravity fast or inertia I guess is the way think 10 to 20 or something like this is honestly very similar I think to what Roy de Herber would say but if you could do that then

(1:49:52) the waves the quantum waves that I was short uh Parish you need to tell me what to search for I can't post links technology with electromagnetic technology so what you could then do is put a damper above this spinning object shown here by the blue line and damp the quantum waves above it that means that the object will lift up o anti-gravity waves hitting it from below and fewer hitting from above so the great thing about this is that previously we've had to use Rockets or we've had to push off the ground to move

(1:50:27) things this is a new way to move things without fuel fuel is effective guys does this remind you of anything you have a damper above it you have it spinning on its axis Here and Now what's going to happen you're going to have thrust going upwards does that remind you guys of anything reminds me of something you guys ready I don't know I'm not saying this is exactly what it is but I think that the more we dig into this the more we realize the science of these orbs checks out right look at these

(1:51:02) orbs the more I look at these orbs I go these got to be real like it just checks out with science we got these orbs spinning on their axis here we can see this heat signature consistent with some type of monopole and they are ignoring gravity I would have never thought we would have this kind of Technology before I saw these videos in 2023 I look at this look at this look at this non-radiating barrier right here this is a huge orb field too the field this orb and look at this plane right here so this is it's like the same size as the

(1:51:38) plane right here so at least 30 feet across maybe close to 50 feet somewhere in there 35 ft something like that maybe yeah pretty wild and this I think similar to concept to AOG gels AOG gels a little bit different aerogels are also really cool I mean there's several different ways I think that we can create May yeah already seen several different ways we can create a gravitational lift a British engineer called Roya and also NASA now have shown that if you put microwaves into a metal cavity that looks like this it's a truncated cone

(1:52:17) the cavity moves very slightly towards its narrow end ah so this he's talking about em drive right here Jeremy he's talking about em Drive guys it's getting scary guys oh there it is right there it says em drive right at the bottom it's getting scary that I'm starting to recognize this just from the science he's talking about gu so he's saying that uh if if you throw microwaves in a narrow cavity then there uh there's going to be a propulsion effect metal cavity that looks like this it's a

(1:52:41) truncated cone cavity moves very slightly towards its narrow end cavity moves towards the narrow end and this in terms of normal physics is impossible supposed to be impossible trying to push trying to speed up a car by pushing it from inside you can't do it because because of the conservation of momentum but it seems to move anyway the force is very small it's about the the thrust of a Le NASA actually tested this and I think they found a very small thrust as well and quanti Nera predicts this this Force quanti Nera predicts

(1:53:12) that is the name of the theory I'm proposing makes sense okay so yeah so we just don't understand science as well as we think we do like we we we have a very good understanding of science but it's slightly flawed right and that's why we can do stuff where it seems like it's breaking science it's not really breaking science it's just kind of like it's like bending the rules but not breaking them right which is a fun analogy because it's curvature Galaxy rotation without dark matter and it

(1:53:43) predicts a Horizon Drive now the following schematic looks very easy actually demonstrating this in the lab is going to be extremely difficult okay uh how can these possibly be piloted my belief they're being remote controlled there's nobody in there piloting them those orbs are being remote controlled 100% the only question is is there some type of machine device on the inside or is it being controlled by like some type of magnetic radar system from another plane or whatever else right or is it just a matter of it

(1:54:18) being like locked in locking in onto the plane itself or something on the plane could be any of those options the reason why I think that there is a device inside is because of the lines we see in front of the orbs here these lines we're seeing in front of the orbs here to me says there's got to be something on the inside otherwise I don't think we'd be able to see these lines like this where they're they're breaking through gravity because we see it in front of them to me that's the dead

(1:54:43) giveaway um but that's just my opinion let's see what was that somebody else wanted me to look for something real quick Parish Matt fin seeking circuits in the cosmos I like how people like um have us look stuff up and we take a look at it and see we'll come to that one in a second we're going to look at like one more minute of this maybe and it's not quite known how to damp Quantum waves yet but conductive materials seem to do the trick conductive materials seem to do the trick guys we keep coming back to Super

(1:55:17) conductivity every time it comes back to Super conduc ity that is the answer that is like the the letter told us it doesn't it's not that super conductivity is what makes the floating happen

it's that you enable super conductivity and then that enables the floating to happen right but if we can do it then we should be able to launch a capsule without God we've had this for 10 years at least we've probably had it for decades it's wild yeah I'm going to look I have got the video up on the side side

(1:55:50) Parish so you should rise up like that thank you very much honestly a lot of this stuff isn't even really new right what's Happening Here is you've got smart people like him like what was this a year ago five years five years ago right and people have been I mean this has just been out there right and we are just it's just hidden in plain sight and there's people that's known as well this he's probably not even the first person he's just lots of people have been putting it together and even the people

(1:56:19) the alien scientists that Jeremy's had on Apec that are out there that have been showing anti-gravity technology right A lot of the stuff they're doing is they're Reinventing the wheel again this is the reality it's like the government's already knowing how to do it we're just doing it again some of them might just be in the no because what I found out is that the way the technology gets out is that there's two ways right one is that the people who are in the know they know how it works

(1:56:46) but they can't talk about it because they have ndas but they're allowed to leak certain components to it so one of the posts that I'm going to make maybe tomorrow uh is that how things are classified and how it's hidden is that all the components of what we need are out there in the public sphere but when you put them together that's what makes them classified that's what makes them National Defense right and so you have people that are profiting off of it because they know stuff's real and

(1:57:11) they're patenting certain aspects but not the whole pie you know not the whole thing um and then you have different the other approach which is what's happening is that you have people that figure it all out on their own without even know seeing the stuff and this is going to sound a little egotistical but that's what I've been doing right I'm watching the thing I'm watching a video and I'm going that's super conductivity that's how they're able to make it float and I'm able to do that with no scientific

(1:57:39) background right just because I've been able to piece together all this information from ufology from like Ik99 the things that are you know the satellite stuff like that's the thing they're afraid of those are the people that threaten the Orthodoxy of the scientific and mil military-industrial complex and and Jeremy I'd say is probably one as well I don't think he has an NDA and he understands that you know a lot of this technology is possible because of the people he's been talking to and the scientists he's been

(1:58:06) talking to right and the scary part is we don't want to get disappeared right because those are the people that the government needs to go talk to and they got to scoop them up before they reveal all the information they reveal all the secrets and this is why it's so important that they hide video like the MH370 videos right because the moment those leak out there now

a bunch of people who are smart are going looking at and going oh I can figure this out right and they can go around and they can find all the the uh papers and stuff

(1:58:33) and the thing is like like Jeremy's saying right now the physics gets published in the journals regardless of classification the thing is there's so few people read those like my posts on Twitter the ones that get the lowest amount of Engagement are my scientific ones it's kind of sad it's really sad because that's the stuff that's like the building blocks of what we need to know in order to get there everybody just wants to see the cool looking videos right no one really wants to dig into

(1:58:56) the science and that's why it's easy to hide it because no one's looking at the scientific stuff that's why it's so important what Jeremy is doing with alien scientists is going through the papers really digging into them putting the puzzle pieces together that's why when I look at them too I like it that's why when you look at salvator P's patents like salvator P's patents 100% have been watered down right super watered down they've definitely been watered down guys um and we can tell that just by reading

(1:59:23) them but we can also tell that obviously he's seen something right you don't write those patents without having seen something man uh big butter dude uh just go back to CNN bro you don't you know if this upsets you if reality hurts your feelings don't worry about it no I don't think the government's going to kill me not re not anytime soon because I'm too high-profile and it would be to the point where like it would it would expose the conspiracy instead what they're going to do is what they have

(1:59:49) been doing they're going to come up with fake **debunks** they're going to push uh social media right they're going to use their influencers in social media the people that are in mix West sphere **Mick** West sphere 100% is linked to the disinformation even if he's not directly people in his direct sphere of influence are linked to government disinformation there's no doubt about it we were just watching a right before this I was watching a whole YouTube video about how they're editing people's Wikipedia pages

(2:00:14) right that's how they discredit people they force people to retract papers people like me they try to discredit me by whatever they can whatever they can do they call me a grifter even though I make no money off of this right uh you know whatever else they got to come up with and that's the reason why I chose to be this person who's revealing the videos right is that since I have a security clearance it makes it really hard to do that then they can try to say oh well he's working for the government

(2:00:41) right but it doesn't make any sense either to normal people because normal people are like well if he works for the government why is all his stuff talking about how the government's hiding all this from us doesn't really add up right um so yeah uh and then let me think what else oh yeah and so what they do is they fabricate fake **debunks** right like the **mick** West VFX **debunk** that doesn't match right and it goes to show how dumb sorry that's just how it is or like you want to call them sheep or whatever how

(2:01:10) asleep most people are is that most people fall for the dumbest stuff they don't even like just like the ash Conformity experiments like you could do the ash Conformity experiments on this and it would work right if you were to show people this and you were to have four people say yes this is a perfect match the fifth person is going to go yeah yeah it's a perfect match right even though they're looking at they can tell it's clearly not a perfect match I mean any rational person can look at this and go this is not a match you

(2:01:39) don't even see the plane sticking out in this and they go oh well you just Photoshop that in and instead of even answering the question logically they simply say oh you don't know how VFX works like watch watch me break down Big Butter here it takes like 5 Seconds satellites move thousands of miles an hour how does it keep the same perspective of the plane here you go you ready for this because you're not looking through a satellite Big Butter why it's 2024 do you really think that you're

(2:02:08) looking through a satellite that's moving 16,000 mph how did that even work how would a satellite in low earth orbit moving 16,000 mph how would you look through that ever and see anything what do you think the point of the satellite is right here's your answer I'm going to answer for you right now look in the bottom left corner of this page if we were looking at a satellite that was moving at 16,000 mil hour the coordinates would be moving in real time the coordinates don't move in real time

(2:02:37) the coordinates only move when they change the perspective this tells us exactly what we're looking at all you have to do is use deductive reasoning here right all you have to do is use deductive reasoning here is that we know we're looking at a computer program that is pulling data from a satellite and we know that because we can see coordinates accured to six decimal places which is consistent with Google Earth and we know that the coordinates are not moving in real time it wouldn't matter even if it was in geostationary

(2:03:07) orbit it's still slightly moving and because it's the six decimal places you would see it slightly moving around those coordinates would be shifting around in real time all the time they wouldn't be stationary and then changing right this is how we know it's not somebody actually pointing the satellite around that never made sense anyway it's not somebody sitting around here pointing a satellite around it's a literal computer program that's pulling the data from all the satellites in real

(2:03:31) time and building a video Google Earth playback that's what this is that's what they use we've been able to deduce that and it makes total sense that's how you track an airplane that's how you would look through satellites in 2024 or even in 2014 you're not going to be looking looking through a specific satellite that's stupid have a good night William so it's obviously a an altered version dude that that's not how VFX works man like these people that talk about like it's obviously an altered version no

(2:04:09) Starship Troopers didn't edit the VFX they literally put in the whole VFX without it being modified because that's how VFX actually works there's no it's obviously an altered

version that's just straight up conspiracy speculation there's no way anyone can even change this to look like this in the background that's not even possible you would You' be better off just starting from scratch you'd have to change every single Pixel look at this look at this because you pick and choose the one

(2:04:38) frame that's similar look at the other frames it's not even close to similar literally no pixels match no pixels even match on this they're not none of them are even the same color you'd have to literally just start over from scratch here like that's how easy it is to break down the disinformation that people that believe we're looking at VFX is doesn't even make any logical sense whatsoever they're not Lo using logic or reason you're just going oh well this one frame looks similar so therefore it must be

(2:05:05) that they must have just changed all this so you tell me how long it would take you without looking at the MH370 video to take the Pyromania VFX and get it to exactly match this without looking at it without being able to compare it because you're telling that what they did was they obviously manipulated what we're looking at here in the middle to match what we see in the video how' they do that without having something to compare to this is literally the equivalent of giving a monkey a typewriter and waiting

(2:05:34) for them to produce Shakespeare for you that's literally what it is and people go well that's a dumb analogy because there's stupid people who don't understand it it's really not a matter me not understand it's a matter of them not understanding something very basic right so I think I just explained it to you big butter man so I hope you get the help you need man because reality is going to be a Harsh Mistress when you find out you've been getting lied to your whole life when you find out that

(2:05:58) you were wrong about this which objectively you are um and there's a lot of people out there like big butter right that you know they just believe whatever **Reddit** tells them they believe whatever their favorite streamer says they don't use any logic or reason they don't they don't think for any through their arguments whatsoever they don't even look at the second P the second frame they just look at the first one here even if you were to take it would take hours and even then probably take days

(2:06:24) to accidentally get it to match this this background right and why would you even change the this the edge here why would you even change this why would you manipulate that it makes no sense right all all of them do look the same man that's the funny part Taylor said off blast waves are commonly found in strong explosions here's the funny part they all look the same we can literally do this with anything in that's a dispersion pattern and we can get them to match exactly the same way that the pyr did look at that perfect

(2:06:56) match look at this exact same thing that's how easy it is to get them to match if you cherry pick here's another one watch this you ready boom Another perfect match it's just like it's so silly guys look another perfect match that's three different effects that we've been able to match up to the blast wave three different ones guys so okay let's see if we can show this real

quick somebody wanted us to show the Matt Flynn circuits and the cosmos couldn't exist in space we have to **debunk** the

(2:07:29) **debunk**ers like every day yeah and I'm not trying to tell you guys you got to believe in teleportation or whatever else man I'm just telling you the United States government knows what happened to this plane man I personally happen to believe that teleportation is real because of what I'm seeing in these videos but you know I don't care if you believe it or not it doesn't matter I think there's a there's a percentage chance it could be cloaking there's a percentage chance that it could be uh

(2:07:56) Annihilation event I don't really know I it'd be a lot easier honestly if it wasn't teleportation their path has to be a closed circuit and a closed circuit exists the description of the particle State at any point depends not only on the local conditions but also on what's happening in the rest of the circuit for example if a double layer forms and explodes all the energy of the circuit will be released from it in an amount that can be vastly greater than the energy of the double air itself double layers are capacitor like

(2:08:28) formations in plasma a bit long I don't solar wind getting power from some source of yeah so this is where the Aurora is right so what's happening here is you get you imagine your electromagnetic your your magnetic field around the earth and so the the solar wind is blasting it and it's following the electromagnetic field the barrier around Earth Earth and then it's focusing here and creating these auroras that we see it's pretty sweet yeah no invisibility is definitely real dude I mean meta materials we've

(2:09:00) already have like invisible blankets and all this stuff that's out there right energy and for the record guys like the reason why I don't get upset is because I realize that and I think a lot of people will agree with this that most people out there that are asleep right the ash Conformity experiment shows us that most people simply go along with their heard no matter what even they'll just deny objective reality in their face Ash Conformity experiment proves it people will just deny objective reality

(2:09:29) just to agree with other people so we have to be somewhat patient with people now it doesn't mean we have to be patient with the people who are being rude to us but it does mean we're going to have to explain the stuff over and over and over again probably and that's fine you know it is what it is and what we'll do is we'll slowly wake people up you know that's just how it'll play out but laboring under the idea of an so there this is pretty interesting this is how you can see the magnetosphere right

(2:09:54) here um and then how you can see the solar wind and how it's going to you know basically bounce off the or like bend around the magnetic field and then that's why it's going to be kind of creating these roarers right here pretty interesting uh I don't know if we're going to watch this whole thing oh oh here we go isolated electrically neutrally early scientists looked at these electric currents and instead named them the solar wind despite there being no wind in space and then they left the question of where's the power

(2:10:23) coming from out of their equations so while astrophysicists who are clueless about electric currents in the atmosphere may not know about double layers let me tell you not only do they exist the electrical effects of a double layer can be incredible they store and discharge energy and radiate noisily over broad what does that look like guys holy smokes that's the alar drive right there we're staring at it there there it is that's your alar drive frequency wow what was this charge energy and radiate noisily over broad

(2:10:59) bands of frequency wow they accelerate charged particles and divide plasma into cells of light properties often separating small variations into categories like temperature density or chemical composition there's that amazing self-organizing property of plasma I mentioned before when electrically ignorant astrophysicists observe these effects they come up with all kinds of crazy mechanical explanations to dance around what clearly looks like electrical phenomenon everything from black holes magnetic reconnection neutron stars Frozen in

(2:11:35) magnetic field lines and shock waves and on and on but up in our atmosphere where we see these energetic effects like the Aurora in action one might ask where's the power source well the power power could be generated locally the rotation inertia of a body could drive the circuit in much the same way a water-driven turbine in a Dam's generator works and it's true early plasma physicists figured that was how it worked but now we're in space and everywhere we look we see smaller scale circuits in space coupling up to larger

(2:12:08) scale circuits just like how our Aurora yeah electric universe is I 100% online with electric Universe guys 100% um yeah I was reading about Royal rif earlier today actually I where was I reading that I think I saw a link on [Reddit](#) I think definitely electric Universe seems to explain everything folks um we might have to dig into Casimir effect oh yeah so one other thing I wanted to say is that so people may wonder they may go Ashton well you're into UFO stuff right so why are you not talking about aliens being real and why

(2:12:44) you not care about uaps the answer is I I do care about them I guess but I I care that the science and the technology will automatically reveal that stuff the moment we find out we live in an electric universe and that we can teleport an object and I I don't even really like the term teleportation I just like the idea that we can move fast as the speed of light or faster than the speed of light if we use electricity the right way I 100% believe that we can do that the moment you do that everybody's

(2:13:13) going to believe in aliens why because the reason why people a lot of people don't believe them from The Logical perspective is they go they can't get here it's too far away right it's too far away even in our own Galaxy the moment you take away that limitation and people come to terms with the fact that life is everywhere now you go okay well obviously they should be visiting us right like we can't be the only life in the universe so that's why I'm not worried about that in general and like

(2:13:36) I've said many times over aliens aren't going to change my life what will change my life is super conductivity uh room temperature super conductivity the ability to remove our Reliance

on fossil fuel TOS the ability to not have to get on an airplane ever again which I the moment I can do that that'll be wonderful um so that's the kind of stuff so that's the reason why I go for that and I think that's why Jeremy and I are aligned right is that Jeremy's out there trying to prove the

(2:14:01) science and he's doing it with way more scientific background for me than I am I'm just trying to catch up slowly right so yeah yeah assume assume a traversible cosmos that's a really good way to put it I like how he puts it there connected to the solar wind or the sun circuit more accurately for proponents of and the last thing I want to say in this front cuz we're going to log off here in a few minutes is that why is this all important as well is that we're building the building blocks for understanding

(2:14:34) how all this stuff is possible it's one thing to just say hey aliens are real it's another thing to say hey I can explain not only that aliens are real but why and how they're visiting us right that's why it's important that we learn and understand this stuff because then not it's not a matter of belief anymore it's simply a matter of here's logical deduction we've already deduced that this science is possible therefore we've deduced that we can make an object like a craft turn invisible go fast as

(2:15:06) the speed of light and get here from the Andromeda galaxy even maybe was it maybe beu maybe Ambassador beu is going to be visiting us from Andromeda galaxy who knows man who knows electrical theory of space this leads to an undeniable **truth** we are externally powered and that power is delivered by vast sometimes Intergalactic circuitry that can travel across light years while keeping its narrow braided structure intact the fact is there's just one known method for confining gas in a vacuum one known explanation for tight jets that span

(2:15:42) light years the magnetic field the natural byproduct of electric current we know hundreds of years of Plasma Research that an electr plasma will generate its own magnetic field and self constrict the current Channel this is known as the Benet pinch effect it produces filaments or threads of current that keep their shape over vast distances multiple filaments tend to spiral around each other forming helical power cables that can transmit electric power across the cosmos wow but this isn't just some Stellar effect it

(2:16:18) happens here too these cables have been identified running from equators to poles CC whole I'm going to post this in the chat plasma cosmologists also identify them in the filaments that extend from Active Radio galaxies this good this is a good find guys radio loes which are just double layers far above each pole of such galaxies look at that oh wait where did that go where go whichard Jets and lobes yeah yeah I mean it's crazy how you can keep this secret when you just have to look in the sky right and you can just see

(2:16:54) clearly we're dealing with electricity and magnetism everywhere right um let me see if there's any other parts of this we want to look at let's skip ahead a little bit you guys can watch this on your own as well yeah now you can see the this will be I guess the maget yeah so this is the magnetism right here the current access to large distances and these dist regions are likely

locations of energetic double layers which show up as radio and xray loes in certain active galaxies the currents then spread out and flow

(2:17:28) circumferentially around the equatorial plane they return to the galactic core along spiral arms pulling in matter and pinching it into stars as they go every element in these Galactic circuits radiates energy and that hints at further couplings with even larger circuits we get a hint at this with the observation that galaxies occur along strings H this is why the late great Halton Arps observations of physical plasma Bridges was so invaluable these Bridges connect thousands of Highly red shifted galaxies to lower red shifted ones interesting

(2:18:04) for those familiar with Arps groundbreaking work this is a bowl in the [china](#) shop to the expanding yeah scaler product guys scaler physics is I think where the secrets at when I learned in scaler physics that Academia is just zeroing things out because they can't understand them and explain them that's when I started getting red flags going off I think I spoke about it on uh investigate Earth podcast as well Universe in Big Bang Theory I think I'm going to close this particular one off here because we're getting to the

(2:18:34) end um here's the here's a uh sneak peek at my post for [Reddit](#) for tomorrow pretty long damn I didn't realize it was this long probably going to edit it a little bit we'll see I'm going to put in the link in there there as well so here's our autopilot post for tomorrow as well got some stuff ready to go for tomorrow pretty much got to make some modifications to it um one last thing I'm going to leave you guys with is something a little a little spooky Aus uh Aus so there is an asteroid that in 2029

(2:19:16) is going to come EX extremely close to hitting us so you guys know we've been talking about cbers right here's Aus 2029 this thing is going to basically intersect with us guys so I think a pus how do I make this bigger how is this kind of want to SN can I pause this so looking 2029 here when these two things overlap right here boom right there you saw that that so I'm just going to remind you guys of something real quick these satellites out here are geostationary satellites way out here okay Aus Aus

(2:20:03) whatever um this this asteroid is going to come closer to us than these satellites are out here it's going to come within this outer ring here that's how close it's going to be it's going to come closer to us than any other asteroid ever has in the history of modern civilization you guys ready for that imagine if we're off by just a little bit it's a 100 or 1,000 foot wide uh asteroid pretty wild man I was reading about this yesterday and I was going wait a minute this is really going to

(2:20:39) come that close pretty scary man in fact is this the one I'm I'm saving this is this a gift yeah it is yes Scoopy doop yeah that's oh boy that's scary folks look how look at this right wait did I miss it yeah I already missed it I don't know I'll have to figure out how to pause it oh we'll definitely be able to see it that's how close it's coming have like we could land a Rover on there if we want to so anyway guys it's been a fun night I appreciate you you guys hanging out

(2:21:18) tonight I'm going to get some sleep uh you have a good evening

MH370x - Recap and Investigation 1/21/24 - YouTube

Transcript:

(01:30) Malayan 370 contact 120 Nan 37 breaking news tonight A Malaysia Airlines flight with 239 people on board including four Americans has gone [Music] missing [Music] I remembered the line from the Hindu scripture the Bhagavad Gita Vishnu is trying to persuade the prince that he should do his duty and to

(02:35) impress him takes on his multi-armed form and says now I am become death the destroyer of worlds what's up everybody how are we doing tonight hope we doing well sorry let me get my things set up correctly here this is fine how you guys doing hey Sandy hey everybody give me a sec folks we'll be answering questions today uh just want to get this out here I don't know how long we're going to go tonight we'll see think this is good

(03:42) right okay I think that's fine okay folks here we go um oh I think there's going to be a solar micronova huh it's interesting okay so let's chat what do we got going on Ben Davidson I don't know who that is but yeah I don't know I think we're in tough situation either way right evening everybody so let's uh let's recap what we've been working on what's been going on today there was a big space uh that I was in where we had uh Brandon Fugal was in there from Skinwalker Ranch he

(04:27) impressed me a lot during that space I think people were trying to proved that he had uh paid some people to promote the uh promote the show didn't seem that way to me at all I think his explanation was pretty good that he had nothing to do with any of that um so uh that was one interesting space that we were in uh I've also got to get my background stuff oh boy hold on guys had to get Kobe back up there oh can't disrespect Kobe gotta get him lined up um yeah so Fugal was good let's see what else do we have going on we had

(05:18) uh we had the the let's see alien addict podcast I was on earlier as well and that was really good we talked about the case we talked about updates in the case we talked about uh the post that we're going to be going over here in a few minutes uh regarding uh the Espionage scenario so I think that that was really big we had the investigate Earth podcast so I talked about the Chan Thomas stuff which was pretty weird because we had the videos show up so more and more I'm thinking there's might be something to

(05:53) that video that YouTube channel I'm very very hesitant to dive into it given the past

history we've had of uh hoaxes and **scams** and fraud that's been done um let's see oh yeah so oh the Ben Davidson oh Ben Davidson yes yes okay sorry space news he's the space news account yeah yeah the Ben Davidson stuff is interesting because that's also what I was talking about with the investigate Earth podcast so if you guys are interested in the whole poll reversal stuff in general yeah so Ben Davidson broke the

(06:34) Chan Thomas story that's pretty big we on the investigate Earth podcast listened to pretty much the wi files piece on it and we talked about it I did a bunch of research for them on it um yeah more and more I've been hanging out with them talking to them even offline um you know I think that there's a lot of crossover between stuff that they've been working on and stuff that we've been looking into on our side and it was weird because um Chad called me up and he said hey what do you know about the Adam and

(07:05) Eve story and I was like I was like are you serious like I was just talking about this on my podcast because we had this video show up on uh the same channel where we got the direct message and so I I was like hey I'll I'll look into it I I had seen the wi Files episode a while back and so I did a bunch of research into it and you you can listen to the research and us talk for we I think we talked for almost two hours on the Adam and Eve story and we talked a little bit about some esoteric stuff like whether

(07:37) or not your Consciousness can change your reality um so I think that that was pretty big in general downside to this week because I didn't get a lot of the editing done that I wanted to get done been too busy um doing research investigation but if you're interested in the Chant stuff please listen to the investigate Earth podcast it was really interesting yeah there's been nothing new on the real creepy stories which I don't know what to take from it right so the three big stories that we got of the

(08:06) real creepy stories was the letter to us then there was the glitter which seemed to be about meta materials and then there was the last piece which was about this chant Thomas story and I've been talking to people and researching and it seems like there is something to this chant Thomas situation like the US government has surveillance stations 14 of them that are monitoring the magnetosphere so just as a little recap of what the chant stuff was that there may be a cataclysmic type event that would occur and we might also be able to

(08:44) detect earthquakes based on the ma Earth's uh electromagnetosphere and there's two different layers to this one layer is that if there were to be a polar reversal you might have um the crust rot a bit the plate tectonics which would cause dramatic effects basically be a cataclysmic effect and then the other side of it is even if you don't believe that the crust would rotate the Earth the magnetosphere weakening just that alone makes us very vulnerable to uh Cosmic uh what is it um God why am I oh uh mass choral

(09:25) ejections mass choral ejections um which is a very powerful uh burst of solar radiation that might hit us right and I found so the two things that I dug into it there are two aspects of it can we first of all can we detect earthquakes using electromagnetic uh waves or electromag by

you know measuring the electro the magnetosphere or the electromagnetic radiation and then the second part of is can we predict them and the answer to the first is that we definitely have electromagnetic radiation uh you know happen when

(10:03) earthquakes occur this could be explained by piezo electric effect where you would have like with uh a quartz crystal like where you squeeze the quartz crystal and it create electricity same thing you might be having happening within the Earth itself and then the other side of it is that um can we detect them and the reality seems to be that there might be a ways to I found three different scientific papers that pretty much argue that we can detect them and that even from Ant interestingly enough Antarctica comes up

(10:32) again it might be possible that they can predict the locations where these earthquakes are going to occur now you may say okay well how would they do that right and the answer to that is twofold one um if you were to think about like cracks forming right and it gets to a point where it this it's going to hit this Tipping Point well you could argue that the tidal forces from the Moon might cause it to go over the edge so that you might be able to measure um like the buildup and then determine that okay the moon's going to hit this when

(11:02) it goes around the next time it's going to cause it to finally burst the other thing is that they might be able to detect that from uh just like deviations in the uh electromagnetics uh waves that exist in the atmosphere and that they can tell oh you know based on the certain rise and the frequency radio frequencies they can actually like directly tell what direction um and a high likelihood that an earthquake is going to happen so it does seem like even just from the public available literature that there's some way where

(11:32) you can potentially detect some of these events I don't know if that would mean you can detect a cataclysmic event but they definitely seem to be able to detect some so not going to go too much into that let's talk about some mh37 yeah the neutrino detection so that's what it kind of logically FLW uh the conversation kind of flowed to Evan is that this whole thing with the Antarctica with the neutrino detectors that um I forget the guy's name but he was on Shan Ryan and mentioned that it might actually be like an active weapon

(12:05) as well because then you think oh we're not just detecting if we can actually change the electromagnetics then we might even be able to force earthquakes to happen that's scary so then the bigger part uh to Arn's question here is how did chant Thomas get his sources well chant Thomas was an electric engineer and he was also a geologist um he was also a ufologist so he studied science and made those predictions whether or not those are H up to today's scientific scrutiny is the big question and uh you know they apparently

(12:45) he predicted excuse me some earthquakes and he was able to determine that there wouldn't be earthquakes in other areas so it's it's pretty interesting looking into it there does seem to be something there I'm just not sure how much right okay well Josh that's going to earn you a **timeout** till tomorrow man okay but I am going to address what he just said in the chat there which is that um I brought up the sentient program thing today so UFO Korea had

messed me and uh floated the idea that

(13:28) it was a virtual session related to on the on the satellite program and I asked UFO Korea and the direct messages to provide me a source and provide me documentation he did not so that's not a new idea that's not uh somebody's copyrighted information I literally was already speculating they were looking at a computer program there's nothing new to that when people just throw ideas at me I'm not going to Source them on that and the idea that you would expect some somebody to get sourced because I had a

(14:01) conversation with them is frankly like egotistical so if you want to put together a document or some kind of official post and you want to Source it and do actual work and then you want to show it to me then yes of course I'm going to Source you now when I go on a podcast it doesn't mean every time I refer to it I'm going to give I'm going to Source you out on that okay and if you expect that and demand that then you need to go somewhere else okay just so we're 100% clear on that I'm under no obligation to do that

(14:31) um and if you come at me like that like that's a good way to get blocked so don't do that ever again Josh and for UFO Korea if you're out there watching same goes for you man um I don't like that kind of attitude and I don't like when you think that you're like I'm I'm under some obligation to owe you something because you gave me a piece of information especially one that's not verified so that was really weird because afterwards he also messed me and was like like how come you didn't Source me on

(15:02) your when you mentioned that on the podcast with alien addict like dude what are you talking about I already speculated that we were looking at computer program well before I even knew who UFO Korea even was so I don't know people get really weird and parasocial about stuff um uh you know I not last thing I'm going to say on that before we move on to the next thing is that everybody out there is free to post their own stuff on their own channels and their own theories I've made everything I had available for everybody

(15:33) else um and the only thing that I would ask is if you use my story that you credit me to it if you want to use the evidence I'm not even forcing people to use that in general uh so I don't know it's it's weird man okay now let's talk a little bit about the uh the case and where we're at with that switch over hold on oh that's not the one I want hey Krypto how's it going man [Music] okay uh I got to ask also real quick on the space I was on earlier I got to ask um Brandon Fugal a question so he came

(16:33) very credible to me or he seemed very credible to me because I asked him and here's the evidence by the way if anyone wants to use it in their own research um I asked him what did I ask him if what what type of Technology does he think is out there um either based on the Skinwalker Ranch stuff or just based on his own investigation in General and I and then how would we get it out if it's hidden from the third party contractors and I don't oh yeah he said stuff like anti-gravity and the things that we would uh what else did he say

(17:12) anti-gravity um he I mean he didn't say teleportation but uh it was pretty much along the same lines as the stuff that we've been discussing and uh just from his reaction the way he brought the stuff up it felt like it was very aligned with the other people that we've been hearing about out there you know he said that they didn't know of any way we could get it out and I said basically that we could we would um we would just keep talking about it right we talk about it so I've gained new found respect for the skinwalker uh

(17:45) Skinwalker Ranch people you know and again I everybody every time I think that somebody's discredited that's where I want to look at it again CU I think we're finding that um you know a lot of people get falsely discredited especially people that are close to the **truth** and then he had a conversation with **Mick** West near the end as well um I'll go back to this real quick where he basically said the same thing that we've been saying which is that the **debunkers** the Skeptics don't hold themselves to their own standards they

(18:19) use confirmation bias and then they selectively cherry pick pieces of information that they can **debunk** and ignore the rest right and and it it sucked because one minute before I was about to call **Mick** West out after **Mick** West and Brandon fogle went back and forth because **Mick** West was trying to go oh well I haven't seen any real evidence and he was saying um that if he saw more evidence he would look at it or whatever and I was just sitting there thinking the whole time like what are you talking about man like I have look at my

(18:52) evidence list right here you know you didn't you ignored all the evidence that we put forth for MH370 and you you decided that because you think one frame matches it doesn't match that the the somehow the videos are discredited right so I was about to call him out on that and I was going to call him out on the idea of like what even is his standard because the **debunked** the dod Navy videos for nine years and then it turns out that they were real and they were admitted to be real and he didn't he

(19:22) didn't never admitted he was wrong even after the dod Navy came out and said the videos are real he he wouldn't admit he was wrong instead he's still trying to **debunk** them so I think **Mick** West definitely needs to take a hard look in the mirror cuz he was totally full of crap on the space earlier today and he was about one minute from me just completely destroying him and then unfortunately the space crashed um and I thought about making a post about it just to call him out on the questions but didn't seem super important he was

(19:51) also saying about stuff like oh he wants to have the original sources but he didn't have any original sources for any of the dod Navy videos he never saw saw the originals from any of that stuff he just saw whatever was posted out there just like everybody else's stuff so and then the craziest part was he was saying that he wanted Brandon Fugal and the Skinwalker Ranch to post their stuff on **Reddit** and metabunk because he said that the community would do such a good job of reviewing it I almost had to laugh my

(20:18) butt off **Reddit** **reddit**'s the dumbest people on the planet Red's the last place in the whole world that I would want something to get reviewed on and meta bun is just completely

biased I mean they just anybody who goes against their narrative just gets removed from their threads they're just that's where there like a literal cult on metabunk okay uh so let's see so yeah I I did not know what to think of meta of Brandon Fugal um so would you assume they're paid to do so so then also

(20:48) Brandon Fugal also mentioned that he thinks that metabunk is compromised and that some of them might be getting paid uh Ed Ed win says how do you explain the tail of the plane being in the frame after the zap you mean it's not after the zap it's in the middle of the zap so there's nothing to really have to explain there but we'll go ahead and show it because we haven't shown the videos yet here today I'm not going to address every question though unless they come up kind of early on I don't want to keep going

(21:18) back to it a lot of times we end up having to repeat stuff so uh I'll just go to this part here where we can see it happen right um so in this Frame right there you can see the videos I mean how do the people who think we're looking at Pyromania VFX explain the taale being visible I guess that's the better question right so in the very first frame the in in the moment in which this Frame was captured the singularity had not completely enveloped the plane so we see the tail sticking out of it or at least

(21:47) a residual of the tail it's hard to tell exactly right and the next frame it's it's been fully ENC encompassed right so I don't think there's really anything to have to explain there but if I'm wrong um and you have a followup Edwin please go ahead yeah so like quiz aoto says it seems like **mcwest** motivations are probably I would say they're probably not monetary I think it just comes from being CNN brain right and I'm actually starting to notice that while this is not perfectly accurate there is a

(22:20) political element to this as well it seems like people who are left-wing don't tend to believe this stuff's possible and people on the right wing are more open to it weirdly enough even along the lines of what we're dealing with in the UFO community on Twitter it's very weird how the political allegiances are pretty obvious now it's not 100% there's people that have opposite political allegiances on one side or the other right but for some reason the Skeptics seem to all be on the side of leftwing politics in the

(22:50) United States or what we would consider to be leftwing politics and then on the right side you would have the people that would be considered to be uh right-wing politics ICS you know in terms of sorry not theep in terms of the people who think this technology can be real I think that's very odd I did not expect that but I guess it goes kind of along line with the same thing that we've talked about in terms of religious people have no problem reconciling this information and these beliefs seems like

(23:14) the ones that are more atheistic are the ones that have the harder time reconciling it yeah no it's not it's not 100% guys I'm just saying just saying uh I I bre y J whiz asks have you seen Punjabi post new post about the orbs dragging the plane uh we could take a look at that I have not looked at it in depth I saw he posted a bunch of stuff out there and I do think that is

Punjabi Batman I mean I think that's pretty obvious that it's him I mean doesn't take a scientist to figure it out um I had messaged him his other

(23:48) accounts definitely got banned so also wouldn't surprise me if that's him out there um but yeah and I think I saw some messages where some of these people are still trying trying to say that I might be pujabi Batman I mean man these people got to seek help you know I really don't know what to say about it so I think is this what he's talking about the plane was stalling the plane wouldn't have been stalling though the plane would have been turning I went back back and look there was an old

(24:14) **Reddit** post from the early investigation can I find it do I still have it up I don't still have it up and it it basically confirmed that the turn of the plane was within the capabilities especially while descending so the is not stalling I I don't think that's true I think the reality if anything when he did his calculations which I I was going to post it and I don't think I did did I post it maybe I did post it yeah I posted uh I don't remember if I did or not but uh when he did his calculations

(24:46) he showed the plane was actually going faster than what the people previously had shown I I looked up on grock as well using Ai and that would have been within the speed of a plane while turning so the pl when a plane turns just like when you turn in your car you slow down so when it's then kind of straightening back out again um it probably would have been speeding up again so I don't think there was anything wrong where I don't I don't think it's stalling or anything like that I double checked if anything I

(25:15) thought the plane might be going too fast yeah they're apparently Banning his accounts uh which is weird because like how do they know it's him I mean and the people the people reporting him know right but how does **Reddit** know so it seems like they're silencing him because as far as I know I don't know what he would have ever got banned for like what's he doing that's wrong I think that what they do is they're now Banning him over ban evasion which is now just a Perpetual cycle right which it feels bad for

(25:49) him yeah we're in a day now for tragon ghost there's so much drama in the UFO Community I was also oh yeah I was in the the space earlier where with Shane as well where keemstar got in there and I missed another one cuz I was on the alien addict podcast where keemstar apparently just went up against the entire uh the the lons against all of them right I don't like this term the UFO hate group I don't think they're a hate group I just think they're lons right their cult followers of Lou

(26:15) alando I think that's a much better explanation for what they are and um and I don't know what he said cuz they didn't record it so if somebody has that recording i' definitely want to watch that later in general so memory hole 370 has a great question unrelated question why did the pilot lose communication even if the electronics bay was completely demolished it shouldn't shouldn't they have the device in the cockpit I 100% agree with you I think that the only logical explanation oh do I not have

(26:46) live chat going on okay we're in live chat the only logical explanation is that the uh uh the communications were not shut down I don't believe the communications were shut down at all I don't think the communications were shut down and I think that the evidence is that we know there was a communication at 1730 UTC which was from a 777 pilot that was going to Tokyo so the 777 pilot going to Tokyo heard the plane supposedly 10 minutes after the plane went dark so this means that I don't think the communications would have been

(27:20) shut down and if you go look at the stuff out there it says that it's very unlikely for the communications to been shut down so then why are there no probably because they're classified especially if our videos are real it explains why you would classify them same reason why you would cover up a fire scenario right also yes the communications could have been intentionally jammed great Point Arwin appreciate it hopefully I don't have to Source you because you made that up so if the communications are jammed

(27:49) like by the awax like if the United States government's taking this plane then they could be jamming that Communications now not only is there theeven 1730 communication but the Malaysian Minister defense says that they knew it was a civilian airliner and not hostile I think logically speaking the only way you would know that the plane is not hostile especially given the hijacking scenario is if you have communication with the plane what we know is they only released the communications up until 1719 UTC which

(28:20) is only a minute before the plane went dark we also know there's a potential Mayday call at we think it's 1843 UTC but supposedly it's 2:43 a.m. it depends on what time zone that's in if you believe it's Malaysian time then it's 1843 UTC which is in within three minutes of the time that our window of opportunity for the videos to happen is so yeah hey thanks rip zip I appreciate you rip zip says I am a VFX artist for a major Motion Picture Studio I can guarantee these videos are 100% real do

(28:55) you want us to tell us what studio yeah I think that the **truth** is my opinion is they're absolutely 100% real you mean you look at these videos there's no discrepancies on a single frame in here right look at all the details like even just the heat signature of the brain of the Drone how's a hoaxter even going to know about this this is all classified information in 2014 this was three years before the the dod officially said that the uh Fler videos were authentic before that they were assumed to be

(29:26) fake how would anyone have any idea how these orbs are supposed to look how is someone going to like make it so that the plane goes off the screen here like this like this is a manual tracking this isn't like something they like randomly have it moving around this is actually like like a real human being manually tracking it the shake increases when they zoom in right like there's you have this much you have this much evidence over here for a **debunk** and you've got this much evidence for it being real

(29:55) it's like yeah yeah and still the only evidence against the Drone video is the Pyromania VFX which doesn't even match like as a statement of fact it doesn't match like here it is overlaid

that's this is not in our this is not in our video it's this the only frame that's even close is this one and it's not even really that close I mean you would need to be 100% on the money they go well you don't know how VFX works is well I do know how it works you take the effect and you put it

(30:27) directly in your video and you don't modify it that's how VFX works it's literally how it works that's how Starship Troopers did it Starship Troopers didn't go and modify it to make it look different why would they do that it's called confirmation bias the literal thing that Brandon fugle was telling **mcwest** that he does same thing that he did here they did confirmation bias somebody finds something that's similar and then they just lie and say it's exactly the same when it's clearly

(30:53) not and the problem is the moment they lie and say it's exactly the same now they've completely discredited themselves now we can't listen to anything they say anymore because they've shown that they don't have a rational approach to the situation right they're vested and trying to **debunk** it not trying to get the **truth** yeah thanks rip you know rip says that every one of ashen's points are all one would need to verify their authenticity he's done a great job it would take me months at my job to

(31:25) recreate such videos and of course I mean cuz VFX is not easy to pull off if it was movies wouldn't take years to to make VFX is the longest part right it's the longest part so that's why I hope that one day these videos will be authenticated as true you look through the evidence here did a bunkers haven't address any of this stuff not only have they not addressed it they refuse to address it and you'll even hear them argue logically and say that oh I don't have to address it all I have to do is poke

(31:55) one hole in it and then I've proven it's fake that's not how it works at all not at all especially because I want to make another statement of facts the **debunkers** have no facts on their side whatsoever what they have is speculation and it's ironic because on the **debunker** sub~~reddit~~ they tag content related to me and other people as speculation when it's you know based in actual facts and they never tag their own stuff as speculation ever even though they literally only have speculation nobody has proven anything

(32:27) Rel these videos being fake they've speculated as to how they could have been created that's it that's all speculation is not proof and if you want to go to a court case I would happily take my evidence against the people that think that oh I found one frame that's similar or somebody randomly found some cloud images somehow in 20 minutes which by the way now we think that we can actually prove that the cloud images have been fabricated uh I haven't dug too much into it because I just don't care about

(32:57) the fabric the cloud thing that much but for the people that do I may make a post about it we'll see okay how would we know the Drone is cropped out because we don't see the Drone in the video good question so here's the the satellite I'm going to go with the high quality single VI image one the Drone is going to be cropped out right out the top of the screen why because we don't see it in the video seems pretty simple now why would you crop the Drone out that's

also a pretty simple answer the satellite

(33:26) video was released first according to reeside and on right they probably didn't even think they would have to release the Drone video now why else would you do it probably because there's other Assets in the area as well they're not just cropping out the Drone they're cropping out other stuff as well otherwise why would you crop the video at all realize we see this mouse come in from the side of the screen here right Mouse comes in off the screen so we know that it's cropped we 100% know is a factual

(33:53) statement that the screen has been cropped and that we're looking at a screen recorded here right now but what I want to say here as well and again this is not UFO Korea's information I already speculated on this and I did so like a week ago and before that is that if we were following a satellite like people early on thought oh the coordinates are changing because someone's moving the satellite that's what people thought early on back in August but we already have shown that what we're looking at here is a computer

(34:30) program a 3D Google video Earth so what that means is when these coordinates change it's not because the satellites moving around and if we were looking through the satellite what UFO Korea mentions if we are looking through a satellite that's moving you should see the coordinates shifting as while the satellite's moving along that's how we know we're not looking at us through the lines of a satellite and I've already speculated this beforehand too is that it doesn't make any sense to be actually

(34:55) looking through satellites it's 2024 it's not the 70s or 80s anymore you're not actually looking down through the satellite you're just taking that data and you're sending it to a computer program which is creating a visual representation of it an extremely accurate one so I think we're good on that what else we go we've already **debunked** the cloud images they there's no uh proof that they existed before the video yeah nobody should be proud of being a **debunker** and that's why I don't really

(35:35) want to use the term **debunker** because I think it's a bit of a kind of a pejorative it's really Skeptics for the most part but then there also are **debunkers** the orb videos do match I'm not sure why I keep saying that I think it's pretty clear that they match in the side by side yeah so sama's great Point here too is Imagine thinking somebody made both of these with no inconsistencies they didn't mess up on a single frame they just somehow made them all exactly perfect no mistakes anywhere that anyone

(36:12) can find even the Skeptics can't find any mistakes they just try to claim oh well this they use some other V Pyromania VFX or they found some 2D image even though it requires a 3D render to pull it off and then if you ask them well how can you have both those in your head at the same time you agree it must be a 3D render but you say oh no it would be easy to convert the 2D image into a 3D render what they just keep saying oh it would be easy to do this or easy to do that but it completely defeats their own

(36:40) argument either it's a 3D render and you rule out the 2D visual effect or it's a 2d visual effect and not a 3D render it's one or the other man it's mutual exclusive use logic and reason don't just say oh it would be easy to do it that's not an argument it's not an argument what else we got okay are we good with this stuff how many more questions do we want to address related to this before we move on to the next thing and welcome everybody thank you all for being here I appreciate you guys

(37:19) um there's something else I want to show you I want to show you a video I made I want you guys to tell me if this is too cringe but I'm before I do that we're going to go through the the Espionage scenario with everybody here and I also want to do uh I want to set up a a all evidence review for later this week as well I want to go back through all the evidence not only do I want to go through the evidence though but I want to kind of really hash out what the evidence means related especially to the

(37:46) Espionage scenario but potentially other scenarios yeah regardless of whether or not the videos are real as well we don't have a solid answer for what happened to the plane right so anybody who says the videos are debunked for first thing you say is what do you think happened to the plane how does the plane go missing how does the 77 go missing in 2024 yeah Cole go ahead ask a question buddy uh if I missed it apologize I'm trying to catch up on the chats um hey Sam from Australia how's it going friend how did I find the info about the

(38:22) X seals has been out there for a long time I just never reported on it cuz I didn't have strong credible reason to go with it so the reason why I reported on it now is because of the letter to Ashton Forbes because I can't stop thinking about that letter and how the idea of the Espionage scenario brings back a lot of the evidence that we've kind of had to throw away especially around the people with the fake passports understanding why the fire would have happened the fact that the fire happens at the weak point between The Radars

(38:52) seems like a very planned event right so I had pretty much discounted the entire Espionage scenario but if you bring the Espionage scenario back in I think we have to believe that the uh Gru the Russian intelligence report is real I think we have to believe it's real I mean it tells the story of the Espionage scenario so that's why I reported on it as you can tell it's pretty convincing it's I mean it's weird those two guys dying is messed up we're going to go through it here in just a few minutes

(39:25) okay let's see Mr science when I don't know benator I don't know what that means my man yeah someone spent a long time even the people who have tried to recreate it can't even get the orb movements correct because it's too accurate to science right yeah so we're looking at um probably the chemical reaction of them trying to put the fires out Google admin and the chemical reaction is going to release toxic smokes now IR can see smoke that's actually a false statement the people that tried to argue that

(40:11) Fleer can't see smoke are arguing for like not seeing like someone cooking barbecue or cooking ribs which is like uh I don't know exact kind of smoke but the uh I found some evidence

that shows that lithium ion batteries to be monitored by infrared and so I think it's very plausible and likely that the chemical reaction from lithium ion batteries is visible in infrared and exhaust is as well if you believe it's exhaust but I believe it's smoke it is speculative I think that the statement

(40:50) that someone would make that infrared doesn't see smoke is absurd what what kind of smoke not all smoke is the same right this is just again low low quality like low quality **debunk** attempts that don't even think through their own arguments if someone was going to go hard with it they should say what are the exact chemicals that of smoke that the infrared can see and not see and try to argue that uh lithium ion batteries don't produce those hey Wu appreciate it uh I don't know I'm trying not to dig

(41:31) too much in the sacred geometry stuff the reason why I'll say that is that this is where it starts to get it's not even just for us or me it's more for people in general right is that when you start digging into sacred geometry and start saying that okay every this is everything in the universe this is all it all connects like it gets too much into the esoteric side why do you even need to go there just explain why it works we don't need to know that oh this is also all this you know all these uh

(41:57) angles and numerologies all repeated in the universe we don't need all that all we need to do is explain how the science works that's it that's what our focus is going to be on now if it's because there's some sacred geometry and certain shapes and what have you that enable that great great we don't need to dig into why all those shapes exist we just need to explain what the shapes are so that's my uh a view on that stuff what else we got tragon you're you're border lining

(42:33) Bud okay where was Cole did we get Cole's question out here oh there it is hold on yeah the creepy video guys that's I can't get it out of my head man I listened to it like two more times today the other thing I'm thinking too is that I'm I'm leaning towards the creepy video letter not being American what if it's like Taiwanese and Taiwan is um you know on the same side as America or India right something like that plane was leaving Malaysia had is **China** the video we beli is in nicobar

(43:11) Island sorry spelling isn't that the wrong direction well yeah Cole you got to take a look at the flight path man and again this is the official flight path here so you can see pretty clearly this is where the plane went everybody agrees this flight path is agreed upon by everybody the part where we deviate is right here so this plane turns around everybody agrees it goes to panang goes right over the closest airport goes from the closest airport over to the nicobar islands this is where you've got the cop

(43:37) tiger and potentially Cobra gold exercises happening with the US military right here where all the most most advanced equipment is and then the people that believe the imrat pings all the stuff that you're going to see out there from the experts and I'm using quotes cuz they're not really experts at anything related to this uh they say that the plane went to the

South Indian Ocean right here we say this is where the videos happened that's the difference if you throw out 10 rows of Excel data on a

(44:05) spreadsheet then this is where the plane disappears right here it's that simple 1840 UTC not just that 1840 UTC is also the time where the last communication was reported or the last time the plane was tracked according to the uh March 8th 2014 the same day the plane went missing subang Air Traffic Control I Lo contact with the plane 1840 UTC that's right here this is where there's a witness who sees it as well so hopefully that answers your question Cole let me know if you have a followup yep two marines uh died not

(44:42) even two month not even a month two weeks before the plane went missing hopefully that helps Cole well that's wait where's well you guys are chat's moving fast today folks okay yeah we're going to get into the seal stuff here in a second yep I contacted salvator Pas we are probably going to have another salvator Pas hard Tru in February so probably in a few weeks for the people who are interested the videos have not been proven fake let's just be 100% clear on that Skeptics have assumed and speculated the

(45:37) videos may be fake the videos have not been proven fake that's a lie if anyone says that so let's just be clear I mean if you're not even willing to admit that it's not been proven fake then you're obviously not coming at it from an area of good faith whether or not you believe they're fake is a different question as to whether or not they've been proven fake the same way we can't prove that they're real right we have to hold both sides the same level of Standards we're not

(46:03) sitting out here saying they've been proving to be real we're just saying that we have a huge amount of evidence that shows that they're real right and that's why we're seeking the government to make statement seeking the government like AO to investigate so we can prove that they're real look at the antenna array I don't know about the antenna arrays Justin I'm going to give you a **timeout** bud you can come back in 30 minutes no concern trolling guys not really in the mood for it not going to permanently ban people

(46:42) but if you if you're coming out here trying to tell me what to do or whatever it's going to be a **timeout** okay yeah if you're curious and I'm not going to go into everything here today but if you're curious here's your evidence right here man so Cole and anybody else has not caught up to speed please start with looking at my pinned evidence it's all broken up into categories very easy including flight path there's one for the flight path right here the flight path so again you can just follow along

(47:10) with all this you can go to my YouTube channel which you're on right now and you can actually find the flight path explainer which goes through everything as well as just because you don't believe something doesn't make something fake guys you guys got to really just use logic and reason use logic reason okay let's see what else we've got uh yes I've been on blurry creatures podcast that's out there somewhere you see I've been busy with this stuff creatures yeah I got to get the links

(47:41) guys to all these we got some more podcasts coming up I'm not going to be revealing any podcasts ahead of time though unless until right ahead of time okay we're going to get into the seal stuff relax guys relax yeah muon was pretty good muon was good I probably should mention some stuff around that yeah milk farts all his counts are banned I me maybe he can make more but three already has been lost so I don't know why he' make any more yeah it's very strange quiz cotal that nobody in the uip disclosure wants

(48:16) anything to do with the videos I've done my best to not antagonize them although I'll admit that I have in the past uh but yeah I think it goes to show that two things one is that most in the UAP Community are either not aware or not prepared for the implications of the very thing that they want to disclose the technology and the implications of that technology what it can really do I think most people are not aware of that and the other side of it is there's a lot of people that are just grifters

(48:44) they're just grifters like they're making their their money off of this this is their job right they're either too emotionally invested in their own opinions or they are at a point where they don't want to lose their their money right I mean if a disclosure happens then they got to go do something else or they got to at least Rebrand into something else right yeah I did a podcast I I did a few I did one with Howard Hughes as well we're going to get into let's get into the seal stuff now okay and then we'll

(49:14) go back on some of that stuff you guys can ask more questions but I want to talk about the seals okay so let's go into that and then maybe we'll look at this later I don't know this is actually a clip that I wanted right here I want to look at this real quick can we can't make this wide screen or anything like that you can't okay well we'll save that for later then maybe because this is what I want to do but I want to do it even faster where you can see the clouds morphing it's even hard to tell even

(49:40) from this smaller thing you really have to see it full screen in order to see like the little clouds morphing everywhere okay the Howard e Holt na Naval communication station that's interesting I'm not sure what that's going to lead us to but that is interesting thought I will Google that for later Howard eh Holt Naval Communications station I just want to see where this is real quick yeah it's in Australia I mean we have pine Gap Pine gap's there as well but I mean sure there another one uh let's figure out where this

(50:32) is okay so there's another one that's good to know yet another Naval Station I mean there's a lot they have a whole jorn array satellite or a radar array they should have easily been able to find the plane so yeah there's not much we can do about it though okay let's go yeah Aaron that's because it's apparently it's it's too hard for the trolls to avoid getting **timeouts** but for everybody else it's too easy to not get timed out right just acting like a normal person is pretty

(51:02) easy okay so what is the stuff that's been going on Wow 40,000 views already in two hours okay 62,000 views okay he's got a lot of views um okay so this is where it gets spicy folks

so let's start with the **Russian** intelligence report okay you can click this link down here you can check this all out on my Twitter if you want to follow along at home this **Russian** intelligence report is you can find various versions of this it's you don't have to use this particular website there's it's been

(51:37) referenced all over the place on the internet um I did steal the pictures from this and use them in there now this **Russian** intelligence report is dated I believe March 15th March 14th this is only six days after the plane went missing early on in the western media this wasn't reported on and people online speculate this was **Russian** disinformation right but why would **Russia** come up with this story about it right uh doesn't make a lot of sense and if you are looking at the Espionage scenario and looking at two videos of

(52:12) the United States government teleporting the plane then this all of a sudden gets a lot of credibility right the amount of credibility this gets all of a sudden is huge cuz they literally are talking about capture and diverting the plane they even mention it disappearing when on March 8th the aircraft disappeared they're using specific terminology that's in quotes this is directly from the report supposedly they're not saying that it was taken by remote control they're saying it was literally disappeared so I urge you guys you can

(52:46) read this I'm just going to go through my abbreviated version and read my abbreviated version so I say the **Russian** intelligence report was MH370 an Espionage event published March 14th 2014 is an article that references the **Russian** Gru uh intelligence report claiming to be confused as to the why the US Navy captured and then diverted in quotes MH370 from its normal flight path to Diego Garcia military base the report uses disappeared in quotes to describe what happened to the plane supposedly the flight was under

(53:20) surveillance by the gru because it had received highly suspicious cargo that was previous aboard the container ship MV MK Alabama famous for the captain Phelps story and movie that was in 2009 **Russia** informed **China's** Ministry of State security Ms MSS and received assurances that measures would be taken to ascertain what was being kept hidden the report claims **China** Was preparing to divert the plane from its intended location of Beijing to Hau uh Milan International Airport on henan island huan island the report concludes by

(54:03) questioning why the United States media has not demanded radar plots and satellite images from the Obama Administration who would have Without End doubt seeing the plane on radar and or its debris fielded via satellite as our investigation has proven so then I say part two is coming soon the strange deaths of Mark Daniel Kennedy and Jeffrey Reynolds on the M Alabama okay so why is this credible already well one we have two videos of the plane getting disappeared by the United States government we've already

(54:35) implicated them we've already said that the you know locki Martin in conjunction with the US Navy is probably the most likely explanation for why the plane is disappearing so this corroborates the first paragraph here right the highly suspicious cargo is the new element that's being thrown into this part of the report is that there's actually a report that corroborates this

from the French dad who apparently there was some last minute cargo added after onto the Manifest after the plane already taken

(55:04) off 89 kogam so if the United States government let's just hypothetically say had some type of thing to force the fire to occur on with the batteries that's would be a good opportunity in order to do that either a device like a bomb type thing where they can ignite the batteries or something like that um so this would imply that what we're talking about now is no longer a random event where the fire accidentally happened but actually one that was planned now this is another thing that adds in here now it says that **Russia**

(55:39) knew about it and they told **China** which normally when I first read this I didn't have any way to connect this to the case but now that we've listened to a letter to us that says that this was a show of force by the United States government showing **China** hey you try to steal these people no we're going to show you what we can do now this makes sense this corroborates what that story is talking about **China** Was preparing to divert the plane because these people are defectors defectors defectors defectors defectors

(56:08) even they're defectors so if they're defectors it would make sense why **China** would divert the plane they're diverting it because they were going to divert and hide these people and then United States government pops in and says nope we're taking this plane it's not going to happen right and then it says and this is something else that now we know this is true again right we know this next part's true in the report why was the United States media not demanding that the the Obama Administration tell us

(56:35) what the radar plots and satellite images were from I've shown multiple videos we've shown the cers system we speculate on the sentient system I even showed Diane Feinstein on CNN being asked don't we have better satellite imagery shouldn't we be able to see the debris while the CNN host is literally showing her the uh the uh Bin in compound from like 200 what was it 9 when that happened and we can literally see people with high enough resolution where we can actually see people in outside the compound and cars roing

(57:06) around how will we not be able to see a giant debris field miles wide from a 777 crashing into the ocean just nonsensical we know that we would have been able to see it why was this never pushed so here's the official thing again let me see what else I so the part that I left out is is after it talks about the MK Alabama uh was that what first aroused Gru suspicions regarding the Alabama was within 24 hours of loading this highly suspicious cargo uh Bound for the Malaysian Airlines flight 370 two highly trained US Navy Seals assigned to

(57:46) protect it were both found dead under sub suspicious circumstances wow that's wild right this has just happened two weeks before this was put out so this was March 14th so maybe three weeks if you want to really stretch it okay March 14th is when this report comes out or presumably before it and they're trying to connect the deaths of two guys to the plane that were on board the Alabama M and connecting the M cargo to MH370 both Kennedy and Reynolds report says were employed by Virginia Virginia based Maritime security the

(58:28) Trident Group which was founded by US Navy oper Special Operations Personnel seals and Senior US Naval surface Warfare officers and has long been known by the gru to protect vital transfers of both Atomic and biological materials throughout the world hello right I mean hello upon Gru assets confirming that this highly suspicious cargo was aboard MH370 on March 8th this report notes Moscow notified them blah blah blah we already talked about that I mean this report I would have thrown this report out in fact I didn't report on it for so long because

(59:12) I didn't have a way to connect it to the plane I didn't have a way to connect it to the scenario that made any sense but now I'm going what if this cargo was the batteries what if this was some of the batteries that were used to ignite the other batteries and The Runaway lithium ion fire battery fire what if this is some other cargo not related to the batteries but also some type of important device whatever it might be right anything what if it's something that China's trying to steal right yeah

(59:39) and if we go around the scenario of Allegient which I think NC boy has been all over I can't really make it make sense but he says it could be a nuclear um what is it MRI technology or something like that I think that's what NMR stands for nuclear magnetic resonance yeah nuclear magnetic resonance like an MRI turns out that magnetic resonance is exactly how MRIs work just FYI when I was Googling about magnetic resonance the first thing that comes up is MRIs so if you Google electromagnetic resonance uh or let's just do magnetic

(1:00:23) resonance MRI Google magnetic resonance first thing comes up is MRI machines magnetic resonance imaging that's what an MRI actually is pretty interesting so we don't know exactly what this cargo is pretty bizarre though right okay so yeah exactly holy moly I mean now you guys see why there's so many views on this because it's crazy I mean this is like the fact this all connects to what we've been talking about is bizarre so what's the followup so that was the first part I saved the part about the Navy

(1:01:03) Seals because I had looked into the Navy Seals years ago when I first read the report about the Navy Seals I thought holy crap something is stinks here and I'm talking years ago I at that time I didn't even know that it was anything related to MH370 that was bizarre I thought this whole report was Russian disinformation and I had no IDE I just knew that something stunk with the the seals when I read this now again today and I went man that Navy SEAL thing is there's definitely something wrong with

(1:01:34) it right and if we now bring in that maybe this is a legit report and that the the Russia isn't lying about this they're trying to expose this and the Western media wants to cover this up right United States government's not going to let mainstream media report on this and they didn't and now we know that the mainstream media is under the thumb of the United States government without any question of a doubt I mean this investigation has proven that the United States government controls the media in the United States simple as

(1:02:00) that it's the reason why they're not talking to me if I mean there is no reason the United the media would not want to cover a story like this unless they're being told by the

United States government not to talk about it I've been on podcasts like Tim P Alex Jones all kinds of huge people right so the followup this is the part where I actually started to get emotional Related to this okay I don't think this has anything to do with Co guys this was 2014 this is 6 years before the covid stuff happened so

(1:02:35) let's not go and do the thing where we try to connect every single conspiracy theory together let's just follow the clues and follow the evidence and not speculate too much if we can I know it's hard I found out about this uh report months ago and it was only till recently after I had heard the letter to Ashton Forbes that I started to be able to go huh this actually this actually might make sense so I want you guys to realize something else here as well okay I've been honest about all of this as well I

(1:03:06) never believed conspiracy theories before this I was a CNN brain in the not super distant past myself so even as I've been going through this my own understanding of what's true and what's real and what's not has also been evolving so when I first read this I think it was actually Punjabi Batman that first tried to speculate about this cargo I want to say months ago and I didn't report on it at all because I didn't find I didn't have a way to link it to the case in any credible way and manner right but now

(1:03:41) that we have this scenario that seems plausible of this Espionage scenario as it was presented by the letter to Ashton Forbes I had to say huh maybe there is something going on here right my opinion on the Russian government and I don't know if there's probably tweets or like replies from before I became have so many followers but I've always thought that the Ukraine has no chance against Russia I I don't have any particular love for Russia or Putin but I think that if we say that we're somehow much

(1:04:12) better than Russia is I think that we're pretty much just Hypocrites I did not vote for Joe Biden I'll say that I did not vote for Joe Biden um but that was not for any reasons related to this case or anything that's come up recently um that was more to do with the stuff that happened with the lockdowns and all that stuff I was never a support of any of that stuff um and just for people to know I don't know who I'm going to vote for just in case you're curious it's probably going to either be RFK or Trump

(1:04:43) most likely that's probably who I'm going to vote for I mean I I don't know 100% uh but we'll see just full disclosure full transparency um so let's go through this real quick and then we'll do some more questions guys the suspicious deaths of Mark Daniel Kennedy and Jeffrey Keith Reynolds I'm hoping I'm going to be able to get through this man because hey take it easy Evan thanks for being here man this was actually emotional when I started reading the statements so you

(1:05:10) you'll get there I didn't even post them all there was a lot more the Russian intelligence report mentioned suspicious cargo loaded onto MH370 transported by the way of the Alabama MK two Navy Seals were working for the Trident group protecting the cargo both dead on board February 18th 2014 this is 2 weeks before the plane goes missing two and a half

weeks this is very close to when the plane went missing guys so right away time frame plane goes missing March 7th or March 8th depending on when you want to count

(1:05:46) if the seals are found dead on February 18th the **Russia** thing says that the cargo was loaded onto this boat the day before these guys were killed and then this cargo gets onto MH370 local police say that the pair went to the casino met prostitutes bought drugs and then they both overdosed the pairs movements were unaccounted for 3 hours between 3:00 a.m.

(1:06:19) and 6 a.m. so I look through this 3:00 a.m. is when they leave the casino the casino closes at 3:00 a.m. 6:00 a.m. they check in to the boat so they check back into the boat at 6:00 a.m. and then they're found dead later that day that morning or day whenever I don't know when they exactly found them police said that they both died from heart attacks related to alcohol and heroin overdoses both of them two people both die from overdoses at the exact same time when does that ever happen they were found side by side surrounded by syringes pills and

(1:06:59) heroin toxicology found no traces of poison so they supposedly were not poisoned family and friends were shocked and refused to believe the story they are convinced of a coverup and called for a US investigation into their deaths okay guys when family and friends are all calling for a cover calling for a cover up and investigation and they're literally like two two people both overdosed at the same time my alarm bells are going off man and this was my alarm Bells were going off before when I was a CNN brain and not

(1:07:36) even a conspiracy theorist type person they were already going off now I'm going I'm going holy crap way too suspicious I do not believe Mark took drugs white told Mar online that is not the Mark I knew there's so much more to this than is being not being told right now whoa there's much more to this that is not uh that is not being told right now whoa friends who grew up with Kennedy and training alongside him at a local crossfitness gym ridiculed suggestions that he had become a heroin user or hung

(1:08:12) out with hookers it is rubbish to say that he was suddenly taking heroin he did not even smoke so why is someone who's a seal and has been taught to look after their body to become a junkie it does not add up something is wrong Mark's dad this guy's dad like was basically having like he he was so upset that he was unable to even talk to the reporters he's in the just weeping he says there has to be an investigation there has to be an investigation just put yourself in the mindset they're trying to say that your

(1:08:48) kid overdose you know he doesn't do any drugs they're trying to say that he was hooking up with prostitutes you guys know anybody else who they tried to say was connecting with prostitutes anyone else related to this case that you guys can think of that they tried to say that they were buying prostitutes how about Lieutenant Commander Edward C Lyn they also tried to say that he was trying to get prostitutes they were trying to put him in life for prison over Espionage and decided to throw a prostitution charge

(1:09:12) out there right bizarre another friend who did not even want to be named said what are the chances of two x seals dying at the same time in the same room isn't it the smallest bit suspicious that they both take heroin and die yes it could be a contaminated batch but I just don't buy it I don't buy it either this cargo gets loaded into MH370 two weeks later and then the plane disappears I do not believe in coincidences this is just wild cuz they tried to throw Lynn in prison for life they tried to throw him in prison

(1:10:00) for life dude maybe he was protected man he was not a Traer he Edward C Linn was not a Traer I'm sure of it after reading through his case if somehow he's not connected to the MH370 videos which I think is almost impossible he's not a traitor so maybe that's why they didn't try to kill him I don't know he was also active duty these guys were not active duty I can't say for sure this is pretty wild right yeah even the chat is like holy crap right I mean this is I had to go and uh I didn't even have

(1:10:37) I didn't drink tonight but I thought about having a drink after this because I'm thinking guys we got more people to vindicate we got two more Navy Seals to vindicate here now it's going to be hard to prove without a doubt that these people are connected to the plane missing but something ain't right with with this man this does not sit right with me at all and as far as I can tell I was Googling it I don't see any investigation that ever happened like they just made this go away after like a month later the

(1:11:05) toxicology goes comes back and says yeah these guys had heroin and drugs and alcohol in their system that's it it's gone so if you guys oh and here here the images of these guys okay so here's one with the dude in front of the MK look how Jack this dude is this look like a guy who's out there taking heroin and hooking up with prostitutes I couldn't find more pictures of this guy Jeffrey here's him with his wife she's not unattractive I seriously doubt he's out there hooking up with

(1:11:40) prostitutes I mean I don't know man I don't know yeah I think the patent holders thing is a myth also guys I think I found evidence that the patent holder thing is a myth as well in one of the 4chan posts that specifically calls it out here it is **I want you** guys to read this about the patent holders okay yeah honestly I need I might need to have a a drink man this whole thing makes no goddamn sense man here you go um it is a fabricated conspiracy if you feel manipulated you should the conspira is understood to shape the

(1:12:21) collective unconscious of the world manipulation of the mental states of those who plant the seeds of Suspicion is a priority for leaders over the globe the conspiracy of the Blackstone owned patent was planted into the collective psyche the Chinese patent holders were paid to take the flight the other passengers that were on the the flight are now working various jobs of the American Military this post and this was the follow-up post to the forchan post that I made the other day this post basically says that the

(1:12:53) whole patent thing was planted by the intelligence Community to get us to not know what really happened to the plane because if they actually this was an Espionage event they

want the conspiracy theorist people to put out something else that doesn't make any sense so that everybody goes oh no that doesn't make any sense that's a lie right this makes a lot of sense to me they are manipulating even the conspiracy theorists because everybody goes oh the patents and the Roth Childs it must be that right and then everybody else who's

(1:13:22) the CNN brains go oh they're talking about the Rothchilds again and then people that know how patents work are going to go no that's not how patents work we've **debunked** that and meanwhile nobody's looking at the whole situation of these 20 people being directly tied to the technology nobody's even thinking about that so you guys can read this if you want more stuff there's even more quotes in this one the one I posted is super long he would was their hero and they were so proud of him for serving his

(1:13:57) country overseas said the neighbor they are Shattered by Mark's death it's going to take them a long time to get over this now where's the other stuff they claim that CCTV footage shows them Waring off an alley with two women but there's no CCT footage that gets released I've known Mark for 30 years and never once in that time did I suspect he was involved in drugs Said Fred and David Carlton 44 Mark was straight as an arrow he was a Navy SEAL and they have to be in top condition why would he mess with drugs we went to the

(1:14:46) same high school he was a great football player back then and very fit drugs were never part of his life there's something very odd about his death and the US government should investigate it we started to look through the passenger names and we can't even find the patent holders on the passenger Manifesto they're not even on it so some of this stuff doesn't even make sense man we don't think Element 115 is another one of those things that might just be completely fake that might be a thing that's to throw people off I don't

(1:15:19) we we've basically the people that we've talked to basically say that Element 115 is not required for super conductivity or for anti-gravity let's see uh what else we got here okay here's the obituary A club member at the bow CrossFit where Kennedy would work out said Mark hardly ever wore a shirt when working out if he was doing drugs we'd see track marks it does not make any sense oh what he just decided he's just going to do heroin for the first time I don't think so man heroin is not exactly kind of drug

(1:16:20) where you're like hey man I've never done any drugs you know what you want to just shoot up some heroin while we're drinking doesn't make any sense man oh NC boy is going off right now good we're going to probably be closing up here in uh 15 20 minutes as well um not going to do too much tonight I don't think but yeah uh the whole heroin thing is just not sitting well with me especially both of them overdose at the same time just makes no sense man I've had a good life let's just try some heroin while we're

(1:16:57) drinking ah that certainly can't go bad and hey let's do it both at the same time so that we can't even look out for one another and we're just going to get so messed up we're just going to die all together at the exact same time we're both going to overdose at the exact same time as well like what heroin's super hardcore like also drug use is forbidden on the ship so this

idea that they're found in the ship with all these drugs around them like this is like let's just sprinkle some crack on him right let's

(1:17:29) just sprinkle some crack all over him like you're going to get caught with all the drugs on you in the middle of the ship doesn't make any sense either and they die on the ship it's not like they were like off on the shore they took the drugs and died on the shore we know they checked back into the ship at 6:00 a.m.

(1:17:46) and then they were like hey now let's shoot up some heroin and die and it turns out this was the ship that was uh hijacked a few years before I'm not a conspiracy theorist folks I'm a coincidence theorist they try to say oh the the heroin was mixed with fertilizer I don't know man uh you can look at my uh twitch stream if you want to find out about the the podcast so I'm I will at some point post a list of all the podcasts I know I'm overdue guys but you can go here investigate Earth podcast right

(1:18:33) here I probably will do a a repost tomorrow and just let people know like thank you to so and so and and what have you and then you can find the alien addict one that we did today this one's about an hour and a half the investigate Earth one's about an hour and a half to two hours so if you want to listen to that you can listen to it on higher speed if you don't if you want to get through it a little quicker but some good discussions in both of those yeah as far as I can tell there's no followup on that okay so I want you

(1:19:01) guys get your guys opinion on this before we uh close it out for the night I want to know if this is too cringey here we go so I made a video this is my message my name is Ashton Forbes I'm going to reveal the truth about MH370 United States government my government took that plane we covered it up and we lied about it to the world that's not just what I believe that's what the evidence shows I will vindicate the families and the victims I don't care how long it takes me or what it costs me I'm just

(1:19:47) getting started how's that is that too cringey what do you guys think give me some official give me some answers on that I'm thinking about putting a post with that I'll do like a quick text post with that tomorrow and add that that add that video clip to it can't decide I got kind of emotional I was when I was going through this and I figured I had to make a post about it no I like I want it to be I want it to be like I didn't want it to be like super zoomed out it's good okay good yeah no uh it's slightly cringe but

(1:20:22) not too bad right now I want it to be big on the on on my face a little bit so that uh I want it to be a little different perspective than what you see when you do when I do like this right I didn't want it to be like this with the background I wanted it to be like straight on yeah okay you guys like it okay good okay sweet I appreciate that yeah so I will probably post that tomorrow and uh yeah I should have said something about I shouldn't have said maybe I should have said I won't stop talking about but I think that what I'm

(1:20:49) going to do is I'm going to do a little text to go along with it uh I'm not really I guess I

am trying to provoke people I'm trying to provoke the people that are lying about this stuff man we know that they're lying about it right we know they're lying about this thing man they're lying about this playing 100% right yeah I probably got to get better lighting I mean there's a lot of stuff I could do to make it better I appreciate the the the feedback guys definitely yeah awesome yeah yeah I think

(1:21:29) I'm yeah I was just I was fired up about this stuff man just pisses me off that we might have killed two people over this as well right yeah I in my head I'm thinking I'm going to say something about us not not stop talking about it I'll have to I got to buy some more equipment like some better lights as well maybe Adam not suicidal yeah I think I if you watched alien addict I already did my weekly I'm not suicidal thing yeah make sure people know that I'm not interested in heroin or hookers

(1:22:02) 100% right I was literally thinking about that Jack I was literally thinking like I might need to say something about how I don't do any drugs just so that people know that I'm not going to accidentally take some heroin dude it's wild man so I'm just getting I'm getting tired of the [REDACTED] man like we're going to Just Between Us chat and everybody who watches this later on we're coming at the government we're coming at locki Martin I'm going to leave no stone unturned they're going to

(1:22:29) make another mistake and when they make another mistake and reveal information that corroborates the story we are going to be there to expose it 100% they will mess up again they will mess up and we will expose it right that's the reality and maybe we'll find more information too right we've dug through so much we've done through so much uh but yeah there might be uh there might be more information that we can find I mean look at how much we found so far guys look how much we found it's just it's mindblowing it's really mind

(1:23:09) blowing to me guys yeah if I die they going say cuz I was a frat boy in college that's exactly it though like we it's funny but it's not at the same time right like we actually have have to make sure that if something were to happen that they wouldn't be able to come up with some BS narrative like Ashton got really depressed cuz the case got debunked or something right like they're going to come up with some nonsense and they'll sell it to the media and the media will just blast it they'll be like Ashton was

(1:23:40) depressed and taking drugs or something right or like oh he drank too much and overdosed on alcohol like he had three he had too many martinis cuz his tolerance was too too low or I don't know man we got to be like five steps ahead of them it's just the reality of it okay so what questions you guys have any other questions you want to go over tonight let me see what else we have to go over from this week I have okay so here's the other thing I want to talk about real quick I'm going to address this I think

(1:24:10) tomorrow on a post um well first before I get to that one thing that I'm going to do is I'm going to start taking clips from the past podcast that I've been on where you've already seen me do this a couple times but I'm going to start taking clips and I'm going to start posting them

as thank yous to the people who' have done the podcast with us before uh the next one I'm going to do is with Tony Merkel I think that what I'm going to do with Tony Merkel is I'm going to find the

(1:24:34) part where I mentioned that I didn't know if it's Espionage or not and I think I'm going to clip that part and I'm going to post that to the thank you to Tony Merkel Tony Merkel is one of the people I appreciate the most with the confessionals podcast you know especially after we've done other in-person podcasts and we've seen how other people have treated us Tony Merkel treated us with so much respect right so big about that uh so that's coming the next thing that's going to be coming as

(1:24:59) well is that I'm going to make a post just explaining to people I just want to because I think it's important that I explain my position about what the content is that I'm posting like posting this fascism thing right here I'm occasionally going to post stuff that I just think is interesting okay now the way that I will be differentiating this is I will post anything related to the case will obviously have the hashtags related to MH370 which you find at the bottom of every one of my posts but at the top I most likely will

(1:25:29) do something like I've done here like investigation update the reality is not all of my posts are going to be about MH370 I'm also just a normal real person I have my own political opinions my own opinions about the world I like other weird stuff that's out there and apparently I'm in the UFO Community as well so I am going to be making posts about that some of that type of stuff as well also what I want to say is that occasionally you're going to find posts like this which is just me retweeting

(1:25:57) people that I think have really positive sentiments especially people in the community who've been here a while Sarah has been following forever she's awesome you guys should follow her right I saw this last night and it touched me because she's saying that she's out with her friends hanging out drinking they're talking about David grush and MH370 and me you know spreading the words talking about it right this just I think this is just awesome so I'm going to retweet stuff like this on

(1:26:26) occasion as well guys take it easy Sam appreciate you tonight man stuff like space fence I'm going to be retweeting I'm going to be posting stuff around everything related to lockie Martin everything related to locking Martin their technology I'm going to be blasting that all over everywhere right these people need to be exposed I am convinced Beyond any shadow of a doubt that they have advanced technology that they're hiding probably north of Grumman Boeing Bigalow airspace probably all of them but definitely

(1:26:55) lockie Martin lockie Martin is number one in my sites and they like to post a bunch of their videos everywhere we can just watch it like space fence and directed energy weapons and uh all this stuff that people think is not real siers right like we're just going to blast all their stuff anytime you guys see updates for locked Martin I want you guys to tag me in that stuff I'm also going to be posting of course satellite video stuff as well and the videos in general I'm going to

be posting uh I'll keep post that okay

(1:27:26) occasionally you're also going to see just random funny little things that I do as well guys cuz sometimes I don't like to take myself too seriously uh so you're going to see stuff as well like my Chinese lanterns with jet rocket Jets coming out of the back of them okay you're going to see some of this stuff as well right because everything I post is not going to be 100% serious it's not going to be 100% related to the case just want to let you guys know that but you can tell this is not related to case

(1:27:52) I don't have any tags I don't use any MH370 updates right so just a heads up um what else this was the four other 4chan post that that F that second one was related to that I haven't posted yet I may do a followup and tag this as well who's DJ do you see what DJ said about grush I don't know who that is oh dark dark journalists um not really man I'm I'm not trying to get involved in all this drama in UFO Community other than the drama related to keemstar and uh Skyfire news I'm in the

(1:28:31) middle of that I'm I've said I'm in I'm in the group chat with those guys right I'm not directly involved in Skyfire news but I've given them permission to take clips from any of my stuff that they want to feel free I'm not hurt by that um they can use clips from my streams as well if they want that's fine I 100% support Skyfire news um but I'm not directly involved in it and with respect to all these like little this person hates this person this person hates this person this person's a CIA

(1:29:01) plan this person's disinformation I don't really care the only people that I'm against is the lons and that's because they picked the fight with me first uh let's see a and the other reason is that I think I I don't trust any of the people that are in this UFO community that are celebrities that are not revealing the **truth** right take it easy depleted appreciate you buddy have a good night man uh I don't uh yeah I see alien scientist even alien scientists I support alien scientists but I I think

(1:29:34) he my personal opinion and advice is that he should chill off from constantly attacking Co or uh uh what's his name Corbell right like even if he's right what's it you know what is he really accomplishing there right he's not getting the kind of attention that he wants the best thing we can do is focus on your own thing and push forward right but that gets to my next part as well okay um which is where is it also man this this thing about Mike Harris is wild too man this Mike Harris thing is wild um but yeah like I don't you know I

(1:30:12) don't know the whole thing corbel whatever nap all these other guys like just keep in mind they have their own agendas they have their own uh um their own missions right and and just because it doesn't include us doesn't matter I just I did two podcasts in the last two days so um and I've got more coming up there's more coming up I'm trying to chill off and not try to do them every single day rarely and also this advanced technology for some reason the technology stuff in the scientific

(1:30:42) papers gets like the least amount of Engagement even though it's probably the most important stuff that's fine though um rarely you will see me doing stuff like well if there's funny memes like this I'm definitely going to be playing them all the time by the way guys just heads up um where is it where's the larper guy now that was a few days ago now huh huh where is it oh here very rarely will you see me calling people out very rarely but you will sometimes see it okay so one thing I want to be clear to

(1:31:18) everybody who's either watching right now or watching later on as well is that don't send me messages that are like I'm worried about your mental health or how are you doing and stuff like this like don't send me that kind of stuff just don't send it to me the answer is I'm fine right I'm fine I'm streaming like every day you can watch when you try to patronize me that's a sure way to a get unfollowed right away and if you continue to do it you will be blocked I don't want anyone patronize it

(1:31:48) somebody sent me like six paragraphs trying to wonder about my mental health State dude don't ever do that don't ever do that to anybody ever like the amount of hubris and ego that's required to send somebody five six paragraphs about hey how are you doing I'm worried about your mental health stuff is like just weird man it's too parasocial don't get involved with it and then with respect to this like these larpers and stuff like this occasion you'll see people get called out but only if it's

(1:32:24) extreme circumstances like it was with this Luke guy right these people are off their rocker don't come at me don't try to this person literally like if you read one of these posts where was it he should do the right thing we will not stop until he removes all his MH370 content from his ex and YouTube accounts and turns over the MH 370x admin to somebody else if you send me something like this you're going to get called out never make a post like this demanding that I delete all my content and that you're

(1:32:57) going I have to give over my own hashtag that I came up with in my community to somebody else that's never going to happen so occasionally very rarely will you see me call somebody else out so that's what we've got on the agenda in terms of what you can expect from my content for everybody who's out there because I just want to be 100% clear about what my content's going to be like right it's going to be a combination of stuff that I find interesting uh a combination of things related to locky Martin some

(1:33:27) content related to uh some of the trolling stuff that's going on out there some funny content and then of course there's going to be a lot of stuff related to MH370 guys so you guys have any last questions about the case or anything that we've discussed here today on our weekly review I want to keep this a little bit shorter it's we're at about an hour and a half so I don't want to have these be super long so that people are watching them later on can get caught up to speed on him and lastly what I will say guys is

(1:34:00) thank you all very much for following along I appreciate you guys so much I am I consider myself one of you guys and I just happen to be on this side of the the camera but I

would be on the other side if it was somebody else doing this absolutely I don't look at myself as anybody who's Superior to other people or anyway better than anybody else I'm just another normal person and I you know I don't have a PR agent I'm not being told what to do I never ask anybody for final cut or final edit on

(1:34:31) any podcasts or streams that I do I never ask for any type of Revenue or any type of monetary compensation for a single one of my appearances none of them none of them the only one I've gotten any compensation for was the muon one which they offered me the money ahead of time \$200 that's it right it's not exactly a huge thing anyway that was nice of them to do and I could have rejected it but you know why not sure um so yeah let me think is there anything else I think that's probably about it yeah and I I appreciate you guys I

(1:35:09) appreciate you guys have been following along as well and I'm going to continue to put out more content I'm going to skip this last ad before we shut down here um let's just quickly go over what we have on the agenda I still have to put the podcast list out you see right here uh I have to still edit all of my hard truths podcasts and get those out there and get them formulated I'm also going to get the audios out onto Spotify so hopefully that will come in the next week is that I can edit the audios and

(1:35:37) get them out on Spotify quickly for everybody um it's going to take it takes a lot of work because each of those are like an hour two hours or even three hours so I have to like listen through them while I'm editing them um we're going to need a new all works we haven't done a new all works in like two months and then we have more explainer videos to do as well and of course we have more foas now Richard Dolan I think is somebody who's he since he's so connected to the community I don't think

(1:36:05) that Richard Dolan is probably going to want to talk to us because he's got too many people telling him to not talk to Ashton or whatever um but whatever U let's see and yeah I think that's about it for now guys and then we'll later this week of course we're going to do more science uh science stuff we probably will do science stuff tomorrow because we haven't done it in a few days I want to dig in through a lot more electrical engineering probably for the science videos that will have that that probably

(1:36:35) have no monetization on it because I I think we're just going to watch video clips for the science stuff they're going to copyright strike us anyway so I would like to do more stuff with Timothy Abino I I need to wait for him to be back in United States though where he has a better connection it was kind of a problem I mean it was it worked fine but wasn't great but Timothy Abino I I love that guy I I really like Timothy abino I could see being friends with him in fact if I do more stuff with

(1:37:04) investigate Earth I may try to get them to talk with have him talk with them as well I don't necessarily want to go more into the Peru mummies thing or the Peru uh what was it called the uh Peru aliens or The Invasion whatever you want to call it but I want to talk uh other stuff with Timothy AB know anything he's working on I want to talk to him about he's just a

super interesting guy so thank you guys very much I am going to go ahead and I am going to uh go ahead and get some sleep and you guys

(1:37:33) have a great evening everybody so thank you very much MH 370x I'm out

Transcript:

(01:29) what's up chat welcome guys trying to figure out how to get my space working here um SEC where exactly is this thing I was able to find Direct eyewitnesses and corroborate that did happen when individuals would Target in on it with the Optics the way it was described each of these hanging things they were stiff like they weren't moving they had geometric form like scales where was said to be scales like an armor there were also people with night vision who were out and they were tasked to go look for it couldn't see it on the

(02:27) night vision immediately so that put me on high alert too why is it completely being shut down that battle guard guys total nut job not the funny kind either it goes out over a body I'm told it stops on a dime descends into the water stiff talking about Jeremy corbell and for 17 minutes nothing talking about JC guys and boom this thing comes up out of the water and shot it looks very much mikle like a good enough of the gist so yes that's definitely good enough these were two videos that came out that he

(03:19) claimed were of the same object at different times but there wasn't any um what's up Eric long time no chat Bud like uh it's not like skyf fire news besides his words that it's like the same object you know I mean it's kind of hard to verify um so didn't have any thoughts on that before we get into kind of like because then what happened it became almost kind of like back and forth with like this chinoski witness kind of in the middle of um competing narratives from **Green Street** and Corbell

(03:48) so yeah Chris Corbell I thought it was interesting because obviously I haven't watched the show but he Corbell States something along the lines of you know this thing was jamming r radar and you know but we can we can locate a whatever terrorist or whatever he said from so and Target them from soall way well it's really funny because that specific system which we now know uh was the tethered aerostat radar system uh doesn't have a weapon system attached to it from what I could tell so uh it's

(04:22) kind of weird that he mentioned that because it's not really relevant because that system doesn't have that kind of targeting think as far as um like weapons so always I thought

that was a little weird that he mentioned that he should know better than that but then again that's Corbell not he acts like he knows things about the military but he doesn't there is a um maybe like an embellishment you can kind of hear you know what I mean a little bit to make it sound more serious and I wonder if

(04:53) that's in an effort to make the the um the topic you know what I mean a little bit more urgent or you know or or what but I think you're not the only one who's noticed something like that there's some discrepancies I mean in the video he describes behavior that isn't shown on video that would totally go against the idea that it was a Belo right there's there's this idea that it dives into the water I might be going don't feel right about it right like drifting or anything your V now the video we just

(05:28) see that this thing is floating over the base why don't we see that other part where is that other part he didn't he say that it exists but I agree with tup yeah that's an interesting aspect of it I think right where the only part we get to see is the part that could be explained away is that to stir debate is that on purpose or well he he he mentioned on the podcast with steo that apparently he's gonna release the other part of the video uh which is interesting because if he had if he had access to that from the start um and

(06:01) this thing isn't classified why didn't he just release that part of the video with the other footage like why would you not have the evidence and put it forward to back the claims that this thing took off out of the water at a 45 degree angle like it makes sense to hold that off and not post that claims that it exists and that he's going to put it out so heed your yeah if I can jump I agree with Chris on that like it's the thing that there's two things that stink about me or stink to me about

(06:33) this which is one that this object is just floating it's not really doing anything anomalous like I think we can be a little bit more creative than balloon personally like I don't know this isn't much more creative but maybe it's like some kind of tarp or something that's floating with something stuck to it I have no idea but the other thing that bugs me about this is the way he's building it up like he's like Floyd Mayweather right where it's like okay we're going to release this on this day

(06:58) and then I'm not going to tell you about this other thing that would like verify it but we'll we'll release that in like two weeks or something like he's like building up like maximum dramatic effect for it right like when you're an investigator you should just be putting the information out there right away and I don't know the only way two ways I can look at it one is that it's he knows it's some kind of inside **scam** or something where it's not legit the other way is that he is trying to like catch

(07:23) people in a trap where he's trying to get people to say they **debunked** it and then go oh no here's this other footage but I don't just doesn't feel right to me I don't know what to say like the whole thing about it just odd yeah I agree with Ashton there I mean if you especially the part where you why not just it seems a bit deceptive like like it almost seems like it's a backup plan

for if it wasn't well taken like you know what should I do now to to mitigate this damage like nobody's

(07:56) buying it what should I do well let's say there's another part of the video and I'm going to release that like I said it just seems very disingenuous and I also think it's you know you can make the case that this is part of his grift this is how he this is how he does it um but you know that's just my stance on it personally and everybody's entitled to make money right but at the same time it's like man I don't know it definitely feels like he's trying to build it up for maximum marketing value or for I

(08:24) don't know is the next one going to be on TMZ as well do we have any information on that I mean maybe we'll all look stupid when he releases and show some crazy thing in this you know knot balloon or whatever it is flying off into space if it does then I guess I'll be the first one to be like okay maybe Jeremy Corbell is right oh I yeah I've stated in a comment somebody asked I said I'll I'll eat crow no problem uh and dish out apology if that that other video shows up unedited in a raw form to where it is 100% the

(08:55) same object taken off out of the water at a 45 degree angle or whatever angle he claims I will 100% apologize publicly uh to Jeremy Corbell yeah that's great I think can you can you uh verify for us what is the the additional claims just so everyone in the chat is aware like something about going in the water and shooting off can we nail that down so that when it comes out we can know whether or not we hit our goal posts yeah that's basically it he said um that it flew it shot down into the water for 17 minutes it was underwater

(09:30) and then the same object shot out of the water 45 degree angle I think this might be a good time too before we get right into the chinowski stuff we uh put up some clips this week of Corbell talking about vetting sources and also like threatening the CIA and FBI so I've never done nothing wrong so the whole idea is when you how do you know it's not fake there's a lot of ways to do that we'll talk about some of that stuff first conversation if you're call me I say have patience on me don't give up on me

(10:05) I'm on Cosmic time not on your time seriously and I develop relationships over years with people I then do my own vetting through my own sources not through who sources give me sources and then I bring it to George Knap when I feel it's a good case and he does his own process through his own contacts that he's made for over 40 years if I put something out you can bet your [redacted] ass that it is legit and that it is worth putting out to the public for debate Chris I see you laughing you have any thoughts on that before we get to

(10:37) him threatening the FBI be SC careful put this first of all sorry it's my dog first of all having the balls to sit there and make threats to government agencies put invitation open invitation to say come investigate me this magnet extremely happy ex honest maybe he's just got a big head other platforms like Joe Rogan and all and TMZ and all that stuff that is a very foolish statement to make and especially on the back of when Sue Goff has stated that you know unauthorized disclosure of of certain things um you

(11:17) know could lead to investigations so it that's that's a really bold statement um yeah and let's listen to the FBI thing real quick let's assume that one real quick because that not call into question you know the you're just not g to share the S so but it's not a sour what I'm saying is uh it takes usually about three times for me to get a product right like a military filmed video then what I do is my own channels not connections that sources give me I I mean I have sources in the in the

(11:55) what no I'm playing uh red did did Red cut out for anybody else yes okay cool we were all we're all on the edge of our seat um the rest of that clip is actually really interesting that was one of the best interviews uh steveo's Wild Ride yeah I had to keep those magnets super far away from one another that's they're wild man yeah those magnets do not mess around man I put them like a foot apart on the counter and they just they pulled at each other and the one magnet just broke and they hit each other so hard I I was

(12:29) like holy crap word is uh doing a lot of work for him lately I think he's really trying to harp in on that because I do think they're kind of and even on their show uh we didn't really clip this part but they were kind of talking about actually not just magnets they were super powerful magnets this fear of Investigations right and like leaning in on that we journalist uh it's okay that we classified stuff and I'll be honest as a quote unquote true I'm conflicted there like if they're leaking legit UFO

(12:59) footage I feel like that's kind of commendable I'm chis here so yeah well obviously I'm gonna disagree too loud my ears if if it's classifi there's a reason it's classified and I'd be willing to bet my entire bank account it's not because it's uh evidence of Otherworldly craft there's a reason for classification tomorrow I'm going to take that magnet and mess around the he could say think I don't really consider coming comp to George Who start doing experiment fit more of a

(13:39) journalist uh but I do find it uh a bit interesting I'm scared even promoted that because like I said he's getting pretty these are pretty ballsy statements we've we've seen Corbell and platforms for years now and he's never gone out like this and stated these things so to it's either one or two talking about the this guy is legitimately telling the **truth** and he's got the information and he's ready to spill the beans or obviously I want to hear from General Flynn General is a traitor he's to get

(14:12) that makes me even more interested my parents have full C he also had three years to investigate this jellyfish thing and you know if you had three years to investigate it like he stated I just again why not release the app the full video why only clip it you know it just all stuff doesn't make sense and it's huge red flags Ashton well yeah I can hear Ashton I don't know if you guys can but yeah reflex oh you can no I I can't hear him but uh what do you guys think about the fact that other jellyfish type objects

(14:55) have been filmed that are somewhat anomalous uh do you think that uh is there any connection there is it always balloons have you ever seen a video that has come out that

resembles some type of weird creature or something like that in the sky there's a ton of them floating around we covered a little bit of it but these have been going around since like the 90s and you got to wonder like what are these things um have is there any **truth** to the overall term is Corbell maybe piggybacking on that term or is I

(15:22) muted that's why oh yeah is it all just balloons yeah so what I would bring up is the Jetpack Man situation from a few years ago right to me that was first off first thing I thought of when I saw the jellyfish thing cuz I don't think we should assume what we're looking at there is like actually like a jellyfish right and it might be just a weird shape right and then if you think about okay what other the weird shapes have we seen well the Jetpack Man one was every every goes oh no Ashton you can jetpacks

(15:48) people can fly in jetpacks 3,000 feet man guys I'm just telling you that's not a real thing like yes you can fly like 20 30 feet in the air over the water it's because if you land then you go into the water right but if you're up in the sky that high it's not really how it works I think that what we have a tendency to do is have prosaic explanations we see something and we go oh like we think that thing looks like a jellyfish we say oh it looks like a jetpack man right um those are the ones

(16:12) that I think we should if you want to try if people are interested like that's the stuff we should kind of compare to and try to figure out like what is this floating stuff if we just say for a second okay let's say it's not balloons just for the sake of argument okay well then what is it right is it a creature is it if it is an alien or is it some other explanation yeah that reminds me of it was funny one of the the running things was ett early on from the **debunking** camp I thought that was pretty funny they're just not awake

(16:44) it looked like bird poop you know what I mean yeah just for clarification I never said bird poop oh yeah oh good for you Chris yeah Chris is Chris come out clean on this one when the theory was presented okay that it looked like a like a bird poop my mind my mind wanted to immediately just register bruhha The Mex you want to dismiss maybe you know what I mean some of these like things that you're seeing that don't make any sense but that theory I loved how it dissolved yeah I want to hear from the if you

(17:15) guys me on but weird to like to dismiss it so easily and even uh **Green Street** popped on that that one was like please God let this be you don't know how bad I want this to be literal bird **[redacted]** I thought that was a a funny comment but uh yeah quickly quickly it was figured out it was 3D what do you guys think about the fact that it's called a balloon but the the balloons hanging from the main part aren't like drifting backwards or like don't seem to be like really drifting at all or moving independently they all

(17:47) seem to be like one object pretty solid have you guys noticed in the object on the jellyfish from the from the video any kind of like drift in the little dangly things that are coming down the appendages yeah I saw that that I mean it's interesting you do see jellyfish reported for a long time but uh I really don't know what to make of it we'll see I mean it would be cool

right if Corbell put out the full video and we could like look at that but as it is now I could see the like balloon stuff and some of those arguments maybe

(18:18) but I don't know uh it might be good to kind of go into like the stuff that happened with chinoski afterwards so so basically this uh this guy Michael chinoski he was station at the base where this was filmed after the fact was filmed I think he got there in like December and this was filmed in November or something like that it was fairly shortly after and he said it was the Talk of the Town he left a comment on a YouTube video maybe something and then basically step **Green Street** reaches out to him talks to him his takea away from

(18:48) that interaction was that um see that's the difference between those traged thought it was **debunk** I don't care uh I like thought it was kind of like praic basically uh he said uh when asked if he had to choose between the object being something alien or praic chosi replied the latter and then so **Green Street** kind of did run with that right and then it seems like uh I guess we should just listen to and talk on new nation before we hear him talk to corbel where he kind of talks about how he feels like he was wish

(19:21) could have just the video somewhere he was telling Corbell that he kind of felt like would be a good way of saying narrative controlled I guess by well I mean it I think so I mean really **Green Street** has his own angle of the story right and that's I mean he's that he wears that on his sleeve it's not really hidden um and the the way he phrased it I think was so the latest when asked if he thought this was alien or prosaic he said the latter like he said prosaic but I mean those are the only two options you're asking

(19:53) me to say you know what I mean in an article I know that's going to come out on the New York Post or something I'm going be like okay definitely probably praic you know what I mean probably not an alien that's fair that is kind of like a weird thing to set it up as like do you think it's prosaic or do you think it's uh time traveling Dino Beaver yeah by the way this I'm gonna print this totally **debunked** H maybe uh we could listen to chinoski on news Nation everything's been **debunked**

(20:24) did yes and so what else is there in the video that we haven't see not a whole lot all I can say about that is towards the it's going to be a let down I guarantee it it it seemingly just continued off into the distance and it got smaller and smaller whether that's because uh the sensor was zooming out or it was moving off into the distance but it got the thing about why it's not a b balloon would be increas height right it's not going to be going horizontally Dro into the water or it just continued over the lake because

(20:56) there's a lake next door of the it's got to have some weight to it uh but at no point in the towards the end of the video did it where you could see it drop into the water and then shoot off into the sky like there have been some Dean that never happened did you think when you watched it for the first time that like it could be you know or is that him it crossed my mind it's definitely not me because the theories that we had like I said fully explain it and so naturally I think our human mind or Cur curiosity kind of goes

(21:27) there and it's like you know is is this something extraterrestrial or extra dimensional or paranormal or whatever I like Chris a lot but his community is like the worst and it didn't seem to be it's like one step below going to threaten us Lon is so it wasn't like we needed to take immediate AC against it so yeah we've created new I think was handled in the best way possible like I said it kind of just ended up being kind of like the ghost the lon memes later the base okay so we can there and that's

(21:57) interesting he kind of says uh I think I think he said basically right there too that that shooting out of the water thing he said that that didn't happen or at least that wasn't on film um any have any thoughts on that before we kind of get into what he told Corbell about kind of how his uh statements were maybe mischaracterized yeah well I want I want to describe who sinoski is right so um did we break down who he is and why why it's important and he wasn't there happened to be that stationed at that

(22:23) same base later and he heard about the stories and saw like I think he was saying what he saw there but yeah actually was not there well he stated he was part of a crew that replaced uh yeah I group who were stationed there that's that's normal maybe it's just he heard about the story they had talked about it he had he stated that um and it was the ghost the ghost story on on the joint uh operations base there so U but that's how he wasn't there he just saw it saw the video ones and I think he's even stated had it

(23:02) saved on his workstation yeah the thing I would jump in and say is that that right away was a red flag where he says he saw it and it doesn't seem that he saw the whole video right and he didn't see anything that wild like that's what I'm afraid of with Corbell like he's building something up to be hyped up but then it's going to be a let down but now to flip to play Devil's Advocate what I'd say is it doesn't look like balloons cuz balloons I would expect to be rising or or kind

(23:31) of blowing more erratically right if you would think about like a balloon in the air you're generally not going to see that like low altitude or like low to the ground like that moving horizontally um that's the only thing that seems weird and like there has to be some weight to it I feel like so has it ever been said how low to the ground it was that's the thing is like if you watch the video and you know it's it's it's taken from that that tethered uh reconnaissance system um and it's and it's moving

(24:01) around is this a is this a form of paraly I'm just putting it out there where it obviously it makes the the object look like it's moving faster than it is because the the system recording it is also moving in a different direction I think the system recording it was from a balloon yeah it was a tethered balloon recording it was from a balloon what's that just so I sorry I missed I think you explained this earlier but so the system recording is also on a balloon is that true or is it or what yeah so it the system uh that

(24:38) it's recording from is called the tethered aerostat radar system or tars that's what I believe that uh sinosi stated um so one that doesn't carry any kind of Munitions uh but it's

tethered so if it's tethered and it's a balloon obviously it's going to be affected by wind we wonder is the recording system also moving while the balloon is because if that's the case then there's a possibility that it's making the object look uh that's so weird look like it's actually moving quicker than it is

(25:15) and did say that he didn't think it would be balloons because it was too static he did say that I agree with that descript I mean I agree with that suspicion it's two St you'd expect some drifting things like the balloons presented in that like now meme image right looks like it has a bunch of other things dangling from it with like you know that is they're not stiff those arms aren't stiff on on that balloon you'd expect some drift some something and there's nothing it's interesting to get that

(25:46) description from from Sosi as well go ahead Ashton that tethered aerostat radar system this is so weird I was just looking at this like yesterday um somebody had mentioned this to me I was looking at these it's you guys should Google this or so if maybe we can put a link up to it but it looks like a big ball sack I don't have a better way to put it but uh it's such a weird object it's like the big Hindenburg balloon that they float around I just couldn't believe this thing was real and now

(26:13) apparently that's what took the video of the jellyfish interesting um I don't understand how you have that footage for three years but then the internet has to figure out like the wind speed at the time and the internet has to figure out um you know the direction it was flowing over the base if you have three years I mean good Lord you should not only drop the the video but you should have a lot of information from an independent investigation to go with it um so yeah that b question I don't know about three

(26:45) years having the video for three years I I really question that and this kind of happened last time right with the 29 Palms one where they had it for a long time they've been sitting on the stuff for three years and uh then they released it but it's like it almost seems like like at least have some witnesses come forward maybe that were at the event you know it's like why did chinoski have to come out after the fact from a YouTube comment you know I feel like stuff like that should have been maybe handled before um yeah any

(27:13) other thoughts he brushes it off with Cosmic time I don't think Keem heard that before but it's like Cosmic Time come on was that not a quote that is a quote a quot uh I'm on Cosmic time not your time I I definitely seen that um and I I did laugh I mean it is what it is everyone's different everyone's got a different way of saying things I don't want to beat him up uh you know too much on uh you know stuff like that but I when I see something come out and you've had it for three years I just expect way more

(27:47) information on it um and unfortunately it's it's kind of up to the internet and it's up to all these independent um you know researchers all online and that's why that uh post from Green wall was so good um I'm not sure if anyone's seen it but he put out a big post saying within like 72 hours we got all this information on this because everyone has been working together and

investigating U the UFO jellyfish there needs to be more collaboration um but I'm just again at the same time I feel like Corbell should

(28:20) have had everything like he should have came out with this is what we know about this this is what we know this was the wind speed this was the direction it was going uh just I don't like how these things are being released and I question if they're really being investigated as much as corball says yeah yeah I feel like he's overhyping and how much work he put into it as well right just because of what you said like he didn't find anybody who was there anyone who corroborated he didn't look to see what

(28:47) the wind speed was like there's so much stuff you could investigate to give corroborating evidence but it's like just puts it out there here you go internet and I'm going to build it up and hype it up as much as possible as well and also I have stuff that's not in it like imagine if Ashton uh or even Chris were uh releasing this uh footage to the world I mean it would come back with pages and pages and pages and pages of documents as well like this is what we found here this you know what I mean

(29:14) like there would be just so much information with the video um so yeah yeah it's pretty interesting uh three years and and that's where the argument for collaboration from both sides makes the most sense when you have something that's out there open source you have people from all different uh backgrounds and uh Specialties and whatever they can all hone in on this and and give pieces of the puzzle to to form the actual picture and that's why like I've always found it really crazy give him credit

(29:58) though don't you know subscribe to Skeptics and and or **debunkers** whatever you call it pry weird weird video but if you if you just like who was it Ashton said or or Keem said Richard MC within 72 hours all of this information I'm pretty sure Corbell even stated that the Bas was top secret and all of these things and aren I mean it was ours we knew the name of the base I mean Sosi came out uh we knew the lake that was near the base um we I mean it was narrowed down relatively quickly but you had three

(30:33) years to look at this and you you couldn't give us any information other than the fact that there's more video out there that you didn't release it's just wild to me we're gonna doubt um I someone made a comment earlier that it um couldn't be balloons because uh you know it wasn't going up or down or anything like that um I don't I don't believe that I think like we've all seen balloons where they've lost like some of their helium so they just sit sit static like they

(31:06) don't go up they don't go down they just float in the same spot um if it was balloons it's probably something similar to that there's a lot of videos of those I mean a lot of security camera footage of little balloons kind of floating down and behaving strangely but they're drifting with the wind a little bit they seem to behave intelligently but they're just going up and down you know what I mean with the temperature and with everything else uh sometimes with the traffic there's a old famous one and

(31:33) guys if you want to see any of these videos you can scroll to the nest uh just check out the stuff we've been putting out uh we're going to try to keep the stuff up there kind of topical uh as we go through it um but what do you guys think how different would that video be of the UFO jellyfish if it stopped and then went the other direction like how much more credible would that video be so much more or if it went in the water and then came out and shot out into space like you said like that would be

(32:00) unbelievable that would be that would be amazing but even a little bit of a direction change some kind of like intelligent movement would have been great um yeah but hopefully we get to see the full thing if it's out there TBD I think it's Pennywise Pennywise it you know just sending balloons out there people scaring them haunting them well little alien balloons as literally stole a thought right out of my mind because I was GNA open the mic and say it's probably just pen Pennywise floating around see you guys are destined to be

(32:28) friends look at us I mean if it is a secret military base I mean what are the chances of it being a you know a very like cheap spy uh balloon type situation like aren't the chances of that relatively High yes yes 100% uh you know there's mwan down there he could probably talk about this too but yeah I mean when you're over in those those types of those countries and those that type of the world you know they they have to get creative on ways of accessing information about you know obviously non-friendly groups over there

(33:08) so they don't have the access to technology like we would so they have they would probably try to utilize other ways put access things that that does make sense but at the same time I also hate the statement and people have been saying this that a place like Iraq wouldn't have balloons floating around cuz apparently I don't know if people just think they're too poor and it's just all completely desert and there's no the people out there are miserable and don't celebrate birthdays or special

(33:36) occasions but there very much are a lot of celebrations especially in that culture where they release like they have balloons so I think that's probably why that theory holds a little bit more water and I know some people disagree but at the same time people saying that there there shouldn't be balloons over air bases conflict zones in Iraq uh that's just ridiculous I mean we're we're seeing stuff like this in the current conflict right now with uh **Russia** and Ukraine you know **Russia's**

(34:06) bringing in all this high-tech tanks and all that stuff and the ukrainians are getting DJI drum like commercial or excuse me civan Dr they're using those and strapping grenades on them having tanks ball balloon thing was filming at what it called Jack it's not that crazy though some would have a makeship uh spy balloon with a GoPro attached to it and they're just floating it over a military base so that's not that's not a crazy Theory yeah I actually think that's probably one of the most likely theories right I mean I

(34:41) don't really dig the idea of birthday balloons I don't even see balloons in my own like State really ever but I think the idea that well it's a secret military base like yeah people get

creative we just had a Chinese spy balloon like what February of last year floating around but Grant that's not the same thing but you know like you said people get creative maybe it's a go go Chris and I'll lead us into our next clip I got pulled up oh I was just gonna I was gonna agree uh I mean yeah I mean there's obviously

(35:14) things that are are floating around um and we've seen that as of February last year so not not everything needs to be super Advanced and I also want to say to back up what Keem said I've literally seen a video here on X of a drone in Ukraine and it dropped a grenade or some kind of explosive ordinance on top of a soldier's head and killed him instantly and he had a helmet and it was a DJ DJ uh what is it DJI or ever literally a civilian drone like this is this is like a \$2,000 drone that we can all buy on Amazon that is what

(35:54) they're using one last thought somebody in my chat mentioned is that um we could look at AO gels as an explanation as well uh those have been kind of floating around the scientific Community recently which is like this I I going to call it a meta material although I don't think it qualifies technically but like they're able to suck out like the inner of this foam basically and fill it with a light substance so that essentially is light as air um so that could be an explanation as well theoretically well a lighter than air

(36:25) structural thing with definitely explain what we're seeing there right because it doesn't like you know doesn't have little dangly Parts it's really just it's pretty solid and that's even what Soshi said and he had probably better footage than that um so it's you know it's a pretty valid uh description real quick I want to Welcome to the stage we have uh Jeremy Macwan and also alien girl uh thank you guys for being here Jeremy what's your take on this thing uh will you close us out of the jellyfish

(36:53) topic and then we'll we'll allow uh red to play this next clip and get us in the next thing yeah well first off can you guys hear me okay I'm on Bluetooth I don't know if it's working yeah you're coming through good perfect awesome awesome yeah so jellyfish UAP obviously I was one of the ones that came out at the beginning and said it's bird crap um but in my defense I spent maybe 18.

(37:19) 3 seconds looking at it um the reason I didn't put a lot of faith or time or invest any amount of energy into investigating that video is because of the source it came from and the history of that source and the fact that you know we know that Corbell put out the Mojave triangles that was proven as as flares and all these other things I just I have lost any amount of faith that I ever had in the statements that Corbell puts out especially when it's extremely sensationalized you know it's a top secret military base on the

(37:56) sensationalism true folks and the fact that they had this video for two years at a minimum and they didn't figure out what it was Frid the collective consciousness of Twitter has basically all but proven that this is a balloon just reinforces the fact that I think we Prov spending a on looking at that so my first speculated it looks like a bird crapped on the viewfinder or I mean on the uh on um that turned out to be not correct because when you look at the video

especially the uh the still images that were pieced together you can actually

(38:37) see a three-dimensional object in there um that said I do subscribe to the balloon Theory uh helium balloons that have lost some of their helium will become what we call neutrally bullant um it is possible that it is a uh handcrafted spying device with a with a GoPro or something similarly low Tech on it I know when I was in the middle that's to me what's most likely now over there low device I just don't know what it is I I've had firsthand experience chasing I think that corell's gon let us

(39:14) down with the handful of balloons that had been tied together that somebody had affixed a old Sony Erikson uh cell phone that had one of the first iterations of a video camera on it and flew it over Cobar Towers in Saudi Arabia is an interdimensional creature miles and miles until it was down naturally bar recover the phone and take PR low bar for proof interdimensional creatures not doing anything interdimensional that does happen in this situation I am less uh believing of of that and more thinking that it was

(39:52) the uh I think it was the elid celebrations and such that were roughly timed in the same uh capture that bird so I I think it was just a conglomeration of balloons and to address the fact that somebody had said you know what about the appendages they didn't look like they were drifting backwards or anything unless it's a they don't have to be because it doesn't have its own forward momentum the balloons are all traveling at the same speed because they're trapped in that wind speed so the bottom balloon is going to

(40:23) be being pushed at the exact same speed as the top balloon it doesn't need to drift backwards I think the question is why is it not moving like more have we talked about the um the other side of things where there's like kind of a historical record uh throughout history of people claiming to see jellyfish that's where my interests lie right is like okay maybe this one is weird but what about all these other ones and why is that a can like we I always hear about like the tr3b right the saucers the orbs but we have videos

(40:57) of all these weird and stories too from like super large ones seen from airplanes to you know all these different recorded ones from the ground I mean I do think that's where that's where I think is super fascinated about it though I don't know what are your guys' thoughts what other examples do you have oh oh sorry hey guys what's up what's up Amy welcome to the show thanks man this is really sweet um I think I think the jellyfish video was probably balloons that's what I think oh yeah not on Cosmic

(41:33) time maybe it's not though maybe it's maybe it's something else maybe it's interdimensional I mean I can't really tell but it did look like those balloons from the ey get to the woo Celebration The **Green Street debunk** was pretty good it was that's great segue so now we're going to have chinosi or chinosi some explanations thees CGI and green stre out to him first interviews him basically ends his interview with asking him hey do you think it was prosaic or alien and then he said prosaic if I had a pick and then

(42:17) that was kind of ran with his like oh it's already **debunk** guys we have someone who was at the base it's kind of funny though like you got to be honest some people are like oh yeah hell yeah sinosi hell yeah and then as soon as like this clip comes out where he's like I was kind of forced to take a position then it's like actually that guy's not credible anymore he's not a credible person but uh let's just listen the I mean I know that I think the first interview that most people saw

(42:41) was conducted by yor we saw that and we were kind of surprised by the angle can you walk us through that what you said and versus what was reported so the the biggest thing I think that was um kind of mouth is I really wanted to take the approach of I'm I'm kind of 5050 between you know this there could be a logical explanation but I was kind of forced to take a position and I didn't want to and that was kind of illustrated what do you mean you you were forced to take a position you told me that first thing

(43:15) and we recorded that conversation I asked you can I record and you you said that you were being kind of forced into position you know of like a **debunk** kind of thing I think it was the New York Post you said what was the what was the misquote what was the kind of pressure you were put under to to to take a position I think specifically um yeah it was that New York Post he had asked me he was like do you think it's alien or do you think it's more prosaic and I I with the information that I have and being with my background being an

(43:46) intelligence analyst right I with with all that information that I have I went with I'm leaning more towards you're right it's it's unexplainable it could be probably logically explained but that is not my official position you got to prove what it is you got to prove it we got do better I guess my my my question is got do better than that uh you kind of conveyed to me were you pressured by the New York Post were they trying to get you just to **debunk** it right out the gate I feel pressured during the interview uh it was

(44:21) more of a just kind of a more of a friendly question like oh what do you think and I was like well I this but afterwards when uh it was written about and shared to an audience it it made it sound more so that that is my position and that's not necessarily true so yeah pretty interesting stuff and it's something I think probably a lot of the speakers here could kind of uh empathize with right you kind of get uh because he kind of was kind of thrust into the community right and then before you know it you have all these different

(44:52) sides trying to like pull you and push you towards certain narratives and um it's pretty meta I feel like even within that speech right this poor guy Loki I feel like both people kind of used him to their narrative **Green Street** and Corbell but it's funny that like corell's like really digging for like the the Zinger on **Green Street** I also find it funny when people are like I think it was the New York Post uh maybe it's like bro you know it was the New York Post you know it was **Green Street** what why you trying to act like you

(45:16) don't know but yeah any thoughts he was like you know he was dist distancing himself from that dude for real it is a tug of- War sinowski popped up on a YouTube comment right and

then within hours **Green Street** had reached out to him got a comment from him and posted right away you know what I mean it immediately started this like tug of war between this like so-called witness who was just a person who was there who saw the video like very interesting and then everything they said from one side to the other everyone

(45:43) was like weighing a whole argument on it it's very it's very weird there are people just thrust into the community though who who come out is this an example of like treating a so-called whistleblower a witness like if you're in his shoes how do you take that are you enjoying your experience so far or are you like I don't know if I'm gonna want to talk more about this stuff you got to be careful because everything you say is going to be under a microscope right 100% And I also think uh I like I

(46:12) stated earlier on on Lou's podcast I think sinosi is a genuine dude and I think he he gave his honest uh speculation or opinion on what he he saw via a video and do I think that **Green Street** reached out to you know have him **debunk** claims I don't it's hard to it's hard to tell that because actually read his transcript that he put out got CNN you know to **Green Street** you gotta look at it like from his standpoint he's only gonna think it's either aliens or it's not right or it's or it's simply explainable

(46:55) there there is no options of uh like nhi interdimensional what whatever the the you know uh gamma of explanations that's not alien that's not what **Green Street** his beliefs are well it's either it's either ours or it's not which would be aliens that's what I get from that and it it's really and I posted about this I really think that you know Corbell tried so hard to get this guy who's been genuine and even **Green Street** to this day still states that despite Sosi changing his story a little bit he still

(47:30) puts out there that he thinks he's just a genuine dude and he was just talking about his experience and you know and Corbell possibly persuaded him to might change it a little bit because of what Corbell claims that he has from sources and so that would make somebody trying to remember something from a few years back think well [ ] maybe maybe there was something you know you know what I mean so I don't think it was ill intention on **Green Street** but it's obvious that in that clip you can tell

(48:00) Corbell is trying to do a gotcha moment which I posted a post where it puts that clip that goes a little further where Corbell is bragging about Bad actors and all that but then he does the same thing and tries to convince sinosi what he just explained as something being a little more prosaic and exp an explanation about the infrared Corell is like well um so you know comparing uh I've talked to these sources and who are experts and they say this and and he you could see in real time Corbell is trying to convince him you know maybe

(48:37) maybe it is more you know alien or whatever you want to call it and that and so Corbell literally becomes a hypocrite because he does exactly real time on that on that podcast claims **Green Street** was trying to do B's impressive yeah I thought that too it was very meta right he's like I feel I feel everyone was honestly trying to persuade that dude and lowkey like manipulate

them to fit their narrative the best I think some people do it more overtly than others but I kind of feel bad for people like that that just are

(49:09) kind ofc he was excited to talk about it first and explosion man I don't like how we uh two people interact right you know where's the show where we have a neutral host and we got Corbell on there we got **Green Street** and they can talk about jellyfish or balloons like I want that combo I think everybody wants that combo right it's it's always in this controlled narrative whether it's the the New York Post article from **Green Street** all controlled it's **green Street**'s point of view or you get it

(49:43) from Corbell un weaponized it's all his point of view right why is there not enough any debate why is there not any these two worlds are going to meet each other and then we're going to have these ideas battled out in real time where is that this community should be it's not truck4 from the house for sure Skyfire news debates it it absolutely has to happen right because in this vacuum these sides just get more and more polarized they just get more and more like in their own tribe and then now you just have this

(50:20) Division and everyone thinks they're spitting facts and everyone thinks the other person's full of you know crap just it's not great you get him down sitting down long form I mean that's amazing right we just seen Corbell uh go on steo podcast right um is steo an expert in this is steo gonna hit him with the hard questions like you know what I mean this is more of a propaganda tour instead of you know like trying to get the word out and like this stuff being uh with checks and balances and hard questions so we can all get

(50:52) educated right this is supposed to be disclosure there to be you know the people the **debunkers** if you will they have to come to the table the **debunkers** have to be in the conversation if you're not gonna have the **debunkers** in the conversation what are we gonna learn We're not gonna learn anything the the **debunkers** are so crucial to the conversation yeah yeah it definitely seems like this is a topic that needs to be talked about and talked through in a dialogue form not preached at us right from people who hold these answers hold

(51:26) these videos for like three and a half years you know I'm not trying to call them call them out you know directly but why why is all this stuff being dangled in front of us without all the facts just weird it puts us in a very low information Zone I don't like it but I want to Welcome to the stage uh Lou reviews Lou jenez welcome to the stage brother good to see you man hey what's up guys uh I just wanted to answer what Keem was asking and the the real simple answer is that'll never happen because

(51:51) those guys vet the shows they go on and they refuse to go on shows with **debunkers** because they can't hold their weight well this is the issue this is the issue right so when Skyfire news uh gets a little bigger um this is one of the things that I definitely definitely want to bring up right I don't want you know Joe **Rogan** to have another Corbell interview or steo to have Corbell on again without somebody to push back or what's the point at at this point you're just doing one side of a story and

(52:27) that's it right and this well I think I I think it's just a lot of people get lost in the the magic of it you know like Bob Lazar it's such a **sexy** story it's such a **sexy** thing but when you really dive into him and dive into the things he's done and the things he's said he is a psychopath he is a pathological liar he's a trickster he tells Tall Tales to everyone that he comes across um and he also lets down a lot of people I mean he Bob Bigalow told the story of how he gave him a whole space and ended

(53:02) up just putting all his furniture in it instead of actually doing science work like he told him he was gonna do like it's nobody on these shows does that research because they're so caught up in the **[REDACTED]** of it and they will never do shows where people who know those stories or people who have done that research can question them and actually put their feet to the fire they know who those shows are they know who those people are they never interact with them and they never come close if you're even

(53:35) within their their spit range they will not go on your show or talk to you or interact with you whatsoever if you interact with anyone that they feel is a threat to their empire their little shitty Empire that they sit on you know like they want to control the information they get the you know head line there shitty little tours and there's stupid little movies and you know like it's it's probably a billion doll industry and they're getting a pretty sweet slice of it so that's that's what it is man like this

(54:08) conversation will never get to a scientific level like Eric Weinstein was begging for because the community every time science hits the table they spit on it they kick it out the door they doubt it it's like you can't doubt this this is these are facts and and we refuse to look at this in a real logical way and I I think that's the problem man is there's so much lore there's so much stigma there's so much **[REDACTED]** attached to whatever is happening that to cut to the **truth** of it honestly it would probably either be

(54:44) really boring or something that none of us could have explained before it you know like so you're the perfect example of that Lou because like uh right of they only go on shows that they get softball questions I was just bring this up the second you do it's like it's not even just like don't go on that show anymore it's like all out of attack so yeah it probably is wishful thinking but I think it could happen still there's some there's some good debates that need to happen and Keem real quick uh for a

(55:13) little bit background of Lou Lou was from the believer camp like you know alzando all of them and I know You' asked Darren Reed that one time who was in here just a second ago uh you know sell me the idea of why I should believe in Lou alzando well Lou uh reviews here jenez he he was in that camp and he obviously saw things at red flags and the most in that camp went on his show more than anyone else the most groomed even if you want to say he's a counter Intel dude I don't know I feel like that's an appropriate

(55:45) word yeah I mean I I dude guys like I don't think it was groomed it was just pure chance man like meeting him and uh you know being able to sort of like **[REDACTED]** he knew how to charm

you to like well he knows how to charm everyone you know he's a charmer he's a nice guy he's gullible he's uh you know he's like he's fun he's he's he's a Chum so like yeah anyone who and he's a veteran that's what they get you with is they hit you with hey I'm a veteran but I'm

(56:20) also your buddy and you're in this club just as long as you say the things that we want you to say or repeat you know like they never had to ask me hey can you say this or hey can you do this it was more like I would listen to what they're saying and I would then formulate what I would say on my show well that's how they kind of do it though right like make sure you guys thing right like you get that text before you know you're asking so we can get more people in the community more people following more people paying

(56:48) attention to the um on the MH370 Stuff Etc got close to these guys and and did a complete 180 on them Jeremy McGowan was yelling at me a year before I was able because look McGowan would tell me all these things and I would go bro like there's no proof of this like this is what you're telling me but I don't know I wasn't there like it's not that I don't believe you I just I have to see it for myself and it took seven interviews and two years of interacting with him and seeing how he operates

(57:25) before you could see who this guy really is and he's just [REDACTED] he's just lying and it's weird and the way the things and the people he interacts with and and the the people he follows on Twitter like it's just weird like why would a government employee act like this and someone who's flirted with the idea of running for office like it's absolutely wild like and and I I me and now got into just the craziest arguments like we wouldn't talk to each other for almost a year and all this [REDACTED] went down and

(57:56) then you know obviously we were like oh yeah sorry man I was wrong like I see it now like all enemies we were all like curious but none of us want to look like [REDACTED] at the end of the day and none of us are willing to S knows I'm interested in the science our souls for shitty UFO Fame like it's you know it's not that important to us you know you know what's really strange to me and we're getting way off topic here and I'd like to stick to the news because this is like the the the last week right update um but it's

(58:37) really interesting uh to me with you know this type of community where everybody doesn't know who to trust and everyone's skeptic of everything and oh you're a CIA agent and you're this and you're that they're also incredibly gullible and will just trust anything like when PE when people tell me stuff I'm like yeah that sounds about right and then I'll go vet it right then I'll do a little bit of research like okay did this really happen did that person really say this okay you know what I

(59:04) mean you it you can trust someone you can believe someone at Faith value but then you actually have to be a responsible adult and do a little work research to just confirm that you're probably right you know you have to do that well I think for a lot of people that are really like me that are really attached to this issue they've had or have seen something you know possibly in their lifetime you know like I've seen something weird man like it was [REDACTED] weird funny

people ask me I've never seen weird because I saw that's not

(59:38) proof that's not evidence you know flip it around yeah man like I I agree like it's all all people want is just straight answers and I think the straighter we are with each other the more we hold each other accountable to the things that we say the better and I love that the internet is the murder board for Jeremy corell's [ ] because I think people are starting to see through it like there's only so many of these that you can do you know there's only so much Goodwill and cool movies and watches and haircuts that you

(1:00:07) can put on before people are like you know what [ ] you like this is always [ ] these videos are always blurry there's always some like you said three-year investigation where nothing comes of it and it's debunked in [ ] two minutes on the internet like it's dude it's it's but even though I'm criticizing it I want to be you know perfectly clear here like I'm not anti-corbel I'm not anti- Greenstreet I'm not anti- Lou I'm not anti step Greer I'm not anti any of these guys right I want

(1:00:39) them to release more stuff I want them to talk more I want them to investigate more stuff and get more stuff out you know the the more information we have the better um so you know that's the other thing there's a lot of like oh that guy's bad never trust does or says ever again who knows maybe someone's making mistakes right maybe they're flat out wrong two things on the third thing they have the Smoking Gun but no one even pays attention to find out if it's legit or not you know so it's like

(1:01:08) everything has to be uh researched and looked at in my opinion if I could jump I have a I want to play a little bit Devil's Advocate but also kind of support one thing that I've said is I've never seen anything anomalous but to me that doesn't mean that there can't be anomalous stuff out there so like what I would say is do we hold ourselves uh to the same level scrutiny like when we say stuff like oh Jeremy Corbell doesn't go on certain kinds of shows we have proof of that um if we say stuff like um you

(1:01:33) know the stuff like about Bob Lazar like do we have proof of that as well and if something if our level of proof is that we have to see it for ourselves can we ever really hope to obtain that level of proof I would just ask that we be introspective on that sense as well because I think that we have to kind of look at it halfway right I'm not saying blindly believe stuff but I'm also saying let's not also blindly believe our bi bies when we are saying that stuff's fake either right we should hold

(1:01:58) both sides of the Lael same level of scrutiny in my opinion I mean no offense that's really nice to say but when you propagate a you know a fake Wormhole story for months and months and months and months when people and experts are telling you look man this is [ ] and you just refuse to look at the evidence like and and by this time it's too late like that information's out there it's it's already it's it's it's dirty the pool you know so it's it's kind of tough to

(1:02:27) sit back and just be like yeah man you know like let me be are those which experts you talking about because the experts I've had on my podcast that are Engineers from the Navy and the dod and physics theoretical physicists the ones that say it's true they've gone on record to say that so which experts are you talking about Lou this is exactly what I'm talking about right like you have your biases and your opinions but they're not supported by any facts or any real experts you just say they

(1:02:52) are who who are the physicists uh roy Herbert uh engineer Salvadore Pas engineer Dave Rossy these people actually work for the Navy and the dod they're not just ladies gentlemen Aston Forbes versus Lou reviews let's go well this is what I'm getting at right is that people like Lou just make up stories to reinform their confirmation gentlemen before we digress into that uh debate which I think is a good one it needs to happen uh believe it or not there's been a ton of [REDACTED] that happened this week in the news and

(1:03:20) we want to slide through some of it I think I think we'll find a lot more topics before we do though before we do if you could bring like all your data and everything you got and Lou if you could actually research this for a week we set this up for like future debate an MH370 debate I would love it I would love it maybe lose the wrong person but I would love it's a it's why it's a waste of time oh see come on that's the type of attitude I don't like d it's a waste of time it's already been

(1:03:53) **debunked** it is a a waste of time these guys win last five seconds of my world Keem damn I mean I think a conversation's worthwhile I mean it's not really considered a debate if you want to but you guys both have data Ashton beli because of the people he believes in Lou you have your own view on him talk about those people talk about their theories figure out if they hold water I didn't what was it a how \$50,000 reward how much was that guy offering to to prove it was real don't like you don't know 150 Grand man Grand

(1:04:28) you think a Bitcoin billionaire like Tim P says that made it they didn't want I was listening to you earlier actually I was listening to you earlier where you said right didn't they have to prove that they made the original video to get they have to bring their source files but I was listening to Lou's uh podcast earlier with Chris and Lou was saying that rich people always want more money so how come the person that made in hoax those videos did not want to collect \$150,000 and become one of the most

(1:04:54) famous people on the planet get a job at any VFX Studio they want kind of amazing maybe maybe because they don't follow it or maybe because they already work for one like you said everybody wants more money right anyway let's move on to something else though that's why that's why well are you going to give up are you going to give up a whole career of working within the FX Community for 150,000 for a one-year salary why why would your career end because you came out I made that yeah I think it' be

(1:05:24) hella CL you be like I'm the guy made it I don't know man I I don't think people in the industry really give a [REDACTED] about that kind of clout this is the guy that literally was arguing like

an hour ago that rich people need more money well there's something else that you guys aren't considering imagine you being the person that created that video and you come out to collect \$150,000 reward for proving that it's fake but now you're faced with being in the public and every single family

(1:05:51) member that lost somebody on that plane is is going to come after your ass because you just drugg them through a year of trouble and turmoil and emotional damage and all sorts of things because they are living on a hope that something out there means that their people are still alive and now you've got to look those families in the face and tell them that they that you made a joke of the death of their relatives but you don't because literally nobody reached out to me not a single family member has none of them have so that's

(1:06:25) also [REDACTED] this idea that like it would hurt the families like what I would ask anyone who thinks that go watch the CNN Clips with the fames they don't go oh yeah the plane crashed in the ocean they go no this plane didn't crash in the ocean go watch the Netflix documentary where they say the debris was planted they know the official ns are a lie this idea that like alter they're hoping that because it didn't land crash in the ocean man you got to wake up listen to what the families are telling you says that they

(1:06:55) fake the video you remove that hope from these families that are praying that their people are still alive nobody has reached out to me around the videos man I've had hundreds of millions of views and gone on 60 podcasts not one of them is hanging their Hope on those videos I wish they were I wish they would talk to me because then we could get on TV about well maybe that tells you something too maybe the families know it's [REDACTED] as well isn't it POS isn't it plausible Ashton though that the let's say there

(1:07:22) is a hoer that created this hypothetically speaking isn't it plausible that that hoer um would uh be a little nervous about coming forward because they might feel a sham that they made this up when people died yeah yeah I think that that part is a valid point but the point that like you're going to hurt the families you're afraid of facing the families families aren't even on gun TV most of them sign settlements they can't talk about it anymore none of them have reached out to me and I've

(1:07:46) made that 100% clear so this idea don't live in this country or speak this language so then how does that help the argument you guys you guys have a lot of passion about this topic I really believe you should agree to a deeper conversation you guys both have your own fan base and and the the community is kind of divided on this topic anyway it would it would do good to have to hear you guys kind of like talk this stuff out present your facts you guys might come to Common Ground who knows but at least show the potential for it to

(1:08:13) happen I think it'd be cool but real quick let's get to the news red what's next so okay so great comos guys but next we're going to go into like the whole grush of the week and it kind of started with that hearing that was last Friday um you think Danny Destro com saiding and then we could talk about through the week with me setting that I firmly believe in I believe that

he's telling the **truth** I watched it live he is a credible witness I watch the comment disappeared one thing in particular live your own fantasy to be

(1:08:51) concerned about this whole thing is that jul Dory literally deleted his on the phone that there were people that were hurt hiding this information and keeping this information safe and brains are funny man they just completely like believe in the alternate reality let me just give you no they're never going to debate we lost you zero% chance these people won't last 5 Seconds debate there is there is currently three orbs spinning around red uh oh red don't go to the light okay we got to uh I appeal to the emotion of the

(1:09:29) is like the worst argum that's one of them that's one of the best pieces of compilations of that in thees like literally in our so just go up to the top SC through thise was taken they don't believe that the plane was crashed in the ocean alien who said interdimensional I think that that's incredibly important because those are the types of things that when we go in there we you know there's certain things that I think one member used the term that what they were exploring here were for phrase

(1:10:00) interdimensional beings is that something that we're dealing with yeah isn't it weird how mad people get us trying to find the **truth** it's so bizarre man I I would have loved to receive much more information you want me to change the balance I think that um it's it's reasonable to say that uh everyone in the room uh Reed probably new information I certainly did and think it's um you know additional information to continue the investigation and ask more questions so definitely have more

(1:10:30) questions less questions oh we're talking about the Congress stuff here it just verified what I'm gonna mute the background yeah Danny Jones was extremely desperate in our interview when I said that he was projecting like that was that was the the The Knockout below projects is that some of the type of things that you guys have gotten into and that they have not been as forth coming on alien spacecraft or something that's not human look everybody is wondering about the substance of those claims and until we actually look at

(1:11:03) those specifically and try to get answers about those those claims are just going to be out there and so that's what we need to kind of delve into I just think what uh most of the American people uh fear is true is that the government there's a concerted effort to conceal as much information as possible okay we good sh there yeah anyone have thoughts when that happened uh some of the statements said real quick I want to say uh go to the top go to the nest we just shared the video up there if you want to see the video version of what

(1:11:33) you just heard uh it's a it's a well put together thing so also follow the Twitter account subscribe to the YouTube and Instagram and Tik Tok um I think it's uh relatively annoying that you know there was no new information what was the point then like what was the point yeah real quick before we go to the next thing too **Mick** West has already dodged two debates with me major podcast tried to set it up and **Mick** West already dodged two debates so if you think Lou reviews or somebody else is going to

(1:12:05) step up to the plate think again no matter what they see or hear in those Skiffs it's not going to be anything gamechanging well and it's also welcome to the skiff because you're not going to get information out of a skiff that's the whole intention and purpose of a skiff ashon yeah I to me it's I think you guys mentioned it right it's like it doesn't seem didn't seem like they got anything new out of it um all the congressman stuff said that I think that there was this narrative that's coming out about

(1:12:36) it being e extradimensional whatever and it seems like the news is sensationalizing that aspect of it including representative Burleson's comments where he thinks it's like spiritual and could be Angels but Realities if you listen to what he really said when tupacabra answer a question he basically said that oh well quantum entanglement exists there therefore I think that we could be in a you know some type of construct which means that there would be a Creator and that uh religion would be uh able to be able to

(1:13:03) adapt to that very quickly which is something that I've been saying a lot as well and to me that's what the story should be because there's these narratives out there that like oh it's being held back the UFOs and AI being held back because religious people won't be able to adapt but I don't think that's true at all so to me I mean I there wasn't a lot to get out of that but that's kind of what I got out of it and from him yeah I that that's definitely not true if you go back

(1:13:25) through the history books you can see humans uh worshiping all kinds of gods right humans can adapt to anything so if the gods that uh are revealed yeah the monkers don't address any of our evidence even today the or any other ReliOn sure people would adapt right away he wouldn't respond to any of it they don't glad you're able to make it um yeah so response to the uh The Briefing in the skiff I I think it was really positive actually I'm going to I'm going to come off uh on the other end uh a lot

(1:14:01) of people said it moved the ball and a lot of people said that it really energized all the the members that are in the room energized them to get you know more answers so I think this is going to lead to more public hearings almost definely was in this hearing has AOC said anything apparently she was in that hearing as well and normally she's all over social media I haven't seen anything yeah even if they couldn't reveal details wouldn't they say uh we we definitely learn more information and

(1:14:36) leave it at that you know we didn't even get a hint of that real well they did compare it to the um the dod uh IG briefing which was much worse so it was an improvement from their last briefing so they apparently did get some new information they just can't talk about it I wonder if what they got was Rush's um questions and the things that he proposed that they couldn't get access to last time I wonder if maybe that was what they've seen um and just I mean because it they did release you

(1:15:16) know Greenwall released the Foya where you know obviously the debate happened about the 15 years grush has been studying uh subject so I wonder if maybe they saw like gush's

statements and what he claims several years ago Prett I didn't know who she even was at first saying a intelligence Community finally figured it out I think their focus and their scope is and abuse so I think the funding uh or with no oversight uh is what the Focus was and that was what was presented on manheim's behalf um because

(1:15:58) that plays into what supposedly grush reported which led to his reprisals which led to his ICI complaint so to me that's probably what was discussed and then probably had access to the things that grush stated that's if you guys notice like the representatives all kind of said different things like you had Luna talking about interdimensional beings you had burleson talking about you know what he was suggesting about you know religion and and how that plays a part you had B said well it's not about

(1:16:35) Little Green Men and tell talk flying saucers it's about you know the funding to programs that have been researching something that hasn't that we've been told uh is not a thing since 1947 so you have all these different people say different things talk about some other stuff after here would say they saw gush's statements they had more access to what he turned in per the complaint and then uh you know they went into the funding of uh special access programs and and that was the scope of the IC

(1:17:10) investigation that's I think it was vague enough for everyone to apply their own worldview to it is kind of what I got to because there was a whole bunch of different reactions that's an interesting take Jeremy you things that's really bugging me though here is because a lot of people put so much weight on what a senator or a congressman says just because they're a senator or a congressman but their biggest accomplishment in life is being able to convince the electorate that they're worthy of holding a position and to

(1:17:44) elect them because they've promised them something or they've been less shitty than the next option these people are no different than the shoe salesman down the corner or the Barista that's giving you your coffee every morning they're not special they're not super educated and they don't have any huge difference in world viw than the remainder part of the population their primary contribution I guess you could say is their ability to understand what the people are thinking and say what they

(1:18:17) want to hear so keeping that in mind we always have to be very cognizant that as Senator and a congressman their very first and foremost priority for the most part is their job security so whatever the the the flavor of the day happens to be that's how they're going to talk about things that's how they're going to respond to things and just because they were in a skiff and told information doesn't predicate the fact that they're going to be able to tell that information so they're going to word it

(1:18:47) in a way that is vague enough to appeal to all sides of the people that are going to vote for them to maintain their next paycheck y because it is election season this year yep that's why Eric uh Weinstein's uh point is very valid go ahead Ashton sorry I was gonna say that that's the feeling I got too where even like uh you know representative Burleson like maybe he is doing

these podcasts because you know he thinks oh well this will give me more exposure as well to this issue and and get more information out there and

(1:19:20) if if he is then come on hard **truth** uh Congressman uh come on my podcast but just uh but to be honest with you though like I think that what you said is huge is that they're just normal people right and I can tell from Congressman buris where he's like oh okay he understands this idea of quantum entanglement and he's kind of at where I was at honestly like a couple years ago where I was going down the quantum entanglement stuff going wow yeah there is something more to our universe right and that's

(1:19:45) what I liked about listening to what he thought there because I said oh well you know take it a few steps further and where does that lead you as well with Brett I feel like he's a little bit more advanced on it maybe a little bit more read in on it on what there is that's going out there you know some of his comments were it's not about aliens it's not about crash retrievals this is about the budget and the money that's being you know withheld from us as well so well I totally agree with you in the

(1:20:09) sense that some of them for sure are kind of just latching on from a popularity perspective they're not anymore int you know knowledgeable than the general public is there definitely are a few that have been kind of seeing this and the ones who' have been really involved with it no you know a little bit more than we do probably not much more for for anybody to have definitive proof of a a special Access program existing that is designed to uh retrieve non-human intelligence created materials or biologics or or

(1:20:40) whatever a senator or a congressman should be demanding definitive proof of that and that proof should come from copies of the program security classification guide maybe the program Charter the budget and resource allocation plans or the audit and compliance reports if they don't have that then all they're doing is regurgitating what they were told not what they were given so you know we we've got to hold our representatives to a higher standard and force them to demand better evidence quick question my own ignorance

(1:21:18) on this is can they actually get that stuff is that even stuff that or is that just classified degree where even Congress can't see it I'm not sure it is classified to a level that most congressmen cannot get however comma there are also waivers for just about everything and with the need to know provisions and things like that the original classification Authority has the ability to declassify or provide access to certain individuals based on a need to know and it would be a difficult but you know it may take years but for a

(1:21:56) contingency of senators and congressmen to consistently push for the exact same things could uh uh suffice for that need to know aspect it it probably wouldn't but it could and like I said the original classification Authority could provide them access to that information through a uh singular declassification system seems a little unlikely to me honestly I mean if you're going to need to know stuff I think that's where Congress starts getting left in the dark but I'd like to know more about that in

(1:22:29) general all there it sorry yeah just talking about the the clearances for members of Congress I think there's a lot of confusion and maybe I have some questions around it too um members of Congress don't have security clearances like uh like uh government employees do they don't have the background checks they automatically gain access by being elected by the people con constitutionally so it's a constitutional power but they have a need to know so it seems like only if you're on the committee that has a need

(1:23:01) to know would you be given access to information that's relevant to what you're legislating but all their staff have to have uh clearances like standard clearances so I'm wondering if a member of Congress can get cut out from information because their staff doesn't have the necessary clearances is that true well it's partially true and partially not once you're elected as a senator or representative you have a modified security well I call it a modified security clearance it's called

(1:23:30) a public trust clearance and it's not the same as a secret or a top secret or a tssci it's just legitimately called a public trust clearance now once you get on a committee one of the qualifying factors to get on the committee is that you have to be able to obtain the relevant clearance so if you are a person that is unable to obtain thetieve comp compartmentalized I don't have a TSC I have going be on that I don't have any compartmental example the chair of the house uh Senate intelligence oversight committee would have a tssci

(1:24:06) clearance which would be predicate I mean he would have to have that prior to assuming his position I don't know if that's true though I'm confused because I looked this up I was confused doesn't seem like they even have any clearances whatsoever be surprised I've taken a clearance and there's like this huge thing you fill out related to it they go through it's like 60 Pages called equip and this whole background check that they do with you you do a drug test everything related to it and I I don't

(1:24:35) know one way or another but I would be curious to know whether or not they really go through that process well if if somebody during this the spaces couldn't Google I'm mobile and sitting in my car but somebody just Google Congressional public trust clearance and clear it up yeah maybe while that's happening a good segue into kind of the the next topic right so a lot of that stuff was talking about gush's testimony uh and also just a quick reminder follow Skyfire news to stay up to date on all things UFO um and

(1:25:06) then after this happened it seemed like there was a lot of grush news and honestly I think we might save the dark journalist Mel and stuff for later because he's streaming right now and I think he's gonna drop more but there was this Black Vault release right where basically Black Vault foiled a document from gush's icig investigation and I believe what 2021 maybe or 2022 um and basically there was a statement there where part of it was blacked out and uh the part that everyone's talking about it says he

(1:25:34) stated that he has been studying uaps for 15 years and that he serves as the N liaison to the UAP task force and this was kind of a a trip up for a lot of people right um because grush

had previously stated on Tucker Carlson and on Joe Rogan that he was really unaware of this until the 2017 article like uh he didn't really know much about anything UFOs so this was kind of a huge red flag so I guess maybe we could just talk about this first and then his reply but what did you guys think when uh this kind of

(1:26:08) dropped I like the reaction of it the reaction to this news from the community was interesting um I didn't when I say I like it I just mean like I thought it was uh surprising really but the um statements itself I mean is it a how long he's been interested in it 15 years or do you think how important do you think this is this debate this fact check I mean all these little lie like people lie about little things right what are other little things they're lying about when do they add up to like big things you

(1:26:40) know yeah Chris and we're dealing with a very interesting topic too yeah sorry go ahead Chris so I I would like to weigh in on this uh because uh it's one of the very few things I claim uh that I I actually correlated million people and made a post about it and that's what took off and obviously through Mike I can never say his name Mike con Angelo or whatever uh Ross colart messaged him with a statement from grush from that post uh so what happened was uh there was a interview with David grush uh

(1:27:16) conducted by the dod IG uh I think it was reporting on um UAP reporting I think there's also slides where they suggested Arrow or whatever office whatever that was and in the questions in the interview uh why this is such a big deal and I they don't have to this is an issue SEC you know for a field that wants like credibility and transparency then so yeah I did go through the exact thing I have to you had to have a sponsor as well I had a sponsor that when uh came out and he was doing his podcast platforms on Joe Rogan

(1:27:56) he stated on Joe Rogan that UFOs weren't even on his radar until the 2017 New York's time New York Times article mine's definitely tope about you know who's this Lando guy and everything like that so we know from multiple platforms that he has stated he never had topic should be obvious before 2017 he said that now when you know when you say things public versus what you say behind closed doors there's an Integrity issue if it differs so when when you look at that foyer response and it's an interview

(1:28:33) with grush in 2021 um and it states and and and it's already you know it states you know this person you know and it has in quotations defin CLE the UAP phenomenon for 15 years so that mislead oh really automatically if you follow if you've been following grush since he's come out there should have been a red flag because we know that his perception to boost his credibility in the public on platforms was he he basically said oh I'm not I wasn't a UFO guy I didn't research the topic it wasn't even on my radar but

(1:29:16) then behind closed doors with the dod I'm G change my streaming set up so my camer now I don't like how it's straight I made that post and then the rebuttal from it was a statement from grush per cold heart stating that sure I'm going to do some investigating IG got it wrong quality my production my counted his time uh as a Cadet uh in school as part of that time well

my rebuttal to that would be any outside I think it's only the Air Force Academy I could be wrong with this but outside the Air Force Academy if you're

(1:29:54) a Cadet at a in a jrc college program that service is not counted towards your uniform military service time and uh so like so for example if you do 20 years in the military to get your pension you can't say well I'm only going to do 16 years and you guys got to count my four years as a Cadet uh because that doesn't happen that won't that doesn't work that doesn't count towards that you have to do a full 20 years after you do the four years because you do the four years at the at the JC college program to become an

(1:30:30) officer that's how you get commissioned as an officer when you come in and real quick Chris uh he didn't even say that they messed up he said he may have messed up I'll just read the last part of his statement because this is uh pretty interesting he said the interview reports that I've been studying UAP for 15 years I have not and may have misconstrued my total time in uniform service Cadet plus commission officer at the time so he's saying I may have misconstrued which is actually funny at

(1:30:54) our little launch party they're they're all getting mad at us like oh you called G liar you called GES liar and then he like comes out and basically says I I lied right may have misconstrued sure maybe lies is like the hardest version of that but it's also kind of like not telling what was the **truth** of the fact okay so let's do the let's do the math here this was in 2021 like you take the four years out of that and let's say okay let's count that LE 11 years 2021 minus difference what

(1:31:23) does that give us it gives us 2010 way before he stated in 2017 so it still doesn't that's irrelevant it doesn't make sense so what happened was Rush officially got caught in a lie and people are like well it's not real it's not a big deal you know he's been found credible by soand so and and politicians okay great but you guys want transparency you guys want honesty hesty you got a guy that's went around bolting his credibility saying you know what I wasn't even a UFO guy but now it turns

(1:31:59) out he was so lies matter when it comes to credibility and you not being transparent about what you say to the public versus what you say behind closed doors uh in in government settings that H that's an Integrity issue totally and to gush's credit though he didn't disparage anyone's mother when he got caught in a lie handled it gracefully uh but he still said I may have misconstrued Arthur do you have any thoughts well my opinion is that yes he did lie uh he got caught uh and I think this feeds into

(1:32:35) this whole idea that he's kind of being controlled behind the scenes kind of used as a puppet for some other you know people like melon and others yeah I guess I could have I'm sure they you know rehearsed him being interviewed I me the most the most basic question is when did you first get into UFOs I mean they knew who was going to be asked that and this is kind of like what they did with the 2017 article right they kind of like they weren't upfront with what the article was really about right it they

(1:33:07) didn't he's a remote viewer but like this is stuff he's never been into this stuff too but he was actually remote viewing in Afghanistan in 200 really split in hairs here right yeah they tried to Brand themselves of the scientific you know uh part of ufology but they're the most far out uh woooo people ever you know they're they're Over the Top If you finally like get into their cult and find out what they truly believe uh it's totally ridiculous and uh yeah it's just a managed you know

(1:33:34) bull craap thing and I it was really disappointing but it honestly wasn't surprising yeah it was kind of disappointing and not surprising and also it makes me think of and I'm not saying this is happening but I just my mind goes there are religions where it's like you're allowed to lie for like the religion you know what I mean I'm not saying that's happening but uh interesting thoughts Ashton yeah I mean just to play Devil's afate I feel like we're kind of uh maybe splitting hairs or um I forget the other

(1:34:00) Turner phrase here had a couple martinis here but just kind of uh holding him to a little bit too high of a standard you know in terms of okay he maybe misrepresented or like what it sounds like to me is that they took his total military time and they got that got equated to the time amount of time he's on UFOs all this stuff doesn't really matter right it feels like a little bit of a reach where it's like okay it doesn't mean that what he said to Cong is true or untrue you know I think that

(1:34:24) at the end of the day we need to be able to verify that information my complaints with grush and this isn't really a knock on him I've been honest that or my opinion is that I think he's telling the **truth** at least about what he knows and what he's been told but is that he's got an NDA so people that have ndas can't say everything that they want to say because otherwise they're going to go to jail um and that's what we really need from the UFO disclosure movement is somebody to break their NDA and just

(1:34:49) tell us the **truth** but then the problem becomes like we're hearing right now now is that it then doesn't become about what they're saying it becomes whether or not we can believe what they're saying right and this is the ultimate issue this is the the problem we have is then we have to have this hard evidence hard proof and what is hard proof I would ask the people in this chat for you all especially my Skeptics out there what is your bar for hard proof what would David grush have to show us for us

(1:35:15) to believe let's just I'll take alien bodies would we have to wield those out I think even if we wield the alien bodies out people would say they're fake but that's just my opinion what do you guys think they already did they already did Wheel out the alien in Mexico they did right exactly me the cat's still out on the alien mummies from NASA the science hasn't caught up yet and that makes sense because it took like a really long time I like alien the out of the Skeleton thing because I think that took like 10

(1:35:50) years you know and if you go look at the peer review journal articles about it's very um I don't want to say um obvious but like it's a genetic it's it's a very rare unque genetic anomaly

that was found and the half I Want Some More Scary Stories to come out or whatever the half of the genan sample I don't think the momies were necessarily fake I I don't know they said like oh it's I don't think they've been proven fake in my we don't know if it's alien it might be alien just a lot of

(1:36:21) disinformation dising was it was coming from a degraded sample so they couldn't even get DNA to look at and that's totally different seems unlikely to be get DNA thousand years like that is not alien we don't know maybe it is alien there's no more good stories yet anyway so it's a whole cluster f with all that stuff but like we don't know like people say the different things about the nas mummies all the time so they did Wheel out mummies of aliens they did show us two bodies and nobody nothing happened

(1:36:51) nobody cared it was totally fake that's because that's because Ryan Graves was there and he was embarrassed about what he got asked to be a part of he even stated like that he said I'm pretty sure and I'm gonna paraphrase something along the lines of this does nothing but set back the UFO Community uh because those arees I played with plaster in art class in high school soon as I saw that I was like that's plaster like there's like eight like six different mummies and so because yeah they're not plaster

(1:37:30) they're not plaster and Chris and they have had that fig for sure but there are other mummies that's it's still out that's just how you preserve them right they've had people say like oh no these are definitively organisms these are plaster some of them that they've looked at and and some of them that's the problem when you you believe what people tell you versus what the fact this is what is wrong with the world in general is that we believe oh what did what did what did Ryan Graves say what

(1:37:59) the hell does the matter Ryan gra say just some dude who's invited to come along had nothing to do with the mummies even if uh it comes up that they're real No One's Gonna believe it EXA believe it I think it'll take like 20 years to seep in it would take it would take the public 20 years to be like oh those were alien bodies whoa you could have the president of the United States like you know confirming to the country look this is real these are from these this star Galaxy and immediately people would be

(1:38:36) like this what are they trying to cover up why are they coming out with this now they must be doing something else are they trying to start another War somewhere like no one would believe it and that's evident in every time I love guys uh viral about the UFO Community lately it's grush if you go into comments of every one of those posts especially on Twitter you'll see everybody talking about all right so this is a distraction from what everybody they like nobody hardly believes and you could I mean

(1:39:09) it'll take and maybe a sprinkled in there but mostly everybody saying this is a distraction something going on across the world want to have something glowing in the background blah blah blah maybe I'll make a four orb sign can somebody give me a or sign we right a hurricane will hit you know if you go and look at the comments online people are like oh

the government harp harp created that hurricane because they're trying to distract you because they're doing something somewhere else like even with

(1:39:39) weather design me one of these or like you know when there's a a gang fight juveniles in a big city and all of a sudden we got aliens running away from a mall because aliens like to shop at malls I guess I don't know they weren't just aliens s to 10 foot aliens thank you they seem pretty big and they were shadowy they moved throughout the Shadows of the of the ground it was a very strange Story by the way uh one of the witnesses claimed that on January is only two days away is going to have a big reveal with the seven to

(1:40:23) 10 fo so um he's been hyping it up on his Twitter apparently that this news break is gonna happen on his YouTube channel so uh we'll see if he follows through good is it the same guy that kid that uh made the claim from the meteorite Fallen that there was the eight to 10 foot alien in his backyard multicolor no no no but I don't Chris you don't believe that Las Vegas story hell no even even James Fox himself came out and said it's probably a hoax after being who put the video cameras up who

(1:41:03) put the video cameras up Chris uh what video stuff about it too though if you guys go to Miami aliens.com about like a day before all of that went down there was a cryptocurrency like nft site that was launched um not saying one thing or another but like I did find a tweet like people who were using hashtag Miami Miami aliens way before the media storm happened I don't know who knows it's so weird that that trended can I explain how this happened and this is just from my experience on Tik Tok why would I

(1:41:42) need I posted a video one time uh because there was a UFO video that went viral um near where I live uh that near a army base I went out because I was I was eating lunch and there was a military helicopter flying extremely low circling around my neighborhood which is extremely weird I've lived here five years I've never seen it I've seen them pass over big is but it was circling it made about five circles around my neighborhood in very low um so all I did was post it and I said all I said was it's really weird

(1:42:19) this is happening when I'm five minutes away from this video and I and I and I tied in the other video and what it was about and would you know that that that video alone got over a million views in like two days and the what and the theories and the wild I mean it just spread like wildfire it was insane so that and and I guarantee you if you trace the Miami aliens thing it all came from Tik Tok because the [REDACTED] like that spreads like wildfire on there there and that's how people they'll start they'll

(1:42:54) start clipping the video and they add in their their own socalled experience or they The hoax what they think that they were there like there is no quick quick question Chris did you did you pull up a track uh flight tracker or whatever to see if it was not sure are you talking about my my thing or the Miami thing no the helicopter that flew over your house uh so no this is before I found out what flight radar was about or existence uh so no I didn't uh I I've had helicopters 00 too much 99.9% of the time whatever I see in the

(1:43:36) sky it's on there but there's been a few times where there's nothing on there there's nothing flying my house but I clearly see a helicopter or I clearly see a plane well not everything uh okay so there's a misconception there not everything is going to be reported on that um and there's reasons for that I kind of looked into it and there was a guy on I've seen the D specialized in that and he said uh that you especially with military flights you're not going to see all of them pop up uh

(1:44:07) for a variety of reasons but the majority of things because I looked there was a helicopter crash down in Alabama I think it was I don't know if y'all remember that it was last year kind of fell out of the sky couple people died there was a big investigation and it was yeah I think it was Alabama so I was tracking it on flight radar and there was a big thing about it on Tik Tok and so uh and you'll see like there was a thing where it didn't show up huge um so you kind of dive into it not everything's going to

(1:44:38) show up on flight radar or those types of apps um so people tend to speculate at that point and they'll say well maybe it's because of this or maybe it's because of this and then once that gets out on Tik Tok oh my my God it just spreads like wildfire it's crazy yeah well that might be a great segue to uh the next points um seems like a lot of grush activity right sorry and then Eric Weinstein had some interesting statements and remember few years ago he had said that he was almost being brought in on like the

(1:45:12) inside group right but then it kind of just kept on being a game of like um we're going to tell you this this date and then that date comes and they're like actually never mind 30 inches could be good we're tell you that on this date and it would just keep happening so this week he said I have no idea as in zero what is meant by interdimensional beings despite a PhD in the relevant subject area I've been looking at this for four years or so and it is all total garbage to my ears anyone have any thoughts on

(1:45:40) it uh you were muffled for most of that who made the statement I mean I know but could you say it again yeah so it's Eric Weinstein and he says I have no idea as in zero what is meant by interdimensional beings despite a PhD in the relevant subject area I've been looking at this for four or so four or so years and it is total garbage to my ears and this is I think in response to everyone kind of talking about interdimensional beings because of uh gush's hey Ashley yeah dude I think he's made fake definitely

(1:46:14) documentary like the idea of extemporal dimensionals Dimensions how many people he knows think in in these different dimensions like to answer your question Ashley that's the big issue with the **debunkers** in general right it's they're the ones who are believing and what they want to believe in right they don't they don't really put themselves in the same of scrutiny as the big problem so uh so to kind of go in on that so he actually responded to one of my posts where I retweeted that uh so you have to go on

(1:46:46) he actually made a couple other tweets yeah what they did this plan is pretty gnarly man he states that in the scope of interdimensional beings we've never seen vide like but if you

want to talk about other um more relevant explanations to I think that topic what's the explanation for this CED other theories and things that I'm not I am definitely not um educated on I don't repeat it but maybe uh I know I've got the Tweet saved they F all this 12 beings and he said he even approached grush

(1:47:21) uh Eric Davis talked brush Eric Davis and not but he talked to Travis Taylor nether one of had the answers for him so doesn't he have a quote reced that like the day after he talking to Eric Davis and how big Butler he said Eric said to Big Butter I recanted and deleted my post like the next day you're one of the only people you and how and me are like the only once we couldn't find the cloud images in the Torrance that's when I said WR yes that was so funny his delivery on that was so funny when that

(1:47:54) happened we pulled two different torent from the old website images don't exis being like dude okay finally some brains on the team all right well here's the deal here's what's happening I what's going on here that's Eric's that's Eric's the camera all the time what is going on here what is like where are the why do you think can't see said there's no what's people's argument why I can't see in the mix but yeah speaking of grush you don't even know where the

(1:48:19) camera is how can you say so two UF people there's no adults in the mix that's a pretty strong statement yeah I have people on **Reddit** they're like the most insane people they just make a bunch of fake stuff this can't be possible this can't be possible even though they have literally no first to me the funny part is they're the ones who argue that right because they're the ones that argue that we are putting up conjecture with our 14 pages of evidence but literally all of the **debunk** comments are

(1:48:49) are conjecture all of them are they don't have any hard evidence whatsoever it's all conjecture 100% because there's nobody who's come forward and given us the source files that's why we have the source files as a requirement right then to me that says that you think that grush is uh his um approach on this or his belief on this is also garbage um the plan with the magnets is to cook the bismi and then make it float we were showing there's some experiments out there so I'll I'll pull the magnet

(1:49:24) up hold on bring light to the topic basically that's paraphrasing but the tweets on there uh so you know so I had to edit it obviously because he's not going to slam dunk on him this is a neodmium magnet it's extremely powerful and it might be too heavy I I've been feeling it's heavy it's like actually heavy and I might have got one that's too big but the plan is to try to make this to float we'll see it may be too heavy we'll see I think it's just a a very nice way of

(1:49:53) saying uh no offense guys but you're wrong this doesn't make sense from what I know from what I study here are the actual list of theories that if it did fall under that this is what it would be considered not interdimensional beings that's kind of what I got from it maybe but to say no adult in my opinion but that's kind of a great segue too Tupa reporting for Skyfire news was able to talk to congressman about the kind of Angel interdimensional thing right so something that Eric they should be

(1:50:28) helping kind of thing and here's they should be helping but they don't right so that goes to show the dishonesty hey guys great great show I'm glad you guys are doing this this is really great um I have a question uh I found your statements uh about the potential for this to be Angelic or like the biblical description of what would be like a messenger from God or whatever um I'm curious like in the in the information you gathered from was there anything um that kind of was implied about that like the the interdimensional

(1:50:58) nature of the phenomenon I think gush has commented on before but I'm curious was there anything that like LED you down that road yeah as well the moment that I read his report prior to the public hearing this not a top secret report basically it's what he read in the hearing um and he and he used he mentioned the term extradimensional uh it it really intrigued me because I think that here I think that what he has found the position that he has found it fits my biblical world and I'm not saying this

(1:51:36) is what most that all Christians believe but I think that I think that we live this is my belief we live in a plane of existence that is just one plane of a much more deeper for existence and that uh that obviously outside of our our existence in the way that that he described as a holographic model and and I'll tell you why why like I think it's been validated through science why it's not just this is not just it's more than just a theory um I think that quantum entanglement points in the direction of this because because

(1:52:19) if you understand how that works you've got two particles who are entangled you send one Photon to the other end of the Galaxy and then you make a change to to the one the other one and it's instant and it instantaneously changes the attributes of the other without having anything sent in between to me it defies conventional SpaceTime understanding great job Tupa and it's important to know you led that question with like your information from grush right so we're hearing these Congress get these behind the door briefings and

(1:52:52) then they came out saying stuff like this and that was a great it's actually kind of funny that was an expansion right on the question that uh that UFO podcast or the statement K made on that UFO podcast you're able to get him to go more in depth with that theory and he was saying some pretty interesting things yeah was that your interview or was that that UFO podcast interview I've got one over there over here found out there was a AMA going on on you even put them like six in apart you can feel it's super what what are

(1:53:22) their I always forget what the name of their thing is called as yeah they were having on and that UFO podcast stuff went down Congress that they were interviewing about the same topic basically pretty interesting yep they didn't want me to use are Petty as hell for that and I love it that's what's up that's what's up I love it I mean and it was really interesting his answer too like it it was way better we got way better by the way after my little Twitter video at that UFO podcast those guys didn't even respond they're like

(1:53:55) ignoring me it's like not cool bro like what yeah I know right they they'll figure it out I don't know maybe you know what I mean maybe they don't want the smoke who knows who

knows but at least we were able to get our own video our own clip and get a little bit more in depth of an answer for that exact question which I think is one of the most intriguing Parts about this that debate between is this you know so-called spiritual or aetheric or you non-physical or extra-dimensional or are these alien creatures who evolved either

(1:54:25) on Earth and left or are tucked away in some crypto you know Shadow biome or they evolved another planet and we're so interesting to them they flew all the way over here to cut up a cows I I don't I don't really think there's a scenario in which um we find out that there's a superior uh race of being right uh that don't get turned into God right um as of right now like humans are pretty much God to the rest of the animals on the planet right so if uh if it gets revealed in the future

(1:54:57) that there is you know another species that are far Technical and uh Superior to us like it's religion is is going to happen automatically I would say what did um Russell BR say like he humans are a species who worships like that's just part of it's part of our uh DNA and then the idea of like what do you worship and the presence of an alien is one option but do you guys ever and this is a little off topic but I do get the feeling that they're kind of um propping up AI to possibly be part of that solution as

(1:55:36) well or occupy that space for a lot of people who were more technically minded I mean even Gary Nolan himself right when talking to Lex fredman and explaining about how why he believes this phenomenon has been around since you know the beginning of time or been around for a long long long time at the very least and produced religions and ideas right he said like you know we used to believe in God's the forest and we believed in religion and we don't believe in religion anymore now we believe in technology so they're showing

(1:56:01) up as technology um and uh yeah Gary Nolan is a Stanford scientist at the very least it shows that what they're being told on the other side of those closed doors is like crazy stuff right not crazy but like out there outside of the normal scope of their reality you know if it's true or I think it's clear that like they're being told some pretty pretty interesting things yeah I've learned to not uh prejudge people anyone have any thoughts on that before we kind of close up with the Kirk Patrick article that dropped

(1:56:35) today I would just like to talk about about you know ballet how a lot of this goes back to ballet where alternative hypothesis to flying saucers like um yeah I being something you in our Collective Consciousness or interd loud uh getting called a grifter is a write a passage it's basically like getting called a conspiracy theorists beings and they've said that they're from other planets there's there's a lot of material that suggests that yes there's stars and with planets and they have biospheres and there's light that

(1:57:11) exists on those biospheres and they're curious and they explore and I think it's not an either or it could be both you know interdimensional and extraterrestrial and it's hard to probably distinguish between the two because Advanced extraterrestrials would have amazing technology that would look like magic um so I I don't even think it really matters it's just

something other it's it's alien I think alien is a perfectly perfectly good uh term that kind of incorporates everything I think

(1:57:36) it includes interdimensional I don't like the I don't like the term because well never mind I I've given up on what I was about to say go ahead now that was just that was my my thoughts I just you know don't reinvent the wheel I don't think extraterrestrials should be thrown out I think it's probably the leading hypothesis in my opinion you think the leading that's interesting I think it's the uh if I think they're close right if I had to say in the race right they're neck and neck but but I do believe like

(1:58:09) the uh crypto or Shadow biosphere or other worldly kind of nature of the phenomenon kind of makes a lot more sense given the fact and information we know the scope of its influence goes beyond physical you know like Landing marks from its landing gear and uh scars from abductees it goes into Consciousness right it goes into something a little bit deeper and we can't really ignore that as much as we'd like to I'm a nuts and bolts guy too but we can't really separate these things and we're finding this more and more to

(1:58:39) be the case especially with people like Chris ble do not to digress into that case or anything but still something's going on um so like also I think it's statistically less likely that a being evolved on another planet and came here but if that was the case that has so much that that has a lot of implications and if the phenomenon isn't that then it kind of expands the idea of what it is to be a person or what it is you know what it is to be alive on earth right you know like we have these questions

(1:59:11) about our existence if we find out that you know it expands out into the cosmos or into this weird UFO phenomena like what is that if it's part of us or part of another like part of Earth for instance then it expands our idea about who we are ourselves versus like how interesting we are to other people slow down but I don't know I think it's a good debate uh go ahead Chris why is it whoa go ahead Keem I I was just gonna say why is it as a child it was so easy to understand the concept of guardian

(1:59:41) angel but as an adult it's so hard to to also understand that why no that's fact dude you know like that's what Eric burles seemed to be like listen like I you know I can't speak for all Christians or anything but from my understanding of these words and this definition this is what it is um and there's a lot of people he's not alone he's not alone and you know WEA who's a professor of religious studies um at the University of South Carolina I think careful you need to wrot a couple books about the American

(2:00:18) Cosmic Book is like a really interesting blending right within like scientific method of the phenomena and like historical records of people having these strange things happen and the Catholic church has like this really indepth uh Archive of all of these individuals all of these occurrences and she found that they were almost identical to Modern UFO experience or stories which is a strange strange fact but one people should explore you haven't read that book you definitely should go ahead Chris all right I just

(2:00:54) want to say one last thing uh because I really got to get off here and spend time with my wife uh because between this and Lou reviews episode I did uh I've been on this been like four or five hours going um so I know a lot of people in here doesn't it really doesn't matter if it's enthusiasm or if it's uh skeptical um but I'm going to pitch something and I think people uh this ties into Kirk Patrick's uh article so he mentions a tip and ultimately we know or most of us know that follow the

(2:01:29) subject knows that ATP was nicknamed for a that's melted bismo though well if all of this circulates back to that that's what I want to do then the real whistleblower we have one in the community we legitimately have that whistleblower exact who has been a part of allat program who was feed who you know boots on the ground at Skinwalker Ranch who worked at Area 51 who has the credentials that backs it plus the experience and not only that military veteran who potentially was experimented on unknowingly on the

(2:02:05) property while working at alsap he's right here in this community and he's been popping in and out for I don't know how long he he comes in space as he goes he has a legitimate case and he's been to DC twice uh potentially maybe going another time we'll see but Chris Bartel is the true whistleblower that nobody in here is I don't know if you ever heard of him or you just maybe don't take what he says seriously but he has all of the documents he has all of the evidence all of the pictures to his like phrase he is

(2:02:43) the true whistleblower he is the true whistleblower because let's think about it Patrick if k Patrick has has drawn a line back to alsap a tip like he did in that article if you want to get alsap on the stand who also receiv received \$22 million on a whim from Senator see why want it uh to investigate you know at first it was like Paranormal type of occurrences and then they tried a tip to try to access you know and make it a special Access program you know um so if you have that you have a guy who doesn't need a skiff he can tell you

(2:03:22) the things that he went through he's got a security clearance he is the vetted perfectly vetted source that has has experienced everything on that ranch in that program of alsap and he could stand right there in front of Congress sworn under oath tell you everything he experienced that the evidence to support that he was he was a unknowingly particip in a study on effects of that ranch on the human body and he could do it right there in front of everybody and there would not be any like Yellow Tape awesome Chris before because you're

(2:04:05) about to leave and I was really wanting your input on this Kirk Patrick article could you give us your thoughts on that real quick but yeah I'm All About Chris Bartel yeah so that's where I was getting to is so you know Kirk Patrick has tied it to oap and I don't know you know we I've dissected gush's resumee I think it's people need to do themselves a favor and go look at Kirk Patrick's resum it's online it's it's in more of a biography form but it also lists his Awards and decorations who one of them

(2:04:35) was through the nro and the national Recon I love grush states that he had all these students oh it is 500 Degrees yeah he is the he's the real deal and what the UFO Community just

did was push one of the best scientific Minds that could have helped eliminate the BS and hopefully actually get down to maybe there is something out there and they pushed him out bism is pretty weird what he what he talked about in that article um is Prett sketch 's a fireplace uh and you know with all the stuff that you talking about hard for me

(2:05:11) to recollect everything but his article was a slam dunk on grush and other whistleblowers uh and he talks about how he invited all of them to come and speak multiple times to him and they didn't do that now you could speculate and you're probably going to hear people say well it's a fly trap or you know there's a reason why they didn't go well they say the other way they say that grush actually reached out to arrow and Kirk Patrick and he was like ghosted basically never replied to so it's

(2:05:42) really weird that this is like a thingy K Patrick has also come back and said well no that's not true I've reached out multiple times so it's a matter of who are you really going to believe right I mean and we don't have the details we don't have the access to the email chains nothing like that so we don't really know but they thought it was the heaviest element wow that stands out to me and if you look at the background and The credibility and the history uh and accolades to is like as

(2:06:13) rare as versus what's posted publicly about grush and the fact that I called him out on the LIE and basically he did come out and formally say yeah I mean yeah so I I did lie about that that's because he made a statement and it came out I honestly think that Kirk Patrick was the real deal and this was his final blow right on the eve of the skiff meeting or right after the skiff meeting and this is him saying look I did everything I could my team was well prepared as it could be and and we're up and running the best that we could in

(2:06:50) the at time that we were given how crazy is uh this is the **truth** of the things and he even talked about unauthorized disclosure of of those special access programs and things that have **leaked** out that that happens that still be awesome they suggest is you know related to UAP and he went into that's not true so I mean there's a lot in there and it just I think what it boils down to is who are you going to believe are you going to believe grush in that camp are you going to be believe Kirk Patrick who quite

(2:07:22) honestly there's not a blemish on his record that you can find so it's just it's kind of left at that and the dude is a legitimate scientist his his background is unreal so that's where I'll leave it but Chris Bartel the true whistleblower thank you Chris than for sharing his story I think it's a good one we're going to you know dive into that for real and just to wrap out this K Patrick talk and close out uh some of the things he said was that it's like a small group of people all interconnected that are

(2:07:52) kind of pushing this narrative to Congress and whatnot and they're not being scientific he also kind of called out um Skinwalker Ranch and said uh that like a lot of money was wasted he he kind of harped in on the tax pair dollars being wasted angle oh um he he harped in on Robert Bigalow too who owned the ranch uh during the oap years or beginning of at least and

he basically kind of said that there was a a social media frenzy of secondhand and thirdhand retelling of the same unverifiable claims so he kind of did

(2:08:27) come out on all fronts against like this whole and he also said there's no evidence of aliens after his year investigation that there's absolutely no evidence welcome Grant you have any thoughts how are you doing R how are you my friend it's good to good to be with you thanks for giving me a chance to um yeah I like few things I just wanted to provide some of my comments on um k following the uh the the article that he his oped that he put out I me I think there was a quote in completely Bo laughable and his quote

(2:08:57) was verbatim I can assure you as its former director that Aro is unwaveringly committed to harnessing Science and Technology to bring unprecedented Clarity to these fascinating important and stubborn Mysteries and to do so with maximum transparency well you know forgive my skepticism but Arrow complete lack of any communication strategy and Community engagement to date uh does not really instill a whole lot of confidence another million UFO researchers public trust and the case and point of that is if you look

(2:09:33) atag Aster feed it only has two posts both dating back to you July of 2022 I'm not going to take swipes out them here so you know if AR is would be totally justified in doing so your 37,000 plus followers with only two post mosts since mid 2022 imagine what audience it could attract and the the public trust that it could help rebuild uh if it had some frequent and informative engagement with the general public on on social so I think you know despite what's been said thus far I think Dr katrick has failed

(2:10:08) miserably uh under you know Aro has failed miserably under his leadership as well as that of the former control of the the purse Ronald to build public trust it hasn't lived up to its expectation that we have and its aspiration of I think catrick works for being transparent and and and that was 're gon late hopefully this this space will close swinging at grush then we'll go over a couple quick things and then we'll close out ourselves but we got a few things to go over thank you grant it's good to get the like believer side

(2:10:45) and uh he did say I think at one of the hearings that the most things was anomalous which is pretty weird um art and then Ashton well I'm kind of torn with this catrick um article because a lot of what he says is true you know it's verifiably true and and I do have a lot of issues with the whole you know ttsa crew and bit like the Skinwalker Ranch crew um but he I don't believe him I think he's a he's a disinformation agent he's he's like running a Project Blue Book 2.

(2:11:19) o i i 100% think that he's a a Believer I think he he's a big giant UFO nerd uh I think he's probably been studying UFOs probably for decades um so I think he's intentionally deceptive and I think uh he's just uh taking some shots at some easy targets uh over uh on what do you think his motivation Dr motivation is for that that Cas he's he's fighting back because he got like attacks viciously by this group by the the hate Group by the UFO hate group like literally the same UFO hate group we

(2:11:53) talk about he at NASA's first ever hearing on UFOs SE scen from the UFO community and he also brought it up like a month and a half ago so he talked what was that event he brought up Center CIA he brought that up and he also defended his drone I don't want them to under to go uh us the had to end attacks on the family online you know me does that answer your question I don't understand like what is the point of attacking this guy like what's the objective what I because he didn't give he didn't give them the

(2:12:31) answers they wanted they thought they thought when Kirk Patrick when Arrow was was put in office they thought Patrick was gonna be the big reveal we were gonna have disclosure I remember because that's when I first came on and I remember saying I don't expect from this first hearing we're only like three people showed up y'all remember that uh that hearing I was like don't expect it very much from this and he from that hearing they even have Patrick I don't really he got attacked constantly

(2:13:01) because this guy didn't bring disclosure he actually stated on record that to to what he has found right now from what he's investigated there is no there's no proof of anything extraterrestrial and that started a whirlwind of all kinds of stuff that came out and attacking him and all of a sudden people were criticizing him about his job and how to they're tell basically telling a guy how to do his job it was ridiculous that's where it all started and it's all because he said as of right now there's

(2:13:34) nothing that points to extraterrestrial real quick I have that clip Chris just we could hear him talk about the same stuff we talk about um a senior technical Advisory Group that must you must have stood up that is helping advise so there're just questions about that group what what is it made up CNN plus comb that academic and scientific Community you just referenced so it's a strategic technical Advisory Group they don't like to be called senior and they actually do work they're the review board yeah I mean resigned is

(2:14:10) just a fancy word for fired the anal they do multiple layers of they come talk to you and they say it's time for you to resign right we don't how you do it with Saving Face they call it in Asia Saving Face is a huge thing in the west we don't care as much very specific people because Asia though it's all about saving face that the the harassment and yeah if it's US tech deped murum Crow gets right who cares if it's aliens that's not what we're trying to get at where's the

(2:14:37) secret technology right um I'm not going to subject my team to that I have some of the best professionals on the face of the planet working some of this um but I'm not going to to subject them or their families to that kind of harassment that is making our job a lot harder I've had people tried to dig up uh information on my life my child where I live uh make threats this is why the guy told me not to reveal who he was that's not called for and what is the claim I talk I'm probably the only

(2:15:11) person in space because you haven't said what they want you to say about the sources of these anomalous stings that's a that's a great way of saying it but I I would put it a different

way right I told everybody as when we stood up I would follow the data wherever it L that means you have to follow the data and the evidence where it leads if you don't like where it leads don't call me a liar and then come after everything's not a scop guys so I also just lie to Congress King for harass prison for that

(2:15:42) and the Hayden Center liked that post so and the Hayden Center is like a think tank for I want to say his name is Michael hayen who was a former head of the CIA so a lot of these guys they make little like weird thing tins after they leave and they do Consulting and they actually like that pose um so yeah and I got that I got that from his article too where he kind of start stayed like he was kind of like wide-eyed and kind of excited but by the time the year was done he was just kind of like bitter and like screw all of this and Ashton

(2:16:07) actually oh I was say Ashton's the only one in this room who actually submitted something to Arrow I believe right hell yeah yeah that's what I was going to comment on I think I might be the only person who's talked to Arrow as well so I talked to I don't think I've mentioned this before but it a lieutenant colonel they asked me not to say their name probably because of what we just heard on that uh little clip there right where these people are getting docks and harassed and what have you in general um

(2:16:30) another thing that I'll say in my discussion with them is that they pretty much repeated what we had heard there from KT Patrick kir Patrick which they had not seen anything that would lead to any type of I I don't know the way they phrase it if they said it was anomalous or aliens or whatever but I think the wording does matter there um but they also told me as well this is something I haven't mentioned before is that we had a just conversation in general we talked for like an hour and a half and I asked

(2:16:55) about the February shootdowns and they said that oh those were definitely balloons and I that made me very skeptical of their analysis in general because I'm really skeptical it made the first one was a balloon the Chinese one for sure the other ones I don't know what was going on with that it was really sketchy the way they hid that um what I would say in general for people is that you either believe that we are at the Pinnacle of human civilization technology right now or you believe that there's more yet to

(2:17:20) be discovered and if there's more yet to be discovered then what I would ask you is or what I would propose to you is that we split the atom and dropped the nuke in the 40s that was 80 years ago a whole lifetime have we been doing nothing since then is that still the Pinnacle of technology today or is it possible that the military-- industrial complex does have advanced technology that we're not aware of whether or not that comes from UFOs or that we've discovered ourselves doesn't really matter matter at the end of the day

(2:17:49) right so to me I think that the big question is is there actually anomalous technology that is unknown to the public that's being kept hidden I think that that's the way we should frame it to AO in order to get the answers we want if we say hey we need to know if there's aliens or not they're going to just deny it right and even if there were aliens they're not going to

be they're not going to get shown that information so then they're of course they'll be able to say stuff like yes we don't have any

(2:18:14) evidence of it right so we've got to be very careful about the questions we asked to get the responses that we want whether or not you think kac's a liar or not I'll just tell you my opinion is I think that he's got what I like to call CNN brain which is that he just believes that whatever the TV has said that's all the science that we can know is possible so it's probably really easy to lie to somebody like that where you just don't show them the information that would prove it to be wrong the LA very last

(2:18:37) thing I would say is this is that I don't really care who believes me or not in terms of this but um you know from what I've been told by Mo people I trust the most in this world that this technology is real in terms of advanced technology that could even allow a UFO to float to go from one part in the solar system to another in a very high rate of speed and that the people in the CIA even the people that are in the know that will go on TV will just straight up lie whether I don't know what their

(2:19:06) motivations are lying we could speculate but they will just straight up lie and what that means is that they're going to lie to people like Sean kpatrick the AO Etc because they have their own motivation and their own kind of intentions I would just like to say that I don't think um K Kurt Patrick um is honest at all I think uh with some of the people that have gone to the r office they've said that um they're very dismissive basically saying that we already know everything that you're trying to tell us um and I think

(2:19:45) everyone in the r office is probably uo believer and they're just managing the narrative I think that's their main job uh I think they've probably been spread in at least kpatrick has probably been read in the secret UFO projects to a degree and he's part of the cover up that's just my opinion though yeah we do have what Robert salace and um Bob Jacobs some of these older witnesses that some people have problems with their stories sure right but uh around the nuclear weapon stuff and they both

(2:20:15) said they went in and they both kind of had bad feelings about the whole saying that they weren't being taken seriously which I kind of get cuz K Patrick's like this stuff so old what am I supposed to do with this it's a story of like from 60 years ago now but I can see the Divide here how we dropped the mic I hope the next person is had a couple martinis job I personally think was good for the job it's I do I do that there's something non here compartmentalized right harping in on the interdimensional thing who knows and

(2:20:42) be like oh I technically said the **truth** then but I don't know Grant what you thinking and if um Ashton I was just going to ask you did Arrow issue you with a memorandum for record following your submission they said that they were making uh a record for and they were going to email me I haven't got a response so I hope I wasn't getting trolled by them but they told me a couple other things that kind of verified the story um they said that they were historian they said that um the person who I talked to was actually

(2:21:12) the person that set up the website interestingly enough uh and they said the government takes a long time and there may not have even been a recording mechanism for it based on what I saw from there but I'm supposed to get an email where I can add stuff to it for that memorandum oh one other thing that they wanted to help uh uh kind of clear the air on is that you don't have to sign an NDA when you go to Arrow they told me that as well that there's not that there's this idea out there that you have to sign an NDA when you give

(2:21:38) something to them but apparently that's not true and they said we could talk I could talk about any of my discussion with them as long as I just didn't mention the um lieutenant colonel's name because of I think what we were talking about any other questions so would you be in a position would you be in a position to post your MFR to to ex redacting obviously your personal information once you receive that it's executed yeah maybe if they say it's okay I I posted the email that I got back right after there was a

(2:22:04) confirmation I thought it was pretty weird they called me after hours but apparently they worked late cool that's interesting I was wondering like how it actually happened so they called you you submit something online they called you like at night and tell you it was like 7:00 my time and uh I'm in Central Time Zone so it was like or 6:30 or something like that my time so 7:30 their time they how do you confirm that that's real like you're talking to the right people it's hard right just

(2:22:30) from the context the fact that they emailed me back on my real email account that I used to sign up the fact that they knew that I was one of the first people to submit a requ record request um the fact that the person mentioned that they were the one who set up the website they gave me their name and their Rank and I asked twice cuz I was like how do how the hell do I confirm this right like especially after getting scammed I like how do I really confirm this but and I don't know just the conversation was definitely the real

(2:22:56) person right it was a real lieutenant colonel was their rank they gave me their title was like some historian thing to collect your record but yeah I mean and they knew a lot of information about arrow in general and the the look the funniest part too they were like this is the part where I say that kind of verified it for me is when I said that they said that okay you can post any or you can mention any of this publicly and I was going to ask and they had mentioned ahead of time and they also gave me like a legal Spiel

(2:23:22) as well about it and they said well I told them that like I have a lot of followers now on Twitter from this from the case that I've disclosing they're like well you might not want to post this because it might hurt your brand Rel because people don't think highly of Arrow and I'm like okay well that pretty much confirms they're legit and I just laughed like dude I don't care about my brand but still waiting on a response then huh so what grade would you give Arrow as someone who's gone through some

(2:23:47) of it if that was legit then I I would give them good grades in general like a seven or an eight because I think they're honest people that's the feel that I got from the person I talked

to but like I mentioned I I didn't I feel like they were necessarily being given the full story from the information that they get access to but we'll see I mean because what I told them was that I have verifiable information stuff that you can go check like if they can pull up stuff that's classified or top secret or

(2:24:14) whatever R things they are I said go figure out out if this is what an mqc one great eagle with a aerial surveillance camera under the wing looks like right if that's what that video looks like and they have that rainbow capability like that's a huge piece of evidence and like if this is the sentient program they said oh we might be able to go to the nro and figure that out and confirm that if this is the sentient program cbers that's what that video looks like right now I don't know how they would confirm it back to me but

(2:24:38) then I also said like go talk to Edward C Lyn and figure out if this is what he was convicted of right because they do have security clearances so apparently they might have access to that I even said go find General **Dunford** and I was kind of joking like good luck trying to get him if he's like board of directors of lockie Martin but they were like yeah we might be able to talk to him you know it's possible so um yeah just in general to answer keemstar's question there's the conversation in general just I don't

(2:25:05) think it was an hour and a half and then we went to a lot of in-depth stuff like that it'd be really hard for somebody to be faking all that in general but yeah I never know interesting interesting stuff um um I would say even if you don't have a lot of trust in the um you know in in a program like Arrow why are people not using it my volume's backed out you know like find out find out what the result is you know it's just it seems like a no-brainer exactly keemstar and that's why it's

(2:25:36) like people have criticized me a lot for like going to the FBI going to Arrow people were saying oh they're not going to do anything it's like but what what else I mean that's what it's there for we at least have to go through it and see it play out right and then to keemstar's point like keemstar likes content well here's content right like we'll find out if it turns out it's [REDACTED] then we can criticize them for not doing their jobs right and if it turns out that they do well then okay

(2:25:58) maybe they can be redeemed whatever I don't care yeah it's like what you told uh what Timothy Abino I think is the name is like people don't like to get dirty right they don't like to get down and like submit I mean John Green's one he does the foyes but a lot of Grant too I think started doing foyes good for you grant but a lot of people don't even do that right they just like to uh what is it armchair criticize and whatnot 100% I've done like eight or nine Foos now it's really easy guys there's like

(2:26:24) websites where you can just submit them some of the agencies make you like mail or not mail something but like print something out scan it which kind of sucks but and honestly all of mine have basically been rejected so you know it's hard to get real information but you know I'm learning there's strategies to it too so definitely the thing to take away is like use all the

government resources that are out there even if you don't trust them you can still glean information based on the responses or

(2:26:47) non-responses you get back very cool well that was kind of it for the week coming up there's the grop Ed which it almost kind of seems like all this stuff I think it was supposed to come out this week but maybe he pushed it back because he was kind of taking a lot of heat this week and then what else is there there's something else coming up oh uh dark journalist which we touched on a little bit but I think tonight he's going over more of his interactions with grush and this whole alleged uh melon kind of being the

(2:27:13) controller Handler of who he could talk to people were saying the reverse of it is well yeah why would we not go to them yeah people like to talk to and not talk to other people but it people will kind of only go on podcast and shows that don't really ask super hard questions hey hey red before you wrap up did you see um Travis Taylor and cook Patrick go back and forth at it on on LinkedIn oh I think I actually did see a little bit of that um we're working on a on an image for that uh but yeah what are your thoughts on that could you

(2:27:43) maybe see if they've respond right uh I haven't seen um I haven't seen links to the actual uh LinkedIn comments but one of the things that um Travis Taylor um made a claim on is that you know there's no um you know doing research there's no funding for it he Travis Taylor Made a claim that it's really only Enigma labs and this IQ uh organization have received IC DOD funding but what's interesting is um there was a tweet earlier today where so Brian Bender in January of 2023 he reported that Enigma afraid yeah

(2:28:30) I'm afraid to accident reveal this guy's name and um he he responded to a tweet that I was it it was 11 days ago putting out there today um Dan Dan Warren kind of weird he has responded and the dod had a partnership and uh so uh Alejandra roas chimed in and for those that don't know um Al Alejandra roas is the head of research and content at Enigma labs and he confirmed in response to Brian Brian bendett said I don't think they have gotten they would a fake this I don't think they've gotten any funding to

(2:29:01) speak of um email address here that from responded nothing has changed since your prior reporting no Government funding so Al Alejandra roas is refuting what Travis Travis Taylor claiming that enigma's got DOD funding this was right after I talked interesting Tupa was almost hired at Enigma he almost got that DOD or not DOD money that uh sends chills down my spine uh the uh there it is I mean I don't know where their money from a military mailx that those like debates right between roas right the fact of where the money's

(2:29:37) coming from that could be like a technicality they could argue that always I'm like no the money landed here first and then it like went to you know this other thing so it wasn't directly from the government um I because Enigma Labs right what they are and what a lot of other these companies are they're they are apps and companies that want to set up apps that uh Network people for UFO sighting is how it's is how it's portrayed um but there implications behind that when you incorporate the

(2:30:08) data and the the data from the very particular individuals who are somewhat involved even tertiarily like to Enigma labs what they think is that people who see the phenomenon might be having something different happen in their minds like in their head in their brain they've even studied this people like Gary Nolan right so like the idea of basically having a bunch of experiencers or a Bas let's say a population of 100,00 people and uh certain people are constantly popping up like oh I see something I see something

(2:30:42) I see something I honestly think as a researcher the grainy cell phone video that's going to come from that is less important than finding out who is seeing the phenomenon and when they're seeing the phenomenon because that's going to be more valuable information in terms of science because I mean I mean cell phones are getting better and cameras getting better argue that all day but at the end of the day what you're seeing is these give me a yet to see um you know a series or a slew of very clear uh like

(2:31:17) cell phone video you know we look at you see the full moon you put you point your phone at it and all of a sudden looks like this tiny little speck on your phone you're like okay maybe it's not as epic as I thought it right so how valuable is that video um versus how valuable is it to know who seeing the phenomenon that's that's one of my uh not concerns but just seems like a a fact that they'll be able to collect that data as well and I'm waiting for them to talk about that can can I raise a question since I cover

(2:31:50) I'm a journalist art LaVine yeah welcome art art covered a lot of this stuff he's covered uh Bigalow oap kind of the money the ttsa money he's also one of the first uh mainstream Publications to talk about the UFO hate group harassment Alando Colt how's it going art good and I'm glad Ashton if I'm getting the name is submitting his claims to the um to the arrow to he's to be congratulated for that and I hope hope they give his claim serious attention although uh at I'm not going to debate the issue

(2:32:24) with as so my my question is from what I can tell uh since the New York Times piece has emerged not a single uh prominent influencer or claimant on social media or elsewhere that includes elisondo melon um you know gush anybody you can think of who shaped debate and got a lot of press not one of them has faced skeptical repli tough-minded but openminded questioning from any legitimate mainstream journalist or member of Congress is can and and I do not count softball questions from Jeremy Corbell or Ross card as legitimate tough-minded

(2:33:16) IAL is there any example that I I'm literally this is both a rhetorical point but also a literal question because if you notice periodically Stephen **Green Street** will you know have a film of him being hung up on by you know David grush or you know he did get a chance to speak to Brandon fugle and then was kind of frozen so in that case he did get to ask questions and **Mick** West is periodically interviewed very politely some some people like Dietrich and so on on his show but in general I haven't seen the sort of questions and

(2:33:56) issues that I've uh uh gathered Jason Kito has gathered Patrick is now gone publicly stepen **Green Street** none of those questions get to be directly asked or answered and in my

own articles they basically generally evaded the question they not respond back to the email no with exception of the corruption issue several just gave flat out denials in terms of the SEC and what they were looking at so I'm sorry to be so long-winded are there examples were these highly profiled well po have actually submitted

(2:34:30) themselves to normal mainstream tough-minded skeptical questioning by mainstream journalists or legislators no and not even other like popular **debunkers** and that's what we need you know we need you know like conversations like I said earlier are you weren't here uh between you know **Green Street** and Corbell like imagine those two battling out uh UFO jellyfish on a show together you know don't right okay and then the other thing is I keep posting and I use as my little ironic hashtag I stand with Carl

(2:35:10) SE Sagan and I post his uh baloney **debunking** kit periodically as a reply and I posted it here it's very it's like eight tools that skeptical thinking can be used to apply to how present evidence like you don't necessarily accept Authority um so at this point you guys are you guys are what what's very interesting about a lot of your points of view is your from what I can tell from the public profiles of some of the people in this group you are open to the very real possibility and or our experiencers of UFO and alien issues but

(2:35:55) you're also want to see some standards of evidence and are very critical of the cult like uh hate Mania Etc that infects the UFO Community is that a fair assessment of where you guys are yes for me yes okay well that's good to know I mean I think I try to be open I try to be open-minded and one of the just to let you know one of the counter claims is you know to the **mick** west of this world and so on is go well one prove that I'm wrong and that you know prove that I don't have prove that it doesn't

(2:36:34) exist but the other point of view is even if they're dismissive now I absolutely believe that if Michael Shermer **Mick** West and you know Stephen cambian but I'm talking people with great science credentials like **Mick** in terms of research **Mick** isn't the scientist but if any of these topflight Skeptics actually there was hard physical evidence and you know direct live beings and things that would be investigated by multiple teams of academic researchers independent with no Financial ties so that means Gary

(2:37:17) no no Shady academics working with real academics affiliated with major institutions independent teams Gathering and studying this earthshaking material has no credential putting their Mater their findings out in peer reviewed I do think that you know **Mick** West and Michael Shermer would say okay you got me the evidence is here for years we're saying where's the evidence now it's here I'm changing my mind it's a little too loud I I just have to be closer to the m that is my view about how these kind of

(2:37:53) rigorous skeptic response to good solid evidence that meet normal scientific standards what's your take on that well I'll jump in because I respectfully disagree I don't think and so this is what I would ask is that what is that standard if we if President Biden were to come out and say that aliens are real if he were to roll alen out you know that's still not going to meet that

level of evidence that level of standard my personal opinion is that we have to learn the science ourselves that's the only way in

(2:38:27) my opinion is that we have to prove the science ourselves if we are going to say that there are uaps that can float and that they can go distances at the speed of light then we need able to prove how that science Works what I would say to the people that are interested in doing that is learn electrical engineering okay well see but I I you know okay that's where I think if you read books like Thomas cun structure of Scientific Revolution where he coined the phrase paradigm shift so I my feeling it let's

(2:39:02) say your first example Biden says are AI change mind now I'm gonna bring out a corpse or a living alien being we can't understand it you don't think that he would submit those aliens to you know both internal government scientist agencies and other academics to be invited to do it and see that that's I do think if you as a as a claimant for certain phenomena would read the the you know the baloney detection kit and just try to keep those standards in mind be very helpful and also from your point of

(2:39:44) view um you know um I'm having is this Ashton talking or who's talking this is Ashton yeah yeah Aston so so here's my question is in in your case just so I would know and the people listening are you you seem to have you know a while ago admitted okay it's probably a hoax or this is the guy who hoaxed it but now do you you're back to saying that it's still more likely real than not your origal claims talking you talking about my case the MH 371 yeah your case yeah yeah yeah no nobody has come come

(2:40:23) forward to collect the \$150,000 Bounty nobody has produced any files related to this nobody has even tried to claim the \$150,000 so well gentlemen gentlemen gentlemen excuse me excuse me if I could for I gotta go I just want to this ashon thank you Ash okay uh I gotta go this is going to end relatively soon so I just want to thank everyone for coming uh we're probably going to do this like every Friday we're going to do go through the news of what happened in the last week go through every story um you

(2:40:55) know have prominent people on stage to give their opinions have **debunkers** have Believers have everyone you know so we can have a a real discussion about this that's how it should be done that's how everything else that's done that that's taken serious is that there's like debate around it so just want to thank everyone if you're not following Sky fire news make sure you do I do see uh Darren Reed down in the listeners what's up Darren uh got a w on that um UFO podcast yesterday got milk uh dude today that's

(2:41:30) two W's in Dazzle woke guy please get a w you can't take L's every day I'm gonna try to shoot for a week straight on y'all but uh all right thanks guys sweet heck yeah Keem great time that's kind of basically oh I don't know maybe Ashton wants to respond to where he is at currently and then we're pretty much wrapped up or came a little late maybe next time we get here sooner but um yeah yeah no I I know that a lot of people honestly I just I don't care what people think about the videos

(2:42:05) anymore like I'm I'm actually like I just mentioned uh learning the science myself and learning electrical engineering I think that the people that I respect the most are the ones that put the work in so if I could uh just kind of respond in terms of Devil's Advocate I would say that people like **Mick** West don't have any credentials he literally has no credentials whatsoever he's not a scientist he has no scientific background whatsoever he's not interested in learning the science I think that people on either side skeptic

(2:42:33) or the side of the Believers That's the Way Forward right it shouldn't be a matter of I'm going to believe this person or that person right I think it should be a matter of coming to your own investigation your own conclusion for anyone who is interested in mh3 70 case you can look at my profile pinned to the top of my Pro profile 14 pages of evidence that are categorized in terms of the video evidence the evidence for the fire scenario it's not just about the woo and the science it's also about

(2:42:58) practicality of what might have happened so you can take a look all right well I think we'll wrap up there guys because we've been kind of going for quite a minute here closing thoughts but yeah it was fun for space a lot of good news covered I feel like people listening in will be caught up on the past week and a half or so hey red uh and and T I just want to chime in and say Hey you know congrats to you guys and keemstar for for launching Skyfire I mean I think you know it's so easy to get lost in the

(2:43:26) noise on on just just over the not trying to convince people who don't want to be convinced I just don't care yeah kudos to you guys for for the launch and and looking forward to following your curated content and these sort of uh engaging spaces going forward heck yeah thank you grant and and congrats on LA Channel last year too you been streaming it's good to have like good people it means a lot it means a lot and guys just so you guys know for the listeners uh tonight uh for this for this space we

(2:43:57) selected we hand selected the panel uh we wanted to keep the conversation flowing we wanted to get through the news and we wanted to get these guys' opinion because you know a lot of these guys have been in the field for a long time they're contributors people like I'm brand new and then they're critical thinkers too right new thinkers critical thinkers Believers Skeptics we need everybody in the mix um like kings that you know we sharpen uh our focus on the topic wherever that leads us and uh

(2:44:22) that's what we're covering here if you guys want to follow more just make sure you're following Skyfire news we're putting out media content um all regarding what's happening right now uh that was a we debrief we're going to try to do that maybe maybe every Friday you know what I mean this really really good I don't care they uh hopefully we'll see you guys the next to all the speakers all the listeners uh until next time guys follow Sky fire news thanks guys okay CH Ching CH Ching okay guys uh let's see what are we

(2:44:56) going to go through real quick um okay three quick things so there was an airplane situation they're saying that this airplane may have had a hole in it airplane engine hole now

why did I not report this okay hole found in Boeing aircraft after emergency Landing well that's a video can we get a story can we get a story here we go now why did I not report this because it's a softball size hole so if you guys know about physics then you know a softball size hole is about this big that's really really small this is not a

(2:45:36) UAP crashing through the the engine unless we think of okay the wave function collapses down still pretty unlikely also the other thing I want to mention is that if something like this this size here were to crash through the wing it probably would leave or through the engine it probably would leave a softball size hole so I don't know what it is but yeah now to that point yes we now know what a flaming aircraft would look like now keep in mind this is very low altitude very low altitude it was still taking off right so this plane

(2:46:05) here is still taking off why is this in a different language my god do we have to sit through this no no just no no no no no no no um I also want to keep in mind a couple things people have been trying to say that um people try to say oh well this doesn't this rule it out this doesn't it doesn't really do much of either but it does show us what a fire of an engine looks like which is pretty clear you're seeing the fire of an engine here and you're seeing explosions from this engine or something shooting out of it

(2:46:39) now um our fire is inside the cargo bay which which is lined to prevent fire from escaping so very different situation but it does give us some idea of perspective you know this is also probably only a few thousand feet this was right after takeoff so the glowing orange is going to be because the hon fire extinguishing gas is seeping out through the plane probably due to being depressurized or potentially damaged from this explosion and fire that might have depressurized the plane okay this is actually really lowquality

(2:47:17) version of the video as well so it's not going to be like this one I somebody tried to argue with me today too that somehow an engine fire is less severe than a cargo bay fire it's the most ridiculous statement I've ever heard I don't know why people make up stuff like this literally your engines on fire is like the worst possible thing that can happen it's like how you stay a loft right just because you might be able to Glide down doesn't make it safer than a fire in the cargo bay cargo

(2:47:47) bays are actually built to contain the fires engine going down is one of your vital pieces of equipment to keep the plane afloat so um so that's why I didn't really report on the softball thing I just didn't think it was super relevant although it probably would have got some views if there's more of an update on terms of what caused it then I may do an update on that okay um there's this weird [Reddit](#) post here as well from forchan okay this is pretty bizarre I'm going to read it open letter to the

(2:48:14) Curious your government conceals vast amounts of information from you the public while simultaneously actively monitoring every aspect of your lives as a Defector from the CIA I am risking everything as a human everything a human being values by making this open report to freeth thinkers of the world a small price to pay for easing my conscience I'm writing to you

from a leaky store room in Diego Garcia three short blocks from here in a large Warehouse stripped of its paint and panels and hollowed out of its original upholstery mechanic uh

(2:48:44) mechanics is Flight MH370 the so-called missing flight from Malaysian Airlines what I'm about to disclose involves the creators of the Georgia Guidestones military experiments technology that could create the world kept in the dark or change the world kept in the dark and perhaps the most important simple message of of Hope or fear one of the greater riddles of Life answered straight up no chaser we are not alone in the universe wow okay why why is this pretty credible well the date says November 13th 2014 so this is 6 months after the

(2:49:21) plane goes missing people still really have no idea what's going on people had proposed the Diego Garcia scenario the Philip wood picture had showed up a week after the plane went missing so that stuff had already been out there the thing why it's compelling is down here the Georgia guide stones throws me off I I forget if there what the mystery is around the Georgia guid stones but military experiments sure no no problem right technology that could change the world that's kept in the dark absolutely and perhaps most importantly

(2:49:53) the simple message of Hope or fear we are not alone in the universe I think that what they're saying there is we've got technology that we reverse engineered and we figured it out a fire in the hall is not the same as a fire in the cargo bay Richard I don't need to research it I already have I already embarrassed one person today on it just Google Dr edel MH370 fire cargo bay you can listen you can read it for yourself I definitely don't want my plane to have an engine on fire for three hours I don't think it's going to

(2:50:30) lead to any good scenarios I'd much rather have it be a contained cargo bay that's built to withstand temperatures of up to 1900 degrees fhe that's just me though okay um the GU Stones were a doomsday message the dude that made it was racist H okay well that's interesting so this is an interesting one we may post this may post this in the morning does seem like a bit of a LARP The Leaky store room in Diego Garcia is the weirdest part why would you write this from The Leaky storeo in Diego Garcia wouldn't you

(2:51:16) just write this from your home when you got back what I would urge everybody in the chat is to not succumb to your preconceived notions of what you've been told is true or not true about anything investigate it for yourself I think that the biggest criticism I would have of somebody like Lou reviews from the space we just had is that he succumbs to his own narratives that he thinks are true but doesn't hold his own beliefs to the same level of scrutinies he does that things that are not he says oh well you know uh that Bob Lazar is a

(2:51:58) terrible person like what come on man that's just judgments that's not any factual evidence like what are the actual facts versus the opinions right what are the actual facts the same way as we say oh somebody was a racist or eugenicist or whatever like what are the actual facts what are the things they strictly believe right that would be my what I think we should interpret 1980 oh it's in it's in Arabic or is it in multiple languages yeah yeah I mean somebody destroyed this because they were nut jobs right and they were

(2:52:50) believing CNN brain related stuff these are pretty cool huh Sanskrit huh oh so yeah Sanskrit hieroglyphics classic Greek and Babylonian that's neat I don't think we should read too much in the guide stones though okay but that's that's a fun thing have a good night Amanda I got to go to sleep too in here a minute what time is it oh it's super late oh boy it's been uh it's been a long long stream yeah calling Lazar a psychopath really and like whatever liar all the trying to all this horrible stuff or whatever is

(2:53:54) bizarre dude yeah people do not lose your engines every day Richard Jesus man it's the CNN brain talking Richard again Richard you're doing the literal thing I'm telling you not to do man work on facts instead of opinions facts man find the facts work with facts right so many people out there just base everything they believe off of opinions you're not basing your things on facts tell us what the facts are right when you figure out the facts then you'll get to the your answers and you'll avoid a uh opinion based

(2:54:43) research okay okay last thing uh luon memes okay we're going to start we got new luon memes here as well and again I think that people need to hold themselves to their own standards again Richard I don't care what you are what are the facts man no one cares about your pedigree what are the facts address the facts come up with the facts opinions don't matter I have opinions from people who are phds and experts at fires burning right have you ever had a lithium ion battery fire burn in your cargo bay no

(2:55:17) you haven't you probably haven't had an engine fire either so what your opinion is just doesn't matter man like that's the problem right so I can search MH370 Dr edel fire scenario right cargo fire literal expert literal PhD expert at fires okay okay expert on the science manufacturing of lithium ion batteries reviews the whole thing you want to read it have a good one man have a good one I don't I don't need your your things here you can read it you find the evidence you find the facts

(2:56:01) man you find the facts my man you're the one who wants to be convinced I don't want people to try to convince me I want people to present the facts and I want them to do so in a non-biased manner that's what we're trying to break down so this is the luon right here right we got the luon conspiracy the the lanon followers right obviously a play on kinon because it's the same type of people right that follow it they follow their leader right they follow whatever their leader believes in them for Lando I have nothing against

(2:56:39) him he's the one that blocked me man he's the one that's following racists and and uh homophobic people like uh king milk fart right right I don't know why he's following terrible people like king milk fart but that's the first question anyone should ask Lu oando why are you following a racist and a homophobic loser and terrible toxic person who's been banned off of Twitter multiple times luon folks don't be a luon guys okay anyway guys I'm going to sleep you guys have a good one and uh

(2:57:22) yeah thank you guys very much for following tonight appreciate it did I dox him no his name is Joseph Marinello every it's public information everybody's known that it's been all out

there on Twitter he's attacked so many people so yeah king milk farts uh Joseph Marinello have a good one

(01:00) right malan 370 Contact 120m 9 night goodan 37 breaking news tonight A Malaysia Airlines flight with 239 people on board including four Americans has gone [Music] missing [Music] I remembered the line from the Hindu scripture the Bhagavad Gita Vishnu is trying to persuade the prince that he should do his duty and to

(02:05) impress him takes on his multiarmed form and says now I am become death the destroyer of worlds what up what up with everybody how's it going nice to see everyone out there we got a lot of people already in the chat nice to see you guys so I found out something interesting uh right away which was that some of those YouTube channels that say it's copyright free music they're lying they're lying just so that they'll use you use their music so they can uh copyright and uh steal monetization from

(02:48) you pretty funny I didn't realize that until just now I was wondering why they were getting some of my streams were getting marked they're not really copyright free that's pretty funny the **scams** are pretty elaborate guys um what up everybody how's it going tonight uh I've been thinking about what we would go over tonight yeah I was I was kind of taking a break posting some other uh unrelated stuff this this afternoon sitting by the fire having a vodka cranberry um we got a lot of stuff though we could go over and

(03:26) do so I guess let's get into it hope everyone's doing well um um I'm thinking about switching to sides guys maybe I'll join the **debunkers** do you think **Mick** West has room in his ranks for one more feel like they need some help I like to be on the underdog side plus reality is I just can't stand most of these people in the UFO Community you guys are fine but man there is just a lot of terrible people out there they're just o guys pretty bad uh so let's see what do we have going on today let's

(04:20) see um we got our all evidence out there guys so you can take a look at the all evidence you want to share the evidence with the uh CNN and **Reddit** brains that are out there you've got access here it is thinking about adding another post to it I may add the uh the real story of MH370 to this so it's a nice thread yeah there's like a group of Gatekeepers as well you'll notice they all retweet one another and they've pretty much all got me blocked so you know they probably have like a Discord

(05:02) and little like uh chat group as well where they all like you know do the same thing that red brain happens where they get their little consensus opinions this is probably they're probably the number one thing that's holding disclosure back right now The Gatekeepers and their little clicks and their CNN brains like they're actually the number one thing holding uh disclosure back more than anything probably even more than lockie Martin drinking an aviate I don't even know what that is um and the reality is that like cuz

(05:35) they've they don't they're not really trying to get disclosure right they're trying to like not make sure disclosure doesn't happen and they're also idiots who know nothing about the science right so there's like two major aspects that are doing and none of them are trying to understand the science they're just waiting to be told that it's okay for to believe in whatever right um so I don't know I think that that's maybe that's where our our Gap is right where we are bringing the science to the

(06:07) world in general um I don't think Flynn following me means much I think I don't know I don't know I don't know how he found out I maybe saw one of my posts something like that not sure not sure also since my stuff's been happening so late it's hard to get decent amounts of engagement on my posts cuz most people are like asleep at this late time which is fine I don't really do this for engagement but I do want to get the message out there as many people as possible so I'm not sure maybe I'll have

(06:39) to start drafting more post to post in the morning but I don't know I don't want to upset my work and have them think that I'm posting during work and stuff like that um just trying to think of what we do here we did all evidence we did the orbs changing orientation I Foy the NGA oh I didn't Foya about sentient they're not going to give us anything about that though uh oh we didn't do the comments from Tim pools thing you guys want to see something else is pretty cool yeah I mean there's no I don't

(07:28) think he's like spying on on me I I forgot why everyone hated uh Michael Flynn apparently they're calling him a traitor or something my parents are full CNN brains though so don't really take what they say too seriously he was never charged with being a traitor he got I think he was charged I think he got the line to the FBI thing right wasn't that the thing and then I think Trump pardoned him so no I got nothing against uh General Flynn I'll take any generals on our side I'm happy happy

(08:11) um can I just find a video of the perpetual motion machine count in okay so check this out perpetual motion machine only two people on the planet know how it works apparently it lasts for like two years before you have to give it a slight push and look how rudimentary this is so imagine if uh you had something that was more advanced right over Unity is real 100% this technology is real I think we send a send a letter to somebody hey Sandy hey Hermes what's up guys yeah there's a lot of deags around

(09:15) guys it's hard hard to avoid them we're just going to I think not give him any attention is really what it comes down to right they're just so desperate for attention we pissed off king milk

for a big time guys oh boy we pissed him off big time he was pushing lots of disinformation this morning cuz he got so upset cuz we showed his uh criminal record on stream I think it's not me it's a different it's a different 36y old Joseph Marinello sure hey Ellie what's up they were uh fabricating like fake uh

(09:55) fake criminal records against me which tells me that he he was probably upset that we showed his criminal record on stream so we might do that again I don't know um I want to focus on some some science stuff I think yeah there's an epidemic of dishonorable people and for some reason they all seem to lead back to Lando for some reason they seem to all lead back to Lou alzando I don't I don't really get it it's uh pretty weird possibly would like to hear about your combo Dan show yeah there's not really

(10:38) much to say I just I asked him some questions trying to figure out if he's legit or not and couldn't didn't get really get any answers that had me believe in one way or another Flynn has been in spaces with me is that true doesn't sound real is it be funny if it was yeah one of the people that got upset was saying that Lu alzando started disclosure how delusional do you have to be to think that and some of these CNN brains are yikes man Lando's not even relevant for disclosure man not even relevant that's the funny part he's just

(11:35) a fake wannabe celebrity spook disinformation agent oh we started a AI tiip dude a tip what exactly did they show us the Navy Declassified the the dod Navy videos that were already out there for nine years if somebody knows something they got to just speak up man they got to just speak up yeah Tom dange honestly did more for disclosure than Lando that's just sad he's a musician Lando should be somebody who's in the no dude's just a straight grade a grifter and he's got a group of troll nut jobs on his uh

(12:25) payroll let's see what we got going on here um that's that love one Luke groman Palisades golden interview okay Luke groman Palisades Gold radio interview yeah the sad part Hugo is that that Tom dange has done more for disclosure than Lou alzando and he's a musician that's the sad part dude it's like these are people that are just like wait for my next book wait for this like just tell us what you know man just tell us what you know be a you want to be a hero defy your NDA and tell us the **truth** enough stories of [ ] you

(13:28) know I'm just over it people don't want to come out and tell the science they need to get out of there Step Aside let the the real adults into the room it's just concerning to me as well that nobody seems to want to get into the science like even Dr Greer is like talking about this stuff and he barely understands it I'm going well figure it out learn you're a doctor you can figure out how some science works right let's publish it Cloud expert we don't really need a cloud expert man these are real clouds

(14:07) it's not like uh they're cumulus clouds you know these are obviously real clouds this is why they had to come up with a fake picture **debunk** right because there's no way you can **debunk** that these are not real clouds the I mean the real question is like how many people are on the spook payroll to try to hide these videos that's the real question and how many of them

are just delusional like you know Matrix robots that don't aren't really conscious that are just fighting against the program

(14:47) fighting against uh the people that are trying to break them free that's really the only question right **truth** is I just don't really care about any of those people you know if people want to reach out to me and and assist then I'm happy to be aligned with them but the ones that don't uh you know whatever good luck oning your books or whatever yeah yeah where's Mount Fuji in the video I mean we've got coordinates to six decimal places that say it's the nicobar islands but sure is a video

(15:33) picture of Japan we had somebody recreate cloud images and un with high quality in in 45 seconds that's how easy it is to fake those images let alone if the military did it with their technology okay let's kind of want to do a letter guys Roman trident fractal antenna crystals I don't know what these names are I've got over here got a bunch of names over here I don't remember if I posted some of this stuff or not we got some real weirdos attacking us

(16:40) now right we got fake AIS and we got uh we got fake Ai and we got uh like nut job like cultists so getting pretty bizarre man what do you guys think play with the plants means is that code for something hey slam dkm hey guys hey everybody who I haven't said hi to oh oh boy tron's ghosts welcome tragon um I don't remember I think sure's like

(17:53) real poo I'm just going to put these in here uh man why is Masha witz is hard name so hard to spell something like that sounds like a weird **sex** thing playing with the plants no this is this is just root beer it's root beer tonight folks Ellie what's so funny blazing Keef man sometimes I wish I wasn't on a contractor job to the government blazing Keef sounds like a a

(18:57) fun activity touching grass play with plants you can I love how you can get as drunk as you want and be as belligerent as you want but if you if you smoke some marijuana or do any other drugs then it's a no no man our society's messed up sounds like someone who's into plants of all kinds tending them smoking them Etc that's a PL the plants is ah now I give a plane with the plants means it's like the injecting the marijuanas injecting the maruchas uh I don't think they drug test you uh like persistently you definitely

(19:47) get drug tested before you get your security clearance though yes and um I don't know if they probably saw me talking about it on a stream they might randomly drugged test me I don't know I don't really know it's not something I really want to risk folks but I I just think it's funny that they uh dude Timothy aberina man he looks like a badass he's like real life Indiana Jones I love that guy I just love that he's just out there he's like I'm going to Costa Rica only downside was on that

(20:31) interview quality was kind of crappy you have to have a note from your doctor a lot of my a lot of my chat loves weed got drug tested before deployments and exercises yeah sounds about right sounds about right folks what's up Aaron Jenum Jenum test which one's Jenum is Jenum the cat urine one is how you spell it is this going to be yeah fermented human way oh

God I was afraid for a second this might be uh might need safe search on like if we're searching for Don Lemon black holes okay yeah I thought about doing another

(21:30) stream where we talk about these videos been getting a lot of views pretty damn weird videos are pretty damn weird not g to lie guys hey V what up I had some uh what did I have broccolis or something like that tonight it was good yeah that's good I mean reality is a lot of people are seeing orbs right they've been discrediting them as fast as they can as balloons but eventually it'll break like we need more military videos is what we need we just need more military videos there might be some out there man who

(22:11) knows like these videos have been out there for N9 years yeah I appreciate you Chuck welcome man welcome I probably should be posting these streams to my Twitter but I just don't care that much I'd rather just be with the chill crew people right now that are hanging out um I think I want to write a letter to does it need to be directed at them we might rewrite this but I'm just going to put some words on the page guys and let me know what you guys think so here's what I'm thinking I'll

(22:59) just kind of tell you what I'm thinking on this I think we should write another piece tonight regarding just the advanced technology just implicating lockie Martin we don't think we need to implicate the general anymore um and what the techn implications of the technology would be I think that's the move keep it kind of short I think we should and then I think what we what do we want out of it let's think about what we want out of it what we want is new hearings we don't even let's not call

(23:36) them conspiracy hearings because conspiracy has a negative connotation what do we call them we want hearings for revealing the advanced technology from the third party contractors right you guys can think of a better way to phrase it let me know but that's what I think we want kind of need some music man I wish the feds would knock on my door what is it going to take man what is it going to take can they like I guess they must just be really confident they can keep this stuff hidden right uh chill music no copyright

(24:29) or trademark I wonder if I can find the one I played before cuz that one didn't copyright strike me kind of [REDACTED] man here we go this one technology transparency oo I like that technology James gold star James Gold Star trans technology transparency hearings I love that where did my thing go guys whoa okay well that's not coming on my headphones you guys know I have a sure mic now uh oh I'm going to play it pretty soft in the background guys this is a crowdsourced investigation folks we want technology

(25:44) transparency yeah when you get down to it it's about the tech right locky deleted a whole post I I keep forgetting we need to be like following everything locky does every day that's what I'm going to do every morning from now on I'm just going to up to locked Martin's uh Twitter page they have 500,000 followers 660,000 views on this they're building a space fence as well kind of want to post about space fence tomorrow are they building a super plane yeah they're building that super

(26:53) plane yeah I mean if they can build a plane in 60 seconds then uh pretty sure they can make some UFOs okay should I direct oh wait can I direct message them yeah basically every post they they make I'm going to get them to block me I'm going to sneak into replies as much as possible yeah the text's real so what do we want to say here

(28:12) what do we call Dr Steven Greer what does he call himself ufologist I don't really like the term ufologist I don't even want to use the term UFO in this letter at all let's just call him doctor we're just going to post this yeah we are we're getting freaking what do they call them space fences it's unreal man these people are just no one can convince me locky Martin's not evil man space fence the F man of course

(29:19) there's a video folks of course there's a video do what someone's got to just we got to just be on their YouTube channel all the time look at this look at this crap man space fences people are in the chat like we just need a regular fence border fence we can get guys we got space fences but we can't get a border fence that's what that that's a joke for my trump supporters out there Trump supporting followers I mean put the space fence in Texas making electronic fence okay you guys are cracking me up what happened to the

(30:14) music the music just went like silent there it goes it's back yeah Have a Drink Man enjoy relax I don't know dark journalist is a little too edgy man let's too edgy here's the thing guys like getting into conspiracies is one thing but it gets to a point where like everything and everybody's a scop right and it just becomes counterproductive it just becomes counterproductive man guys make Mexico pay for that space fence yeah I kind of like space fence now guys you know what I think I'm going to get

(31:02) on board with space fence I'm going I'm going to do a complete 180 from my opinion about 10 seconds ago guys I'm all in on Space fence it's so stupid that I love it it's one of those things where it's so stupid that I love it it's like Ripple Moon space fence guys space fence is coming space fence is coming guys space fence is happening guys it just seems so absurd I don't know what we're going to post about space fence but it it's going to happen I need complete 180 I'm all in on

(31:40) Space fence all in stop the aliens from coming we're going to space fence the aliens away Whatever It Is Ash space fence guys [Music] [Laughter] all like space fence is just such an absurd concept protects us from the Ripple Moon yeah we're going to definitely get censored for the space fence but yes space fence boys Don Phillips did we've had a space fence it's called it's called the moon it's called

(32:44) gravity uh yeah I think a might be what you're referring to well not really maybe there is one new govern government office form for transparency I think it's at a right uh no I don't see one at least Google doesn't show one we'll have to think about space fence yeah space fence and ripple Moon make the alien we're going to make the aliens pay for make pay for space fence guys

(34:00) I might change the wording on that but [ ] yeah space F's going to keep the aliens out can probably keep that okay so let's see should be my investigation it's really our investigation right let's say Beau

(35:55) I don't know how to spell that we'll fix it SK your

(37:11) [Music] dark glitter space fence or offense shirts investigative community what do we want to let's see free

(38:25) energy Advanced Medical [Music] oh [Music] [Music] you Dwayne Johnson probably

(39:38) not heard the rumor that Joe Biden might get be stepping down getting stronger and stronger when it happens just remember Chad and I called it like two weeks ago H uh what are we talking about **debunk** respond to what **debunk** respond to this **debunk** please respond to this **debunk** please please respond to this **debunk** let's see all these **debunk** uh responses are always the let down no guys uh president's got to be at

(40:42) least 80 years old yeah I said Nome but Nome I think that Nome uh I think we damaged him too much with the recall campaign that was the whole goal we we knew we were never going to recall Gavin him in California right way too many uh liberals but it damaged him enough that it might have taken away his presidential uh aspirations people hate him SW

(42:01) what did salvator Pas tell us could be enabled by super uh meta materials or what guys the next president is going to be Donald Trump calling it love him or hate him this what we're going to get seems inevitable respond us to the **Jonas D debunk** we've already responded to it first of all it's not even his **debunk** guys so that should tell you about how much credibility it has somebody who is a corridor crew groupy made a a brand new **Reddit** account and let's let's tell him guys so a corridor crew groupy was upset that I

(42:51) dunked on their favorite VFX artist so they made a sixday old **Reddit** account and then they claimed that they found images that were in 20 minutes on some obscure website that had been like reshaped resized inverted and somehow they used their Rainman capabilities to tell that there was those were the clouds in our videos and so then they anonymously emailed the supposed photographer told the photographer where to find the supposed images because the photographer couldn't even find them and they had the photographer make

(43:25) a **debunk** video because they needed to have somebody's real name tied to it because if it's just an anonymous **redditor** account of course there's not going to be any credibility So within one hour of receiving an anonymous email **Jonas** goes out there and makes a **debunk** video isn't that kind of weird why would somebody who's not connected at all make a **debunk** video within 1 hour of getting an anonymous email for something he knows nothing about I ended up speaking to him and I tried to explain him to him

(43:56) that there's no way it can be a 2D image and I tried to say explain to him to look at the evidence but he refused he was not interested in it he he immediately believed that there was

some kind of hoax how could he know that if he was just told about it through an email just hours beforehand so he told us he told kim.

(44:17) com and I that we should look in the Torrance because we tried to figure out tell us who bought these images within the 70 days that they would have had to make these these videos and he said oh well that might be that's probably secret we can't give you that we were like no you can tell us how many people at least you don't have to tell us exactly who and he said well check the Torrance so we checked the Torrance the images don't exist in the Torrance the images on the database have been updated December 4th

(44:49) 2023 when you update a database you don't update all the rows in the database you don't update all the elements so those images have been updated for something they got changed somehow the same day that the **Reddit** account was made in addition to that um when you do a reverse image search on the **Jonas** images all the ones without the clouds in them reverse image search back to the website guess what the one with the clouds and it doesn't reverse Google image search back to the website even though they're supposedly

(45:23) 11 years old that's pretty weird the way back machine only shows them going back to 2016 doesn't show them going back to 2014 so if the videos are real and someone planted these images they could have done so all the way back in 2016 as insurance had two years that was even after Edward C Linn was sentenced so the reality is there's no proof whatsoever that those images predate the videos and we had somebody create high quality image within 45 seconds using AI so that's the **debunk** I mean the first

(46:08) **debunk** is that we're looking at moving clouds in our images in our videos which means that you couldn't have used a 2D image for it but and that the funniest part is we proved that before the **debunk** even showed up which kind of tells you that it was probably a **debunk** that was in progress and that they pulled it out but it was already too late but they were able to con you know convince enough people that it was real so I think I've addressed it right I made a whole explainer video on it you can look at my

(46:38) uh look at my YouTube page so yeah take a look at my explainer video on my YouTube page if you need more answers yeah I mean guys we're talking about a plane teleporting right Daniel I literally just told you I already did one go watch it it's on my YouTube panel page addressing the cloud **debunk** isn't it right didn't I upload it guys did I upload it yeah right here Cloud rebunk video two weeks ago like man I've made videos for everything here you go here you go Daniel wait why is it the wrong

(47:41) Daniel exif data is easily faked as we saw when the people who committed felony fraud against us faked the exif data on the on the uh the metadata takes like 5 Seconds to to to change the XF data and metadata it's the easiest part to fake they faked it on every single file they sent us people act like it's hard to do any of this stuff **debunkers** don't even hold themselves to their own standards we **debunk** the images more than the images **debunk** the videos it's like yeah when do I sleep why do you think the videos are

(48:29) fake you're looking at real videos man can you really not tell what a real video looks like it's like why why do people think this is fake this is a real video got real Shake manual tracking you can see real smoke that really condenses every aspect of the whole videos is 100% authentic but no somebody says that they're they think than one frame they're looking at a Pyromania VFX somehow that **debunks** re obviously real videos I think the **debunkers** need to stop talking past me and start addressing our

(49:12) evidence they don't have nearly a fraction of it they have literally two arguments one on a single frame it's somewhat similar to a Pyromania VFX from the '90s that they saw that doesn't match and their second argument is that they think that somebody that somebody planted 2D clouds or that there someone's 2D clouds match our moving clouds that's the only two arguments that even exist there's no issues on a single frame and no one will explain how we're looking at real videos and really what it all boils down

(49:44) to is this right here right is that people simply cannot believe that we can teleport an object or maybe on a very low percentage chance cloak it or also maybe low percentage chance annihilate it using some kind of antimatter capabilities well it's 2024 guys it's time for us to wake up Advan science is real we're not at the Pinnacle of society yeah just guys ignore Trojan man I don't know I think he's just desperate for attention gu me distracting messages yeah they they just they just talk past us right it's one of the

(50:44) elements of disinformation is they force us to address their points but they won't ever address any of ours right never not even a single point all you have to do is ask them how a plane crashes into the ocean without leaving a debris field they won't answer that I mean it's just like and when you want to address their their **debunk** all you have to say is how many pixels match right and they can't address that either like they literally can't address any of our arguments whatsoever and yet they

(51:10) demand that we reply to every one of their comments and and criticisms like no you address ours balls in your court when you want to address my 14 pages of evidence when you want to explain how planes crash into the ocean from 15,000 or 15,000 ft in a minute without leaving a debris field then we can talk about your silly stupid **debunks** right let me know until then we're not going to honestly I'm just not giving the time of day if you think that the videos are **debunked** then you can move on with your life and go back to

(51:41) being asleep pretending like that we're at the Pinnacle society and that CNN is telling you the **truth** or whatever right and that people on **Reddit** are no more than people who are Engineers for the government I really just don't care the reality or uh [Music] I think this is right hope I'm not

(52:45) saying this wrong e where's our coherent matter wave

(53:54) beam there it is [Music] yeah guys you can tell like the **debunkers** they have like the seed of Doubt as we were to call it right like in the back of their minds they know that they stuff is

nonsense right and that's why they haven't moved on like if you go to even like **Redd** still which we haven't talked about in a while they are

(54:59) all the **debunkers** are still swarming any post right and if you were to ask them why they'd say well like they would say some type of like uh that they're doing so out of like some sense of moral superiority got to just to help other people not to get trapped or confused like dude what you're not like it's like a savior complex right they have the Savior complex they're going to save everybody from this dangerous information so it's so transparent to date none of them have ever tried to solve the case either it's

(55:32) pretty wild there's only a couple people yeah they need validation is what they need right because that's the world we live in now in social media it's not about logic and reason right it's about peer validation and what what's what they're told is popular and and what what have you it's just like the ash Conformity experiments right people will literally change their own beliefs to go along with the herd Danny Jones is trying to work on something yeah good luck man is Danny Jones that obsessed there's

(56:09) no way is he John is that true is there any quote on that you can tell that Danny's also got the seed of Doubt right when he did that one interview with that physicist guy that everybody hates I don't know what the one was recently I don't even remember his name he's some irrelevant guy never heard of uh but he's like Danny even asks him if he's heard of the MH370 videos and he goes no and he's like yeah don't look into him it's like why would you even bring that up unless like it's on the back of your

(56:37) mind what such a weird thing to bring up Danny's definitely still upset about that I bet he still gets a lot of negative comments on his YouTube I don't have anything against him but like that was such a weird weird interview man he was obviously like upset because of the Julian situation because he's his best bud and Julian was just totally out of his mind off his rocker I mean they're just they're **redditors** man they're **redditors** I knew right away I I pegged Julian as a **redditor** while I was in the interview

(57:11) with him while I was in the interview with him I'm like this guy's a **redditor** 100% right 100% the irony of him claiming that I'm ar**rogant** is uh just the absolute hypocrisy of **Reddit** right it's just it's total projection all the time right it's like they're the Ar**rogant** ones they're they're upset that I don't believe what they want me to believe and that I don't go along with the crowd yeah nothing wrong with Danny is just it was Wild Man reality is like I I hate to be mean

(57:49) but Danny's just not a very smart guy he's just not a very intelligent guy right you don't have to be that smart to be a podcaster we talks the cool people so that's nice but yeah he just I mean everybody saw that watched that realized it Danny even did me direr than I even anticipated he had a fake Break who does fake breaks dude he tried to have a fake break I don't know what he thought I was going to do did he think I was going to be like oh yeah man I'm making this all up in the middle of our break or

(58:24) something like that was weird man like okay let's take a break we take this down like and we just start talking and I'm just off the cuff I thought maybe he thought he was going to get me in something and then to try to throw some kind of recorded video with the the corridor crew like that's just a [ ] move dude just a [ ] move Danny and I knew he was going to do it cuz he's sitt there smiling at me the whole time just a [ ] move dude totally unprofessional complete [ ] move you know the corridor crew are just

(59:01) straight of idiots and cowards too you know like those guys would never stand 5 seconds in any kind of debate with me ever you not even on any topic literally anything right they're absolute idiots and that's that's kind of a [ ] too like what if I just played a video what what if my response to people was I'm just going to play a video that I pre-prepared right like it's just just just embarrassing man just embarrassing especially when you're like interviewing people that are talking

(59:34) about their psychic abilities and all kinds of weird stuff and you never push back at all now Julian got the corridor crew involved so the story there was that Julian was bragging about how he was going to have a major this is a quote major Studio was going to recreate the videos br agging to me like while I'm there meeting him guy was such a [ ] just complete [ ] just just to be 100% clear nobody should ever go on the Julian Dory podcast ever 100% ever just let that guy's podcast career die it's what should

(1:00:10) happen guy is just a [ ] Jersey Shore trash there's not there's just no other way around it that's just what he is guys and the funny part is he tried to lie and like claim that I did him dirty was like nothing but super nice to him man the whole time nothing but nice to him the whole time it was just like dude what sixh hour interview with the guy and that's why Danny was upset right and then you even had Julian going on social media lying saying that like I was going to get destroyed in the Danny

(1:00:47) Jones thing which was already recorded he was just lying to people just straight up lying and then he gets confronted about it has a complete meltdown on the on the space with us guy is just a terrible person dude there's so many like just grifters though and stuff and ufology and podcast and YouTubers they all think they're going to be the next Joe Rogan too yeah he didn't even know how to book a hotel dude yeah we just moving on but anyway someone brought it up cuz they said that we were someone was going to try to so

(1:01:28) it's just funny if they're still mad about it they're still mad about it which is like dude that you just got to learn like stop digging man stop digging the smart move would have just been to apologize right away and take the high road right but they can't Reddit brains can the one thing that redditors can never do guys is that they can never admit they were wrong and they can never apologize I've been on Reddit or I've like you know let's see I deleted my account sometime in like 2019 or

(1:02:01) something like that but I've I've watched Reddit for over 10 years right maybe over 12 since like 2008 so 15 years the one thing redditors I've never seen do is admit that they're wrong

or apologize never oh you tried to pull it on Matthew lacroy as well yeah well at least people now know the game plan right these people now know the game plan oh James CIT what's up let's finish this up though I don't want to be up all night again tonight I got to go to try to sleep I had a weird dream where I'm

(1:02:39) playing soccer yesterday man I don't know why I keep having these weird dreams I was playing soccer in my dream was just bizarre yeah never sign up for reddit man just skip Reddit dude it's just trash man the only thing Red's good for is like Niche subreddits if you're like into some video game or like an anime or something like that or maybe like a television show but even the television show ones pretty bad no I didn't ban him some one of my moderators got him I think I think they were they they had enough I think I

(1:03:14) didn't even see what he said guys I didn't even see what he what he said should I go up and find out okay he's I think he they just timed him out I think they just timed him out here's the problem and this is this is I I'm like almost 99% sure what this comes down to is that there's no way to disclose this technology without disclosing the Doomsday weapons everybody we've talked to even Dr Greer everybody we talked to even Dr Greer says that well we have to just keep the Doomsday weapons hidden right

(1:04:09) it's like how the hell are we going to do that oh yeah yeah tragon is probably a redditor all mo all the debunkers are redditors guys most of our haters on Twitter are also redditors as well you can usually tell because they have like low follower counts because redditors have also been mostly brainwashed to think that Twitter is like the worst place ever when reality is Twitter is where you find real people reddit's where it's just reddit's the echo chamber especially when it comes to politics although I will admit

(1:04:41) that Twitter definitely has more of a right-wing lean on it now because of that I mean because everybody got banned and like 2020 and Beyond no one's allowed to say anything that was even slightly controversial or you just get banned hell I just made a comment on the uh when Ashley babbitt lawsuit was on the news subreddit that was the first news subred I only made one comment ever and my comment was about how like there's hundreds of comments glorifying someone's death glorifying it some of them were even saying they wish they

(1:05:13) could have done it themselves I'm like literally just like literal murderers making comments and I just said how disgusting it was and I got permanently banned one comment permanently banned from the news subreddit even though there's literally people glorifying wishing they could kill an unarmed veteran I'm like holy [ ] man holy [ ] yeah Reddit Lost Cause folks Lost Cause man it's just a brainwashing machine anyway let's focus guys focus focus focus yeah with too much too much crying

(1:05:52) about the reders I mean it's the worst platform ever so just make sure that people understand it so they know to avoid it I think it's messed up that people glorify a literal veteran a woman veteran unarmed who got shot climbing through a window and they twist in their minds that it was justified because she was committing an Insurrection or something something in

their minds like Jesus man Jesus even Destiny when I heard him s of that on the on the Alex Jones podcast I'm just going man that's that's where I

(1:06:36) like disconnected myself with the Democrat Party entirely that's when I said goodbye man that's too much for me man I respect our military too much and I work with them okay let's figure this out voice do we have to up uppercase

(1:07:53) Pandora working out a little bit L January 6 was worse than 911 people say it's worse than 911 Pearl Harbor sorry I just can't take that kind of stuff seriously man and I even my own parents and stuff say stuff like that and I'm just like man it's just scary man like certain topics just became like so politicized you're not even allowed to have an alternative opinion not even allowed to have a Centrist opinion yeah I think when people talk about the unip party as really what it comes down to

(1:08:55) right the reality is this guys um as much as I'm against probably the current Administration and politics like it most likely will not change even if Trump gets elected probably won't change either guys I mean he was already president once and had a chance to change it and he didn't feels bad it's the world we live in man it's the world we live in youi party people are selected I'm going to vote for the one that will give us the best chance at reveal advanced technology which probably probably not a good chance at

(1:09:45) all is this some kind of AD break down see

(1:11:23) one h so have a good night

(1:12:36) James yeah thanks everybody who's got to go to sleep we're going to finish this letter up I think we're going to post it tonight too and then we're going to go to sleep ourselves hey Alien we're writing advanced technology we're going to tag uh some congressmen in this one I with

(1:14:05) yeah I'll read it out loud we're almost done here I think this is about it I forgot to figure out what kind of images do we put in here yeah I mean Alex Jones some stuff I think that it's hard for this stuff to for people to believe TR

(1:15:52) h think oh

(1:17:38) so let me if you guys have any better uh phrasing let me know what I've started what I found most interesting about the advanced technology aspect is that it's not the religious people that are upset by it I was raised and I thought for my own brainwashing or whatever that the religious people would be the one holding this back couldn't be further from the **truth** I think we're going to see a shift back towards religious belief maybe not all the way back but quite a significant one it could definitely be biologic aliens

(1:18:28) as well or um you know what do we call it um manufactured some of the aliens could be manufactured this is pretty good okay you guys ready should we read it out tell me what you

guys think or if I should change anything okay uh

(1:19:33) h i I think we're going to change it to the investigative Community let's say this investigative Community this investigative Community has independently confirmed advanced technology hidden from the American people consistent with the statements made by whist David grush Dr Steven Greer lawyer Stanny shean and others these Technologies are suspected to be hidden in Black budget project with defense contractors such as locky Martin north of Grumman Boeing Bigalow airspace Etc Advanced medicine free energy and

(1:20:12) new forms of transportation are some of the transformative technologies that will change every aspect of our lives these Technologies are enabled by room temperature super conductivity let's say some of these Technologies and really all of them are say these technology are enabled by room temperature super conductivity uh I might I might say high temperature let's change this one to high temperature and then we'll change this one to room it a high temperature super conductivity which can be enabled either

(1:20:47) by met materials or from Advanced vibrational electromagnetic field effects uh uh fields or effects effects is fine one example patn is of a coherent matter wave Beam by locked Martin these Technologies seem like fiction but publicly available science is slowly catching up to these hidden Technologies uh these hidden secrets we can say slowly catching up these Technologies seem like fiction but publicly available science is slowly catching up we are on the verge of realistic room temperature superc conductive meta materials in lk99 and

(1:21:31) recently a whole picture of quantum teleported the magic of yesterday is today's scientific reality Advanced Technologies of Pandora's box and it comes with inherent risks that we must acknowledge the benefits are countless and can change the circumstances of billions of people uh this might be duplicative it can end our Reliance on fossil fuels however this technology can be turned into a weapon that could destroy our entire civilization in an instant we need to come up with safeguards to prevent that from

(1:22:15) happening the most likely reason these Technologies are kept secret is due to National Defense the nation that controls these Technologies has military Supremacy over the world as a patriot I want our nation to be safe but we cannot stand idly by as Millions needlessly live in squalor and suffer We the People request technology transparency hearings related to National Defense related to National Defense contractors related to defense contractors or hiding technology that can change the world h

(1:23:36) the benefits are oh I already have countless I can't say countless again so trory we'll change this to planet plane teleporting Rock

(1:24:51) levitating of the world globally that's too much World globally is a little too much you don't need both of the world it's a little too redundant a little too redundant no I'm going to keep plet there we don't need to quibble over minor use though how many times we use the world word world here it's definitely used again right there just twice let's say just complete

military Supremacy

(1:25:56) complete military Supremacy just be We the People request technology transparency hearings into the defense contractors or related to the defense should defense contractors be capitalized uh I didn't ban Trojan James you're going to be on the if you complain again you're out my mods took care of Trojan because he was being annoying and it doesn't look like he was permanently banned either I think he got a **timeout** he's not hidden on my channel I don't like to hear this

(1:26:59) **[redacted]** disinformation about how I'm Banning people literally I I go and I get blocked all the time by people and nobody ever says anything about all the people that me blocked there's like dozens of people that have me blocked for no reason I've never interacted with one time let me see here free copper okay well James bye James you can come back tomorrow I won't permanently ban you I warn you though I don't know what's up with these people in like lying like I can't tell if people like James are just

(1:28:04) delusional or if they're malicious I I can't tell the difference like is is this guy just delusional or is he like a malicious actor trying to build a fake narrative I I can't tell these people just like I these people need mental help man there's not another way to put it they need like actual professional help like go talk to a therapist or whatever you need man it's not healthy dude okay I think we're going to put this one sec let's put this in our documents for image save this okay yeah it's starting to feel

(1:28:48) malicious right I mean especially yesterday after yesterday where uh Joseph Marinella was like making up a whole fake narrative about how he wasn't really in the chat like these people are just complete nut jobs man they're like complete Psychopaths like that's like the very definition of being a psychopath like I do I worry that they're going to like hurt somebody man cuz like when you have like people who are like literally nut jobs like that like that's what happens oh look at this oh yes okay well we're watching

(1:29:28) this I don't know who these people are oh there's tupacabra and I don't know who the raggy look it's me wait which one am [Music] I oh I'm uh what's his face [Music] [Music] I wish I could make videos like this this is too funny dude trumer Nation on your eyes killer kingstar let's get into the news today we have a very

(1:30:34) serious topic I'm sure you can tell by the title and thumbnail on the line we have Eva who uploaded this video please take me the CL like looking in the eye more just see your actions for your gatekeep and if you're going to gatekeep information in this community giant red all right none of those people better are Gaters in UFO community based on what based on what we're a we adult I'm recording all this I'm **[redacted]** I'm going to **[redacted]** work I'm not a little **[redacted]** kid I'm adult

(1:31:14) I'm an adult that knows a lot of **[redacted]** people and I'm making everything public everything public everyone's going to know step by step what has beenen so like go to hell little

[redacted] Sky whatever a bunch of people these are keemstar this skyf firebag he's transphobe homophobe like the same people crying about bullying they team up with keemstar interesting right they're in it for the month I love [Music] this h this is too funny man this is too funny [Music] man Oh I thought the oh Ki milk F gets

(1:32:16) killed right there no way [Music] oh my God this is the greatest Twitter account on All Twitter man greatest Twitter account of all Twitter [Music] guys a red panda collaborating with him I think is actually great like I think that they're going to do very well like keemstar has been doing this for a long time chba C is already making his videos and now they can just perfect it and get it out to a larger audience so I'm here for that now with keemstar's history the people that are doing this are going to

(1:33:07) take the UFO drama and blast it everywhere the panda UFO Shane movie is going to be one example of this you know right like that's going to be a whole drama thing and we're all going to have the people that are doing this are going to take the UFO drama blasted everywhere the panda UFO Shane movie is going to be one example of this everyone's going to know step by step what has been happening wait karma karma is a [redacted] be careful this is oh my god dude oh my God holy crap that's the best one he's

(1:33:49) ever made that's the best one he's ever made guys that is uh wow that is funny what is this called oh God that is too funny man that is just too funny that is funniest video I've ever seen guys just funniest video I've ever seen so that's up there that was a great one holy crap holy crap oh where trajin ghost back yeah see he didn't get banned guys he's back oh my God that is too funny holy crap guys keeper spear bus yeah we're definitely replying we're definitely replying yeah I wish we could make memes

(1:34:51) like that man that's just oh my God that's talent that's just Talent folks uh can we find a nodding one that works we need one where it's like it needs like yeah like this one maybe this one this look a satisfaction from the this one might be it the there may be blood that might be the that might be the most appropriate one or maybe Triple H maybe Triple H Triple H's sense of just entitlement this is great can't decide Kobe Kobe's pretty good

(1:35:57) too Hillary Clinton how is this a real one how's this real uh I don't know I don't want to spend too much time on this let's just go with uh which one do I like the most I think Triple H I think we call Triple H go Triple H guys that's wow that's an Incredible video UFO Community is going on to hate that guys they're GNA hate that man I love it yeah that's that's incredible no there's no way that was a fake kmf that was definitely him guys once you know what he does like that's

(1:36:52) totally within his wheelhouse man he often puts out fake stuff like his whole gim[mick] is uh pushing disinformation and like falsely editing stuff and like making up fake narratives and stuff like that and fake evidence for fake narratives cuz he realizes like he's very he's he's like literally one of the worst people on the face of the planet king milk fart is Joseph Marinello one of the worst people on the entire face of the planet that's exactly his play was to try to pull like

the reason why he had me blocked and that's

(1:37:24) his thing too is that he didn't want there to be evidence that he was actually in the chat right he wanted like I don't know he's like not nearly half as smart as he thinks he is but yeah they they try to play the victim and like their whole point is like they try to pull people's words out of context they want to get a rise out of you so that they can like frame it where like you're like unhinged or that you know they want to like ideally in a perfect world they want you to get say something racist or homophobic so that

(1:37:53) they can then like say that you're this terrible person like that's exactly what their play is like exactly it it's extremely transparent they're not like good people they're just awful honestly and so is this whole crew of people they're also just terrible human beings and their whole goal right is that they want to have a lock hold uh a strangle hold on what UFO disclosure and discourse is right if you look at them they all just retweet each other as well right they all retweet each other that's

(1:38:24) why this video is so funny as well is that like they uh they're like they're threatened by keemstar because it's a huge uh social media influencers come in right so he threatens the established order that they've developed with their little fake narratives about UFOs and what have you and their little fake celebrities like you know they're connected to people like Ross kohart and Lou alzado like behind the scenes 100% we've proven it we've proven it and it's just it's all a bunch of

(1:38:54) [ ] right it's a big circle jerk full of crap and they're all trying to like get little pieces of money from it the ironic part is they're all grifters too they're all like unemployed grifters who are trying to make their living off their little podcasts and their little vide tapes that they put out about UFOs and what have you which are all just same recycled content over and over again right that's why I'm almost going to think that I'd rather be on the debunker side I just can't stand these people

(1:39:24) I hate what they're what they stand for I hate all everything about them yet I'm in the UFO Community okay so we got we we did a little shout out for our buddy star Captain dread by the way as well he's a really nice guy man and the thing I like about star Captain dread guys is that I don't even necessarily agree like he's all in on like you know the Galactic Civilization stuff but like he just doesn't care what other people think think man he just does his own thing right like he's out there he's just

(1:39:55) doing his own thing he's you know and I love that about him so that's why we gave him a little shout out here um GT good question are they coming at us just because the videos are real it's not just that we are pushed disclosure further than they ever have in their whole lives it's also because we threaten their established order right we we threaten their established order oh the stream shut down crap oh what really let me see oh yeah wow for

(1:41:50) for oh it's back are we back are we back oh it says we're back oh yeah we're back wow

oh nice we back folks we back yeah it said temporary so it said temporary violation due to some copyright issues and then it said now it says you're no longer blocked to due to copyright issues do we have sound is the sound working show us those abs just kidding uh that was weird Man Okay so so I guess they can tell when you play some Game of

(1:42:53) Thrones right quick put my shirt back on okay well we're back well that was weird I've never had that happen I guess I got to be really careful we're definitely well we're not going to be monetizing this one folks oh well doesn't matter to me okay yeah Google that Google deep mine dude okay I'm not going to make this deer Anthony Gates yeah okay this is that's actually really long let's do Matt Gates real Anna Timber [REDACTED] uh Jacob MTZ uh what's what's represent Twitter representative

(1:44:00) MTZ dude I don't know how to spell his his name rep M moscowitz geez man why does it have to be something hard man I'm not following him who is that other Congressman that was talking about guys what was the other Congressman on that podcast that was talking about uh Angels or whatever where was that guy hash m370x [REDACTED] it I'm I'm hashtagging all the UFO the

(1:45:05) things that was that was scary for a second you guys scared me for a second is that how you spell Bigalow did I even spell north of Grumman correctly I don't even know if I SP spell any of these correctly hold on North Roman I I think I did spell it two M's oh uh yeah g r u m m a n oh yeah that's right North ro oh North Rob yeah North Rob Grumman locking

(1:46:14) Martin Boeing is it Bigalow oh it's a e Bigalow yeah is okay big a little Aerospace okay these Technologies are enabled by high temperature super conductivity from meta materials or accelerated vibration electronic electromagnetic effects one example patent is of a coherent matter wave Beam by locki Martin let's just make sure that's what it is

(1:47:19) here coherent matter wave beam coherent matter wave beam uh should I read it out again one more time guys okay I'm going to add some pictures as well so there's one of my pictures uh we're going to add one of the videos I think my favorite one is going to be the zap we should use one of the frames that's

(1:48:25) not the one they think Pyromania VFX is right just in case they try to go this has been deun which they will use this one can I make this go away how do I I make this go away can't make the thing go away huh that seems problematic how do I make this go away from chat guess we have to do it the hard way oh come on my God we have to snap it at the right exact moment and we did okay we got

(1:49:36) that okay that's one of them what else were we going to put in there um oh Rock levitating okay okay this one we we can just uh that's not the right snap picture we want that seems good then we want the coherent matter wave beam uh it's not right what's going on you be kidding me okay coherent matter wave beam what

(1:50:45) other technology should we add in there uh oh maybe the perpetual motion machine

from the Greer one maybe this is the hulum energy system you can Google it sound like this oh what the take that over Unity device okay I like that okay I think we're ready to read this out guys ready read this out

(1:51:52) advanced technology this investigative Community has independently confirmed advanced technology kept hidden from the American people consistent with statements made by whistleblower David grush Dr Steven Greer lawyer Danny shean and others these Technologies are suspected to be kept hidden in the black budget program in Black budget programs with defense contractors such as Boeing locky Martin or locky Martin north of Grumman Boeing Bigalow airspace Etc Advanced medicine free energy and new forms of transportation are some of the

(1:52:28) transformative technologies that will change every aspect of our lives these Technologies are enabled by high temperature superconductivity from metam materials or accelerated vibrational electromagnetic effects one example is a patent of a coherent M wave Beam by locky Martin these Technologies seem like fiction but publicly available science is slowly catching up we are on the verge of realistic superc conductive room temperature superc conductive meta materials in lk99 uh should let's say such as lk99 and recently a whole picture was

(1:53:03) quantum teleported magic of Y of yesterday is today's scientific reality advanced technology Pandora's Box and comes with inherent risks that we must acknowledge the benefits are countless and can change the trajectory of our civilization it can and our Reliance on fossil fuels however this technology can also be turned into a weapon that could destroy our entire planet in an instant we need to come up with safeguards to prevent that from happening the most likely reason these Technologies are kept hidden is due to National

(1:53:33) Defense the nation that controls these Technologies has complete military Supremacy as a patriot I want our nation to be safe but we cannot stand idy by as Millions needlessly live and squalor and suffer We the People request technology transparency hearings into the defense contractors who are hiding technology that can change the entire world let's say change the entire world transform the world transform something like that how does it sound yeah the portal is pretty iconic right does anyone know who the other

(1:54:23) Congressman was that was on that recent interview yeah I'm not going to add both I think this is good enough I like the images we have down here oh really new drunk turkey has a lot of uh locked stuff I might I might yeah YouTube struggled with that okay I think this is good this is pretty late this is a good letter I think we could also call it secret Advance technology but I don't think we need to overthink it I think we just go with it right yeah maybe revolutionize the world revolutionize just I think the end the

(1:55:27) only part I'm not happy with this the end revolutionize reshape our history save it to post in the morning you think I think I lose all my pictures if I do that I just read the whole thing through twice yeah I think I'm going to post it in the morning I'll think about it yeah post it in the

morning is probably more sense I'll have to redo some of it hopefully the images stay but I have a feeling they're not going to just in case they don't I'm going to save

(1:56:43) them just in case okay we got the images yeah it's kind of late now better do in the morning like I want to do a first thing when I wake up well it's cuz we're sending we want the Congress people to see that we're pinging on this I also want to know what the last congressman's name is I don't know someone needs to help me out with that but I'll find it in the morning so let's just save this as a draft okay it's been saved okay guys I think we're going to call it for now um if anyone has any

(1:57:17) ideas before I wake up ping them to me yeah we're too immature we're too immature as a species that's for sure wouldn't surprise me if they're hiding it for that reason and I I put the other thing too is I posted a lot of videos and stuff earlier today yeah the Apex stuff is really big that's why I told Jeremy that he needs to like take clips of a lot of the stuff right a lot of it's like we just don't have the attention span for it we posted a lot of stuff this evening so probably if we best if we chill on

(1:57:54) it okay guys well I'm going to go pass out so I'll talk to you guys later have a good evening

MH370x - Troll Hunting & All Evidence 1/17/24 - YouTube

<https://www.youtube.com/watch?v=pQef2SYZPy8>

Transcript:

(00:51) Malian 370 contact 120 decimal ner good night breaking news tonight A Malaysia Airlines flight with 239 people on board including four Americans has gone [Music] missing [Music] I remembered the line from the Hindu scripture the Bhagavad Gita Vishnu is trying to persuade the prince that he should do his duty and to

(01:56) impress him takes on his multi-armed form and says now I am become DEA the destroyer of worlds what up what up oh boy I had my hat on so my hair is all over the place what's up everybody how are we doing tonight awesome good to see you mystical Sandy Adrian Aaron Billy Sam what up uh did I say Nick I think that's everybody Professor Jay what up everyone shellock James did uh Hey and regular James did Tim pools in that video the orb video yet no I don't think he's made it just yet maybe they don't

(02:46) have a a copy of Unreal Engine available out there for him hey ingred hey everybody who's already popped in hey yo J whiz welcome so what are we going to go over today guys well well let's see I've got an exciting stream for us today uh I've got a little bit of a surprise for

everyone I'm only going to show it cuz it's pretty easy for people to see if they were to just look um and then we're going to do a little bit of troll hunting troll hunting is always fun right oh I got to find some classic music for troll

(03:21) hunting um you copyright free and then after that we're going to post all evidence tonight so that's the game plan and anything else beyond that will be uh will be good yeah we know this playing D to spear hey Kyle hey Sergeant kamach show appreciate you guys jumping on yeah I've already contacted the FBI uh several months ago and it was really spooky contacted this FBI and they basically hung up on me twice it was it was scary man like the moment I started talking about the satellite they hung up

(03:54) on me uh what kind of music we want for hunting uh spooky music no how about tense tense music no copyright here we go let's see how does this sound hey slam dunk Mo welcome oh I didn't have a martini yet should we have martini tonight oh yeah that's definitely the music we're going to play okay turn that down a little bit hold on a second I think we are going to have martinis tonight a probably a

(04:59) martini uh okay it's going to be one of those nights folks uhoh uhoh ask grock we should have Martini okay let's ask Rock Let's get into it let's get into it folks full stream face B grock hello grock fun mode should we have martinis tonight grock why not it's always a good time for martini just remember to enjoy them responsibly maybe don't spill in your motherboard okay that's fair that's fair folks yeah that music is going to be tense folks okay guys you guys ready for this are you excited so

(05:54) people who got on early you get to see the surprise you get to see the buildup something pretty interesting happened tonight guys pretty interesting now um some of you probably don't remember but when we did the because a lot of you haven't been around from you know the very beginning which I'm not judging you but so if you weren't around from the beginning you missed probably a lot of the Edward C ly investigation that we did okay um how many olives do I want you know what we're just going to

(06:33) load up we're going to load up now people that are my admins they know and they know about the Edward C Lin investigation we were able to find out everything about this guy it was do stalking people is easier than I thought I mean every people's private information is all over the place like where they live everything now be clear that's not what our goal is here and we want Edward cin to be as safe as possible because he's a hero he's my hero um but what I would say is we were able to find out that he was on Facebook no

(07:11) no he didn't reach out it's not that exciting geez that was that exciting I wouldn't even talk about it if he reached out guys I I wouldn't talk about it um but it's it's it's pretty exciting guys it's pretty exciting not not that big though you guys are thinking too big too big um but he was on Facebook we were able to find out who he was friends with on Facebook that's going to be a little bit of the clue for you guys here um so today something pretty odd happened while I was looking through my

(07:46) notifications you know what it's been a little while should we go I think we should go see who's been following us recently what do you guys think let's go take a look at our followers while we're stuff in martinis hello hello chat what does that say on the screen General Mike Flynn holy smokes wow what an honor being followed by General Mike Flynn

(08:53) wow well I think that's safe to say that's the first general I've been followed by wow lfg folks lfg holy crap Brandon Fugal resp is following us too wow guys we got some we got some big followers I haven't looked at this in a while I haven't looked at this in a while so yeah if General Flynn's out there guys first thing I want to say is I have the utmost respect for the military second thing I want to say is well do you ever want to talk here I am third thing I want to say is that uh if anybody out there knows Edward cinn

(09:58) please relay to him that he's my hero please relay it to him I want him to know I want him to know that whatever happened to him I fully believe that he's a patriot even if somehow we're wrong about this he doesn't strike me as the kind of guy who's a traitor to the country he spent six years in prison I would like to meet him one day if that's possible so yeah and general Flynn if you're out there please help us do the right thing I mean please man we need help the reality is we need help I

(10:43) don't think that the government wants to reveal any of this information any of this technology and the reality is we need the world needs this technology right yeah Brandon fogle I I don't know he was following us either oh Skinwalker Ranch wow it's getting pretty interesting folks TJ followed us a while back too even though we've gotten a little scuffle with him feels like they they know there's content here right that they can it's like sharks would sensing the blood in the water they know there's something

(11:17) there at least more credible than most stuff that people report on right at least as credible as jellyfish aliens floating around so um so yeah wow big honor realities I highly highly respect the military especially because I work with military um military members on Pretty Pretty regular basis uh so highly respect our military which makes this really awkward when I'm sitting here exposing our own military it's not what I want to be doing in my life but the world deserves the **truth** the world MH370 families deserve the the

(11:59) **truth** and Technology deserves to be free that's the reality of it right so TJ still my queen Hermes you like cracking me up bud yeah I mean I don't know what's going on with like Jeremy was Jeremy was going off man Jeremy was going off my advice to Jeremy as much as I love Jeremy uh and I'm talking about Jeremy Reese at this point the alien scientist is like it's not worth actively trying to make enemies of people right it's one thing where like TJ comes and tries to crap on us and us

(12:32) to just kind of retaliate even that we probably shouldn't do right but it's a completely another thing to just be going after people you know it's just not needed H you know I think back to what Jake uh Chanley told us right he actually blew me away Jake Chanley blew me away I think nobody gives this guy enough credit for the type of person that he is out there but

Jake Chanley I said we got to declare war on the you know whatever you want to call it deep state or whatever and Jake Jo goes no no we I

(13:06) don't want to make it at adversarial he says uh he says no we just have to make them render them obsolete right Jake is man what a standup guy he's a nicer guy than I am um just blows me away that we put this guy who was in solitary confinement put him in solitary confinement let the world vilify him that's why we did the thing that we did the other day two days ago I think it was the Martin Luther King thing yeah and even though you know didn't get a lot of traction we also didn't get as much hate as I expected

(13:42) either and it's fine because reality is I'm not doing this for attraction I just want to get enough eyeballs on the case where we can get this reported on I think that if we were to get to a point where we get on something like Joe Rogan or something huge you know I think that would be the part where I would start to wind down and then figure out a different move on this because we're not going to be able to convince everybody right we're not going to be able to convince everyone on this no matter what we do what we're

(14:11) doing is we're we're making allies with people who are like-minded who want to battle against these people who are hiding all this information not physically battle them it's an information war is the war that we're in right so that's the big news right there wow wow that's like that's bigger than having kim.

(14:33) com follow us man this is bigger than having kim.com follow us and what I would say is any large podcasters are out there or watching or people that know the podcasters or whatever I'm just a normal guy man I'm just a normal guy I'm a flawed guy flawed human being like anybody else I'm not trying to take advantage of anybody I'm not trying to be famous all I want to do is get the answers for the families of the victims that's it that's all I want to do in fact I don't even care that much if we don't get the

(15:05) technology out there the primary motivation is helping the families out the technology is obviously the probably in my mind the bigger story sad as it is to say cuz 239 people potentially disappeared uh but at the same time like what really matters with the families you know US Government if you need to try to keep this stuff secret then you need to come talk to me cuz there needs to be a way where we can get the truth out for the families um that's that's just the reality of it we know there's no chance

(15:36) US Government doesn't know what happened to this plane 0% This Plane didn't crash in the South CH South Indian Ocean let's just be honest didn't crash in the South Indian Ocean hey alien girl what's up everybody no I don't General Flynn's too high profile to keep an eye on this channel yeah that the Barrett James is asking the right question how well does General Flynn know Joseph F Dunford and here's other thing I want to say about General Dunford as well I think he's probably a

(16:10) nice guy as well I bet you I'd love him honestly but the reality is he's also he's definitely

keeping advanced technology secret there's no doubt whatsoever in my mind General Flynn probably knows about it as well these are very smart individuals very smart men they probably would never let it show if we were to talk in public that's just the level of secrecy we're talking about right now they would probably never let it show they probably cannot admit to it I mean they have ndas their their military vets right you know

(16:40) they're they're not going to let the secrets leak out but they know they know right they know about this this technology and the reality is I want to help get it out some of them may want to help get it out too but they can't right they're Bound by their ndas this is how the stuff keep stays secret like we're learning how it stays Secret real time is that people are bound by NDA the military are the ones who know and the third party contractors can't be foed wait trin's ghost aren't you the

(17:19) guy who keeps trying to **debunk** all my posts anyway name sounds familiar with the weird smiley face thing here's the other thing I'll tell you guys now that I've become a a big time uh influencer or whatever I'm really not but I think it's funny uh people remember just cuz someone has 78,000 followers or whatever they they see the the post they recognize people yeah I'm going to have a drink I'm trying to get my olives going here one sec okay uh so yeah let's finish up the the Preamble here that we've got going on

(18:06) while people are jumping on and did I say hi to William and and John and ingred hey everybody hey everybody who's jumped on so uh the big news of the day and hopefully this doesn't get us unfollowed but the big news of the day is you know what you see on the screen right now we got Brandon Fugal and uh General Flynn following us and let's just say that um there seems like there might be a possibility that General Flynn knows uh Edward C Lyn right not it's a non z% chance let's just call it let's just say that

(18:51) right so if he can get a message to Edward C Linn let him know where on his side I would do literally anything for Edward cin anything he needs if he needs this body I'm just kidding but no seriously um if he needed uh financial support or uh protection in the form of social media you know influence whatever we've got that we've got that Spades right I think that these guys also realized something as well they realize the political landscape right trag's Ghost Buddy go go nuts tragon ghost uh spoil alert trag's ghost

(19:49) before I even go look at your channel actually let's just go look at it together uh I'm pretty sure your your your one video here isn't going to **debunk** us but um other people with many many many many many more followers than you to the tune of millions have tried to **debunk** the videos so you can go nuts my man I really don't care what you believe or don't believe it's not really of consequence to me um but what I will tell you is the reason why you can't **debunk** the videos because the videos are

(20:16) real so do your best enjoy whatever you think in your mind think doesn't look right you know have a field day man have a field day but when you're watching those videos I just want you to realize you're looking at real videos so if you're going to go in there and go all this stuff

doesn't look right to me just keep in mind that when you're wrong it's going to look pretty embarrassing that you couldn't tell the difference from reality and fiction but go nuts man go nuts I've seen your post and

(20:49) nothing you say is of any threat to me whatsoever I think it's funny when people call me try to call me arrogant and then you got people out here like trying to think that they're going to debunk the videos or let's do a let's do a better one here troons I I don't think I'm going to care because I don't think I'm going to see it so have a good one bud yeah people call me these are the types of people that call me arrogant right go nuts champ go nuts let's do a little bit of troll

(21:34) hunting maybe we'll start with tragon ghost there he is look three guys got three different accounts cringe man is this cuz you got blocked by the other ones that is why isn't it it's already looking pretty unstable my dude it's already looking pretty mentally unstable boss I don't think we've got a lot to worry about from you my man yikes three accounts huh this cuz you got blocked too many times Pepe is in the background too wow well let's let's see what we should be afraid of here

(22:18) folks let's see what we should be afraid of here and of course he follows me let's see what we got the biggest hole in mh37 Zer that the government teleported entire plane but didn't have a plan to what to tell the public I mean yikes man holy crap this is what I'm supposed to be afraid of tragon they apparently wanted to tell the public beli to crash into the open but didn't think to plant plane debris how are they going to go plant plane debris where do you think the debris came from that they

(22:52) found you don't think they planted that debris if the plane didn't crash where did that come from this this is what I got to be afraid of yikes man these These are the hole this is the biggest hole he could find in the story guys trag's ghost everybody are we are we afraid of his debunk video the biggest hole in MH370 is the government teleported an entire plane but didn't have a plan to tell the public even though they came up with a whole Narrative of it crashing into the South CH South Indian Ocean and potentially

(23:27) fabricated spoofed ersat pings that's not a plan they didn't think to plant plane debris how are they going to go do that they're going to go fly over the South Indian Ocean and throw some debris out the window of MH370 Jesus man yikes folks yeah I'm real afraid of your debunk video man real Afraid over here well that was easy yikes Guys these are the people that call us arrogant huh wow wow is's a reason I'm not reading his comments okay you okay man here we go trag ghosts there's a reason he's not reading

(24:16) my comments okay let's go see let's go see the examples you use to prove the clouds are moving our exact cloud images that were found in a stock image well we've already fully debunked that the clouds are moving that rules out 2D visuals not just one Cloud multiple clouds yes they're all ruled out you know how long it takes to fake uh a cloud image in higher quality than what it is 45 seconds that's how long it takes 45 seconds you want me to prove it you want to see tragon how ignorant you are and how fast it is to debunk you

(24:54) you want to see why I go on podcasts and I'm not afraid of people I'm certainly not afraid of some random dude with like 10 followers let's go find out let's just scroll down in my bookmarks where is it yeah here we go ready ready tragon ghost let's see how long it takes to spoof a high quality uh video start the clock or a high quality image how long boy he's already found a lowquality resolution image put it into the AI magic tools generator presses one button moves it from a low quality changes the

(25:39) name of it to whatever he wants there's a reason why he's not reading my comments guys oh I read your comments look oh po wow high quality image that fast amazing how long did that that take 45 seconds took 45 seconds to make a fake Cloud image in higher quality that's how long it took 45 seconds let's give it a like folks yeah guess it's not possible wow this is him this is a guy just straight up **debunking** false claims okay now what else you got it's beyond coincidence whoa great logic there man

(26:27) beyond coincidence we just showed it can be happened in 45 seconds so we've **debunked** your first two paragraphs multiple different types of clouds as if this mean something okay that's the third paragraph what else the orb trails are also a big Focus you can compare the troll the trails are making to the movement of the orbs and you can see the trail the orb does not match the movement of around the plane good luck with that claim I mean you're not showing that anywhere I've watched the videos probably a thousand

(26:54) times and that's not true but sure the the hubris behind the trolls like this to think that they're going to find something that everybody else has missed today is pretty hilarious man straight up huis man straight up huis not good luck with your **debunk** man good luck here you know here you go here's the the snip of the trails right here the trails don't match what video are you watching what do you mean they don't match hey I I mean I've watched this video a thousand times what are you talking

(27:33) about tragon man just do yourself a favor and find a new hobby don't worry they can update it to Raw as well Todd they can update it to Raw as well and somebody there's they've been conclusively **debunked** even by people who've looked at the uh the images as well some of the ones in the set are actually JPEG but there you go they reverse order huh not in this video Yeah that's the funny but the **debunkers** that arrive on the scene that think that they're going to find something that thousands and thousands

(28:11) of other people in thousands of hours haven't found that's that's the funny part to me sure go nuts man so let's see yeah the videos never get old I mean it's the best footage I think anyone's ever seen look at that look at those trails why do they go ahead of the orbs yeah because it's a gravity engine it's forward- facing gravity engine they're creating geodesic it's pulling them forward it's not behind the trails or behind the orbs only looks like it's behind the orbs because you see the orbs

(28:42) moving right easy yeah could be could be so is that it yeah I guess that's it please reach out would love to talk the absolute hubris of somebody like this to get everything wrong and

then just think that they're in some position to make demands huh hilarious well that's troll number one folks we're troll hunting tonight let me get my music out okay let me see where the rest of my trolls were I think we've had enough UT we're going to go find some other trolls here you can watch my cloud

(29:33) rebunk explainer if you're still confused uh so the trails themselves are their own thing has to be one thing actually yeah we're assuming that there there's a couple different ways Bob Greener argues that we don't even need uh an object inside the orbs in order to control them that you can use like some kind of like magnetic beam thing to like move them around I think there has to be something inside there I think there has to be something inside there I I already did two podcasts this week guys that's why I

(30:16) wasn't on earlier yesterday and the day before they're going to be dropping I think tomorrow and then potentially the late the the next day or whatever the reason why we haven't been getting on shows like Joe Rogan and Sean Ryan is cuz we have an army of UFO nut jobs who are telling them not to talk to us that's the reality let's just be honest that's that's the reason okay give me one second guys uh I need a two-minute break so I can make my Martini oh we might have a Lulu sighting

(30:41) folks there might be a Lulu sighting a Lulu sighting Oh No Maybe not maybe not hello dogas okay guys one sec Martini time it's my teeny time my Tey oh no uhoh it's not clean folks this might be a dirty martini in multiple ways like this okay here we

(31:52) go okay let's get our friend Mr vodka out okay okay okay well that's the end of Mr vodka okay guys what up yeah should we get Lulu out here whoa swasa Ro rotation take that let's drop that up stream folks this ain't a this ain't a fascist [Applause] stream uh wait okay I think it's fine nobody cares about alcohol apparently you can just can't show drugs on screen but showing alcohol is apparently totally fine good old YouTube

(33:07) little flus come here flus everyone wants to see you okay see what we got going on here folks okay so what's the next thing here oh yeah it's a martini so if you want an aut make a martini uh you vodka with a little bit of what's it called again uh vermouth you put a little bit of vermouth in the glass swirl it around pour most of it out except for a tiny little bit and then you mix the vodka with uh ice and a little bit of olive juice to to taste and that's about it I mean it's pretty much just

(33:49) vodka pretty much just vodka oh is uh oh yeah I had some weird dreams too I just remembered one of them I was playing soccer how weird is that I can't remember what the other one was can't remember what the other one was okay we got the martini going hey Tony K thanks man uh I also talked with uh Dan show today briefly not going to reveal what we discussed but I can't tell if it's a troll or not so we're not really reporting on it I I just I can't tell I can't tell anymore uh blah blah

(34:46) blah blah blah uh where let's go troll hunting where was the troll Hunters oh okay so

yeah we can start with oh yeah let's start with the Lar oh my goodness guys hey Kathy okay this is the maximum troll hunt right here this is the final boss troll hunting right now I'm surprised that Shawn Ryan's not interested in uh I mean people definitely told Shawn Ryan that I'm a hoaxer or something like that 100% folks no I don't like crazy dreams yeah English I mean yeah English football yeah soccer I was playing soccer it was

(35:27) a dream man I already did Alex Jones I did Alex Jones and Tim pool doesn't really help my political stance I mean you know I mean I guess it doesn't really matter I don't really care oh no trajin ghost gez I'm sure that'll get you a lot of uh lot of fans good luck man good luck I got enough uh I got enough nut jobs for uh LARPing at me or whatever so one more doesn't really hurt so do your best my man okay let's see if we can get Lulu Lulu what's this come here what's this come here let's

(36:07) yeah guys we're going entier with some treats what's this the tritos the tritos is this could go badly guys this could go badly we're going to try to get Lou here what's this some tros oh yes good girl she seems like know when I'm streaming guys my brand my brand guys hello come here good girl good girl we pick the boo up she doesn't want to be picked up n that's a that's a hard no we'll try again later I don't know why like guys she was uh I was able to pick her up this morning she was all about it I had

(36:53) her on my lap it was super cute and I was sitting here going I was going damn it I wish I was streaming right now and then now she like she does not want to be picked up you can tell like when I try to pick her up she goes like really like dead limp dead weight and like tries to get as low as she can get it's really cute okay uh what is the point of the trail okay guys we're going to do a little side quest very quick side quest everybody very quick side quest okay here we go so for Cole and for anybody

(37:24) else who's new or whatever here when we see the these orbs come in here there's two effects that are going on okay first effect that's going on here is that they're ignoring gravity these orbs are just straight up ignoring gravity right um and the way it's ignoring gravity is by this bubble that we see around it so it's ignoring gravity but that's not enough ignoring gravity doesn't push you forward so you need two effects to happen you need to be ignoring gravity entirely like if we were going to make

(37:55) this alcohol float but then you also need something pushing it forward and we can tell that the pushing it Forward is not what's causing it to ignore gravity because if so you would need to push it like upward right to you'd have to be able to counteract gravity as well as push it forward this these orbs are straight up ignoring gravity and you can see the gravity engine in front of them here see this gravity engine in front of them here the lines in front of them it's hard to see in every frame that's why I was showing

(38:23) the other color version so these or the trails in front of them are pulling them forward like being on train tracks right she just doesn't like being picked up um so you can see them being pulled forward on train tracks unlike whatever tragon saying they definitely are perfectly

aligned with the direction of the orbs some people can't tell that we're looking at a real video here that's fine I mean it seems crazy to me that people can't tell we're looking at a real video um how many fake videos have you seen

(38:53) where like the center of focus goes off the screen doesn't really happen has realistic camera shake that increases when it gets zoomed in okay so yeah so that's the answer hopefully Cole that answers your question it's even easier to see here where you can see the the dark lines in front and then I think it's easy to see here as well in the super slowmo actually we really need to see the higher quality video This is why the higher quality one actually is pretty beneficial the higher quality video I

(39:27) think this really might be a higher quality video where is it this one so in the higher quality one you can actually see it much cleaner the trails even without the color change and so when it zooms out here you can clearly see the trail right here in front of this orb can see the trail in front of this orb right here yeah okay yeah yeah the reason why the orbs are TW it's the trails are twisting is because they're circling around the plane okay back to troll hunting guys why don't they use Auto tracking uh

(40:16) probably because they can't I don't we can't really say why but we can clearly tell they're not using Auto tracking right asking me why they're not autot tracking is like trying to ask me to like read someone's mind uh for some reason they can't they probably can't lock into the orbs would be my guess because the orbs are displacing SpaceTime themselves so they're manually tracking the plane right 100% it's manual tracking there's no doubt about that they're manually tracking This

(40:43) Plane here manually zooming in right that's zoom in like they know what's about to happen this higher quality version you can actually see the windows very faintly but you can see the windows plane might be depressurized as well could could account I mean we don't know we don't have other you know drone videos of commercial airliners so we don't really have anything to compare it to we don't know how they they've created a group chat where they invited anyone they could think of including

(41:15) Tucker Carlson no he did not accept LOL to try and start a mutiny to disconnect me from the MH370 case they are demanding an apology and for me to remove all my content what's with these people trying to disconnect me from my own work I've always been open to others investigating the case themselves and even have made the evidence available uh evidence we' found available to all they're bat signaling far-left YouTuber reaction video Enthusiast **Rebecca** Watson for help hilarious she can give us an update on

(41:53) which type of Christmas tree will kill us quicker the fake ones are the real real ones K we could have a space and allow this Mutiny to play out seems fun you in battle grock Prime let's take a look at his messages howdy **Rebecca** Watson I have no idea who you are or what you do but I'm leading a crew that's running a coup against you Mr you know who at just X Ashton Ashton Forbes all caps to break his grip which is making MH370 sick if you'd be interested in

helping can send me DM or retweet these threads until we

(42:32) # Mutiny Mutiny calls will you answer this is one of the cringiest one of the cringiest things I've ever seen in my life that's easily one of the cringiest things I've ever seen in my life guys okay what else we got so then he's been dm'ing people in my Discord right and they've just been sending me every single message and I'm just kind of got tired of it like I've been seeing it for like the last two days people saying here's what he's saying blah blah blah blah blah tell them no [redacted] that qanon name

(43:20) is a joke and a reference to Elon musk's tweet about hash Sama whatever Sam Alman I don't care I'm not laring anything Ashton Forbes is an idiot anyone who continues to follow him is an Ault of Personality this is coming from somebody who's laring as an AI guys I'm going to take him down this is not a LARP this is a vendetta oo spooky our team was building a whole story training our llm AI on X data way before we got roped into this MH 370x stuff so this guy claims to have a team behind him

(44:00) huh okay n it's fun man don't worry we're not going to spend too much time on this but I just want to I want to savor the moment like I'm about to savor this Olive right now guys we're breaking it real time here Parish B see how Ashton is training the audience to ridicule honest questions yeah yeah these are very very honest questions guys I'm training them to ridicule honest questions hang around Parish B we're going to be posting all evidence later on you can uh go ahead and prove prove

(44:51) to us how much you uh value investigations and and address in the questions and the evidence I can't wait to hear you address all the evidence can't [Music] wait it's getting meta guys trag's Ghost says he is treating me for example with such animosity apparently it's fine he's searching for the truth but not me unless it's what he agrees with wow you know really nail yourself up to that cross tragon ghost you're the victim [Music] here you guys are cracking me up man

(45:58) okay let's see next next uh DM oh this is the best part from Battle Croc Prime the AI larper he should do the right thing for the right reason we will not stop until he removes all his MH370 content from his ex in YouTube and turns over MH 370x admin to someone else yeah man I'm going to delete my whole Twitter because what because you demanded it I'm going to delete all my content man talk about delusional he needs to make a very sincere apology video to everyone he wrongly slandered what who was just trying to get him help

(46:42) not to get scammed I didn't ask for anybody's help I didn't ask for anyone's help I don't need your help battle grock Prime weird AI Lara guy go do something else man just go live your life he needs to come forward now about copyrights and trademarks branding deals and monetization what what branding deals dude hey uh Bernie yo do we need to come forward with my branding deals and all my trademarks and my copyrights here's a spoiler I don't have any uh yeah my YouTube's monetized you

(47:24) can see there's ads you know so thank you for supporting me in this tiny minor [Music] way because that is all going to come out no matter what he does at this point oh no I mean I've said been perfectly honest about everything the whole time and perfectly [Music] transparent too funny man they're talking about when I got scammed by the debunkers and the redditors uh like a month ago yeah this is why guys this is what the internet does to people folks guys I'm going to trademark four orbs guys I'm going to I'm going to make

(48:05) a billion dollars off my four orbs uh branding my branding scheme my four orbs gear four orbs wear would be sick [Music] though honestly it's a good idea it's a good idea I should I think I'm going to guys that's pending copyright that's pending copy you guys can't steal my thing now is there a four orbs I I don't have U our four orbs Channel or uh uh Reddit [Music] no well scary Dan has not copyright tried us and we played all his videos in stream so pretty bizarre pretty bizarre okay what's the next one guys we

(48:50) got we got messages to go through let's go how many different shows have I been on probably over 60 already yeah it's good content though at least 60 uh Sam 60 or more probably like a lot like a lot a lot I've been on investigate Earth podcast five excuse me five different times I've made I was thinking about it today I'll just pause this for a second if you were to add up all the money people have made off of me going on their shows including like the corridor Crews like uh you know 6 million followers for like

(49:31) the two different things they did about me uh I I bet you we might be close to a million dollars that we've raised for for people in alternative media probably close to a million you know how much money I've seen you know how much money I've made overall probably from this in the last six months almost six months of working on this half a year I probably made less than \$1,000 less than \$1,000 and I've given away like I don't know 5600 to people in my Discord that's just an estimate but it's

(50:07) it's a pretty accurate one so am I making money off this guys no let's just say my income my income for my normal job is over six figures okay so I don't this isn't my job not at all okay so and I prefer to keep my my very well-paying job as well so I think we've cleared up that air okay so yeah just keep in mind when you talk when people talk about grifters then they should be looking at the podcasters who are making tens of thousands and hundreds of thousands of dollars on us we're going to get to one

(50:46) of them in a minute the lore Lodge they've made tens of thousands of dollars off of me so and the story so they should have a a little bit more respect considering I'm literally paying their bills with the story that I've been putting forward and giving them content okay and that's the difference between the podcasters and me I'm the only one not doing it for money right these people are doing it because it's their job uh because that is going to all come on every second of every live stream

(51:18) every comment on weaponized 15sec Clips with massive X ad campaigns no lies no editing his own words I have no idea what he's talking about here at all though we are bringing

Forbes face to face or to face the mirror feel free to tell him all of this since that [redacted] blocked our team and we can't DM him manto man I'm an it dude yeah that's a good you can call me that if you want and then the guy who he's responding to says or girl I don't know who I got this from sure one L it let me make sure he gets

(51:51) these well I got them we posted them okay uh what are we who are we deleting oh well I'm gonna Todd you got taken care of by Sandy you shouldn't have attacked her shouldn't have attacked her I'm gonna let her I'm GNA let her keep you banned sorry bud don't attack my ad don't attack my mods okay followup folks boy it gets better yeah Lord L's the fat kid I don't know if he's fat it's a little chunky though but I don't really like to make fun of people for being big boned or

(52:30) whatever right people are whatever they are Ashton's a oh Parish God we're getting good comments in the chat Ashton's a company man guys remember that what does that mean okay so then guys here this is where it gets spicy oh let's get the music battle grock Prime battle grock Prime to Mr Forbes the Deep State the Deep State isn't coming for you I am Luke lawrenson you guys want to know a funny story he sent me this picture told me to show Salvatore Pas this picture and said that if I showed anybody this picture it

(53:22) would get people killed he literally told me that so I showed it to Salvador Pas you know what Salvador Pas said I don't know what the hell that is I'm pretty sure no one's getting killed for this picture uh Luke lawrenson Jesus man yikes my guy yikes does is this supposed to be like an AI picture of him pretending to be the Satoshi guy is this what this whole Satoshi Makoto thing was all about guys it gets cringier it gets cringier I'm probably not going to post the other I have other messages as well on my Discord I just I

(54:03) don't care I just picked the ones that seem the cringiest should I send those too do whatever you want Ashton wanted to grift off MH370 I want to stop I think it says him oh look at me a picture in uh in a diving suit with my aviators on folks oh my God Luke lawrenson everybody it really just Explains It All doesn't it just Explains It All imagine if I post tried to if I said half this stuff people would never stop making fun of me never and I and I they would deserve to they would deserve to oh look at this we got a black and white badass

(54:48) looking picture the chat has attached to Forbes because they used they're used to seeing his lion face every day it's time for me to properly introduce myself Jesus Christ oh my God my God man I wonder how much you had to pay these women to take pictures with [Music] them oh shirtless picture time for me to properly introduce myself this is like like this reminds me of I don't know if you guys ever watched Tosh.0 there's a Tosh.

(55:33) O one where uh a guy's like this big buffed out guy or whatever and he's never had sex with a woman and it talks about how he's trying to get laid for the first time like that's what this guy reminds me of like 100% this is this is him basically look at me this ain't a lar bro this is a mutiny look at me with the my I'm trying to look cool in front of this car are I mean oh my god well Luke lawrenson good luck man the internet never forgets my dude the internet never

forgets good luck with that Mutiny cheers to you

(56:17) sir oh no I [Music] spilled it's not a bad spill we're [Music] good I can never imagine being so upset that I would ever send messages like this or pictures like this it was so people were saying like oh ignore him ignore the trolls guys this is too funny this is too funny folks this is just too too funny I saw this and I'm sitting there going I would never have doxed him I don't care who he was he just why would he dox himself the blue ches olives are amazing by the way yeah so I mean I I don't know what to say

(57:17) folks incredible incredible content guys Doc is himself doesn't even care Oh Tasha's a podcast on YouTube now wow shirtless Aviator picks folks okay let's see what other trolls we can find guys let's see what other trolls we can find very serious stream tonight folks very serious stream okay oh we had uh oh lur Lodge was in our replies somewhere which which post were they in I think they were in this one actually I don't know maybe this one let's check Joseph Dunford first here we go

(58:26) this was a great find by this guy he found this budget thing oh this is already been debunked it's an animation from a video game everybody look it's the what's this guy's name I literally don't have any idea what this guy's name is like why do all these YouTubers have the dumbest looking pictures on their videos I don't even want to give them the extra click how do I I don't even know how to get to the picture they've all got the dumbest looking pictures like my God man some ordinary

(59:04) gamers I wish the ordinary gamers would stick to gaming and leave the science to everybody else um where is he you tell the truth this is one of my favorite you tell the truth tell the truth m m mutahar whatever yeah he's got 3 million subscribers he doesn't need our clicks honestly I have nothing against the other people but they should probably stay in their Lane it's like you guys probably don't remember but um a couple weeks ago so we saw there was like a round table with like train wreck and xqc and stuff like that and

(1:00:00) the videos came up and they're like oh that that's so dumb blah blah blah right and one guy's like trying to be like no it's actually pretty crazy and they just kind of dismiss him it's like yeah just let the The Gamers and the twitch personalities just stay in your own lane folks leave the advanced science for the serious people let's see what we got going on here oh there we go ooh meta it's meta right now folks getting real meta you are mofo gangster for this where is it I don't even know where the the post

(1:00:43) is maybe probably show more replies is dangerous it's dangerous to click on more a lot of people told me I need to get more security oh here we go we found one I'm sure he's losing sleep over this ha that's one of those hahas where they're like crying through the CH through their mask right everybody wants to single people out and celebrate some big reveal you've gotten absolutely nowhere but in a web of your own delusions most of it if true just delivered backwards and underwhelming doesn't even make sense let's assume the

(1:01:18) videos are real I'm positive they are now what there's no one to tell no one to come in and pet Pat you pay you on the back I think it means Pat you on the back and tell you good work kid people have to realize there's three choices become them don't know what that's supposed to mean but most can't hold a 9 to 5 let alone knowledge of the ultimate power two just go with the flow and enjoy your Apple products AR is coming next month chill us out a bit three build your own parallel economy system

(1:01:46) that functions at scale and is not immediately corrupted by yeah we're going to go build our own parallel economy system guys let's go build our own parallel economy system uh the round TBL is I think it was on train W's like YouTube channel for Cole it was like a couple weeks ago I honestly don't remember off top of my head crazy man oh man how do we find it oh look it's trag's ghost is this one of those questions I couldn't answer I said right here I I gave him another answer here it's a big leap it appears his only

(1:02:45) involvement is providing spy planes for the search effort okay that's that's not enough that wasn't even a direct quote from him just to be honest it was a direct quote from from somebody else we don't know that he he supplied the spy planes we were trying to connect him directly to cop tiger yesterday it's not as easy as we could [Music] hope uh [Music] hm yes we've seen this boy same exact thing all again huh spamming the same message from trag's Ghost okay is that seems to be the gim **mick**

(1:03:36) right just Spam the message and pretend like I haven't addressed it oh I'm looking for the other troll post I wanted to see this is an [Music] obsession I just thought this video was **debunked** months ago upside down face okay well move on then later good night Joey later Sam or later whoever was leaving uh where is man trag's ghost and all our replies yo guys I don't know where it is we might actually have to look him up manually okay L LOD we're coming for you you wanted the attention the lore

(1:04:30) Lodge 2,000 followers 300,000 uh subscribers on Twitter oh there it is there they even retweeted it these guys are so upset dude the are so upset okay okay here it is oh it was it was in this one it was in this one it was in the reply to this guy we were we were right there oh God this is going to be good guys let me have another sip of my martini I'm trying to even remember how this Feud started I've literally never gone after

(1:05:35) anybody who was a podcaster except for I guess you could say Julian Dory where I told him afterwards that I was going to have to come out hard against him because of his lies on his podcast which is now deleted which is now deleted the lur Lodge one was bizarre like I had no problem when I went on with them there was no issue with it although I could tell that they were at some derision because of the way they kind of laughed at some of the stuff that I said I could tell that they were like offended uh especially when I like kind

(1:06:04) of made fun of the whole idea that a plane can't get shot down and and they're like oh well they US Government just quarantined off hundreds of miles of ocean and somehow made it so that nobody saw any pieces of debris okay sure believe whatever you want to believe man

that's more that's more nonsensical than the plane crashing into the ocean but you know do you do you um and and that's why like you know we make fun of the fact that they're so young right cuz they were just literally little kids when the plane crashed so

(1:06:35) they just have no idea right they're they're getting all their information excuse me all their information is coming secondhand oh I remember how the feud started cuz there was I didn't have anything wrong with them but then they started coming into my DMs afterwards in fact should I should I pull the DMs so I don't even remember maybe I'm in the wrong guys it's been a while no I think Julian wiped it oh there it is okay let's see I don't know how to do this without showing my DMs wait maybe I can do like

(1:07:44) this hold on I think I know a way let's switch our full screen yeah we do it like this okay I think this will work okay here we go guys it is lur Lodge DM times let's see if I was in the wrong or if they were in the wrong guys let's find out let's find out okay 60 Minutes blah blah blah this is where we're organizing it oh wait is my man is personal information going to get shown here I don't think I ever gave them anything personal so oh well there goes my email address but I've already shed my email address

(1:08:29) several times so it's fine oh man if I show any of their personal information I'm going to have to delete the stream hold on better double check let me just look through it real quick okay okay this let me to look through okay yeah here we go okay so we did the okay here we go we did the first part right didn't think anything went wrong with it it was was legit no problem right hey just let you know ahead of time this just comes out of nowhere right so you guys be the judges okay just to let you know ahead of time our

(1:09:31) part two argues largely for a more mundane explanation such as the aircraft being shot down and covered up or a lithium ion battery fire taking it out and being covered up we do talk about your theory but only in terms of VFX work and what we see is a couple technical issues wow GT thanks man appreciate you bud yeah that guy needs a he needs some help we have made a deliberate effort not to Target you as an individual or researcher but rather to address the evidence directly we're very happy to have you back on to address what we've argued and

(1:10:13) I didn't want you to feel like we had to have you on just to put you on just just on a cross as I said in a discussion after the show I do respect what you're doing I don't want to give anyone the impression that you're doing anything less than honest so basically they're just coming out and saying well we're going to go ahead and make a **debunk** video about you now cuz they wanted more clicks right embarrassing man lur LOD you're straight grade a grifters straight to your face there you

(1:10:41) go we're looking straight at the DM that you sent to me unsolicited about it you literally were going to come out and try to **debunk** it but you're not even going to come up with your own not even coming up with your own opinions you were just using **Mick** West's already shoty **debunk** and let's just address that real quick just so that everybody's watching this stream

right now knows this isn't a statement of opinion this is a statement of fact the VFX **debunk** that you see here does not match this VFX this does not

(1:11:14) match this is not in our videos the closest frame is this one right here and you can see that it doesn't match I watched your video where you falsified it and you stood stood there side by side and tried to modify it to get it to match and then you gave up after you couldn't quite get it to match and you didn't want it to take like 5 hours while you were on stream it was an embarrassment you should never have made that video that's the reality of it right you don't have people come on and

(1:11:41) then try to **debunk** them in a subsequent video anyone can read this message and tell what you're doing man anyone can read this message and tell exactly what you're doing do Force you can come back tomorrow man I don't need concern trolls do Force I saw you on my Twitter as well if I see you doing that again it's going to be permanent block next time okay so let's see what else I said no problem man it's your show I appreciate you reaching out to me in advance my only advice would be to read

(1:12:16) the comments on Julian Danny's podcast but as long as you're not making any deceptive statements I don't think there would be any issue I think people seem to underestimate the intelligence of common people who don't live on **Reddit** ch- Ching I appreciate the willingness to have a cordial disagreements I really do we definitely checked out the comments we have a couple of friends of ours working to try to create something similar to the mq1 C video from scratch to determine if it's possible rather

(1:12:46) than just going off of what Nico said huh where's that video never saw that one which of those friends are that I Lodge definitely didn't see that in your part two so somebody tried to make it and I guess they failed they just released another video where they didn't even try to deunk it didn't even try to recreate it instead they sat on a couch laughing should tell you a lot anyway if you or anyone else can find the hoaxter and provide the source files are \$145,000 reward you can pass the word

(1:13:19) on personally we're less interested in proving that the original is fake than we are in determine if it could have been faked so exactly they're not even trying to determine if the video is fake they're just trying to spread disinformation straight from the horse's mouth right there personally we're less interested in proving that their original is fake then we are in determining if it could have been faked this is **Reddit** brain for you right here guys given the lack of anyone finding the source files if it is fake then

(1:13:49) things would likely created from scratch exactly they set it right there themselves it would have been been created from scratch so what does that mean that means you wouldn't be able to look at the Pyromania VFX and look at our effect and get it to match because it would have been created from scratch so basically the opposite of what you did in your part two video this is I'm not trying to be mean I'm just trying to go ahead and tell you lur Lodge that I'm just going to refute your arguments on the stream right

(1:14:14) now hopefully you don't take this personally the only person with the source files would be the creator of the video exactly I agree I think that's where the **debunkers** should be spending the resources finding that person \$145,000 on the line given the attention seems like it should be pretty easy to do do you have any idea where ridon may have obtain the videos the the name screams forchan but obviously going back even a few days on forchan is a struggle yes from Lieutenant Commander Edward C Linn either directly or indirectly I'm

(1:14:51) going to turn the music off for a second the timeline of his case is too narrow charges too severe would you consider it possible these were Recreations of the event based on what Edward C Linn claims happened what what Edward C Linn was like Hey man go make some videos of orbs with the gravity engines in front of them okay definitely not far too complex and difficult I have Jeffrey Ford on record lead VFX expert from endgame Captain America and Spider-Man no way home saying it would take four 6 months cordor crew didn't even try to make it

(1:15:26) that should tell you a lot we're looking at an mq1 C gry Eagle drone which has been proven to go back to 2014 this is classified information and footage who even knew what they looked like back then and what the payloads and cameras on the wings were like the only one that even makes sense to make this is the US government and a scop angle makes no sense they never promoted this footage I did n and a half years later what would even be the point of Faking this normies aren't going to go believe aliens took the plane

(1:15:55) how would they know we would never find the plane not even 9 years later if we find the plane everything falls apart well the mq1 C has been in service since 1994 is massively present in video games like Call of Duty Modern Warfare is it the camera placement has public been 2011 okay so it seems like they're just mad that they couldn't **debunk** it so that that was it did I act inappropriately to them guys I don't think think so I'd say trying to make a follow-up video to **debunk** your guest is pretty

(1:16:33) inappropriate so these guys claimed that they had some friends trying to make it as well that never happened seems like everybody who says they can make the videos fails so now let's see what we can find in our in our followup here Ashton you yourself admitted they were fake I did did I hm I don't remember that please you have built a huge and passionate following here that you could use to seek actual **truth** on more than just MH370 but if that's ever going to happen you've got to let the videos go guys let

(1:17:05) the videos go this is literal children telling me an adult what I should do with my time I'm going to pass on that thanks for the unsolicited advice my response you kids need to grow up and go waste your time doing something else yep why do you think calling two grown men chilled kids just because they disagree with you and make you look just to make oh just because they disagree with you makes you look smart if anything it makes you look immature Aiden you are a child stop throwing a tantrum it's embarrassing for

(1:17:43) you ask yourself why you're even in my replies I don't go to your replies or your videos

cuz I don't care about you or or think about you I gave you the attention you sought one of your highest monetized videos ever videos ever you've made more money off this case than most when you grow up you'll realize how ignorant you've been I can put you in touch with the Skinwalker Ranch producer if you want to go make videos about Dogman or whatever buzz off now we're doing hard **truths** in real time

(1:18:11) folks look man keep biting hands all you want but it's not going to take you anywhere I was trying to offer you a path to being taken seriously why are all these people so self-righteous why are they all so self-righteous F chat what is the deal with all these self-righteous people nobody should be talking about tantrums considering the one you threw in our chat your followers weren't there so they didn't see it but we do have the whole thing recorded oh no well I just showed all your DMs so good luck you came to our chat started

(1:18:45) throwing around insults you mean in the middle of you talking smack about me on your video that I just happened to see because I was going to my YouTube to start up a stream and I'm going huh lur LOD is doing a live stream about me without me being there well I just showed the DMS did it seem like the I was going to get ready to be ambushed by some people coming up with their own little react video I think you deserved it you came into our chat starting throwing around insults and then made two podcast episodes where you called us

(1:19:19) names and embarrassed Yourself by attacking us for things we didn't even say because you couldn't bothered to watch the video you were reacting to I'm not even angry that's just sad you're like 40 grow up yeah I guess so maybe I'll work on it everyone is so self-righteous on the internet huh one more post guys one more so then somebody replied to them I was an avid watcher of the lore Lodge I always believing they were open to different opinions now I feel like they're more interested in their bank

(1:19:45) account until the **truth** comes out about MH370 look at all that's presented but stay open-minded Ashton is doing an amazing job thanks Loki appreciate you we brought Ashton on the show and let him talk talk even though a lot of what he said sounded off Jesus we wanted to hear him and wanted to be polite about it then we did our own work on the videos and came to an honest conclusion that they're fake did you we just showed the whole DMS man we just showed them all you didn't you weren't able to recreate it at all even

(1:20:17) though you said in your DMs you were trying you failed we also said we think the official narrative is bogus when Ashton became aware that that we had dared to disagree with him even the extremely respectful manner in which we presented it he went ballistic on us and insulted us and our followers during one of our live streams in the chat I literally opened up YouTube and saw you talking smack about me in a live stream in the middle of it I really don't care about you but when I open up a lot my YouTube and you're

(1:20:50) sitting there in the front talking smack about me yeah I went in there and I told you you're a child like I'm telling you you're a child right now for crying like a little baby [REDACTED] then he went and made two podcasts I didn't make any podcasts I literally just live streamed the

reaction so that people could see what transparency looks like in reaction to our content didn't actually watch our second video before doing it kept insulting us and calling us kids despite the fact that we're both

(1:21:16) grown adults who've been doing this much longer than he has this is like this is like TJ Allard right now then only then did he become openly confrontational with him dude you were literally making a live stream about me when I caught you you guys everybody in this chat has seen the DMS uh lur Lodge they've all seen all the DMs I think I was extremely cordial with you guys the whole time I showed the full DMS none none ignored we then even offered to have him back open uh the opportunity to come

(1:21:48) back on the show before all and discuss it with us and instead he blocked us yeah I blocked you that's 100% true and I would never do a show with you again and I think that nobody should go on the lore lodge because they're just little kids and they don't seem to understand how to respect their guests and they definitely will go and go behind your back and make little videos like **debunk**ing you or whatever which is just childish and even more childish is the idea that the plane was shot down it's

(1:22:18) just stupid no offense it's just stupid I mean you can believe whatever you want but the debris field would be hundreds of miles just use standard physics when a plane's flying in the air and it gets hit the debris is going to continue to move forward it's actually going to go everywhere and the plane's at 40,000 ft man where do you think all that debris is going to go everywhere you can't quarantine off the entire ocean there's boats everywhere man they're going to pick up debris all over the place plane's

(1:22:44) going to be in thousands of pieces so yes it's pretty stupid your idea was pretty dumb sorry go talk to Cindy Henry may you can interview Cindy Henry you have an awesome chat with her she thinks the plane was shot down too go nuts okay and then let's see what we got last part last paragraph I mean God we got whole paragraphs here I'm not sure where the stuff about money is coming from Green Dot Aviation was way smaller than we are and they made a video basically saying the official narrative is definitely right and got way more

(1:23:14) views and therefore way more money because I didn't do an interview with Green Dot I gave you all the attention that your fans needed gave you all what you needed there in your response was we're going to make a backstabbing **debunk** video and talk smack about you on our live stream well that's what makes you children and that's why you got this as a [Music] response spoiler no one's making you come into my replies so feel free okay that was our troll hunting feature for tonight guys troll hunting is over

(1:23:54) hope you enjoyed the troll hunting okay yeah we were doing troll hunting guys that was a that was a little thing that I do we only do it like maybe once a week where we just do a little troll hunting we react to the trolls that are out there uh the self-righteousness of them Etc pretty fun okay so next thing we need to do all evidence okay uh yeah there's probably more trolls that's enough I'm sure I missed a lot of trolls honestly I'm sure I missed a lot yeah that that

was our troll hunt feature we we spent an hour on troll

(1:24:45) hunting that's good maybe 45 minutes so keep it up then we can uh we can have more content for our next troll hunt out there guys back to the case though back to the case now we're not done yet okay so now for our **debunk**ers out there welcome to the evidence oh man do we have to go through the whole thing it's 14 pages oh boy this going to be a lot let me see how about how do we do this let's just sit here and think about what we would want to add so the first part's going to be fine ER equals epr macroscopic Quantum

(1:25:33) coherence Bose iron sign condensate lk99 chat GPT and use of quantum computers yeah I'm going to post this I'm posting this online we'll share it that's the next play that we're doing here um s perspective changes a Time Sil coordinates shifts Pro the locations of the nicobar islands what about the small details that we can add I think we're going to move away from the 3D stereoscopic requirement do we ever post The Intercept location I think we can add that maybe we posted it down here

(1:27:21) for oh yeah I mean Edward there's no question the government wants to keep this covered up right like everything kind of explains itself right uh I don't know if the yeah I mean the airline industry would become obsolete right if we can teleport objects I don't think that people would stop Flying though people would think that but I don't think so oh we want to add the dynamic uh involving clouds right I'm going to get rid of the whole Mo the whole form thing I think I'm going to change this clouds

(1:28:17) move and evolve dynamically with that we're dropping evidence right now folks I'm editing it right now and then we're going to post it now we're going to post it I think it's Hilo one right

(1:29:25) yeah he one what's next for you in the channel if all there will be no definitive answers um I might write a book I hate writing though I just hate writing man so probably not unless I lose my job then probably write a book I probably do something lazy like just combine all my tweets into a book then try to sell it just to have uh just to get the word out there yeah dictation could make it easier huh

(1:30:32) yeah maybe just have Chad GPT what if I wrote a book that's written by Chad GPT just feeded all my stuff right it's actually a good idea yeah a book I feel like a book might even be like I don't know if I got a good publisher probably would be a pretty high seller honestly so would be a pretty amazing book biggest red flags in the original story you mean the story that's out there The Narrative uh plane not crashing into the ocean probably you're going to get we're going to get to it here in a second

(1:31:09) basically you want to read what we're posting here spell pal wrong but it corrected me what was the one cers us a groundbased computers oh now it's down here um we're going to go through it all but you guys got to read it I'm not going to read it all out I lose my voice it's 14 pages it's a lot so nrl22 was

(1:32:15) sent up in 2006 presumed to be a relay satellite it was also the first launch related to the cers system so it makes a lot of sense I'm not seeking money but the matter of getting the book out there is to get the the evidence out there it's a good way there's the two best ways are a book and documentary those are the two best ways those are the two best ways I keep thinking about if I did make money then I would want to be able to give it back to the families but I don't know any way to do that

(1:32:52) or at least I wouldn't want to give all of it I mean I put in work on this as well but I want to give back some for sure because I think the family's got screwed over but the reality is it shouldn't be me paying the family it should be the US government okay so we have the USA 229 fly over here we had the video explainer here satellite explainer video that I made sentient AI is used to operationalize satellites fuse multi yep okay sentient can track aircraft movement the satellite video computer program may be sentient producing a

(1:33:35) large Battlefield space cameras on equipment are made for filming these events M q1c would have a aerial package right let's change this to yeah original Source may have been come from a private form uh

(1:35:13) this I don't I don't doubt they're the first guys for Eve yeah locking Mart needs to be paying these people locking makes per year it's absurd the revenues are in like the 50 billion plus this is actually a fact not a speculation okay should be smoke okay requirements how how to

(1:36:24) accurately animate the cameras how the clouds form at low altitudes how to accurately light the volume atric clouds recreate exactly what a m370 looks like what the turning radius of boing in certain descent altitude where the plane would have been at the exact time accurate coordinate shifts relative to location how to animate the coordinate shifts what the weather was like in the nicobar islands how to create the smoke Trail coming from the back of the plane in two videos uh yeah I'm going to move this one I want to flow

(1:37:06) better Tim pool like didn't even let me finish my list I had so much stuff what thermal looks like level fo the experts probably don't need that one I don't like this one how to animate the heat signature and the acent changes oh yeah accurate camera shake and increased shake when zooming in knowledge of military classifi systems and know the public knows that the military is using citric session frame rate difference what type of mouse they use use satellites in operation what false color IR looks like

(1:37:59) I'm going to get rid of 3D stereoscopic imagery one we don't know for sure that that's a factual statement Tim P said that a Bitcoin billionaire could have created this and then he could have made it an Unreal Engine which is just not true but I don't want to be disrespectful he had me on a show how to animate orbs how to create particle system for the forward facing engine how to animate the final frames with the orb flatten the plane blurs what the mq1 C drone looks like accurate delay in tracking the

(1:38:33) plane manually from the operator yep what mq drone payload is where the payload is located to get the exact I think we're going [Music] to that's fine we don't need even we can just say understanding of 0 point sinyal energy patterns of voltage patterns equilateral 0 point equal okay so far so good

(1:40:00) what weird where do you guys see kmf I don't even see him in the chat I don't get it are you seeing people in the chat that I can't even see if so that's pretty funny okay flight path flight path explainer video that's weird you guys are seeing people that I can't see in the chat huh I didn't know that was a thing isn't it funny how the trolls block me so that I can't see their troll comments where I don't see him how do they pull that off bottom I mean you guys can look at the

(1:41:03) live stream and see that I can't see it right this is how the trolls operate though the best part is remember how they used to oh top chat versus live chat I don't see it at all am I missing people weird how do they have it huh weird yeah so the way these these uh [REDACTED] tier trolls work is that they block me so that I can't see their comments so that I can't block them that's how they

(1:42:07) work like this is how pathetic losers like king milk fart are is uh no if I blocked them they wouldn't be able to have their posts up here they wouldn't be able to post at all in my in my chat the reason reason why they do that is because that prevents them from getting blocked because they want to be able to troll without getting blocked out so that's how they operate it's pretty funny and the reason why it's funny is it's ironic because remember how they would cry about how I block them because they know

(1:42:39) that's the last thing they want is they want to be able to troll unabated right that's how big of losers these people are king milk fart's one of the biggest losers on the entire planet the entire planet dude I have live chat on he goes to the back of his mom's car when he does live streams because his house is such crapped here that he doesn't want anyone to see the crappy conditions he lives in I saw it real one of the things like dude's just a complete loser in every respect of the

(1:43:20) word uh red panda koala was telling me today that his parents because he works for his mom that his mom they had to remove him from their website because he's such a piece of crap that people were were doxing him and looking for him so they actually had to remove him from their website because they were embarrassed of Their Own Child what a pathetic loser holy crap he's literally The Biggest Loser in the whole world like just complete [REDACTED] tier loser it's incredible man dude needs to just literally

(1:43:58) just find a new life to have man imagine getting banned permanently banned from Twitter multiple times because you're such a piece of crap human being permanently banned multiple times keeps coming back it's like permanent chronic redit **Reddit** brain right yeah he knows he can't CU he blocked me so that I can't see his comments because he's that much of a loser guys the sad part is he's an adult he's like 35 years old he's been arrested multiple times

he's just a total his real name is Joseph Marinello you guys

(1:44:41) can look him up Joseph Marinello is his real name look him up guy's been arrested I've seen his arrest record I've seen him get arrested you guys want to know a story too here's a real story about Joseph Marinello so somebody sent me his arrest record and I look him up and I call the the courthouse somebody got his uh arrest record removed and he's he's actually tweeted at uh Lou Lando's lawyer before so most likely Lou alzano bailed this loser out of jail to be his little like slave online and troll people he's

(1:45:26) like literally Lando's little [REDACTED] Joseph Marinello is king milk fart 100% how funny is that I looked him up I'm an investigator don't mess with investigators man I'll find out everything about you I'm going to do you a favor and not tell any more about you king milk fart AKA Joseph Marinello the sad part is he thinks he's going to what what get the best of me and troll me buddy I know about your whole life I know about your whole life buddy I know how big of a loser you are you're a piece of crap in every

(1:46:04) single aspect of your life man okay let me going to finish this up though not get sidetracked yeah Lando has like little troll slaves that uh he uses to troll people online it's embarrassing this is why Lando blocked me by the way guys it's because I found out about this so don't trust L alzano which should be obvious you never trust anybody who redacts their own book okay so plane goes east so here's the flight path oh yeah that milk fart guy is Raging right now guys J AKA Joseph

(1:47:10) Marinello just look him up huge loser he post stuff about his Warhammer figures grow up dude such a loser Jesus go back to painting your figure playing with your dolls dude's just desperate for attention because he's got nobody in his life if he wasn't such a piece of crap human being he probably would people care about him too that's a sad part okay I think this part's good though also like a 99% chance he's one of the redditors as well like a 99.

(1:48:07) 9% chance dude's got some of the most chronic reddit reddit syndrome I've ever seen trying to remember what he was arrested for maybe I should pull up his arrest record we can look at it together man big mistake coming and trolling me in my chat see what we got by the way this rest record is public so technically not doxing man I got a lot of troll stuff to go through here hold on oh boy lot of stuff let's see if we can find it real [Music]

(1:49:19) quick so this was in the beginning one sec folks might have to save it for next time God I've got so much stuff I don't even know where I saved it so much stuff I don't even know where I saved it let's check this one real quick quick H yeah I don't know I have to find it later maybe next time where I put it huh I don't know it's out there

(1:50:28) somewhere for the records uh all those trolls by the way um I know who they all are all of them just a heads up all your buddies too like clouse and all them I know who they all are guys if you want to troll like some somebody who calls themselves an investigator just you should be careful man you're not Anonymous as much as you wish you were it's easy to find

your information out people are happy to give it to me I don't know we'll find it later guys oh I could boot him if I want I just don't care let him

(1:51:12) talk okay so to Cole are you still in the chat Cole yeah so here's the best evidence no debris field found most expensive search in history no black boxes black boxes will never be found because they're solid state drives so if we found them we'd be able to prove this plane didn't crash in the South Indian Ocean the Sosa system would have heard the tight the uh plane crash just like how it heard it pop Western Australian Diego Garcia hydrophones had no acoustic detections uh there's actually like four

(1:51:49) states Thailand India Indonesia and Jordan would have seen the plane on radar uh Diego Garcia what's the other one Coco islands and pine Gap I track it okay so that should have tracked it was on active shipping route but no Witnesses saw it despite it crashing in early morning hours official flight path has a running out of gas nowhere else for it to go official search searched everywhere along the final Arc uh this part we don't really need we're going to change this to um experts say plane crashed at

(1:52:54) 15,000 ft per minute would have exploded into thousand pieces we'll move this one up probably move this one up too oops okay oh now I'm just wondering where I put that arrest record h H

(1:54:01) weird it's very weird I have to find oh there it is defendant information Joseph Marin represented by Bay and Hyde birth year 1987 36 years old arrest date 1022 22 bond amount \$55,000 arrested by local Canton Police disorderly conduct and criminal mischief in the second degree I wonder what he plead guys someone made this go away I wonder if he's got buddies and it help to make this charge go away I don't think it's photoshopped anyway people are happy to share information about this guy because he's a terrible

(1:55:11) person how come I didn't find that oh because I didn't search search correctly let me see that shows up yeah okay okay I know how to find it next time now cool okay uh **debunk** in the debris no debris field found by the official search above or below water at least 42 I think it was 42 planes double check that yeah I think he got it expunged oh that's not him that's a different Joseph marinell sure different Joseph W Marin in the same city in the same place whatever he wants to say then I guess it's not

(1:56:07) docin yeah sorry we're getting to the motive I need to double check these numbers [Music] how did we find those numbers I'm just going to say let's say over 80 planes and boats okay consistent with fire blah blah blah some debris has burn marks on it flap run match non-unique serial number scratch only missing 777 thermal matches exactly silhouette

(1:57:18) coordinates military proven F satellites yeah okay this is good yeah people usually start their sentence with LMFAO when they're uh when they're raging every stands up from include workers wife co-workers no indication of suicide I'm going to okay okay cop tiger

(1:58:23) exercises now I'm wondering if the cop tiger exercises Cobra gold dates 2014 okay why is this not loading up think we'll just change this I'm not sure about the start dates of this this is taking forever to load what is

(1:59:46) this here we go oh so maybe Cobra gold began February 11th yeah okay okay okay okay Cobra gold Begins for 11th let's let's change this to military exercises that should be better it's more accurate okay batteries skipped to security cleanings 19 Witnesses gas should be a last for three hours where's that part

(2:00:55) okay we need to add some more stuff here for cargo bay BL okay he's

(2:02:17) gone yeah I'm not going to let him derail you guys he's gone he'll never be back don't worry the answer is no he doesn't get enough attention from his mother who he lives with and he works for cuz he's a loser he's probably unemployable as well let's move this one up yeah why won't Jeremy Corbell look at this good question guys uh I think cuz he only looks at stuff that he gets

(2:03:21) firsthand right yeah I appreciate you guys in the support don't worry I think we got rid of the trolls they're gone now if you guys sign find any other trolls like that who are trying to like block me so that they can't be seen or whatever just let me know I'll just ban them it's easy takes five seconds main witness Catherine T the funny part is how um these people remember when they used to to rage at me cuz I blocked people they didn't like even though that's like literally their

(2:04:16) MO their wholeo is to block people that they don't want to be able to see their toxic comments so that they can't get they can't get blocked in return pretty ironic huh hey Ellie how's it going not sure uh I did reach out to Ken wheeler actually I asked him if I thought if he thought teleportation was possible I didn't get a reply back email but he probably gets about a thousand emails collaborating with who Jeremy Corbell probably not man probably [Music] not if they reach out to me I definitely

(2:05:04) would talk to them but I think that what we're looking at here is a lot too much for most UFO people they're more interested in jellyfish stuff right I'm sitting here talking about actual science they're not really interested in doing the science they just want to be told like oh the science is possible or not right what we're doing is we're figuring out how the science Works ourselves okay this is probably still correct this chat GPT thing might get contradicted it's fine I have nothing against Jeremy

(2:05:46) although I probably should I probably owe him an apology for one of my rude messages that I sent him back in the day but that was back when I didn't know who I could trust and who I couldn't we're going to get to the motives here we're almost there conditional

(2:06:51) should we delete the general Flynn part on this now I'm going delete that part now the general Flynn's following us uh let's see man I've got a lot of uh supporters that are uh on team

Trump it's probably going to flip me over peer pressure huh when all your supporters are voting for somebody it's a lot of a lot of pressure to go along with the crowd man any any politician that came out that they said that they would reveal this technology though I would vote for in a heartbeat I don't care who

(2:07:36) it is or what they stand for otherwise okay call me back uh I've already got some of these Foy rejected I think it was the Air Force rejected them I don't know can't remember which one yeah there's not a lot of great options there's not a lot of great options for who we're voting for yeah if you missed the very beginning of the podcast of the stream tonight you might want to go back afterwards and check it out might want to go back and check it out Trump for the win he also might be the Antichrist though so there's

(2:08:31) that I think Trump's going to win like big time I think that I think that Joe Biden will step down and they'll they'll select somebody else to be his replacement and they're going to do that probably at the last minute which is pretty much anytime now at this point I think that the last election showed that from the Democrat side you don't even need to run a campaign and you'll get people voting for you they didn't even Joe Biden didn't even run a campaign last time you like didn't even have

(2:09:05) events it's just kind of sad man I expected more okay uh I think we're good with all this but yeah politics is so [REDACTED] now man it's just gotten worse and worse um okay motive is coming up here for you Cole hope you're still with us Cole hog boss I'm not even going repeat that no I'm going to talk about that yeah just in case you guys are curious I have it on good authority that um what are they called over Unity devices just another word for free energy device pretty much that they're real and the

(2:10:05) only way the only thing you have to do to understand that they're real is realize that you just open the system up to the vacuum state of SpaceTime okay Cole time Cole this is for you buddy motive 20 free scale semiconductor scientists Engineers 20 people flying on the same plane is too many people breaks company policies plane was likely doomed didn't land a panang uh for unknown reasons Landing in the ocean would have broken apart the plane 2005 NSA security security report on Commercial room temperature super

(2:10:47) conductivity I think we're going to say room temperature super conductive microchips microchip development that references free scale nine times so they had there we found an NSA security airport references free scale semiconductors talking about room temperature superconductor microchips those are used in quantum computers they launch a major initiative serving RF power needs VIP may have played a played their get out okay so here's the four possibilities for you yeah I would vote for RFK it's probably just be honest

(2:11:24) with you guys right now it's probably going to come down to RFK or Trump for me um VIP passenger may have played their get out of jail free card uh could have prevented the the IP from going to China this is the letter to Asen forb scenario possibly preventing the IP that's related to technology being deployed so there this is like where you're trying to save your I your

technology pretty much and then the last one is you could be testing the technology on Doom plane we couldn't find the itineraries it's

(2:11:52) too hard we can't even find the names of all of them we've been looking hard yeah if I was President I would dismantle the FBI I would dismantle the CDC and I'd probably dismantle the CIA as well that would definitely get me killed no doubt they would JFK the [ ] out of me no question CDC is completely useless they don't do anything um FBI is corrupt as hell we don't need them you can just have the police do the FBI's job uh and then the CIA I just don't think we should have a intelligence

(2:12:33) agency that has more power than the rest of our government okay orb analysis super conductivity uh okay nor gravity I think a lot of this is repeated yeah we we already have a lot of this repeated I'm going to remove some of this acceleration yeah okay I think we already have a lot of this I think I'm going to leave the science part as is for now I'll probably have to edit it later on but I think it's fine I think I already edited most of the high frequency gravitational wave stuff okay generate gravitation

(2:13:42) enable yeah documentary would be pretty cool yeah we I don't think anybody really knows about the jellyfish videos problem is they're not doing anything anomalous right they're just floating [Music] around which is what opens the door for them being called balloons but they look pretty damn weird they look pretty damn weird what is this I think I was going to I'm going to probably get rid of this for now 25 rules for disinformation H I'm going to post this somewhere else I'll keep it in my

(2:14:40) Discord somewhere I don't know where I'm going to post it my MH370 we'll post it there and then let's uh let's just get rid of out here I don't know if we even really need a disinformation section probably get rid of this section entirely I'm just going to move it over to my my Discord in case we need that later effect oh man I don't have the cloud debunk in here oh let's we have to add another

(2:15:47) one okay okay addressing the cloud image as debunk let's do this quick guys because I'm getting tired I want to log off pretty soon here um so cloud images debunk there's more I'm going to add but we're going to keep it brief for now there's going

(2:17:17) be that's for for

(2:19:02) that should be good how's that what's his new account name what's Joseph Marinello's new account name just put it in the chat for me we take care of him let's not waste too much attention on it Community oh there he is oh he's gone uh let's report that as well that message guys okay he's gone he's going to get his account permanently banned as well

(2:20:05) it doesn't matter I mean he gets lots of accounts permanently banned because he's a terrible human being honestly one of the worst human beings on the face of the planet anyone who ever talks to Lou alzando the first question anyone should ever ask Lando is why do you

follow king milk fart AKA Joseph Marinello AKA one of the worst human beings on the face of the planet get an answer someone needs to get an answer from L alzado on that why are you in touch with one of the worst human beings on the entire

(2:20:36) face of the planet who's been banned from social media multiple times L oando needs to answer that question before he answers anything else about uips why should I listen to any anything that a guy like Lando has to say when he's following a disgusting rat human being one of the worst pieces of [REDACTED] on the face of the planet so anyone who's listening who interviews L alzado that's should be number one question you ask him every single time we should get an answer for why he's following one of the worst human

(2:21:14) beings on the face of the Earth Joseph Marinello one of the worst human beings on the entire face of the planet nobody should ever employ him he should be basically Persona n grada from anybody and everyone terrible human being let's see what we got going on here okay so reverse engineered okay I think that's good okay we got the hyperlink here let's start by God how many pages can we do let's see if we can fit eight pages I have no idea if we're going to be able to copy

(2:22:18) okay this is going to take like another 10 minutes just to post this on Twitter yeah he's got nothing going on his life it's it's sad man we should actually feel bad for this guy I mean if he wasn't such a terrible human being I would feel bad for him but he's just such a terrible terrible human being that he he sadly deserves every bad thing that he that comes to him and when you're that bad of a human being like a lot of bad stuff comes to you the universe kind of has a way of of uh of

(2:22:48) getting back to you you know oh crap um there's two ways we can do this this is probably the better way to do it um hold on move all our per EVS over here I almost had a panic attack right there I thought I I lost it but it automatically PDF I think the way to do it is we just copy this uh no this isn't going to be easier this is going to be worse what's going on here the problem is this is not going to copy correctly okay so

(2:23:51) let's delete that oh boy let's go to like here this is I don't know what the best way to do this is maybe that was the best way and then we just copy this and then we just edit it one by one so we start at the top the formatting is going to get messed up is probably what's going to be the downside of this right okay

(2:25:21) we could get rid of this here maybe maybe we do it like this save us a oh God dang it video facts I'm going to mess up somewhere in here I can already tell sorry guys this is going to take a minute there's just no easy way to copy and paste it doesn't cleanly copy paste oh boy what did I just do when we pasted the last time I messed up

(2:26:30) one of the the format the formatings and uh so this way is slightly better because you still have to delete like a ton of stuff even if I paste it with these dots in there okay video effects speculation we deleted this up here right okay we're doing pretty fast we're doing this pretty

fast though orbit oh o satellite video explainers don't work the links don't work we're going to have to add the links back in guys remind me to add the links back in actually let's just do it right now

(2:27:34) before we forget yeah the cbers video is up here as well so where's the cbers video BL copy address cers video from locked Martin here it is okay fly over copy link address USA 229 flyover okay copy link address satellite video explainer okay let's do the others real quick where's the last one there's two more flight path one copy link address flight path explainer actually it will do like

(2:28:41) this fight PA oops flight path copy link address flight path explainer okay cool did my chat crash yeah it looked like it crashed oh man it totally crashed what the hell sorry guys my chat crashed here we go uh Rich gel 99 has had me blocked for a long time dude's a fullon loser

(2:29:50) I missed everything about Lloyd Austin what about Lloyd I got to focus on this guy sorry we got ways to go here we're not even close it's going to take longer than I thought uh I'm going to post the link at the top as well uh William Wallace yeah you can join but um send me an email at MH370 xpron tell me who you are and why you want an invite keep in mind we don't really

(2:30:55) tolerate any trolling or anything in our Discord so if you're getting in arguments with people in the Discord you'll get booted out really quickly that's why we have a pretty good Discord I haven't checked my email in like a week so I apologize I'll get to it at some point I'll get to it at some point what do we do on the Discord not much chat about what's going on you get the inside scoop as to what we're working on stuff like that everybody's pretty good people in there people research

(2:32:02) stuff people that contribute a lot occasionally get gift cards it's nothing it's not a promise or anything but if I get like a good payout or something from X or YouTube sometimes I give people the gift cards but yeah it's not that's not what you shouldn't join for that reason just join the hang out or whatever back again what's his new account name just paste his account name in the chat and we'll just take care of him people are just sad man I don't know why why these people

(2:32:47) are so obsessed with me it's like the it's like that uh Gro guy it's like man these people got issues man going to have to get like an actual restraining order against these people people don't know what Discord is yeah don't worry about it if you don't know what Discord is it's it's started as like a chat application for gamers but it's kind of grown into more than that if you know what Microsoft teams is it's pretty much the same thing it's basically what Skype used to

(2:33:32) be but a little bit more advanced uh do I want to I'm not going to be able italicize all these quotes there are some other quotes up here as well on the flight path right maybe we can italicize them I'm probably going to miss some it's hard to get all the formatting correct this is looking pretty good uh here's the link I'm going to post the link in the chat for people share copy

(2:34:39) link have at it folks oh he's been banned already that was fast damn the funny part is I got I have it on 10 minute uh 10 minute subscriber mode anyway so you's got to wait 10 minutes and subscribe on a new account like imagine being such a loser you gotta like keep making new accounts because you just keep getting banned so much it's like man what a absolute complete loser I can't imagine going through life like that man just being a loser that everybody hates all the time hope he I hope he gets the mental

(2:35:32) help he needs man I really do it's like his life has just got to be absolutely terrible man usually that's the only reason why people are so toxic is cuz it's like a self- sustaining system where they grew up in a ter terrible environment right so you know we probably shouldn't push too hard on him but he just you know just like somebody who just keeps asking for it right he has to help himself first watch him be like Lando's nephew or something like that uh we need an AI generated image guys as

(2:36:40) well to go along with this this okay where's my AI thing what was it called uh what was the AI thing called Microsoft Bing there it is yeah mental health is just really an epidemic hopefully when we get this technology people like him won't be as terrible you know we can get rid of some of the trolls okay we need um what kind of image do we need

(2:37:45) invest uh we could use the MH 370x investigation image right oh I know I know which image we're going to use let use this one let's just scroll through it while eyeball it for that's

(2:38:50) fine looks pretty good let's just call it all evidence there we go Corbell is probably a controlled opposition I just I try not to judge people at a time that's the **truth** okay so we stopped at all other Witnesses so where does that leave us all their Witnesses God it's still a lot of stuff stuff to go wait did this go to Mias [Music]

(2:39:55) Chang no let's add the Mias Chang stuff here as well now we have the second part start with Edward cin the rest will definitely fit okay I think that's good should we have it say 101 or something 102 yeah like

(2:41:02) that copy this I missing anything chat honestly bring back lunatic asylums is is real man we really do need to bring back lunatic asylums it's legit man we really do need to yeah if you guys if any of my mods see uh king milk fart Joseph Marinello in the chat just hide his his thing from the channel okay dude this better post okay God are you going to kid me for a second two of two

(2:42:22) okay paste that this 370 Zeal all EV version okay some of these dates we might need a little bit of help with not sure if all

(2:43:24) these dates are 100% accurate or it's not that they're not accurate we just need to verify the the years make sure we're not off by a year oh we didn't add the appeals thing in here that's okay we'll add

(2:44:44) this okay one of these was already rejected but I don't know which one for

(2:46:22) how come there was no space between that one whatever who cares oops any questions chat what kind of tech do we stumble on to uh basically the most advanced techno to man most advanced Tech known to man that's been kept secret from us anti-gravitational technology if you want to think of it like that and really if you want to think of it it's really scalar physics is what I learned earlier today I was learning about scalar physics scalar physics is basically the way they've the textbooks

(2:47:28) have gotten around it is they just zero it out and they just say well it doesn't make any sense so we're just going to zero it out and ignore it and why is it important because scalar physics allows us to unify electromag Electro uh electronic waves with magnetic waves in order to create gravitational waves pretty big pretty important why is there a random space here sorry I'll look at the chat in just a second we're going to be closing down in five minutes I didn't think it would take 45 minutes to post this but it

(2:48:30) did it's not super fun and then tomorrow I I need to get the podcast list done I got to put it into a document as well because there just too many hyperlinks yeah just take care of them completely guys what's G dude Jesus why do people make up stuff like this what's mentally wrong with you dude Joseph Marinella what is like actually wrong with you dude woman you were arrested for hitting that time come on man why did these nut jobs make this stuff up like you people like Joseph Marinello literally belong in a nut

(2:49:19) house he actually either belongs in a nut house or in prison like that's where he needs to go he's going to end up there like 100% that's his future is going to prison but like man get mental help dude just get mental help man just don't be such a toxic piece of [REDACTED] you have control over your own behavior dude it's incredible man like I hope your parents are embarrassed of you dude I really do man I mean I'm sure they are but like holy [REDACTED] dude it's like I don't know what's

(2:50:00) wrong with you mentally but man you need actual help dude you need like real help man why is there an extra comma there yeah dude this Joseph Marinello guy literally king milk fart he like literally belongs in prison dude literally belongs in prison he's like an actual actual psychopath not like haha you're a psychopath but like no haha you need to be in prison so for like the safety of the rest of the people around you he's going to end up hurting himself

(2:51:09) or somebody else 100% 100% or he's going to troll the wrong person and that's going to be the end his life's going to be over I don't mean that in like a threatening way I just mean that like a you sigh ahead of time you realize well he had like infinite chances and he just mess with the wrong person and that was that and if I'm on the jury it's a easy not guilty it's an easy not guilty Joseph Marinello just like if people are watching this for the later court case just know that whatever

(2:51:48) Joseph Marinello did he's 100% guilty and he deserves every single thing that he gets man just complete psychopath man complete and total psychopath I don't know why there's all these Extra Spaces hit women come on man what other bullshits you making up about me DUIs

come on man guys if you have a criminal record I'm pretty sure you can't get top secret government clearance like literally part of the

(2:52:53) reason why I did why I decided to be this person is that they can't make up [REDACTED] about fake criminal records about me and they don't care they still try they're they're like actually sick in the head somebody like lied on Twitter too and claimed that it was probably him on an ALT account they were trying to claim that I was some sexual predator with like a different middle name just totally sick people man like mentally not well people people that are like literally belong in like nut houses

(2:53:23) in [Music] prison that's why we need to like Shore up our online protection um laws as well so that like people like him go to prison where they belong like that's just like literally where he needs to go for the safety of like everybody around and anyone who supports him like honestly just as bad like Lando Lando is a terrible person man Lu zando needs to answer why he's following someone like king milk fart who's like one of the worst human beings on the planet he needs to answer those questions like did he like make his

(2:54:10) criminal record go away so that he has his own little online Troll Army or what it's just bizarre man okay guys I think we're done sorry slam dunk Mo about that fight with your girlfriend man sucks I put a v in front of the mq1 C1 oh man where the hell was that oh boy there it is thank you okay appreciate you catching that okay oh we're almost done okay let's link we can link the

(2:55:16) document up here as well again I think oh boy there's like bunch of people in here looking at it it's already seven people watch looking at the link okay we'll link it at the top let's put in um I think we'll just use the same damage twice uh probably better if we don't actually let's do a different one what's one of my other four orbs ones we'll use one of these ones here use this one oh I didn't hash MH370 X on that one oh

(2:56:29) well okay yeah no problem everybody looks pretty good okay I think I'm going to edit can edit the first one we're going to have to edit this oh I can't edit it why can't I edit it why can't I edit it chat can I not edit it because I replied already yeah I can't edit it because I replied damn it well whatever feels bad okay here you go

(2:57:33) chat hey thanks everybody it was a good night uh it was a good stream tomorrow we'll be on with some more uh have a good one guys and uh yeah take it easy thanks everybody um

(01:21) Malian 370 contact 120 decimal 9 night breaking news tonight A Malaysia Airlines flight with 239 people on board including four Americans has gone [Music] missing [Music] I remembered the line from the Hindu scripture the Bhagavad Gita Vishnu is trying to persuade the prince that he should do his duty and to

(02:26) impress him takes on his multi-armed form and says now I am become death the destroyer of worlds what's up chat how's it going so we don't need this hope you guys are having a good night hey everybody hey Paula Paul or Pamela Paul Aaron Sandy Bruce Banner sub web James Aaron Cat Just Jeff Station Jason what's up fellas how we doing how we doing yeah uh man politics are confusing these days just a quick recap it probably is Martini time but I don't have any martinis I just have to drink straight

(03:23) vodka at this point feels bad I don't think we're going to tonight got to work tomorrow um yeah my political stance now is that I will vote for whoever is going to reveal the advanced technology for us hey isy how's it going hey Sean yeah I think we may have figured out who the uh video maker is guys I think it's somebody in our Discord there's there's quite quite a lot of Clues at this point hey James hey Rick yeah whoever is going to reveal this technology is going to earn my vote for sure

(04:13) 100% uh so tonight we are going to uh we are going to put a couple people on blast we are going to post the Joseph je uh F **Dunford** piece we're going to repost it and then we are going to uh do a post about Kenji Brown Jackson because I'm kind of tired of the BS guys kind of tired of it um just cause I just want to get it out there and then we'll go and we'll dig in a little bit of Science and then we'll call it a night probably um we got some stuff we can look into for sure the AI stuff is good but it's uh

(04:58) yeah hey James cbat there's a lot of James is in in our chat here that's the number one name for sure in here the AI stuff is fun but the whole password thing today like in the the newest video tells me someone's someone's playing with us we opened it up already people figured it out real quick and uh yeah everything about it now seems like it's definitely like a super fan somebody who's involved with the case uh who's been watching us closely still fun but my spider senses are tingling so um here

(05:35) we go it's going to get spicy so Joseph F **dunford**'s mother just passed away when was this back in September huh now I feel bad his mom had just passed away and I was blasting him on Twitter doesn't believe in retirement let's see what we can find about the good General retired Marine Corps forstar general commanded US forces in Afghanistan served as the top military adviser to two presidents I'm not actually retired I'm in the second chapter of my life 42 years of active duty his brother is a lieutenant

(06:39) colonel H man it would be so awkward if I ran into him in real life as part of my job that would be so awkward oh man okay um H see what else we can find let's see man this guy's good

at line though huh really good at line you're covering up uh super harmonic conductive orbs he was adviser Obama and Trump H helped insulate national security policy from disruption and political pressure well that's that's definitely

(07:43) true folks he definitely insulated national security policy from pressure and disruption when you hide that we stole MH370 that's definitely what happens [Music] H he's definitely a patriot no doubt about that what can we find out about this guy chat if you're playing along with us **I want you** to see anything we can find out about him anything that could incriminate him related to the case anything what did he do while he was joined Chiefs of Staff anything he's doing at locki

(08:56) Martin would be good too yeah I need to get locki Martin we need to get locki Martin uh they're the ones who are doing all this publish 2015 okay now we're talking don't want that God why does it try to log me in every time only the Second Marine to hold the highest leadership post juggle a range of global challenges yeah I bet you trust him trust him because he helped cover up

(10:19) MH370 Joseph **Dunford** **General Joseph Dunford** definitely knows was he involved in cop tiger H good question 2014 were we really still in Afghanistan back then it's hard to remember May 5th of 2015

(11:30) these guys are hiding hiding the technology 100% um I don't have anybody lined up for the next hard **truths** so not really in a rush but yeah would like to involve some people he was involved in cop tiger really really where was he when Malaysian Airlines disappeared Global Security challenges I want to connect him to the plane hey hey bur hey Bern ey What's up I don't want to vilify

(12:38) him so October the same year he becomes com commandant of the entire uh entire Marines and then just a few months later he becomes the highest ranked military officer on the planet okay let's see nothing not one thing comes up oh so I'm looking at new hello which man which article was

(13:58) that what if we change the search range let's go these guys are good at hiding a lot of the information about who's working where and doing what huh what's

(15:09) this whoa what's this yeah Bernie send me some ideas p eima i don't it's not what we're trying to get on to here okay looks like we're not going to be able to find much N qar I don't think did the videos guys how do we have evidence that he was at the cop tiger exercises guys because if we do it's huge I can't find anything so fan uh fan from cheese send

(16:17) me what you got I mean we can't find anything oh no that's not it nothing exercises C huh

(17:37) oh where is it where is he where is he probably me too hard to connect him directly to it okay I think we're just going to post the thing Cobra gold is is going on okay let's see here what

do we got okay here we go

(18:51) um okay let's copy this for go

(20:57) is okay should read I'm going to I'm going read this oops c c I'm going to shorten this a little bit

(22:52) I think do we might delete some of these links I want all these thanks yeah he got promoted in October to being commanded of the Marine Corps real

(24:27) for okay what was that one yeah command it means you're the highest rank uh marine officer really they expanded their board of directors that

(26:05) delete all this we don't need this give me more juice William good job or whoever that was oh we're going to include that let's delete all this stuff too okay let's see let's edit this a little

(27:27) bit I'll say since okay what else can you guys give

(28:34) me why would my credibility take a hit James I'm giving you a **timeout** just for making that comment come back in 30 minutes I don't want to hear any [ ] like that man no crap about credibility I don't want to hear any concern trolling if you're posting stuff like that you're in the wrong place man it's like when AO told me you might want to think about your brand guys you think I'm worried about my brand youve you've been following me long enough guys I'm I'm posting about locked

(29:13) Martin here they're probably one of those powerful companies on the entire planet I'm not worried about uh making it to uh making it to my own retirement I just have a feeling I'm not going to die of old age not not too worried about it folks I want more juice on this guy uh this is about Ty Joseph **Dunford** to locking Martin yeah I was talking to AR last week yeah I've already talked to Florence the Changi I saw the comment I just didn't reply he's connected to 2018 cop

(30:18) tiger okay I need a I need a source on that uh Lockheed Martin Joseph F **Dunford** and we're going to yeah oh yeah locky Martin definitely has private uh military geez he's also on senior managing director of Liberty strategic Capital jeez well we're making powerful enemies here

(31:26) folks 80% of retired generals are in defense industry of course they are huh did Tim P recreate the videos can you tell me what to Google to find the 2018 connection he supported the F35 by interesting it's not a lot about him huh it's pretty secretive one trillion dollars later he was a big supporter of the F35

(32:36) one of those just went missing right 2018 there he is right there do we know this is a cou tiger exercises oo wow that this is definitely connected yep I think

(33:45) so I mean can we be sure though is this the connection here is this not sure we can be

sure yeah they don't but it could connect him to the other cop tiger exercises okay

(35:18) we never for let's move this

(36:56) for let's say instead say change should we even tag UFO Twitter there's not much about him yeah you know where Afghanistan is

(38:09) though it's just right there in the Middle East it's not far man look at that's really not far you're going to send somebody from Afghanistan way sooner than you're going to send somebody from the United States out here he was already overseas so it would make sense for him to be at the cope tiger exercises I mean that's mad that's really close oh yeah thanks Timothy Abino is really cool I don't think this is I don't think this is really him nah that's a different account that

(39:04) uploaded the video weird maybe they're just uploading it to see if they get copyright stried I don't think locky Martin's gonna hire me guys I'm let's tag them all anyway for I don't know oh BBC verify yeah okay um

(40:46) this doesn't need to be capitalized for H what should we say here

(42:10) I don't know if we want we don't need the this part I think let's just go like this this is pretty good I think yeah we've looked into Jack Surat we don't have a we're not on a talking relationship with him guy's kind of an ass clown um we're just doing a little post on Joseph of **Dunford** it's t of speaks for itself give me sec

(43:34) okay okay I think we're good with this uh no oh yes yes and no William Wallace I think that the technology is too dangerous for the world and I think that if they didn't want it revealed they should not have um hid the plane should not have hid the plane right here you guys go they're friends apparently if they wanted this technology hidden they shouldn't they should not I mean this technology can help too many people right if we destroy ourselves that's up to us man that's up to us I agree with the people that say

(44:29) it's up to us like it's up to us whether or not we destroy ourselves it's not up to locky Martin and bureaucrats and a bunch of BS I'm I'm sick of locki Martin hid in this technology I truly believe that locki Martin was given crafts that they reverse engineered and they figured all this out out and they've just been keeping this technology for themselves and the elites have been keeping it for themselves right okay next up next Target Forum non cenis

(45:52) grounds okay is it how do it always get it backwards maybe we should save katoni Brown Jackson for tomorrow or should we go hard with it tonight for

(47:10) uh there's no dead man switch should we do science yeah maybe we'll save katoni uh Brown Jackson for tomorrow okay I'll save for tomorrow okay okay we'll save it for tomorrow folks okay let's do a little science we haven't done science in a while oh so it turns out guys over Unity devices are real so that's cool you can make free Power free Power devices are real

they've just been getting covered up it's awesome uh Remos I already told you man you might be new but I know Florence the

(48:03) Changi and I message her so I don't know what do you want me to do with her I thought about doing a piece on some of her work but I haven't been able to finish her book it's 500 pages it's kind of long yeah over Unity is just getting covered up so that's pretty bizarre but whatever for yeah that's a good

(49:25) one yeah I'd like to talk to Rand Carlson for sure probably need to reach out to him I just got so much stuff going on yeah this stuff's a big deal guys uh scalar physics is stuff I wanted okay let's see what we got on the science science agenda here we haven't done science in a while so yeah I think it's it's overdue we're overdue see let me look at my new evidence review list too oh we didn't do the cop tiger book thing either man we got a lot of stuff Starship Troopers done comments from Tim pool on

(50:13) fire I don't know what that means oh yeah yeah God we got a lot of stuff man I don't know if I saved all this stuff in one spot I think I did I don't know if I did the Hermes explainer video got to edit the I did one of these I think I did this one [Music] Island okay I've got something for us let me find it one second this is the think that's a geod diode what's this one okay that's this we posted

(51:24) that it's Ken wheeler here you go guys ready for a little science huh Eagle Works Laboratories warp field physics Dr Harold Sunny White NASA joint space whatever that stands for JSC look at what Daddy found hyper fast Interstellar Travelers the way within a framework of physics such that one could cross any given Cosmic distance in an arbitrary short period of time while never locally breaking the speed of light look at that wormholes chaing ch-

(52:30) Ching what year was this 2014 seems good seems good folks no it's not jck it's like joint space something or other yeah Florence is on a track but she's also in the she's in a marathon not a Sprint right she's been doing this for a long time what's the next step for disclosure we need more information to come out right we're on the we're on The Cutting Edge of it you're staring at it right now in the middle of your screen alaer Drive look at that folks look at that turns out Nassau is taking it

(53:20) seriously as well they're talking about making warp bubbles guys literally talking about making warp bubbles right here thickness decreases energy density magnitude decreases oh man I'm tired bubble thickness decreases surface plots of York whatever I think it is possible that we have military personnel on other planets I I don't know about other galaxies seems unlikely though I think one step at a time he reduced the energy requirements I mean when you have free energy then the energy requirements kind

(54:18) of don't matter anymore bubble illation optimization now why is this important cuz Dave Rossi was telling us about quadruple oscillation right yeah I think this stuff's just all been hidden in in plain sight oscillate the bubble intensity oscillation right oh yeah exotic Mass warp

requirements I don't know what these rings mean oh is this like how far long it would take to get there is this how fast it can go given the mass yeah faster hyperspace velocity yeah so the idea here is it's less and less energy thicker bubble ring

(55:20) thinner bubble ring okay takes more and more up here okay so this is the something the size of Jupiter something the size of Earth something the size of a nits carrier here huh funny how they mention the nits huh yeah no problem what's this yeah I've already seen I've already read this whole paper this is Eric W Davis right I think it is oh maybe this one's not there's no Singularity of infinitely collapsed matter residing at the worm F [Music] throat this is where we get into E equals e which stands for Einstein Rosen

(56:24) equals Ein Ste pki Rosen which is quantum mechanics equals general relativity via quantum entanglement being equivalent to a wormhole makes sense to me I I definitely posted this I remember posting screenshots from this what a wormhole looks like in the real world the Exotic matter threading up traversible Wormhole throat produces a repulsive gravity which will then deflect light rays going through it and around it whoa looks like a sphere that contains the mere image of the whole other universe or remote region within its own

(57:21) Universe incredibly shrunken and distorted huh hello we're looking at scientific papers we're doing a little science folks science time is that it right there is that why we have the lensing effects I feel like we're looking at a wormhole right here I mean as best as going to be described as one the thing is this might be outdated too this is definitely the Eric W Davis paper right I definitely read this already negative energy also feels like if you break through the fabric of SpaceTime this is where you can get your negative energy

(58:23) right or you can simulate negative energy through electromagnetic effects looking at the Event Horizon yeah yeah I don't doesn't feel like it's a black hole it's not sucking stuff in but maybe it is I don't know oh man I'm tired glad we decided so I think the honestly dark matter I think royy Herbert nailed dark matter I think dark matter is just complexity increasing it's just a property of the increased amount of complexity more complexity equals more gravity which is why we have more Dark

(59:16) Matter dark matter is just what our term for dark matter is not a thing that's the that's the the rub Dark Matters property and the way we measure it is we know there's more stickiness more gravitational force than what we would normally expect giv the amount of mass and matter that we can visually see and I've never liked the idea that dark matter is this thing that's out there that we just can't see doesn't make sense makes a lot more sense that it would be a situation where it's a

(59:49) phenomenon the draa equations huh also the issue of capturing and storing negative energy is not considered in what follows because free space negative energy sources appear to be more desirable option for inducing traversible wormholes than stored negative energy free space negative energy sources h yeah yeah we probably need to look at dra Maxwell and heavy side that's where this is leading the other thing I want to point out when we're watching these

videos here is that I I'm almost certain now we're looking at three points of a

(1:00:52) magnet three different magnets collapsing on one another and when they collapse they're they're inducing this extremely powerful electromagnetic electrogravitic force which is what's causing the the breakdown beyond what we can really comprehend breaking that swinger limit and we know this cuz this is probably what I'll post tomorrow I'll probably do the video tomorrow um so down here watch how they realign right here see them realign like where is it right here they're realigning right

(1:01:36) there you see them realign right there they actually are I can't believe I didn't notice this until several weeks ago you can see the the monopoles here the topological monopoles and watch them realign right before the zap right there and then they pop out in the next frame so they're they're realigning they're they're Shi shifting because they're getting ready for what they're about to do right here so they they come out and now they're aligned the way that they want to be aligned and then they

(1:02:09) converge how would someone fake that this science was like back in 2014 the science that supports this like didn't even exist was it its infancy ER equals epr was in 2013 and like no one even really knew about it yeah this version is on my YouTube channel you can find this version on my YouTube channel uh the Heat Signature um Bob Greener says it's topological monopole see non-local spin textures are robust yeah so it is it is a magnetic monopole yeah I don't know why he

(1:03:16) corrected me when I said this is it a magnetic monopole yeah it is so imagine right here where we have imagine that heat signature is theoretically just a North monopole this is literally jamming similar polarity magnets together that's what you're staring at right there right you're sitting similar polarity magnets you're going to have this huge repulsive effect let's see if we can find one like here you go this is this right here is basically what he's describing so you're going to

(1:04:02) have this uh what do they call it the right hand rule Force you create this this toroid and so you get the this forced effect going one specific direction that you need and the right wrapping of the toroid can basically lead to the magnetic monopole that we need H so here's positive magnetic monopole negative magnetic monopole let's should we keep looking at this one what do you guys think do I think the orbs are visible I don't know I don't know hard to say we know Katherine T did not see the orbs or least she say she

(1:05:04) didn't it would not surprise me if they're not visible but at least in the visual Spectrum can we F search F this here we go a non-optical scheme for directing negative energy in experiments was recently reported by Davies and atwill who studied the response of Switched particle detectors to static negative energy densities and negative energy fluxes their model is based on a free massless scalar field in a flat four-dimensional manowski or minkowski SpaceTime and utilized a simple generalization of the standard

(1:06:00) monopole detector which switched on and off to concentrate the measurements on a

period of isolated negative energy density okay what else do we have monopole in here okay Davies and Ellis pointed out that their results are uh model dependent and they found for a standard monopole detector model that there is not always a simple relationship between the strength the negative energy density fluid or flux on the behavior of the detector we need a complete quantum gravity Theory or Quantum super String Theory or other theory that replaces

(1:06:50) it exactly it's what we've been saying space time and gravitation are seen as an emergent low energy phenomenon which arises from the collective action of a much higher energy phenomenon occurring in the quantum vacuum or Lorentz invariance and energy conservation may be violated in the trans Planck regime one knows one now knows empirically that the emergent low vacuum within which once exists is in fact a rich Quantum ether comprised of zero point fluctuation fields that make it behave like a nonlinear Optical

(1:07:27) medium endowed with paramagnetic dielectric diatomic uh baryonic condensed matter and many other fascinating properties therefore if the emerging SpaceTime gravity approach turns out to be correct then there will likely be direct consequence to the physics of traversable wormholes that could dramatically alter the mechanism by which they're created and or mitigate the requirement for negative energy I mean cha-ching cha-ching folks what else do you want to hear right there they just told us that there's energy in the vacuum of

(1:08:04) SpaceTime right there yeah I've been watching some Ken Wheeler I like some of his stuff yeah it's fancy talk for a bubble in space let's go back to the bubble in space time down here okay Warp field infometer so this is really interesting here we've got a mirror and we've got a beam splitter does this remind you guys of anything's remind you guys of anything here how about oh how about this right here remind you of this at all this only

(1:09:10) got 7,000 views man people really just don't like science huh look at this how is this not just absolutely incredible guys can someone tell me what's going on here look at this phase conjugate yeah Davis and Poff I've already figured this out nah you can Harvest Zero Point Energy 100% you're wrong about that one got to do a little bit less book learning a little bit more scientific experiment you can definitely harness the energy of the vacuum of SpaceTime just got to think a little bit more outside the

(1:10:04) box I'm just I'm here to tell you just straight up just going to straight up tell you what science publicly thinks is true is not all that there is to the world you are being misled 100% I'm positive there is technology out there that's being withheld and it will in your mind defy what you think the laws of physics are it's not actually defying them because our understanding is simply limited I want someone to explain this part to me how is the shock glass how is it getting through the shock glass and

(1:10:41) why does it take a certain period of time for it to get through this is the this is looks like magic to me like look at this all of a sudden the image just appears what are what's going on here time is the factor that makes a difference here so the waves are bouncing around in this thing or something I don't get it yeah uh I want yeah ask Bob Lazar if he wants to talk to me

about teleporting objects that's what I would ask him Ryan I would ask him take it easy

(1:11:47) William appreciate you man yeah no that's that's where you're wrong uh fake Ashton the amount of energy in just a hand a scoop of anything you got to remember  $E$  equals  $MC^2$  man equals  $mc^2$  just think about a nuclear weapon man it proves you wrong even in tiny amounts of stuff has a huge amount of energy plus once you get to to a point where you can harness free energy then it's like turning the faucet up and filling up your sink right you got to think more outside the box got to think more outside the

(1:12:39) box yeah warping space is a lot um I'm pretty sure the whole Randall Carlson thing is a bit of a wild goose chase we think I think we outed the person in our Discord who was the person that was setting up the videos they gave us a little bit too much information and I think I figured out who it is but we're not sure yeah don't call him my videos though cuz they're not my videos show him the videos and ask him if he thinks they're consistent with physics as he knows it and if he wants to talk to me

(1:13:25) I'd love to talk to Bob Lazar and you can tell Bob Lazar this Ryan that oh take it easy this side up tell Bob Lazar that I'm a big fan of his that I have watched his presentations and I think that he's legit I believe everything he says and I would like to hear his opinion on Advanced science that is being withheld from us and what the implications of that might be that's what I would want to know from Bob Lazar and you can tell him if you were to come on my podcast he's not going to get

(1:13:55) grilled uh my podcast you can have him watch Salvador Pas on my podcast I'm not trying to prove somebody wrong or dig into their best I just want to talk to people can show them my Timothy Abino interview if you want and I understand you probably wouldn't want to talk to somebody like me I'm just a random podcaster person but uh I would say like him I'm also under attack of from people who want to try to discredit the work that I'm doing in general yeah okay I don't like how you've got

(1:14:33) uh you got my name so you're going on **timeout** if I find this channel says something like Ashton sucks and oh James were you the one I just you're James cabit okay don't troll me man let see no he's not going to testify anything there's not like me there's not really much he can say right he saw the stuff I'm sure he saw it I've already covered other UAP stories when one when a big one shows up I will definitely cover it I'll definitely cover a big one that's out there um but random orbs and stuff flying

(1:15:27) around are not quite enough guys I need to see something anomalous it's rare that you get military videos like we have in infrared right mostly we're dealing with stuff that's just floating around yeah there's a fake Ashton out there as well so be careful guys the best thing that people can do who is on Tony Merkel conf professional podcast Bob Lazar was no way um if he was then I I have a connection I guess um yeah I'd love to talk to Bob Lazar I think that that would break a lot of people's

(1:16:13) minds um I want to know more about what his thoughts are in advanced physics and what we can accomplish with it I don't I don't really care to listen to people who think that we we're at the of civilization and science cuz we're not Merkel mentioned me wait really I haven't been keep if I missed a confessionals podcast with uh Bob Lazar that's going to upset me oh he changed his thing damn that's got a lot of views Miami Mall

(1:17:18) monsters I'd love to talk to um Tony Merkel again honestly CH the portal Cube oh he talked with John Stewart huh how do you is there a way to search this by recent I don't think he talked to Bob Lazar he'd have a picture of him on there for sure oh it's fine I don't care about being Shadow band

(1:18:24) yeah with respect to the uh Jellyfish UAP yeah I'm I don't know I'm probably going to try to talk to Randall probably talk try to talk to anybody honestly I'm just got a lot going on really far behind on everything oh Mark Florentino um the jellyfish thing the problem is it's not advancing it's not pushing the needle right what are we doing with jellyfish UFO stuff right uh I'm going to change the the stream here science it's like okay so there's a jellyfish UFO now what what do we do

(1:19:11) with that are we confirming that or we pushing like what you know the problem even is that if you even if aliens are real what does that really mean what does that really mean man I think sure aliens are probably real somewhere we're staring at the paper uh regarding Sony white Sunny White he's right here this is his paper right here yeah I mean I want to talk to people that don't have what we call CNN brain right there's a lot of academics out there that think that they know everything there is about the world because they've

(1:20:00) they've read it you know as opposed to looking at what is possible if Einstein were here he wouldn't be reading other people's papers trying to determine oh this is the only thing that's possible he would try to push it for ourselves yeah so if aliens are real give us your Tech so that's the answer right the technology the technology is what's important so seeing a floating jellyfish alien doesn't do anything to me man doesn't doesn't what are we going to confirm there we going to get the

(1:20:28) government to tell us there's floating jellyfish aliens then what that's the problem I have nothing I want to be clear I have nothing against Jeremy Corbell or uh George knap I think they're doing what they I think that everybody out there everyone is doing what they think is just and righteous and I am too now from my perspective the the only way to get this out there is to force the science into the open that's what's going to change the world of science what we're looking at right here notice toroid capacitor ring normal

(1:21:20) to push beam path and a resultant spherical uh field so what are they doing here this this feels really important right here yeah of course we're not going to give up on Ripple Moon never never Ripple Moon's my baby so it looks like this beam splitter sends one beam up this way and one beam down this way but then a mirror comes back over here and then it shoots back this way perhaps hits this mirror and then bounces back through the T

(1:22:27) looks like they're trying to figure out how to bend SpaceTime here generate a microscopic warp bubble that protrudes Optical index by one part per one 10 million so they're trying to bend SpaceTime here and create a tiny warp bubble I think I asked somebody about this let me look I'm going to read a comment Sunny took a Casmir approach that utilized a foreign frame frame dragging via polarization of the local Val vacuum to induce warp bubbles on extremely small

(1:23:39) scales so we need to understand the Casmir approach guys I think it's time to bring grock into the play into the game here grock where you at my baby am I paying for grock if so money well spent I'm going to get rid of like my YouTube subscription thing that was useless what is roast me no I don't even roasted phenomenon in quantum physics that describes the attractive force between two parallel uncharged conductive plates in a vacuum this Force arises due to the quantum fluctuations of the electromagnetic field between the

(1:24:38) plates in a vacuum there are always virtual particles I don't think virtual particles are really a thing uh due to the uncertainty principle these virtual particles consist of particle antiparticle pairs that quickly annihilate one another however the presence of conductive plates limit the wavelengths of the virtual particles sounds like nonsense as a result I don't believe when they people talk about virtual particles that's just a madeup word um pushing the plates near one another the Casmir effect is manifestation of

(1:25:11) the ground energy State this is where I Ken wheeler starts to make more sense honestly where he talks about everything's just like entropy or not entropy but what's the word I'm getting too tired to think correctly right now um can't think of the same thing um I think that was just where we just being trolled with that IMU thing MIM tunneling diodes the lens th effect is a

(1:26:21) phenomenon predicted by Einstein's theory of general relativity it refers to the warping or dragging of SpaceTime caused by rotation of a massive object such as a planet or black hole as a result this effect objects in the vicinity of the rotating body will experience a change in their motion which can be observed as a slight shift in their orbital rotation okay hey slam dunk Mo welcome to the chat image searches of the Casmir effects yeah I think I've looked at this

(1:27:41) before I think this is what they use to try to have the EM drive work right I don't fully get it it's local Mass negative region of SpaceTime that could stabilize a wormhole to allow for faster and light travel uncharged magnetic plates or metallic plates so if I were to take my two things of bismuth and lay them over top of each other is that going to create a Casmir effect in the middle we're going to do the uh there's an experiment we're going to conduct by the way later this week chat I need I'm

(1:28:38) looking for a mold can you guys find me a I need a convex mold I need a mold that's not a bubble but like uh uh like one for uh Whatchamacallit contact lens I need a mold that's like a a inverted bubble mold if anyone can find me one I I'll paint it so you guys know what I'm

looking for so the mold that I'm looking for it would have to be shaped like if you're looking at from the side the mold that I be looking for G yikes it is going to be like this it's going to have a bubble in it

(1:29:35) right and then it'll have it'll look like this and you you pour the I need a mold like this and then I pour the Bismuth down in here so I'll heat my bis myth up in my thing here and then the I don't know what color bismuth is this maybe pour the Bismuth down into this cuz I want my end product to look like this which is if you were to pop this out here then it's going to look like this and then my plan is to take two of these so you have one like that one like this made of bismuth and I'm going to make my magnet

(1:30:33) float in the Middle neodym Magnet cuz bism bismuth is the uh it's the Wonder the Wonder thing we're going to see if it works guys now this is very similar to the Casmir effect right the Casmir effect says if you take two metallic plates here then we should be able to create a kind of bubble in in between I don't know if that's going to work it's going to be fun though one way or another it's going to be fun we're doing a sciencetist experiment guys I've already got the Bismuth that

(1:31:10) already arrived it's pretty damn heavy like 10 pounds of bismuth the magnet should arrive soon so I need a mold I need you guys to help me find a mold if someone can find me a mold in my Discord uh just link it I need a mold that looks like this this one here I need a mold that looks like this that's got like a bubble in the bottom of it probably made out of silicone or something else that can not melt when I pour hot liquid bismuth in it so that I can create two plates like this uh I'm going to do cubes I don't know I

(1:31:55) honestly don't know oh no it'll work it's going to work I'm going to video it don't worry guys I'll video the whole process and make a little video for you guys and then I'll also show you in the action there's uh you think it's too heavy might be might be I'm going to melt the Bismuth in the fight I found a link it's called I'll show you guys I'll show you the experiment we're going to try and then actually I'm probably going to go to sleep I'll put in the Science Channel in

(1:32:48) the Discord I'm going to try to get through the rest of this paper though I'm just so tired I've been doing too much stuff man working too much okay molding bismuth for a levitator yeah you might be right it might be too big magnet might be too heavy if so I'll just buy smaller ones boom there you go what were you saying it's not going to work hello why were you saying it's not going to work looks pretty good to me hello Ching yeah the magnet might be too big now that I look at the size of this

(1:33:39) this is probably really small right I might need smaller might need smaller ones don't worry you didn't burst my bubble I'm literally staring at it so you might want to miss sorry I bursted your bubble on fontell there you go what does that look like to you does that look like a a magnet floating between bismuth that's what it looks like to me welcome to science folks there's my bismuth right there we need I have to buy a Dish as well that I can cook it in but I I want one that's convex I want to make a convex side side

(1:34:24) of it not flat so but the end product is like you're going to get something similar to this right seems good seems like a fun experiment to me I was going to see if my dad can do this part for me he's more in the worker guy so we need acrylic I mean I think you can pull it off and see it happen without all this going on this just holds it all in place right this holds it in place this is just building the thing blah blah blah build the thing seems cool there you go is the Bismuth being held up or is it

(1:35:32) stuck to the top of this adjust the magnets on the alignment bolt up and down on the Square magnet between the Bismuth disc float and this is that is that bismo going to float I don't know it's going to be cool no matter what it's going to be cool no I don't need liquid nitrogen we're going to make something float without it so anyway if anyone can help me find a mold for this that would be really great because I searched on Amazon for quite a while and I cannot find it yeah and then I'm going to take some

(1:36:21) screen shots and and and videos oh I'll just take videos of the process and weave them together into a little video anyway so Casimir effects I don't know if that's going to be a Casimir effect I don't know what's going on I'm trying to just understand it is the idea here that if you put two plates next to each other they're going to just stick together I don't think they're spinning I'm not sure though guys we're going to find out ourselves yeah I'll probably stream some

(1:37:12) of it once I produce the the blocks I'll stream it but you guys can watch for sure it'll be sweet but I'm probably not going to live stream cooking it cuz I'm going to go to my parents place where they have a fireplace and I'm going to cook it over the fireplace and try not to burn myself with liquid metal so grock's not helping us out here folks see what Gro says guys oh yeah right that's okay someone I'll let my parents take care of Lulu if I get if I get taken out it is

(1:38:19) possible bism do die magntic material which means it creates a weak magnetic field in the presence of external magnetic field this field opposes the external field and the magnet is strong enough it can be levitated in the Bismuth huh hey looks sweet I think it's going to be real folks that's interesting oh look at this well they spelled bismuth wrong that's that's not good oh yeah look at that did they even melt it in this situation look at that holy crap if we pull this off oh boy holy oh man if we can pull this off it's

(1:39:12) going to be awesome holy crap that's sweet whoa holy crap yeah oh yes oh we are doing this WOW do it even need to be convex or can it just be like flat I mean look at this oh boy this is going to be awesome guys this is going to be awesome your show on confessionals watched by 600,000 guys if you if you think that that's a lot the one I hope they don't mind me saying this but the one that I did with um the investigate Earth podcasts I've been on them five times pretty sure I'm making them a lot

(1:40:12) of money because the Miami aliens one that I did with them which wasn't even really Miami aliens we just talked about like science and advanced scientific Concepts I think I think had like two two million like 2 million listeners that's why I got to get my podcast on like the

audio stuff then people can probably call me a grifter I'll probably make actual money as opposed to the the zero that I make on YouTube uh investigate Earth conspiracy podcast audible oh they do a lot of podcasts yeah honestly I might do more

(1:41:01) like controversial stuff if uh if I if I can do audio where is their stuff man is it on Spotify here it is let's see World War II imminent blah blah blah earthquakes yeah there it is this was a good one honestly this was a really good one if you want to listen did I did I ever promote it I might never have promoted it oh if Chad and Sher are watching and I didn't promote this for 10 days I'll feel bad I think I did I think I did yeah this one was a good one here we go we invite ashon Forbes the investigative journalist

(1:42:06) renowned for reopening the MH370 Missy it's funny that was a that was a great discussion with those guys though a big fan of them I wouldn't I wouldn't melt uh bismuth and a microwave no you should just use fire your stove will work can I still not why can't you guys know why I can't post pin things did YouTube Shadow ban me from pinning things I I don't understand man this this looks sweet though I can't wait to do this okay sorry guys let's uh get ready to close it down let's see if there's

(1:42:54) anything else in this paper here warp bubble detection using infometer blah blah blah so then this is their setup that they show here you can see their beam splitter the laser this looks like the toroid here here's the mirror they have another mirror back here this is how serious their lab is this goes to show you NASA is not messing around I don't know what I'm looking at here then pretty much I think that they show there's some data where there might be oh yeah there's a warp right here you

(1:43:40) can see it whoa look at the warp yeah there's a warping effect right there oh yeah definitely there's definitely a warping happening wow it's small but it's it's something so you can actually warp SpaceTime like this huh wow I don't know what these little dots mean pretty cool man yeah don't put metal in a microwave at all it's bad bad call guys don't put metal in the microwave oh I should have tagged lockie

(1:44:49) Martin I should have tagged Jo J dunf for Dan locky Martin in my Twitter post damn feels bad AC tral capacitor alternating current toal capacitor huh oh DC direct current and don't a lot of this I don't really understand I can understand when I say something bending that's about the limit of my thing you want the link to this yeah sure I'm probably going to do a post on this Q Thruster I don't know what Q thrusters are but then they talk about what we could do I think they end up

(1:45:53) talking about how long it would take us to get to certain places yeah like they shorten missions to Mars to like just two months or even shorter I think 22 days you can even get to Jupiter from 194 days to 61 days pretty impressive like these with just these Thruster capabilities it becomes possible to get to other planets a lot faster and instead of going a th000 astronomical units away take 5.

(1:46:25) 6 years it goes down to 1.8 years gain approximate satari which is three light years away four light years away goes from 122 years down to 30 years pretty cool man pretty pretty cool so this is like a very small warp bubble or something using this Theory Q Thruster okay so that's it for this one okay guys think it's time for me to go sleep I'm tired yeah it's ch that's Child's Play to what we can really pull off based on the videos that we're seeing but pretty cool uh I did read the Declassified

(1:47:19) document yes it's mostly a there's a lot of a story but it's also a bunch of stuff about you know the monopole shift and the D destruction that would happen it's pretty interesting pretty interesting man cool guys well have a good night and we will be back tomorrow peace thanks everybody for being here

Transcript:

(00:48) hey everybody okay so uh this is going to be a little bit of a different thing here tonight we're going to see how this how this goes kind of uh just upset uh because it's Martin Luther King day today and Martin Luther King was all about equality right I think that a lot of people forget uh what equality really means and I've been reading stuff on Twitter today that's people that I like that I follow and uh I'm trying to decide whether or not I want to make a statement I've tried to avoid politics as much as

(01:32) possible so first before we get into all that hey Aaron hey depleted uranium cowboy and Weck and Paul although just I don't like to dig into politics because of how contentious and divided everything is but I think the reality is we have to say something and I think that we are going to make a post that's going to be controversial it's going to upset a lot of people but maybe not maybe people will just ignore it I don't know um so let's get started hey Sandy hey PJ okay so what am I talking about what

(02:20) am I talking about uh I saw Alpha Warriors post today a couple hours ago it's got a lot of views surprisingly I'm just going to read it he said today exactly 3 years ago my family was woken by an explosion the alarm going off in the early morning hours we would learn that the FBI SWAT team with drones and flashbangs were raiding our home in Southern California no one in my home has ever been arrested at any problems with the law as a matter of fact I am a dedicated combat met uh veteran in the Marine Corps and 14 years

(02:55) of law enforcement with multiple Awards including a medal of valor I survived four officer involved shootings and in 2018 saved a toddler who was the victim of drowning with CPR

the crime with FBI was investigating Twitter post they say were triggered by January 6th making me a domestic terrorist you guys can imagine how the rest of this goes so first thing uh this just upsets me because Alpha Warrior is somebody who had us on the show I remember I talked to him for like 30 40 minutes afterwards as well really

(03:38) nice guy lives in Southern California near where I lived as well and the reality of the situation is that January 6 stuff that happened was part of what started to awaken me from what our government has become especially stories like this where people's Twitter posts were getting them in uh raided by the FBI that's unacceptable to me it should be unacceptable to anyone in this country we should have free speech and what Free Speech should protect us against is being attacked by our own government 100% if we don't have that then we have

(04:26) nothing in this world that is the basis and foundation for everything can you imagine if I was getting raided for the FBI from the FBI for talking about MH370 and I know what'll happen I know what people will say people are going to say well it was a it was an Insurrection right they were trying to take over the country that does not justify this not at all right nobody was actually charged with Insurrection during that this is the part that started to wake me up to how powerful propaganda in the media is and I say this is somebody who I've

(05:06) been open about maybe not that open but before 2020 every single election I voted for nothing but Democrats before 2020 nothing but Democrats now you guys know my history of of politics and who I voted for I've said many times that I was a CNN brain person who was out there that was just sucking up whatever I would see on TV right and I've slowly awakened to the fact that everything out there especially on television is a lie a lot of it's a lie and whether or not you believe wholeheartedly with people's politics

(05:48) people have the right to believe what they want to believe in right and people have a right to protests people went to prison for what happened on January 6th some people that weren't even there and that's not right to me and what's upset to me a lot is that people's lives have been ruined by this people that weren't even there and I have my own family members and people that I still run into on a daily basis people that I like a lot that vilify people that I know are not evil people people like

(06:23) Jake Chanley and people like the Alpha Warrior these aren't evil people they don't deserve to be vilified by the media and have this perception of them that is you know just evil out there right and that's and people are going to get upset that I'm going to compare this to Martin Luther King Martin Luther King I think would have said the same thing Martin Luther King would have said equality is treating everybody equally doesn't matter the color of your skin it doesn't matter what your

(06:56) political backgrounds are Martin Luther king would have wanted equality for everybody I think he would hate the world that we live in right now the same way they would have branded him as a right-wing you know whatever they would have probably said he's like an Uncle Tom or something like that in today's day and age that's how far we've moved from the 60s to where

we are at today it's alarming to me so I just want people to remember that this quote right here is one that directly relates to what we're dealing with right

(07:31) now we're not going to dig too much into this just but today is going to be an exception because it is Martin Luther King day so we're going to look at some quotes from Martin Luther King and I think I'm going to make a post because the reality is Alpha Warrior deserves our support Alpha Warrior gave us a platform and did one of the best interviews that we've ever had related to MH370 and if we stay silent are we any better look at what he says in this quote are Our Lives begin to end the day we become silent about

(08:04) the things that matter judge not by the color of your skin by the content of your character I think those are the quotes that we want right look he has stood for acceptance equality and nonviolent protest now did the people on January 6 commit a riot absolutely and they should face the punishment for that now is the punishment for a riot going to prison for 17 years being labeled as an insurrectionist for the rest of your life we've been in spaces with Jake Chanley Jake Chanley is not a violent guy I don't believe he heard anybody and

(08:47) he went to prison for multiple years over it it's just it's not acceptable to me so the reality is I think we need to make a post about it is it going to be accepted by a lot of people is it going to get us attacked by people is it going to get us potentially labeled as people by people maybe what I want to say is that I respect everybody and respect everybody's beliefs that are out there even the people who disagree with me I don't care you can believe whatever you want to believe I think that people

(09:21) should be able to do whatever they want with their bodies I think that people should be free to uh have whatever sexual orientation they want I think that people of different races should be treated equally as well um my where my ethos is is uh your rights end where mine begin that's really where it is so we're not going to do a long stream tonight because I'm I'm pretty tired and I'm sorry if this is going to offend anyone from the political Spectrum I imagine that it will so tomorrow we'll be back

(09:52) with uh science stuff and digging more into the case the reality is we've posted a lot of stuff today so if you are interested in MH370 case let's do a quick rundown before we get into the other stuff um and I I'm supporting Skyfire news here as well because um tupacabra and red panda koala have put a lot of effort into this and they're working with keemstar some people that I I like hanging out with so that's the reason why I'm reposting some of their content in case people are curious um we posted the satellite

(10:31) videos where I I did a lot of editing on well not a lot but so a little bit of editing and I put it in there um so you can see can see the orb shoot up the second orb pretty clearly it's not as clear as I thought in here but you can see this orb shoot across the water and come up here in this video in this video here you can see the very clear this zap animation that's going on here or you know I guess it's not an animation but this uh event that happens here very clearly so if you want that and we've also got

(11:03) here this cbers uh video that I posted earlier today now the cbers here keep in mind guys cbers started with nr22 look at here nrl22 it's right there this is the command satellite I mean I'm trying to put it together for us here but if this is a fake video you're not going to have coordinates accurate to six decimal places guys it's just no one's going through that effort not happening right so I think I laid everything out there for us today um and everything relates back to locked Martin it's all locked

(11:42) Martin over and over again so if you want to dig into the case we've got plenty of content related to the case today as well as the whole preaching thing here from uh John Stewart yesterday on the redacted podcast so just for the today just for this one night just for the next hour we are uh going to do a very brief political stream in general in support of our buddy Alpha Warrior and in support of our buddy um Jake Chanley and it's probably going to get us hated by a lot of people but you know what I just don't

(12:21) care and we're going to tie it to ma or we're going to tie it to um Martin Luther King too which is just going to make things people even more probably so reality is I don't care what people think of me so we're doing it um let's go ahead and take this add that there it's going to get spicy folks main investigator of the global glitter conspiracy why don't I support Julian Assange who says I don't yeah yeah um yeah if people hate it or whatever well too bad it's just one day

(13:19) um let's see what other good quotes we can find real quick uh here we go let's just reflect on the life of Martin Luther King uh as well right the function of education is to teach one to think intensively and to think critically intelligence puts character plus character that's the goal of true education I mean this dude was this guy was incredible man look at what just listen to what he says folks the ultimate measure of a man is not where he stands in in moments of comfort or inconvenience but where he

(14:02) stands in times of Challenge and controversy like does this like if you think of where we're at politically here I mean we need to go back to the words of Martin Luther King whatever affects one directly affects all indirectly I can never be what I ought to be until you are what you ought to be this is the interrelated structure of reality history will have the uh history will have to record the greatest tragedy of this period of social transition was not the strident clamor of the bad people but the appalling Silence of the good

(14:46) people life's most persistent and Urgent question what are you doing for others I'll tell you what we're going to do for others we're going to help out the people that helped us that's what we're going to do never succumb to the temptation of bitterness this is one that I need to work on I think we all can work on a lot of these Our Lives begin to end the day we become silent about the things that matter I think we're going to we're going to start with that actually we can just copy paste it

(15:49) right and of course the moral Arc of the universe is long but it bends towards Justice the P the P the past is prophetic in that it asserts loudly that Wars are poor chisels for carving out

peaceful tomorrows basically saying that war is a waste of time Martin Luther King says literally everything that we talk about on this stream guys everything we talk about helping people treating people equally Justice wars being useless I think that Martin Luther King has been co-opted into something that it's not anymore right where it's supposed to

(16:37) mean that we're supposed to treat people differently than one another supposed to treat everybody differently the reality is we're not it's the opposite of that nonviolence is a powerful and just weapon indeed it is a weapon unique in history which cuts without wounding and enables the man who wields it another really good quote right is that and if you think about what Martin Luther King did right back especially back in the 60s when it was quite a bit more racism than there is today where he would have to stand up

(17:11) against people that just hated him right now think about that related to the case we have people that are that hate us too right and we have to look at them in a nonviolent way we have to look at them with eyes of joy the hottest place in hell is reserved for those who remain neutral in times of great moral conflict right there's another one as well it's like we are in a time of great moral conflict right now we can't just be silent hey PJ Mike thank you man appreciate it I I hope you guys appreciate that we're doing something a

(17:54) little bit different tonight where it's only going to be a short stream just making one post and then then we're going to go offline cuz I just finished a podcast as well um so I'm pretty tired right now okay shallow understanding from people of Goodwill is more frustrating than absolute misunderstanding from people of ill will now this is another good one as well right shallow understanding from people of Goodwill is more frustrating than absolute misunderstanding from people of ill will especially when we think about the

(18:37) topic that we're are posting on here right now which is probably one of the most controversial topics in politics January 6 people have had their YouTube channels canceled for it for just talking with people about it um people have had their YouTube channels strike down just for talking with people like Jake Chanley because it's a shallow understanding from people of Good Will more frustrating than absolute misunderstanding of people of ill will um think we'll go with that okay let's see see what else what

(19:16) other good quotes were did Martin Luther King have make a career of humanity commit yourself to the noble struggle for equal rights you will make a better person of yourself a greater Nation for your country and a finer world to live in absolutely a lot of people did go over to rumble yeah have a good night Paul if you guys want we will dig into the science tomorrow uh We've made enough MH370 post today so we're going to chill a little bit and tomorrow I will be uh working so I probably will not be posting during

(20:17) the day just a heads up yeah it's Martin Luther King day today so I think it makes sense that we do a little bit of politics and just remember what's important in the world um because Martin Luther King was a nonviolent person believed in nonviolence didn't believe in war believed in equal rights for everybody I absolutely support everything Martin Luther King stands

for um and his words of wisdom are incredible um so let's go ahead and what are we going to say what are we going to say what are we going to say folks

(21:04) got to figure out how to do this right okay yeah you can see why you got assassinated man I mean look at why you got assassinated yeah this one's a good one too I don't know if we're going to use this one but I'm going to post it in here for now these are probably the best ones for us to use right related to what we talk about um let's [Music]

(22:18) see yeah they put him in jail too man it's crazy man 60s man what a Time the 60s are also when JFK was killed too right wild man they killed Martin Luther King and they killed uh JFK yeah he was an actual Grassroots so yeah Malcolm X too all the Grassroots movements get snuffed out right yeah uh what's the point if you don't understand what we're doing then just read the quotes the quotes tell why we have have to do this the point is I'm going to support people real people real people that have

(23:07) helped us that's the point we're going to support Alpha Warrior and we are going to support uh Jake Chanley H skip the ads here we don't need ads h

(24:29) yeah they kill a lot H sorry I'm just trying to think of what we're going to say here um there was another post I made that was really similar to this as well for for

(26:23) this is going to be brutal we're going to get a lot of flack for this folks okay yeah do you know we have this is a Andrew Tate quote United States is the country with the most people in prison out of anywhere in the world wild look at the most people in prison something's got to change something's got to change out there

(27:45) how much time did Jake serve in prison do we know I think he sentenced to four years me just double check one of the longest sentences 41 months in prison for obstruction of an official proceeding Jesus man for

(29:00) H hey guys so quick disclaimer I know that this post is going to upset people and maybe even the stream is going to upset people because the reality is we are a community that has uh many political backgrounds and as well as many backgrounds in general and politics is one of those things that people generally try to avoid because it stirs up controversy but the reality is that read a post by Alpha Warrior today where he had been raided uh for posts on social media related to January 6th riots or Insurrection whatever you want to call

(29:38) it man I don't care and I know Alpha Warrior and he's I've judged him by the content of his character and he's not the type of person that is uh going to overthrow the government right he just wants free speech he just wants to make the world a better place yes okay yeah I question whether or not I

(30:46) should do this post pretty heavily but as Martin Luther King says the day our lives we going to end the day that we are silent about things that matter judge people by the content of their character not the color of their skin not their background did I don't think anybody got

charged with any of these right was anyone charged with domestic terrorism I think the closest was sedici conspiracy right

(32:00) yeah I don't think anybody did let's see I think the proud boy leader was the one 18 years in prison 18 years what did they get 18 years in prison man just this I don't know guys it doesn't seem like Equal justice to me I think they got Sous conspiracy is what they got so we're doing a very controversial very controversial uh thing here and it's important that we protect the freedom of speech okay let's see what we got here yeah

(33:26) some of the people were not at the capital what was it parading I think a lot of them got charged with parading um let's

(34:54) see let's let's move this up a little bit uh for

(36:56) trying to think of what we say here hey thanks a lot Caleb appreciate you buddy looking a mineral balancing oh uh crypto is streaming a panel show yeah we'll probably switch over to that once I I make this post I'm I'm going to go to sleep early tonight I got to I've been falling asleep in the middle of the day uh we're doing a quick political rundown here uh in honor of Martin Luther King Day which I think a lot of people will be upset at because people will equate Martin Luther King with uh

(37:34) the left in politics but I think the reality is if Martin Luther King existed today I think he would uh not recognize um uh the supposed Liberal Party in the United States right now because it seems like it's anything but um and and hopefully you know maybe it will reach a couple people with this but even if not then we at least we have supported people that we know are good people um so we're going to see what happens here um and I think that we close this out by Leading this back into disclosure re

(38:26) right for what for

(40:25) for sequester the right right word yeah question for

(42:02) we'll do a quick rundown after I finish this post we're close sorry guys maybe I should use that quote instead h two quotes might be too much

(43:39) okay I think this is good yeah it's not going to waste we'll take a look at that in just a second sir uh let's do like this I this

(44:45) pretty I for okay I think this is probably good going to be controversial

(46:25) for for I don't even need that okay

(47:41) boom Going to get spicy okay okay uh so there we go we did the politics okay relax relax man what is nutritional analytics what are we talking about here man you want me to go on Instagram is that what you're getting me at to go to here or what man I don't know I don't know what you're

(48:44) talking about man you got to speak in less coded words just tell me exactly what you need me to Google I'm not going to check out Instagram so if you've got something you want me to look look at um you need to be a little bit more clear I do appreciate the donations but I hope we're not trying to Market stuff here sorry what am I missing in the chat mineral balancing oh I spelled that wrong okay here we go let's take a look

(49:53) okay so here you go yeah I mean I I need to be clear here we're not giving medical advice to anybody so I work in healthcare guys I I got to be 100% clear I can't be giving medical advice to anybody and I'm not giving medical advice to anybody um I'm definitely not selling anybody telling anybody what to put in their bodies uh a donation Caleb here it wants people to be aware of the benefits of vitamins and minerals and that's probably where I'm going to have to cut this off so um not to be rude

(50:21) Caleb but please don't do any more donations asking me to uh do anything related to medical stuff I I just I can't do it so um but anyway obviously potassium sodium this is not very controversial magnesium calcium these are electrolytes are very good for you in fact the water that I usually drink I pretty much only drink water that has electrolytes infused into them um if it anything else more esoteric on that I I I can't dig into I literally cannot so I'm sorry it's literally I just I literally cannot

(50:59) do it it's um not a matter of what my opinions are can't do it unfortunately because of the healthcare the field I'm in um need to be clear as well is that uh giving medical advice to people that is um you you need to be a doctor to give people medical advice uh and if you don't it can actually be a crime in this country so just be clear on that okay so we did that hopefully uh it is what it is you know um we'll see we're not going to do a lot more any am way to plug I don't know

(51:34) what that is I got to be careful guys I'm already pushing the limits with this uh with just this post but I think it was important I think it was important what is Amo okay guys what do you want to chat about before we shut down for tonight you want to go over the the Dan stuff oh really Dan was do anything now that was the workaround yeah so I agree with V music let's go take a look at YouTube uh the problem with the videos is they make too much sense man I hate this Emoji right here this weird like heat Emoji or what is it hot

(52:27) Emoji I can't stand this one I cannot stand this Emoji I don't know when this Emoji got created but I hate it I hate it thanks I hate it drunk turkey Show solar cycle update got some weird stuff out there um maybe we'll check out crypto no I'm not wrecking Caleb at all it's just you have to realize like I you cannot dispense medical advice guys uh and I am certainly not going to dispense medical advice so just to be clear with people please do not send me stuff to promote anything medical related I I

(53:13) cannot I can't do anything to it so if you if you do send me donations related to it it's unfortunately uh going to go to waste um should we watch the video one more time yeah the best lives do have elements of **Truth** which is why the official story into MH370 makes no sense

right they they definitely included elements of **Truth** in the uh narratives that are out there related to waste what resour William dude you got to chill out man you really got to chill out out like don't stop trying to tell me what I should do and what's a waste of

(54:00) time right what do you mean he want to waste my time come on man please man I'm I'm an adult I can do what I want when I want nothing's nothing's going to this case isn't going to go away because we spent five or 10 minutes on a video right like relax man dial it back like I I think that I'm more with when people tell me comments like that that's sketchier than the video I've got people tell me don't look at this don't look at this that's the last thing that you should do it goes to the same point

(54:36) of like people don't need to tell you not to look at something people don't need to tell you something's fake right you don't need to warn me man no one's asking for your opinion on it right like just dial it back man if you don't enjoy it you can go watch something else right I don't need a million people telling me what I should do right uh so early on I want to be clear that I I had a policy where I would block people just for coming into my DMs and telling me what I should look at

(55:05) what's real and what's not the only reason why we're as far as we are right now is because I don't listen to those people right so I just need to be clear about that and again I know this is upsetting to people because everybody feels like their voice needs to be heard and absolutely I want to hear it you've got to realize that you can't can't go about it in a way where you're trying to dictate what I should do just do it in a way where hey here's something that's interesting right and then just enjoy

(55:33) the ride we are this is not going to be a type of situation where we're going to get answers tomorrow like that's just the reality of this no matter how you look at it the answers aren't coming tomorrow if interesting stuff comes up we're going to look at it that's what we're going to do man and um I want to look at this as well because here's the thing man they're not copyright striking me yeah the Jeremy Corbell stuff man I just here's the thing I want to say about this I'm not trying to start a war

(56:08) with anybody out there I there's clearly lines like we were in the space with uh Jeremy Reese yesterday and we were uh we and Jeremy doesn't like the other Jeremy Jeremy Reese doesn't like Jeremy Corbell he thinks that Jeremy Corbell is a grifter or whatever but here's the reality man a lot of people say that I'm a grifter too so I'm not going to listen to what people's preconceived notions are I think that that type of stuff is not productive right um and so that's what we have to avoid we have to avoid this

(56:40) conflict um and we have to be able to talk to one another right this guy murdered the passengers what what are we talking about it's from San Mato okay so let's watch this turn it down a little bit I want to watch this one one more time it's only 5 minutes welcome back folks my name is Dan and tonight we are going to hear the first part of an amazing story sent To Us by an anonymous user claiming to have unique proof of a cover up and later a **foyer** request that

confirmed it all it's a short story we

(57:16) know you like it fast so let's go oh and tonight our Graphics guy Emil will do the reading since he want to become famous [redacted] prick to all of those who ridiculed scorned and laughed relegating me to the nouse and even firing me for how else would I have been so driven to pursue solve find and derive the truth I owe them on Tuesday May 24th 1960 after traveling for two full days a Pacific wide tsunami hit Southern California after a series of massive earthquakes off the coast of Chile although damage in California was

(57:54) light the waves caused two deaths on the US West Coast 139 deaths in Japan 61 in Hawaii and at least 21 in the Philippines as many as 2,000 people died since I've already played the whole thing I'm going to pause it parts so okay so here's something right away like I'm interested in this you know why I'm interested in this because he's talking about things that are like conspiracies but they're not really being talked about a lot do you guys realize that just like last week or two weeks ago

(58:23) there was hu there was tsunami that were crashing over the west coast and people were wondering like why are these huge waves crashing over on California and what have you and people were even speculating oh well they're doing something in the in the ocean right like why would you have these huge waves all of a sudden coming out of nowhere it's not really explained and so now this guy's making a video about the earthquakes and stuff like that which are what creates the tsunamis um so real quick what's my

(58:56) opinion on the chandelier UF I haven't even really looked at it too much honestly the problem with a lot of those videos is they don't lead anywhere there's nothing for us to do those videos are just put out for the sole purpose of uh slowly Awakening people that there's something going on right but we're already way past that we're already sure that they've got floating orbs that we've already reverse engineered so like if you think about it from a timeline perspective like the

(59:22) people that are looking at jellyfish UFOs and whatever over here we're way over here already right we're already well past that so it doesn't really do anything for me right like and if we if the goal is okay give me something that's incontrovertible that nothing can it can't be denied well then that's not good enough unfortunately the debunkers are going to still have a field day with it uh which I'm just to be clear I'm 100% on the side of disclosure 100% I'm not disinformation or

(59:51) misinformation I'm just on the side of disclosure uh but that's it's not an easy process it's you we have to realize that the world that we're in with disclosure is one of a slow drip acclamation process where they're slowly getting people wakened up the old people are dying off the people that couldn't believe younger and younger people are starting to accept the stuff to be real so and again the only way that we're going to be successful at this is if everybody stops fighting in the UFO community and

(1:00:21) calling each other grifters and what have you right that's the stuff that's people back and that's why at the end of the post that I made just now the political post that we have to realize we have to stop fighting one another man it's not it's not the UFO Community against itself it shouldn't be at least it should be all of the UFO Community combined against locked Martin and the government who's giving them trillions of dollars over the last 80 years and not just locked Martin the other third

(1:00:49) party contractor companies that have all the that have all the technology these people are hoarding technology will change the world of that I am 100% certain and you know that's that's what we need to be battling and the scary part is that's what I'm afraid of like if anyone's going to make me disappear it's going to be those companies but I just don't care anymore you know whatever who cares uh even if I only all I do is make a slight slight impact on this world and slowly push that needle a

(1:01:19) little bit further it'll still have been worth it I don't want to live in a world where people are suffering for no reason whatsoever and I sat around and said nothing and did nothing you know that's not the world I want to live in and that's what I want for anyone who watches this now or in the future that's what I want for everybody else to take away as well is you individually have the power to make a difference I'm just a normal dude you are everybody out there has the same exact capability that

(1:01:44) I have regardless of your background and I don't like when people say that oh I'm I'm dumb or whatever no you're not no you're not you have the exact same capacity and capability that I do we're all equal that's what I truly believe um so please don't ever sell yourself short um and and I always question everything question everything that's out there even stuff like this where there's a good chance this is some kind of video uh you know ruse or scop or or whatever this is that we're watching

(1:02:18) that somebody's playing games with us which clearly they're sending us little messages like they're watching whatever the more I dig into this the more it feels like this is just some kind of ruse but still let's look into it just enjoy the little things right let's enjoy the little things okay along the Chile Peru Coast according to Modern calculations the 1960 Chilean Quake had a magnitude of 9.

(1:02:46) 5 making it the largest earthquake ever recorded this sparked a fiery discussion in the media in the following week and just 13 days after the event another earthquake took place this time much closer on the 6th of June a magnitude 6 earthquake shook the depths just outside the California coast there was an earthquake scare in the papers and the prediction of earthquakes was talked about in Congress then in 1963 a man named chony Thomas claimed that he had solved it and indeed could predict earthquakes by measuring electromagnetic variations and the thing

(1:03:24) is he had the credentials to prove it chony Thomas Was An American electrical engineer and geologist who during the late 40s and 50s worked as a project engineer on Bell

aircraft's Rascal missile guidance system and later Douglas aircraft's a4d Skyhawk program the program ended in 1956 and no one knows what he did during the last years leading up to 1963 he claimed to have been working on what he called the Earth tumbling Theory which he explored based on what he found solving how to predict earthquakes there is no proof documented

(1:04:02) so we can't say we know this but a thing we do know is that after he went public with his claims on predicting earthquakes by measuring electromagnetic anomalies in the atmosphere he was recruited by Dr Robert M Woods secret advanced concepts team at the McDonald Douglas Corporation one of the first private defense contractors in the United States the advanced concepts team was a part of the irad fund the first black budget program and their mission was to to focus on technology critical to Future business According to some

(1:04:37) sources they worked on anti-gravity devices plasma technology and other fringe science related projects for the Navy there probably is a lot to be dug up about the irad fund and there was a pause there this this does this still AI like why the way this person is talking doesn't sound like a robot right like there's random pauses in here and what's San Gregorio what's that I don't know if this is this is like all made up not programs most classified documents are released after 25 years and all top

(1:05:20) secret documents after 50 years due to compartmentalization there is a good chance that there is no one left to reclassify them so if anyone has the time there probably lies still uncovered gold in the CIA Archives this story is not about the secret projects it's about Chanty Thomas and his message to the world a message that was taken from him got its paper copies destroyed and the content of his work was banned and classified for 50 years the longest classification possible and in 2013 his writings were published as

(1:06:00) Declassified in part in a santized copy after a **Foya** request no one knows what's mentioned in the redacted pages but I think what's left is enough to understand you see those stutters this is not an AI generated voice like you know how like AI never stutters the way that it's doing where you see like there's a pause at the end of the words sometimes what he found and why why they chose to hide it from the public this is what he wrote and we weren't allowed to act you see that like you heard that right

(1:06:33) there this could be a voice changer but I think someone's actually speaking this for more than 50 years and we cut it short there quick and easy listening hit that subscribe button for the mindbending part two that's the first one of all these that I listened to that doesn't feel like it's a AI feel like there's too many parts where the the words like they're saying the word and then they kind of like like drag the word out or I don't think AI can do that Vivic dropped out oh boy stay safe

(1:07:01) folks and good night I'm not funneling them really much of anything 500 subscribers is nothing man they're not making any money off this yeah this feels like that was a person reading that so listen to it one more time right here near the end to reclassify them so if anyone

has the time they're probably lies right there you hear that they're probably lies and then they it like drags out this is someone reading something still uncovered gold in the CIA Archives this story is not about the secret projects it's about Chony Thomas

(1:07:38) and his message to the world a message that was taken from him got its paper copies destroyed and the content of his work was banned and classified for 50 years the longest classification possible and in 2013 and almost like there's a weird pause where it's like they're they're reading something is wait Chancy Thomas is a real person yeah the L Lodge guys hate me with a passion and honestly feelings Mutual they're losers they're complete losers man his writings were published as Declassified

(1:08:19) in part in a sanitized copy after a **Foya** request no one knows what mentioned in the redacted pages but I think what's left is enough right there you see that stutter as well you hear that stutter uh no this that's a weird stutter in there as well like I think what's left and then you hear this weird pause right here what's left is enough to right there you hear that stutter that that's not an AI voice I mean yes the voice itself could be AI overlay but I think understand what he found and why

(1:08:53) they chose to hide it from the public I think they're using a I think they've been using a voice changer this is what he wrote and we weren't allowed to access and even there again this is what they wrote and then we weren't allowed to access like it's like a human speaking more than 50 years and we cut it short there quick and easy listening hit that subscribe button for the mindbending part two stay safe folks and good night yeah I mean the email thing is a nod to so do you guys have any links to the

(1:09:26) Chanty Thomas stuff so that's what I want yikes if people I mean if you guys want to look at MH370 stuff obviously please keep doing that if I'm curious about this Chony Thomas situation because I can't find anything on him did that did that go to Stan went to the Stan video that will get a strike 100% yeah um the problem with those guys is just the pretentiousness of everything they do the funny part is they thought I was going to get offended by them not agreeing with me or something like that but they're the ones who got offended by

(1:10:06) me uh wait I I want to know real quick did is that true did he really drop out I mean the problem is this is what I'm talking about you wouldn't find out on the news oh there it is 13 minutes ago endorse Trump huh I don't trust this guy man I don't trust this guy at all I do not trust this guy I never trusted him to begin with we're talking politics anyway so I'm going to go into it I I don't like when people are um feels too highly produced right compare like just compare what you've seen with me with what you

(1:10:58) see with v right real people don't just speak talking points right you'll notice that like I not everything I say anyone will agree with right not people won't agree with everything I say um you know and you you get a little bit more attacked when you have those types of situations as well with VC it's like he's just saying what everyone wants to hear and those people I don't trust at all like yes I think he's got a really strong marketing campaign behind him but feels like a

guy who is

(1:11:32) selected could be wrong but that's just my opinion of him and if he's not then it's kind of sad because then it's like an indictment on where we're at from a political perspective right now where it's like you can't trust anybody to be honest which maybe that's the case so anyway okay yeah and I've told my opinion I think that Trump's probably going to win but I don't that's probably not a good sign cuz I think I've usually been wrong whenever I've had predictions so um if

(1:12:02) you are a trump supporter out there then you shouldn't take that as a big endorsement because I usually get it wrong unfortunately hey Dan show if you're watching out there man you want to tell me just let me know what's going on with this man what is this man what is going on here is this stuff that we should be looking into or is this just some type of wild goose chase this I think is probably the voice generator because they can record an audio and they can upload it here I haven't tested this yet uh because I

(1:12:32) just don't care that much but my guess is they're using something like this um do you guys have any links or tell me what I can Google um and yeah I'm not telling you guys what to think about VC I'm just giving you guys my opinion on it you know harp yeah harp sounds familiar what is harp again yeah oh yeah yeah this Alaska system I definitely think there's some weird stuff going on with the magnetosphere in general very interesting yeah Caleb good call it's interesting um do you guys have any links where we can find out

(1:13:14) anything about is it Chan Thomas or chansy Thomas like what earthquake detection I just want to know oh this is him huh huh this is him why do they call him chansy is that like a Pokemon reference or actually they didn't say chansy they said chany so if they was if they said chansy I would definitely think that they they've been trolling us okay let's just do a quick very quick dive on okay this is definitely the guy okay this is the guy um this is our guy he was a ufologist huh he published a book Adam and Eve

(1:14:05) story which interpreted the Book of Genesis in geological phenomenon to make the scient okay well if Wikipedia says it's pseudoscientific then I'm definitely interested claim that the Earth had routinely been hit by cataclysmic events every 7,000 years oh he was one of the people that thought the poles were switching whoa huh I gotta be honest guys I like this account I don't care I like this account if they're toying with us man they're they're sending me some information that I like I like this kind of stuff this is

(1:14:46) wild hey Ultra Instinct how's it going man claimed Jesus Christ was a scholar who lived among tribes and what is now called the Indian state of nagaland okay sure I mean that's pretty far out there I don't know how you're going to claim that Jesus Christ who was around 2,000 years ago if he was uh you know um a real person which I think that a lot of people think that he is I don't know how you're going to say he got pulled away by aliens it's kind of a pretty wild claim hey slam dunk Mo hey

(1:15:17) everybody as well who's jumped in hey mystical hey professor J Sandy Amanda um in 1967 Aerospace doug M uh company McDonald Douglas assembled a small team of researchers to investigate UFO reports within the goal of discovering an underlying science that powered such Vehicles Thomas was reportedly one of four full-time researchers on the team the team's director aeronautical engineer Robert M Wood wrote some four decades later in a newsletter from muon that Thomas had tremendously Innovative mind and was totally out of thebox

(1:15:52) thinker claimed he had ESP and he was in contact with extraterrestrial life okay it's pretty far out there James Randy criticized Thomas's prediction that Los Angeles would succumb to a future catastrophe 2,000 and 2,500 okay okay oh wow CIA Declassified documents in 2013 this guy's a real guy that was real the other letter to Ash this is freaking weird man this is weird are are the L LOD guys behind this account maybe they're the ones behind this account trolling us man I don't get it who's who's trolling with

(1:16:44) this CIA Declassified documents large exerts from his book why would they have to classify this what it was on The Joe Rogan podcast so whoever we whoever is doing this is a a frequent Watcher of The Joe Rogan podcast I'll tell you guys the number of I I I like Joe Rogan nothing against him whatsoever I've only watched probably less than 10 podcasts of Joe Rogan probably less what's ARG the ARG is bigger than your which has frequently been criticized for broadcasting misinformation unchecked dude Wikipedia

(1:17:38) is the worst man Wikipedia is so bad how do they just add this line in here it's like someone edit this out come on man is frequently been criticized for broadcasting misinformation this is why the advanced technology is kept secret from us you got got Gatekeepers on Wikipedia who just make random crap up and include their opinions in what's supposed to be just factual content H okay well now I'm super interested in this folks now that it's a real person and this is real and they really Declassified this stuff I'm super

(1:18:19) interested now the problem I have with Joe Rogan is I think that he doesn't dig into the science of it at all right so he's I think that even a lot of people that agree with us uh also just think that stuff can't be real right because that hasn't been shown on scientific papers or whatever but the reality is that scientific papers are also being suppressed when you suppress the scientific papers when you suppress the stuff on the TV you dictate what people believe just like in the letter to Ashton at the end in fact I kind of want

(1:18:53) to listen to that one more time the end of the letter to Ashton is the creepiest part man that's that's the creepiest part because it's just true it's just true how does this guy's crappy video keep showing up in the top here God and we got L Lodge stuff look at this Ashton Forbes had some funny things to say about me how upset are these guys man why are these guys so upset oh look there's our thing Ashton Forbes had some funny things to say about me guys I'm living rentree and some people's heads man I'm

(1:19:32) really living rentree in people's heads blows my mind dude theall why do people care

so much about me man just try to tell people I'm just a normal person but everybody's like just  
stra obsessed technology his friends had where is it geometry remind you of something okay  
here we go if you choose to spend time on this God this creepy should instead of m al aliens  
keep in mind that your case is one product of the technology what happens on the other Island  
you will understand this if you pursue it is another more rudimentary no

(1:20:13) I don't watch the like all the react content that people make about me it's too much  
that's out there it's way too much I should even reacted to that one woman's uh thing in general  
I just thought it was in such poor taste um so but whatever it was a moment of uh of weakness  
product what if those in combination could lead you on the right path to the actual technology  
yeah the L LOD guys are literally just some kids man that's the problem with them they'll they'll  
grow up one day the

(1:20:46) gray bearded man is the key and he probably has no idea that he is finally I want to say  
this this this is going to get where it gets wild so this is the thing where this next part in my mind  
is 100% true and this is where it just creeps me out like why would they add this crazy paragraph  
like this is like a like one of those personal letters that I I do how do you defeat someone who  
can turn skyscrapers to dust completely erase whole neighborhoods in an afternoon and steal a  
burning Boeing Tri 7 midair someone who when needed has the

(1:21:24) complete control of all media and crafts the perception of events yeah sorry let me let  
me redo that it's a little too it's not loud enough someone who when needed steal a burning  
race whole scrapers to want to say this how do you defeat someone who can turn skyscrapers  
to dust completely erase whole neighborhoods in an afternoon and steal a burning Boeing Tri 7  
midair someone who when needed has the complete control of all media and crafts the  
perception of events and has most of humanity eating from its

(1:22:00) hands after almost a full life in their service I think I know the answer you talk about  
them and you don't stop talking this that's just absolutely as Amanda said absolutely chilling  
when I heard that the first time I was so freaked out just literally just puts my like hairs on Ed  
listening to that part it almost if it was a little bit more direct I would consider it a threat it's just  
like saying hey we have full control of the media we can do whatever we want we can take a  
plane and make everybody believe that crashed into the

(1:22:41) ocean I mean it's that's wild man that is somebody not messing around right that's  
holy crap Wild elon's tweeting about starlink I I want to look into this chant Thomas thing this is  
bizarre so there was a real person that really werey classified in 2013 I want I want to get we  
should foer this I think or or find this yeah I wish we could disprove this channel too because it's  
creepy man I really want someone to disprove this I just want like if I don't know who who is  
making this I can't figure it

(1:23:24) out the scary part is I think the most likely person that's making this is me but I'm not  
making it it's like the I couldn't even make this is the part two and I couldn't even come up with  
this it's like who the hell is doing this who's doing this I mean best case scenario no you're right

Eve he's encouraging me so they're encouraging us this is not a it's not a threat it's a message of encouragement and it worked worked worked really well um but you listened to that last part

(1:24:02) and they say that like we don't have a chance right they're just saying our only chance is to keep talking about it w event down the rabbit hole B disc hey thanks PJ I don't know what that means but I'll check a look at Discord after I get off here in a minute it yeah it sounds like a secret admirer right it doesn't sound like someone who's against us that's the weirdest part that's the weirdest part about it I've listened to this almost 30 times I haven't really listened to it a

(1:24:38) lot recently the last couple days but parts of it are just straight up wild do I have it up I even asked Jeremy about it Jeremy Reese he was like I think this is a scop I think that the governments sending you messages that's what freaked me out even more cuz I thought Jeremy would at least be like nah this is fake or something he's like no government sending you a message I'm like oh [REDACTED] I don't even know man I would have thought Punjabi Batman but maybe could be him the thing is Punjabi Batman has the technical skills

(1:25:16) to pull this off that was a good point that people brought up was that like I think that keemstar brought it up is that this person's claiming to be like in their 50s or 60s right about 40 to 60 years old and they're saying you know who who's of that age has the ability to do this well the answer is somebody who works with flying orbs has the ability to do this for sure and then there's a meta element to the video as well where like they're using Advanced AI to create an AI video that or AI

(1:25:48) voice so it's like they're they're using technology like Boomers don't know about like if I were to tell my dad like hey my dad's in the 70s if IID be like Dad go make an AI voice video he have no idea you wouldn't even know this is possible uh so it's like man I don't know I don't know what's going on with this all I knows it's really interesting and as long as they keep feeding us stuff that's like on the edge of conspiracy well they're talking to the Right

(1:26:16) audience I think the play here is maybe I should talk to Randall Carlson maybe I should reach out to him yeah it's the thing is too it's really good AI now is it commercially available AI yeah I think so brick suit who's brick suit um I'm gonna just I'm gonna like this no matter what because I like Alpha Warrior a lot man I just like Alpha Warrior um what was I what were we going to do oh yeah uh Randall what was his uh thing I think it was like Randall W Carlson or something yeah Rand oh his DMS aren't

(1:27:12) open we have to find him in his replies he doesn't repost that much though if anyone has a connection to Randall I might ask uh if Martin can get me in touch with him you know what I like about Randall when I watched him and people don't believe that I didn't know who he was guys I don't know anybody in ufology before this I didn't know anyone other than like the biggest name people that you see on TV so yes I did not know who Randall Carlson was before this I'm sorry if that offends people uh that I

(1:27:48) didn't know who this guy was um but yeah he would probably be a good person for hard truths probably be very good I imagine he is busy but the thing I like about him when I've heard him talk is that he talks like I talk like he's like I don't know exactly all the science this is the information I'm told these are the smart people I'm hanging out with like that's what I like about him a lot he's like I feel a little bit kinder Spirit what do you mean second letter to Ashton Forbes Scott I think do you mean the

(1:28:17) other video that has like the short intro is there another letter to Ashton for somewhere tell me what to look up if there is I don't think so I don't know I don't believe all that Freemason stuff man that's the truth I I don't really believe all that stuff I mean sure are there secret societies maybe but this guy does not strike me as somebody who's trying to withhold secret information I think the reality is he's somebody who's trying to disseminate it I just get a little worried are we

(1:28:48) going to get to into the woo with some of this stuff not sure but um what I'll do is I'll reach out to Bob and see if Bob can connect me to Randall yeah he seems like a really cool guy what hidden message what are you guys talking about Ghost Rider requesting a for or bu oh so also since we're talking about this how will close out tonight guys is I do need more people who you guys think would recommend for hard TR podcast out there I probably will try to talk with salvator Pas again I've been trying to

(1:29:27) catch up on the science before I talk to Salan so that I can be not like have everything go over my head um but I I need some more people in general I would like to talk to Richard Dolan and the people I want to talk to are people that are either scientists and Engineers or they're people that believe and know that there's advanced technology out there that uh we can reveal to the public those are the types of people that I want to talk to so people like Randall Carlson who's out there talking to people I want to talk

(1:29:57) to him uh people like Richard Dolan who says that there's advanced technology out there I want to talk to them um anyone along any of those spheres anyone who's in the science and is conducting the science related to it I I also want to talk to um so that's the that's the plan for the future guys I'm going to take off I hope you guys appreciated uh the conversation tonight I think that everybody should reflect a little bit internally on Martin Luther King Day about equality Justice and freedom and

(1:30:28) what those things mean in general and tomorrow we'll jump right back in we're going to dig in I think tomorrow we're going to go into the science we've been going pretty hard on the investigation we've we've been hitting lockie Martin pretty hard as well so I think we'll probably switch it up a little bit and go into the science tomorrow night so uh probably won't be a lot of post tomorrow during the day so yeah if you guys have any contacts to any of those people and can get me in touch or you find them post

(1:30:53) and they can sneak me into the replies uh let me know and let them know too to not listen to whatever people say oh Graham Hancock would be actually awesome as well I wonder

but he's probably too high profile can't I got to sneak in his yeah these guys are pretty high profile man but if you find them make posts and we can sneak into their applies let me know we can get a hold of people everybody have a good night tonight thank you very much for being here I appreciate it and uh we'll be in touch soon guys

(1:31:30) peace

New Creepy Video? 1/15/24 - YouTube

<https://www.youtube.com/watch?v=46sIZmBejhc>

Transcript:

(00:38) okay well you can see my hair is wild cuz I was walking my dog and I got some food and I was editing this video um I was editing this satellite video a few minutes ago I just posted it I was also going to post I edited as well this orb coming through the cloud here and then I saw my replies after I posted um I don't have TW where's my Twitter here it is posted this I was looking through my replies just now and I saw this six minutes ago new creep videos up Ashton is this your voice at the beginning sounds like it I

(01:21) have not looked into it yet uh we're going to do it in real time right now together so let's close this for a second let's pull this so I'm going to keep this up I got to I might do something with the Drone video here in a second as well on this um this is a direct message I sent at uh a little while ago to this Dan show didn't get a response uh the reason why I'm going live right now is because I don't know what's going to happen on this creepy videos and I want to prove that this isn't me so I

(01:59) still have this stuff up from earlier you can see that it's this I literally loaded this up like two hours ago there was nothing on here uh I was looking at this again cuz I sent them that message I wanted to pull this to DM them again so you can see that I literally was just looking at this now this voice changer thing is from last night I still have it up I haven't touched it at all um so if you watch the stream from last night you'll see that when I closed out this is what I had open I've left everything

(02:24) open on my computer so somebody let's figure out what we got if we refresh this yep there's a new one **Foya** bombshell [Music] report was there welcome back folks my name is Dan and tonight we are going to hear the first part of an amazing story sent To Us by an anonymous user claiming to have unique proof of a cover up and later a foil request that confirmed it all it's a short story we know you like it fast so let's go oh and tonight our Graphics guy Emil will do the reading since he want to become famous

(03:14) prick what to all of those who ridiculed scorned and laughed relegating me to the nut house and even firing me for how else would I have been so driven to pursue solve find and derive the **truth** I owe them on Tuesday May 4 1960 after traveling for two full days a Pacific wide tsunami hit Southern California after a series of massive earthquakes off the coast of Chile although damage in California was light the waves caused two deaths on the US West Coast 139 deaths in Japan 61 in Hawaii and at least 21 in the

(03:50) Philippines as many as 2,000 people died along the Chile Peru Coast according to Modern calculations the 1960 Chilean Quake had a magnitude of 9 .5 making it the largest earthquake ever recorded this sparked a fiery discussion in the media in the following week and just 13 days after the event another earthquake took place this time much closer on the 6th of June a magnitude 6 earthquake shook the depths just outside the California coast there was an earthquake scare in the papers and the prediction of earthquakes

(04:26) was talked about in Congress then in 19 63 a man named Chony Thomas claimed that he had solved it and indeed could predict earthquakes by measuring electromagnetic variations and the thing is he had the credentials to prove it Chony Thomas Was An American electrical engineer and geologist who during the late 40s and 50s worked as a project engineer on Bell aircraft's Rascal missile guidance system and later Douglas aircraft's A4D Skyhawk program the program ended in 1956 and no one knows what he did during the last years

(05:04) leading up to 1963 he claimed to have been working on what he called the Earth tumbling Theory which he explored based on what he found solving how to predict earthquakes there is no proof documented so we can't say we know this but a thing we do know is that after he went public with his claims on predicting earthquakes by measuring electromagnetic anomalies in the atmosphere he was recruited by Dr Robert M Woods secret advanced concepts team at the McDonald Douglas Corporation one of the first private defense

(05:38) contractors in the United States the advanced concepts team was a part of the irad fund the first black budget program and their mission was to focus on technology critical to Future business According to some sources they worked on anti-gravity devices plasma technology and other fringe science related projects for the Navy there probably is a lot to be dug up about the irad fund and the early black budget programs most classified documents are released after 25 years and all top secret documents after 50 years due to

(06:19) compartmentalization there is a good chance that there is no one left to reclassify them so if anyone has the time there probably lies still uncovered gold in the CIA archives this story is not about the secret projects it's about Chanty Thomas and his message to the world a message that was taken from him got its paper copies destroyed and the content of his work was banned and classified for 50 years the longest classification possible and in 2013 his writings were published as Declassified in part in a sanitized copy

(06:58) after a **Foya** request no one knows what's mentioned in the redacted pages but I think what's left is enough to understand what he found and why they chose to hide it from the public

this is what he wrote and we weren't allowed to access for more than 50 years and we cut it short there quick and easy listening hit that subscribe button for the mindbending part two stay safe folks and good night God dang it where is this we are someone is definitely playing games with us definitely play where's this is this Diego

(08:08) Garcia someone is definitely playing games with us oh this supposed to be like a tsunami image no doubt they're playing games the beginning too why is it all pixel F why they doing this to the screen shaking it request that confirmed it all it's a short story we know you like it fast there's probably another message somewhere one of these pixels or welcome back folks my name is Dan and tonight we are going to hear the first part of an amazing story sent To Us by an anonymous user claiming to have unique proof of a cover up and later a

(08:56) foyer request that confirmed it all it's a short story we know you like it fast so let's go oh and tonight our Graphics guy Emil will do the reading since he want to become famous prick it's a a direct response to us that that is right there it's a direct response we've been talking about whether or not this they're trying to get money and become famous and I checked I still haven't been copyright stried even though I'm just playing their full videos they should have copyright stried

(09:35) me my my live streams are getting 10 times the views their stuff's getting well not quite but yeah camera it's not camera though right because it's AI generated image so why did they automat why did they add a shake to it oh cuz the earthquake thing right yeah so it's it's it's like a meme they added the first part of what is this this background here an amazing story sent To Us by an anonymous user claiming to have unique proof is that something there do you guys see that an anonymous user

(10:13) claim there's a flash right here you guys see anything okay well I'm going to leave this part to you guys I just wanted to post this real quick um no no no no donation trains I don't know what's going on man so direct message to us we talked about ail we pointed out the AIL thing on stream yesterday uh they're pumping these out really fast man they're pumping these out really fast like if we look at their Channel this one was yesterday like every day they're pumping out a new one how are they doing it so

(11:04) fast any thoughts on this guys yeah they are I mean they're definitely trying to engage with us but it doesn't really tell us anything this is I mean this was all that stuff verifiable can somebody confirm any of this stuff's real I've never heard of any of that stuff 1960 what was it I think I wrote some comments in the chat yeah you can find Dan for me if you want just be careful man it's pretty weird um earthquakes 1960s detection says measuring raate on gas doesn't even mention Electro magnetic

(12:08) whatever it doesn't take that much time you got to do all the research man I don't even I never even heard anything they said today no a AI is not generating this I'm more likely to think this is sentient AI than random a it's just too the stuff's too creative too detailed they could use AI as a tool but even that it's going to take a while man grush mentioned an irad fund really yeah

you guys if you want to look into this pull into any of the dig into any of the history of this here we go JD

(12:53) Cooper is that who he had said in the video idea using seismic waves they said that something was Declassified 50 years later the longest classification man this is so damn weird man this is so weird the thing is we we can pinpoint at least their intros right like that we were just talking about the Emil thing yesterday less than 24 hours ago so this is like a very very quick response same as the Miami aliens thing was only 3 days later maybe even less

(14:28) okay how do I download this hello independent research and development irad seems like a sketchy click guys I'm G to get a virus from this aren't I I'm definitely going to get a virus here I'm not doing this H okay uh thanks Jake appreciate

(15:34) the donation could qar n be making these um I don't think so because I think qar n's like running a hate group against us qaron is like some idiot larion is an AI and uh he thinks he's saying that I made the videos and he's like literally messaging a bunch of people in a DM somebody sent me pictures of it you guys want to see it's pretty it's pretty weird man this is why like you can't trust nut jobs on the internet because there's just so many man so many it's hard to it's hard to

(16:14) distinguish what's real what's not let me close I have too much stuff open uh where is it here oops how do I show it here I'll show you guys show you guys see how do I make this bigger copy image I guess so they qar started this group chat with 90 people in

(17:24) it like this is what happens when you get nut jobs involved like qar on guys this is why I didn't want to get involved with qar n is like like some people are just mentally unwell right and they start getting to meta and like start thinking that they're somehow like involved and just in case you don't think it's qar it's qar there he is like this is just Nut Job man you want to investigate the case investigate the case man I'm there's there's nothing to Mutiny against right

(18:02) you're as far as I'm concerned if you're making creepy like this you're not involved with me whatsoever yeah so if you get any Nut Job like this they even put Tucker Carlson in here I went through the list like this is just actual like schizophrenic like insane people who need like mental assistance kind of there's more too it's not even that's not even all of it like what what is he he's laring a mutiny as if we're on a pirate ship this is why you don't listen to nut jobs folks qar on if you're out there

(18:41) please delete your account and go just do anything just go do anything productive man as far as I'm concerned you're never going to be involved in this case ever again not sure why you're you've gone off the deep end like this this does look like an operation yeah this is like this is psychopath little stuff man larion is an AI and doing some whatever this is supposed to be here this is pretty weird man anyway um oh don't worry there's more one more one more picture and then we're done with

(19:18) this here you go here's all the people you can see JK Philly fans was added to this group Ken was added to this group they basically just went complete Nut Job stalker added as many people as I could to it look at all the people that we got here you can see all the names if your name shows up in this list do yourself a favor and leave this leave this group I've got people in here who are checking all the chats out so anything you post in here will get back to me uh you're not gonna nothing that you post

(19:46) in here is going to be private I will show it on the stream I don't care look at this Nut Job what is this man this is just wild stuff this is this is super weird man this is well beyond like this is you need to get some real help go talk to somebody get some get some help man I don't know I don't know if this is I don't think this is redditors but who who knows who cares honestly just literally larion is a pretend AI like that's cuckoo cuckoo yikes man doing this is not productive this is

(20:30) not a productive use of your time in in this world you know go find something else to do that that's better I just for the clarity I told qar n a while back that I wasn't going to be listening to any more people who are laring his AIS and playing little uh riddle games with me telling me to go look at book of Matsumoto and stuff like that like just tell me what you want to tell me man at least these videos tell me exactly a story that I can get behind it's not some super cryptic thing that I got to

(21:00) figure out right it's like they're just telling me a story of Diego Garcia you know they're just telling us story about earthquakes and stuff that's verifiable not just random stuff um okay uh guys I'm actually G to log off for a minute as well I just wanted to show this just so that people could see that I'm not involved in this thing although I guess people probably still will think so if you guys find out anything new about this uh let me know yeah I'd like to talk to Randall uh I'll

(21:26) probably I'll try right um but I'll come back on later I just wanted to show you guys that I'm I had no idea what we were going to expect here so you saw my genuine reaction for watching this for the first time um I don't know maybe there's some hidden clues in there I have no idea it doesn't I didn't see any off top of my head there um yeah Malcolm would be nice to talk to but he's on the other side of the world so as you saw when we were trying to connect with like even Timothy

(21:52) and um Bob greener in the past it makes it really difficult to do live streams really difficult the bright blue photo is Seven Mile Beach in the Grand Cayman oh neat interesting thank you appreciate that good info okay guys you can go re-watch it I'm going to close out for now and I'll come back on later thanks everybody

Transcript:

(00:00) credible replications of of other experiments that they're getting positive results where if we get enough of them together and I don't know I got to put the media together in the right way and just show people what's going on how to how the physics work and explain it and as simply and uh and easily as I can then we'll get yeah you're right I think I mean I got to take exception to when you were talking about Dave you know not being formally educated well formal education is indoctrination you

(00:35) know they pounded down the well equation so so you know anybody any electrical engineer that comes up to you and I'm an electrical engineer too and starts quoting Maxwell well he's he's first he's quoting the wrong thing so and he and he's using the appeal to Authority method of log you know that's that's a that's a logical fallacy you know we we see in these evos in ball lightning and observable [REDACTED] thing that you know that doesn't hold so don't don't wait for their

(01:07) approval we can get on to it anyone here can have their own theory about it and you know talk about it and one person about the replications mostly then rather than the theory the theory can come after and the and the approval of any kind of accademic body or establishment can come can we we don't need to wait for that you're right we absolutely at that point now where we don't need to public and I pointed this out too like we can with a a video video is going to be the new format for publishing uh experimental physics

(01:43) research and science because I can learn so much more from seeing a video a 10-second video of someone's experimental setup and their whole you know than I you you have to read through a paper and and and you know you can't act sometimes you can't quite accurately you know describe all that stuff in a paper you know you'll be like oh well I don't know I think that videos are going to be the way moving forward that you know publications of experimental physics research are going to have to be accompanied by by like

(02:16) videos being published with them it's just an easier way to communicate the information it's much it's much more high tech and we shouldn't you know like oh show me your paper it's like we're relying on you know Gutenberg technology dude it's get with the tong I don't know yeah that was one thing I was going to jump in and add to Jeremy which is I think that um for your efforts and maybe just it's all of our efforts right like uh we need to have like good quality production video production to go along

(02:46) with it so people can see it because like I was saying it is in essence a propaganda war and you look at stuff like uh I'm not even going to name them but there are a lot of big YouTubers out there and then there's ones in engineering as well where like they're able to get

get the information out there to people because they do kind of reach to this uh lowest common denominator or maybe that's not the right way to put it but like just reach a broader audience right because a lot of people can't understand all the

(03:10) in-depth science but you need the papers to go along with it um but you know I post those papers like Bob greener's paper uh that's basically talking about being able to produce Excess power and energy and you know nobody really looks at it because this goes over their heads like we need to be like showing people stuff that's going to like Marvel them right yeah yeah it's it's an there's a lot of stuff that can explain a lot of different cases and different scenarios and um so I don't know it's I put

(03:44) together that UAP technical summary where it's like a couple hundred slides of uh just information and I was thinking about maybe taking that and Publishing it into a book I think that would be a good way to get all the information like sort of laid out for people I try to do it more chronologically too because also you could also do like a a GPT that could train people on that information so uh I'm not God so not I'm not sure if you've tried my AR Commander GPT but I I have a a book that I've

(04:26) written on exopolitics on on Space Age governance that essentially now can train people to become an exop politician uh and and represent a future Cosmic Republic of Earth model um that could be a more westernized worldview that uh could replace the need for we and their kind of globalist world view with a more free World um kind of view that is in alignment with the Free World but you could do that with any type of of information that you could train them with that kind of of data so so if you have like a book that you've

(05:02) written I I can show you how to create an educational class with GPT that can teach your book that sounds pretty cool yeah that would um that would be worthwhile I I was thinking about putting just a lecture together to to give it at universities to teach people about this stuff and try to get on the speaking circuit with uh local colleges and and stuff this could be a supplement to that where um the program that I've built it uses a variety of teaching styles it'll actually assess your your teaching uh or

(05:36) your learning style and it will try to adjust uh to teach you how you want so it can it can use lectures it can reference to videos it can generate Dolly images to like you know demonstrate certain things uh and one of the cool things I've actually created is like a museum feature where you kind of walk through a virtual Museum and look at exhibits and it'll teach you through that process yeah man I was working with a company that was um doing matterport and we were we had this idea of you know making all these locations available

(06:08) through a virtual internet where you could you know do these walkthroughs of of like places like that I don't know if people are familiar with matterport but look it up it's it's really cool technology is that the one where they like walk into the store and then they scan it yeah it's like this 3D it has like it has uh couple different cameras in it ones that look straight ones that look down and ones that look up and it rotate you you put it in different spots and you hide

behind it and it rotates

(06:41) around in 360 and takes an image of the room with two cameras uh one is um just a regular High definition 8K camera and the other one is um a infrared camera with a emitter that that shines out a grid in infrared so it shines out a grid on the whole structure in infrared and then it takes a picture in infrared and it uses that geospatial data to create a map of the space um so technology from Xbox connects structured light it's part of it yeah it's similar to yeah yeah so it's it's able to create a virtual space

(07:27) where you can walk through in a like it creates like a 3D space out of the whole you want want to know a funny story about that is uh before that technology emerged I was actually working with a company called what Corp and we were building 3D models of uh condo spaces and uh we were actually supposed to go down to Florida to build like a a whole complex of of houses because I'm I'm a Unity uh game developer right so one of the things that I was trying to do was build virtual real real estate and uh they

(08:01) came out with that matterport and it actually took out the company because it was cheaper for them to do it with the matterport than then our company could do it and uh the owner of the company a what Corp was basically like no Google has created this new thing now they can do the the same thing for like a quarter of the price so I I built like I don't know I think Google had that complex and then that business got crushed by by matterport and Google well you know you can now with a cell phone it's called structure for motion

(08:32) algorithms so you don't even need structured light anymore you just need to walk the the trick is motion yeah stereoscopic yeah yeah well it's evolved a lot in the last couple of years I mean I when I was doing that that was in like 2012 right and basically I would like go to the property take pictures and then like try to generate a 3D model of it you know it take me like a week to put it together or whatever but you could walk around in it change the wall colors look on YouTube um something called 3D

(09:03) goian splatting SP a TT iing G that's basically the software Only Solution it's it's not quite as refined but give it you know five years and a lot of computing power and it will be very very good all you need is a phone and uh GPU so yeah I was going to say too real quick on on some of the stuff you mentioned especially the production quality uh is like maybe especially with the Apec things if you could find somebody or maybe even do it yourself it sucks do all the work yourself I've learned from doing it myself but like

(09:41) editing down a lot of those clips into like not necessarily like Tik Tok size but like the shorter the better um especially when I should make czy I was thinking about doing a documentary of like the best of the best and and just show like a 10-minute segment of like the best pieces of of all the best we share that stuff right on social media cuz that's the stuff that can get people's attention cuz you know I've seen people even comment on some of those like oh it's five hours I can't watch through all that right even mine

(10:12) like even the interviews I've been doing I'm trying to get down like an hour because even that's too long um and then just distill it down to shorter chunks like actually that's what I'm going to do tomorrow is go through all my hard TRS podcast and start pulling clips and reposting some of those clips and repackaging them because looking at like I'm learning what I'm going on these podcasts too and like I was actually just looking even at Tim Pool's stuff and he clipped like I don't even know

(10:36) how many at least like 10 different shorts that he posts out there right around the stuff and then they all get a lot of views as well and like it sucks but that's what marketing is right yeah yeah I think I need to maybe uh do more of that this year and um more packaging of the information like I said a book a book and a documentary I think would be a great step and then um also you know we got to like find a way to get a hold of these uh we got to get some you know we got to get it's weird how these people like

(11:17) have gotten an ear and they've gotten this Fe they've they've been able to work their way into ufology get this hu get these huge followings and then they're able to talk directly with our government and make and affect policy and decisions on all this stuff that just that just blows my mind because it's like how do we get better our information in front of these policy makers and decision makers and how do we inform them properly because it's uh I mean I'm I keep calling my uh my

(11:53) local congressman and Senate and talking to the staffers there and trying to just you know teach them as much as I can about what stuff that's going on um you know I wonder if there might be a thought of trying to put together like a city citizens lobbying effort where we could like write bills like the the corporations do that are pro UFO and try to like see if they'll endorse them so that the work is kind of already done for them and I mean with GPT it could probably be done or like other AI Services um where you could kind of look

(12:25) into that and then potentially you know assemble that have team of people that kind of look at these things uh and and you know act as a diplomats on behalf of the UFO Community might be an interesting angle risky yeah maybe I should just spend the day tomorrow calling up um lockie Martin and battel like just call them on the phone like every number I can try to get through to someone and recording it and um just post it it's Martin Luther King day and they're a contractor so they're not going to be working just T oh yeah

(12:57) tomorrow is experience right it's uh but yes I love that idea well um I think we just declare war and locky Martin as the answer these guys seem to be at the center of all this stuff I'm S I don't like those that language Ashton you know I like you know these guys got the biggest Arsenal uh serious you know they don't understand the chance they'll just laser you with about the Institute I mean so really the thing tanks just as much just the hardware guys that are the problem you know it's it's a lot of the

(13:34) bureaucracy involved with a lot of different stuff but uh mindset of these people the stove piping of the operations I think it just needs to come out you know this stuff's been

covered up it's a reality that we're probably not alone we've probably recovered pieces of you know whatever and it took us till this long to figure out a lot of how they worked although I think they made a lot of major breakthroughs in the in the mid 80s they should be a little bit better um on a lot of stuff but it

(14:02) was still it was still really Advanced you know for for what the science was at the time they didn't have total anti-gravity and faster than light but they had you don't have them on the trajectory so you get a couple of these absolute genius guys like uh teller and um wheeler working on the real uh nuts and bolts of the whole physics program hate this format and um you know they write profound papers on things like Quantum non-locality and uh you know this idea of it from bit the idea that at the basic scale It's All

(14:44) Digital and that it's like a computer code and uh you could hack it um if you knew the if you knew the code and um you know so you have these these guys were clearly working on this stuff during those you know from the 50s to the 60s to the 70s to the 80s and you look at the the body of work things that wheeler published you know it's it becomes clear you know you think I used to think that Fineman and I I got into physics because of reading you know surely you're joking Mr Fineman when I was in high school and learning about

(15:26) his work on the Manhattan Project and I like the people are sharing this you know I used to think that he was like the most brilliant guy ever and and and the uh the most read in and knowledgeable because you know he was picking all the locks and all the safes at Los Alamos and testing out all the security and he he was one of the few people that had just access to everything on the whole project and he like helped them keep a lot of it secret and and and increase their protocols on base to keep those Secrets more secure as well um but he

(16:01) was uh you know I used to think that he was the like but then I realized that you know when they when the Manhattan Project went looking for scientists they went to Princeton and The Graduate School um to to recruit fireman out of there and they went to Wheeler and Wheeler was already working for them and would work for them for a long time so you know um these guys have a lot of the stuff figured out if you read there really read the literature and and go back over it with uh especially with the understanding of how it works with

(16:38) entangled light and trapped light and breaking the Stringer limit with these nonlinear Optics and these uh these types of special crystals Optical crystals like phase conjugate mirrors quasi crystals and Mana materials and I think all that came from somewhere else I just you know the Nazis had this remarkable idea for to make an aoic tiles for that u480 sub that could make it invisible but where did they get the inspiration for that I mean they called it they they said they got the inspiration from this Guardian dwarf who could make himself

(17:19) invisible but they they had a they had a psychic uh Maria orc I believe it was that she claimed that she had had the Extraterrestrial contact UM that they were utilizing to get some of the information but I I think a lot of the information that they actually attained was from uh India where where the uh this wasasa actually originally comes from from culture yeah and the

society and um and what's really interesting too is that they may have uh you know they may have been able to figure that stuff out just through pure mathematics or or

(17:57) intuition um with wave math and understanding of that or um just experiments with uh you know you you put the wave math in you put a bunch of barriers in there and you say like oh what happens to the function you know and uh because I mean there's something there's definitely something to that but also what about um what about the idea that they um could have potentially gotten artifacts or relics you know like we have this whole religion of um the Muslim religions based on a black rock that fell from

(18:41) heaven and um that's the Cornerstone of that of the mecca um yeah man look at the um footprint of the world Trad turn it was the same thing so they're worshiping stuff from space you know so who's to say that we didn't get pieces of stuff that fell from space space and who's to say that you know some of this junk that falls from space isn't you know remnants of a something that you know came from a long time ago in a galaxy far far away you know some chunks of alderan or or whatnot you know who knows what the heck

(19:17) has fallen to Earth over the decades and been confiscated by the Roman Catholic church or or the CIA and the men in black or or who whoever have you no idea and um anytime someone had something weird like that it would just go up the chain of command until you know I don't know what why no pitch for it but then again you know you have pieces of this that are now in the public domain supposedly through guys like Gary no and with this this uh this sample which we're now learning more about the history of that

(19:50) that metam material um which metabunk and **Mick** West and everyone in insisted was um slag from a smelting process right um I wasn't so convinced on the on the slag explanation just because uh of what I know about metam materials and layered you know one-dimensional metam materials are are layered stacks of two dimensional layers and um this looks to me like a what's a bra a brag reflector or a dielectric mirror is what that meta material looks like to me when you have two different materials of alternating um refractive index stacked

(20:34) in layers and one of them is bismuth which is you know this reflector and uh the other you know bisou magnesium I think is the reflector and bismuth is the dial is this powerful dielectric because it has a really high spin state so there's weird stuff going on there with with some of the the physics and it definitely resonates with some of the other things I've learned about and then you know you get guys like Josh uh who claims to be the UFO snow and um Josh Bertrand and um the guy who was with me on uh Simon Holland's Channel he's done

(21:16) a bunch of interviews on on Simon Holland you know I had a I had a thought about that the meta material um about it the multiple layers of it is that maybe there's way that um some of the layers within there are are some subject to some sort of electrical force sound that would make the parts that are ins we won't say this all night I just differently than the ones that are on the outside so imagine it like a shell and you know you're maybe modifying the interior contents to act like a like a shield for the ship

(21:57) kind of thing it's definitely like a force field Shield the way I think of it as is you get this it's these brag mirrors this brag reflectors and it takes a bunch of small impulses that you can generate through you know external pumping and it concentrates all those little tiny impulses into one big punch and that in a very very small and focus confined amount of space and in just a and that all that has to do is exist in a very thin shell in the exterior of The Craft and you have that entangled you know Quantum this is this

(22:36) is how I think that they they'll eventually be using this type of technology to build um the next generation of quantum computers that that can act because they've built quantum computers but right now they don't really outperform our best supercomputers they our super best supercomputers are actually do better um so we're not there yet uh according to what the public knows anyway we might have something somewhere uh but I think that um this is the next generation is the the aliens technology I call it UFO technology

(23:15) because I've talked to people I heard about men materials and quasi crystals from a guy who said that you know they were reverse engineering this from Aliens out of Area 51 Ed G fuche you know he he said this I mean it's on the riddle of the Skies documentary if you go watch it this is what he says and this is what he told me many many times in conversations that he talked to a number of these guys that worked on the on these these deeper projects and programs and that the SR71 Pilots were the guys that would be hired to go and

(23:50) fly these uh experimental test craft you know like the Tic Tacs or or whatever they got um so the the technology inside these things uh it could be aerogel as this Josh guy suggests that would make sense with the phys it would explain some of the physics right because you have really low mass on on one of these aerogel craft you get  $f = ma$   $F$  divided by  $m$  uh what's the limit as  $M$  approaches zero or it gets really really small the uh the force the acceleration you get out of that uh small amount of forces it just gets super huge when uh

(24:33) you have a really lightweight Craft Like An aerogel so that makes sense in some ways for the maneuverability and um if this thing is actually like an aerogel blimp that's maneuvered by you know these force field Technologies whether it's externally applied laser beam Tech which I I don't doubt I mean they were working on that with project Sky Vault and the US Navy La lasers at um out at White Sands with um renell Polytech Institute there um Dr Lake maribou you know and he was working on on a lot of

(25:10) that stuff so I think if you combine that technology with the aerogel technology and with uh maybe some of these layer Sur specialized surface layer targets uh Optical targets you know whether they're face conjugate mirrors on just places you can focus your laser beam onto to get maximum um propulsion effects on the craft so you could literally guide these things around with your SDI satellites um by shining you know small amounts of beam directed energy onto them and uh this is in a number of patents I watched this that were live

(25:52) you can look them up if you look up a guy named Kevin CR KR e m e y r and uh look him up on the a patent search you'll find a whole bunch of cool patents on that stuff but yeah so

there's a number of technologies that can explain some of the stuff that we see out there and then when you really get into these focusing uh focused light and trapped light it's essentially you know what people are seeing with these balls the these plasma um ball lightning type effects or it looks like a a plasma ball of of white

(26:35) light or blue light sometimes it it's shifted uh blue shift or red shift depending on you know which way it's moving or how it's moving it will actually have a a a blue shift or a red shift in the warp field which is kind of Co which is really cool um because if these things are you know pumping tons of light into a very small amount of space and and using that to break the swinger limit it's basically like this it's I don't know it I just don't know what that would do to physics because you're you're

(27:12) essentially like breaking the the communication barrier so you're putting everything on an event horizon in a black hole essentially it's it's beyond an event horizon where the information from inside the craft can't travel to the exterior to the outside universe so you're like what what what happens when you when you do that um you have a question on that because it feels like you're like in a video game where you're just turning on cheats right it's like you're turning the cheat Cs on or like you put on I'm

(27:40) froto and I just put on the ring exactly so here's another aspect I want to ask you about Jeremy if this is supported by science is that and I didn't believe this at first but David grush mentioned that some of these craft when you get inside of them uh that they seem bigger on the inside and I was asking some smart people I know and they were saying no that's that's real and I'm going wait really like I I thought that was like made up stuff but like based on what you just mentioned there it almost seems

(28:05) like it could be real I don't know what are your thoughts did I lose you yeah so I I I um do you think that's mumbo jumbo or do you think that's legit say say that say it again because I was oh you're fine so um so David grush has mentioned this idea that the inside of the craft is bigger than what it appears on the outside when you get inside of it do you think yeah the Harry Harry Potter right exactly or like Men In Black yeah right um do you think that's supported by science or do you think

(28:47) that's just made up well this is the idea of quantum non-locality or you know spatial Dimensions or how things are are measured so um I don't know I don't think I can't see how it could be because I it just don't know of any physics experiment anywhere in the literature where something like this has been done or achieved you know it's just like you know normally you me we measure things um in terms of structure you know so I think I like to think of space itself as as a structure and uh so how do you get the structure on

(29:31) the outside to you know be smaller than what it is on the inside so I have a theory on that specifically on that is that you because of the shell that's that's created the shell on the outside would allow for the exterior shell to shrink down to the point of being able to turn into like a string and and use the type of teleportation that you were talking about while the inside

contents are actually protected because they have an inside shell that protects it from the Distortion that would happen to the

(30:06) outside so it's like in The Terminator movies they use a bubble okay and then they have to step inside the bubble to go through time and it's like the same kind of concept where you step inside of a bubble and that bubble is protected but the bubble itself shrinks but the contents inside the bubble are not affected like an internet packet yeah just sounds like you know think it points to Felix the cat's bag you know tricks or you know a bag of holding from many many things like that and in Harry Potter there had that bag

(30:39) too right the same kind of concept yeah right the weird part about it is like it seems like it could be possible because of the same reason why we have time dilation where because space and time are one and the same and we know time dilation exists therefore we know that your frame of reference is going to allow time to flow differently it also seems theoretically possible I guess that you could have uh a different space kind of like what you just mentioned too is that if if we can teleport something you almost have to

(31:10) have what star captain and Dread just mentioned is this capability where your local frame of reference inside the bubble is going to be unimpacted but from the outside perspective it's going to seem like you've shrunk down or you're not really there anymore and that's something where it's like man that's that's hard for people to wrap their head around that's why it's like when I'm sitting here disclosing all this stuff I'm like I wish this wasn't teleportation cuz this is this even

(31:31) blowing my mind when I'm talking about this stuff I'd rather just be cloaking honestly yeah like the Wormhole stuff kind of blows my mind too like it's like this idea of Stargates and stuff and then you start entertaining that and then it's like then you get the people saying oh they they went to Iraq to build you know because they were looking for the Stargate technology and we we robbed all the Stargates out of Iraq and that's the real reason we were there and you know and had nothing to do with the

(31:57) oil or the geopolitics or Petro dollar Warfare or any of that stuff so no I don't know I just if you think about the Stargate from the MH370 perspective is that maybe they grabbed that Stargate and figured out how to make it work in that amount of time I mean it might point to it and I mean if there's a technology that's faster than our current Delivery Systems and a warp drive would represent that that might be considered a weapon until it's you know under control so to speak right because I'd still like to see evidence of it man

(32:31) I mean we know that they've had invisibility project since 58 we know that they have met materials since the Nazis and you know Operation Paperclip in World War II so we know that they've had a lot of time to develop the ability to make things disappear uh so I know we have Compu 100% demonstratable I showed it on Danny podcast when I went on his podcast I made him bring up videos of it so that kind of stuff I can believe in man but I don't know the teleportation thing the bag of holding it just seems

(33:10) like DND DS Dungeons and Dragons fantasy magic kind of Harry Potter crap I know our technology today is the magic of a hundred years ago right so thought yeah that's my view the other part too is that like I think it I don't like to talk about stuff like you know Stargate even though I used to watch that show when I was younger and I think it is the same concept which is weird cuz I always thought that was just magic mumbo jumbo but what I usually say with stuff or I used to think especially with technology or even aliens and stuff like

(33:42) that is it I think it's rarely going to be the same as what we see it represented in TV right it's going to be a lot more foreign when we look at it and that's why when I've looked at the MH370 videos and that I've gone oh holy [REDACTED] maybe this is what it really looks like if you're actually seeing it it's not like a portal opening up and you walking through the portal it's something that's uh you know more of just like this instantaneous event where it's there and then you're not there

(34:05) anymore um and I'm not saying that that's what you want people to necessarily believe but I just want people to think outside the box in terms of you know it's all these things are probably not going to be as simple as we imagined it's probably not going to be exactly like we've been told they look like it's like we need to kind of see the leaks and we need to you know to Jeremy's Point experiment and do it ourselves and then video it so we can actually show people no this is what it

(34:27) really looks like when you do it experimentally else yeah I think uh if someone can you know show with I think there were some interesting Technologies at least aboard with that plane with the freescale semiconductor scientists and if they looked into that alone we'd probably find some more answers for why that plane disappeared completely off the face of the planet and you know they searched for it in the waters and didn't find it and uh yeah it just there there's that and then the es the espers I had no

(35:07) idea that you know that even existed and that's a whole infrared satellite based system of recording aircraft from space dude like what is this why was this created why do we have thing we and and are how many UFO videos do they have on this system that we haven't seen yet hello yeah dude like the cers stuff is like dude they are seeing UFOs give me a break like come on man NASA and these people they're just lying through their teeth about it there's they've got to be seeing them like almost on a daily basis

(35:42) or weekly basis and they're just not mentioning it at all and they're they must be compartmentalizing it CU I mean I spoke to a unless I was getting scammed by that as well but like they're just not talking to other government agencies about it cuz I truly believe the a when they tell me that oh we haven't seen the anomalous stuff I believe that they're saying that but it's because everything's compartmentalized like NASA's not the people at Nasa they even know my guess is if you were to work at Nasa you would

(36:09) never know that NASA is looking at images of UFOs and they're either getting airbrushed out like uh was it Gary McKinnon yeah with the national airbrushing and space animations they

just hiding right the never a straight answer that's my favorite I was going to make a meme about uh International symbol of somebody who doesn't understand science and they just have it be a picture of a NASA shirt I just like the the one that's that says Nazi and with the NASA slogan and lettering yeah because I mean there's

(36:41) just no way forget there was we had a Nazi secret space program for 14 you know from 1945 Operation Paperclip until 1958 when NASA was created so you know 13 14 years of a secret space program run by Nazis Von Braun had a plan in German uh to to travel to Mars that was improved upon while it was while they were here so that may have and allegedly has uh occurred as well so that's an interesting thought of it too is that you know he did have a full scale like colonization plan for Mars and then it just wasn't

(37:19) used might have been yeah like I'm just going to keep posting honestly I should just keep posting that cers video as much as I post like the 3 70 videos cuz that stuff to me is actually just as incredible um I would never have thought we would have all this spy satellite techn capability and the part that blew me away the most about it was just how no one has any idea and it's just right out there in the open like locki Martin just has this crap on their website we're going wait they're scanning the whole world all the

(37:47) time persistent Global persistent infrared surveillance like of course a plan can't go missing we probably can't even lose a car like that's how crazy the technology is they don't want to miss any UFOs either you know any any uh foreign aircraft think about the defense capabilities I mean we have this defense system it's over 85% of the the budget right you know like or something ridiculous now so so think of all the money that goes into this exact type of thing so of course of course this exists of course

(38:24) they're looking at UFOs and covering it up and not telling us about it why would they yeah and here's another element that I want I'm curious as your guys' thoughts is when I first saw the Flier the forward-looking infrared uh videos that they Declassified in 2017 2018 New York Times writes an article about it every all of a sudden everybody's like oh okay I thought why that's so weird we're looking at in in infrared right but now I think about I go I wonder if they developed the infrared capabilities

(38:54) and the advanced radar capabilities they have because because of UFOs because that's the easiest way to see them as opposed to in the visual spectrum because otherwise I'd sit here and think isn't it just better to have why are we not looking at visual Spectrum I just think huh well if you're looking for these UFOs you know maybe that's the way and then maybe a lot of people have this idea that UFOs are like oh they'd be so Advanced that they're Invincible we wouldn't be able to knock them down out

(39:16) of the sky I almost think well think of it more like a surfer on a surfboard right where it's a matter of like they might be immune to like and this isn't really Perfect Analogy but like maybe there's certain things that we can't hit them with like kinetic stuff but what if we just hit them with like like right like wavelength of radar and all of a sudden that just completely distorts them

and knocks their steering wheel out of control and now they just crash right there might be like simple methods to

(39:39) take them down so I almost wonder if our developmental technology in terms of detectors and uh visual spect or you know infrared uh surveillance has been based on UFOs well they they did say that there was an advanced radar system that they they implemented and that was what had picked up some of the um the more uh like the the Spy balloons and [REDACTED] like that right because they that was an advanced radar system um and they said that once they were using those too they were picking up more stuff I think part

(40:13) of the the the reason that they used um infrared rather than than visual is because the UFOs have the ability to um replicate the natural phenomenon called fata Morgana where it's like The Mirage effect so uh from my research into this they're they're using either lasers or like a plasma around their craft that it's allowing to the water recreate the fatom Morana effect like you would see on a hot day on the ground but technologically speaking around the whole craft and by doing that you're bending the light using the

(40:50) existing water that's in the atmosphere yeah so one way that they do it is um they use carbon Nano tubes and and high voltage they run when you run it through the carbon Nano tubes they just heat up super super hot and um you can get that temperature gradient to to bend bend the bend the light optically off of it and uh so that's one way that they've done it there's um there's another way with um active metam materials too that I've heard about where they pump they laser pump the um meta material and it does kind of like

(41:26) the same thing yeah this is this is a super interesting Ashton I invited you to be a co-host in case it kicked me out before and in case it kicks me out again um I want the we hold let me switch over because I can't do it on this I got to switch to my other like virtual phone thing hold on a sec I'm going to rejoin the space okay yep no worries we got join that blue Stacks folks I hope you guys are loving this space uh welcome everybody who's out there hey Nathaniel hey Dorian hey Jack hey Sandy Hermes Krypto Bernie everybody who's

(42:14) been hanging out appreciate you guys uh let's see if we can figure this out there's Melo alien scientist let's join the space uh think we crash that let's try one more time let's try that one more time okay we definitely crashed that pretty hard this such a janky way to have to do this you can't join as a co-host unless you do that like this I guess I can't even get this to work this thing is so garbage hey slam dunk Mo what's going on guys how are you guys doing tonight hope you're doing

(43:14) well uh I took a nap earlier but I've got more stuff to post out as well as you saw what I was showing on Twitter there's there's more details what is this man okay here we go okay there we go on on manned aerial vehicles and drone technology Institute for advanced studies and um goes on to research uh you know anti-gravity in this this team um very interesting other connection there but another interesting thing is with the those freescale semiconductor scientists and the the people that I pointed out there was a a couple

(44:05) individuals on board flight 77 on 911 that crashed into the pagon who were involved in uh some of these radar physics operations radar physics group and this you know anti-hijacking technology that was on commercial airlines and um it was part of the the um onboard GPS uh an autopilot system where you you could have this uninterruptible Auto autopilot function which could be turned on remotely and that would basically turn on autopilot you could upload autopilot signals to the process and control on the airplane

(44:44) and then fly the airplane uh through these remote um augmented GPS waypoints that could be programmed into the and it would be uninterruptible um which means you know you could essentially still be a to join you don't you didn't need hijackers on 911 you could have just you know flown one of these doomsday planes around and um and operated and taken control of those planes um remotely so you know that we don't know what happened on 911 because we didn't have a real investigation we had a cover up as

(45:20) um I pointed as a number of researchers who have pointed out including John gold who made the documentary press for **truth** about the victim's family members who who pushed for an investigation and um when they started asking questions you know first they were paraded them around like Heroes took picture you know photo ops with the with Hillary Clinton and all this stuff but once the the these wives started asking questions about you know what really happened and who was involved and and started getting into that they

(45:51) blacklisted them they wouldn't let him on the media and couter um the Fox News pundit there she got on and and and and publicly shamed them and defamed them uh the victims saying that they were you know right they were uh right-wing I mean left-wing Democrats that were trying to you know you know put tarnish Bush's reputation and and and start trouble and they had all they they made it into this political party issue and and you know it was it was really disgusting what you know Tucker Carlson and others did

(46:26) and um I'm I'm happy now that Tucker is finally coming around and saying you know hey maybe **I was wrong** about some of this stuff and and we're going to try to talk about it and open up to some of this stuff now and and I hope he he uh follows through on that because there's a lot of research that I found digging into 911 that I never would have believed years ago um but it's it's it will just shock you and blow your mind if you look into you know who ran security at the World Trade Centers um

(47:00) the whole building seven connection the financial connections that we were talking about uh with Ben who's still on here as a speaker earlier um in the space so there there's a number of these things which deal with really high level people um these scientists that were aboard the uh that plane in MH370 were involved with some really interesting Technologies as I pointed out um with the patents and um I don't know if those are still available if they've been you know I think there's more there's more that those guys worked

(47:35) on that that we don't know about yet and um one of them was this this radar technology which uh could basically disrupt radar and cloak cloak things from radar um so they could

disappear a plane uh with radar frequency so I don't they combine something like that with you know a Vis because what's on there on that video is um sorry K dis it's um it's certainly curious uh if it if it's if it's um it draws a lot it draws these questions so I I think that it's done more it it will do more if you get in

(48:28) front of the right people um to dig into this espers the satellite based infed systems and that whole free scale semiconductor connection with those scientists that were on board and the technologies that they were involved in including it was like smart dust and and other weird Tech some of the scientists were just involved in in other weird stuff as I as I recall one of them was like invented this uh smart dust which is contact tracing techn technology through RFID tags um so it have been very useful pre pandemic you

(49:02) know to have patents on on contact tracing technology that would have been gone into high demand in 2020 if you knew something like that was coming yeah real quick on some of that stuff because um I was looking in I was looking at Captain Dan Haley's or hanley's uh report where he talks about the remote control stuff as well as I was actually in a space with field McConnell recently as well and I mean I'm I'm convinced on page one that like we can definitely remote control an aircraft uh and after 911 they were

(49:36) supposedly installed on like every Boeing aircraft where they can remote control them so I mean it seems just like completely rational that you would do that as well especially after 9911 when you know it's like you want to prevent people from being able to take over an aircraft it it seems like the logical thing that you would do and then with respect to those Engineers on board like to me those are are 100% whatever happened to that plane it's related to those 20 Engineers on board that on that plane cuz they were into all this

(50:02) advanced stuff we find this NSA security report I think I talked about when I was on your show Jeremy um I I'm pretty sure I even talked about with I see Tony Merkel in the chat hey Tony uh everybody if if you don't follow the confessionals you should definitely should Tony Merkel is an awesome guy um I think we talked about it even there where it's like I or maybe we found out right after but there's 2005 NSA report that's like oh these guys are building room temperature super conductive microchips that are

(50:27) used in quantum computers right it's like this is really advanced stuff this is National Defense stuff yeah those scientists were definitely top of their field at one of the top companies and whatever they were working on was maybe it's just so curious because we we found a lot of these Trends man it's like that's why I'm trying to warn these young kids that are getting into these programs that maybe seemed like this enthralling thing to be a spy and be part of this big secret operation and this technology and

(51:02) stuff but they killed they kill [REDACTED] dude they they're ruthless these people and and the freescale semiconductor scientists are not the first by a long shot there's the whole Marone scientist death conspiracy where you know over 20 scientists who work for Marone went missing between 1980 and 1993 or 4 right so there's other reports of you know a number of

scientists and do and doctors just like if you look up the his look up like all the doctors that have been you know killed or silenced or or um or

(51:42) whatnot you know there's there's tons of uh of medical doctors and stuff too so it's it's a cures for cancer that uh we're talking about cures for cancer or yeah the and a lot of holistic medicine practitioners in the last like 10 years uh probably like good couple hundred um that have actually yeah and now it's all run by this insurance agencies under the Obamacare Act and it's it's literally the insurance companies basically like poisoning everybody and and if if you're one of

(52:20) the doctors that has these alternative medicine anything that's outside their strict like approved gu line of of like Insurance medications and stuff and insurance what the insurance will cover they won't they won't do it and you'll lose your license and you won't like get it's like a big big [ ] scam uh real quick Jeremy I guess you got a pretty bad Echo I got people messaging me and I can hear it as well I'm not sure if uh there's anything you can adjust on your side to make it

(52:47) better it's like you're kind of like robo staticky or something like that yeah you too man you've gotten real Robo staticky you got it too now man I think oh man they're on to us they've nuked our space dude we're talking about too much stuff they don't want us talking about this stuff the next thing we should talk about is uh you know the random event that might happen in the future where MH370 just [ ] shows up again out of the blue yeah I don't know it's been 10 years otherwise I would if it was like

(53:19) 2017 or time they did a Time jump bro yeah it's like what is it manifest or something still haven't watched that show was that missing ship that was like some Destroyer that went missing somewhere and that that like supposedly appeared yeah Philadelphia Experiment or no I know Eldridge but there was like another one and it was in some TV show where like or something that they they did like a shout out to this one thing that disappeared and they never saw it again and um I don't know they may sense but

(53:57) do you know the um the lore of the USS Gerald Ford there was a US SE and right and so the Russians had a a plane with no Armament except a little pod underneath it some kind of electronic warfare it shut down the entire ship and they had to tow it all the way back to um all the way across the Pacific back to uh to California for repairs so whatever that was um we don't have any shielding to it so it's why there's a stalemate in Ukraine right now technology hey Jeremy it's something where when your mic is open at the same

(54:36) time as someone else's mic and you speak it's a echo so I think the fix is if you're speaking everyone else's mic has to be closed I'm going to try to log off here for a second and I'll log back on give me give me like a minute I'm going to start my phone yeah should be fine I got co-host from crash space absolutely loving the conversation and so I wanted to just come up and try to help fix it so that we could keep going yeah I had a few people message me saying it was uh getting annoying but uh

(55:11) hopefully we'll get that fixed in general yeah and then um I think too I I posted in the in the chat uh as well there was this redacted video today where they're talking about locked Martin and uh some pretty incredible claims both about locki Martin's Breakaway civilization level technology but also that like lockie Martin got in a firefight with us like troops and or like jck I guess a couple jck people supposedly were killed so this is it's pretty wild man um it makes me wonder what could really be hidden from us in

(55:43) general definitely recommend checking that out and you can go to I think it's redacted uh Inc yeah I think do this thing on the top The Nest yeah yeah I I made a clip of it I edited I'm getting better at editing like clips together cuz I'm trying to make it you know uh less than like a couple minutes when possible um but the the part that I clipped I didn't clip the part about like them talking about killing the the people I just clipped a part about like how the technology could change and help so many

(56:10) people in the world and change their circumstances and how like the government like you know this this could lead to people marching on the government which would lead explain why people like they don't want to reveal it right it's just such a huge huge thing to reveal like can you imagine these people like you know normal people like people on this stream on this space right now you know struggling to pay their bills struggling to pay for heat it's freezing outside at least where I am you know struggling to have housing

(56:39) and then you've got people out there like portaling around curing themselves extending their age it's just like it's two different worlds man it it's two different worlds I just saw your Tweet earlier at asking and I said to myself like I just got done I I accidentally ran out of oil uh I live in New York and it's like freezing here and so I had to put some diesel in until the oil company could come couple days later which was fine and then it was you know whatever \$1,700 to put couple hundred gallons in the

(57:18) tank and so when you're when I saw that tweet and I listened to that guy the talking about how the whistle blowers are coming out saying like if there's there is technology that I I believe it already exists like not free nothing's free but energy Deb is like 1 1,000th of the cost um and that would be shameful you know if we've had that for a while and they've been keeping it like I get I get scarcity okay you know like you have the Apple phone uh 20 already and you trickle it out and but like to do that

(58:00) with people's lives is Criminal you know in my opinion yeah no I agree and that's the real question too I guess from the socio from the economic standpoint is like I wonder what you know Fusion Energy would cost I mean it definitely would bring the prices down and it tells us that like oil and gas and all this stuff is going to definitely be Obsolete and there's almost certainly an inflection point too where one thing that I've always uh told I love economics in general so something I've always told my

(58:30) family is that you know the reason why I don't worry about stuff like and people this is going to be controversial but even like uh climate change and stuff like that is Humanity will

always figure out a way to adapt when things get really critical and I think the same thing is true for Rising gas prices like I actually used to think that \$5 a gallon of gas was going to be the inflection point where people would like freak out okay well that space just ended well there we go we lost space I was co-host but we still lost

(59:03) it wow that feels bad well I'll finish my thought um I thought that that you know \$5 a gallon gas was going to be the inflection point there but you know then I paid like \$6 a gallon when I was living in California for a while even like a year ago or whatever and uh now I wonder if it's not something much higher like \$10 a gallon in general um and and then at some point this technology will get out and things will change but boy that sucks huh space crashed I thought that it wasn't supposed to happen

(59:38) because I was in it as a co-host let's see yeah definitely crashed right it's not me right just crashed yeah I think it just crashed damn feels bad okay well we tried well oh well it was middle of our conversation crashes like that um but yeah you know I think what's going to happen is when we get to a point where it becomes problematic where there's enough people starving like they're not going to let there be a uh a revolution of violent Uprising right so instead they will uh you know they'll

(1:00:23) they'll leak the technology out as it benefits the elites that's probably what'll happen I think it was cuz Jeremy crashed and then it took too long for him to come back maybe had a bad connection the space has been transported above light speed to Diego Garcia Ellie's got it guys that's probably what happened um okay so probably going to shut down pretty soon here it's been double stream today but we had some pretty big stuff happen and I do want to post some updates Maybe just do it in the morning so first of

(1:00:57) all locky Martin definitely has quantum computers guys they definitely have quantum computers when did they set this up 2011 yeah this this and this is what they set up publicly right yeah I'm kind of surprised redacted hasn't uh reached out what I will say guys is I'm not going to mention much more about this we go into more detail it's not something freaking out about or to get too excited about um but uh there is a TV station that reached out to me so we'll see they're trying to do a piece on

(1:01:38) MH370 uh and I'll tell you guys what I told them is I told them that I hope they at least consider the fire scenario I don't care if people want to not talk about teleportation and orbs or whatever but they should at least give the fire scenario some credit the fire scenario is like definitely what happened to this plane there's every witness corroborates it there's 500 pounds of dangerous lithium ion batteries on this plane it needs to be at least mentioned um as for Tim pool doing dirty I I don't even care man I don't even

(1:02:14) care it's more exposure and more exposure is going to bring people to the evidence the same reason why I don't even care when the haters uh talk smack or whatever um because the more smack that gets talked like the more people are going to come and and check the stuff out and then they're going to be like oh wait this guy's not full of crap right he's just presenting

the evidence um I'm not going to go into more details it's not because I said it's nothing excited about it's not it's

(1:02:41) not like anyone big like you're imagining but it is technically a TV station um yeah we got bopped out of X let's see what happened with that Jeremy probably made a post let's take a look and like I was saying before guys like we reached a point now yeah I think he I think he just crashed man we've reached a point now where we've hit this inflection point where like no matter what when people talk about MH370 they're going to be coming to us right they're going to be pinging me about it because there's just

(1:03:18) so much engagement on social media about it the same way where like people talk about like field MCC right where they talk about field McConnell and the remote control stuff and I wanted to mention the remote control stuff like there's definitely an angle where remote control was used on the plane definitely an angle I mean it's hard to fit in there because we just have so little hard evidence related to what happened with the plane right and we don't know what we can trust like if somebody's lying to

(1:03:48) you how do you know when they're telling you the **truth** kind of situation haven't quite got through this whole thing this Camelot but BAS basically is about their playing being remote control to Diego Garcia um so I don't think you guys the stream is still up right yeah no the stream's up but the xace got crashed yeah oh well you got see my DMs well let's see what they're saying now that we got it up they don't like nukes okay anyway um it's no big deal I don't really care people know it was funny

(1:04:22) somebody in the other space that we were doing the other night was like I'm going to take this off now they were going uh they're saying oh who was that they asked if keemstar and I was a scop I'm like uh dude I'm just in a I'm in a chat with him like we follow each other he probably just noticed I was in a space and joined it's not it's not that wild I don't like to say that we have sides what I do like to say is that um yeah I'll try not to tox myself again that's why I'm not going to show my DMs

(1:04:55) with the the news thing because I've got I keep posting personal information I don't want it to pop up I think that the way to phrase it is that we're align we're aligning ourselves with certain people right we're allying with certain people it's not that everybody's on our side you know even Jeremy's like you know he thinks it makes more sense for it to be cloaking and that's totally fine man I I don't care honestly at this point I'd just be happy if they just talk about the fire scenario I'd just be

(1:05:23) happy if they talk about the fire scenario at this point man like I I've already realized that like the whole teleportation angle is just way over most people's heads right now from you guys perspective I think you have no problem uh but I think that for just people the normies out there it's it's way too much man it's way too much and ghost you're right man there are sides 100% there are sides like you can tell that we've one thing I I said once upon a time I had this job in the past not my

(1:05:53) current job and it was one of those jobs where nobody quits where like you have the same people that work there for like 40 years and like you have a ton of people that work there for over 20 years and what happens is you get this encrusted situation where they develop these policies and everybody gets very clicky and there's certain like circles it's a lot like high school right and if somebody comes in and tries to break that paradigm to say hey why do we do it this way when we could do it this other way they almost

(1:06:30) become like a threat right they become a threat to that establishment it's like when the new kid comes and joins the high school it's like oh which click is he going to be a part of right I think that's a little bit analogist to what we've had go on with the UFO Community from the MH 370x perspective and we've kind of found our way in there where we've broken that mold a little bit where certain people have unblocked us and decid hey this guy's not going away but the reality is

(1:06:59) that there are are a lot of people that this threatens their worldview just like I posted in the message to the Skeptics today on both sides this information just threatens their worldview and we have to keep that in mind right um to a lot of people there's no difference between the idea of something teleported and the idea of you know Alex Jones talking about s Hook was a lie like that's in those in some people's minds these are equivalent Concepts which blows me away cuz I'm going dude you're

(1:07:31) talking about a bu of children who were murdered versus science quantum mechanics these are not things that you can equate to one another one's based on reality right like actual scientific Concepts and the others are literal conspiracy theories and I think people should be allowed to have whatever conspiracy theories that they want that are out there right like ideas aren't hurting people you know ideas don't hurt people in fact I'd argue we need to push the boundaries of ideas in order to get

(1:08:02) to the **truth** no matter what that might be right so I personally with you guys I don't believe that Sandy Hook for example was some kind of cover up conspiracy I think those children were murdered and it's one of the most horrific things ever I think that children getting harmed is just is just I can't stand I can't tell you how much it upsets me it it's gets me actually angry but at the same time like that doesn't hurt me like I don't feel like I need to attack Alex Jones over it right like it's just an idea

(1:08:36) it's not based in real like the same thing where it's like if people lie it doesn't doesn't make me angry right because I know that it's like not reality if someone tells me the sky is green I don't care right like I know it's blue it's whatever right and I know it's probably not really blue it's black up there in space but um so you know I hope that people can at least do that as well with the idea that maybe we can teleport an object like yeah it seems extraordinary but yeah that's what

(1:09:04) non-locality is spooky action out a distance right yeah thank you slam dunk Mo I appreciate it man yeah the the interview with Tim P was uh actually on last Friday but yeah I

think that it's been getting more and more out there if you go to Tim pool uh YouTube and I double checked as well I still haven't got copyright stried by the just to get people up to speed who are not maybe here earlier um I I my intentional play was to see if I would get copyright stri by the uh what is it real creepy stories because I literally played their

(1:09:45) whole videos on my stream without without pausing or anything man I can need a better way to find this channel I I'm not going to subscribe to it though if you're out there real creepy stories I'm not I'm not subscribing to you cuz I don't know what if this is some kind of gimmick or what um but they weirdly posted this past bin today and it was posted today by an anonymous account and they're saying that everything's copyrighted well I played their video non-stop because I wanted to

(1:10:19) [Music] see I wanted to see what let's check there's a you uh Twitter account with this I wanted to see if they block if they would strike me uh on it and they didn't which tells me they're not trying to do this for money because if they were trying to do it for money they definitely should have copyright stried it it does look very troll you know why I enjoy this though guys you know why I enjoy these videos is cuz there's a there's a real possibility even though it's a small one

(1:10:53) but there's a real possibility that this is like a government scop like that the the intelligence Community or even a foreign intelligence Community is doing this right it's just so elaborate it's so elaborate man like I just enjoying at this point like if I'm doing something that's drawing this much attention that's making someone spend this much time you know much time it would take to make these videos I can't even make videos this long like look at how much time like just to be honest with you guys like I

(1:11:26) spend like almost all my free time working on stuff like this streaming with you guys even editing those clips even just editing the clip that I made for the redacted thing that took almost an hour just to edit that clip whoa who's how much is that whoa hey thank you GT keep doing what you're doing man thank you I don't know because I think this is red so I think this is a lot of money thank you thank you man I appreciate that I haven't had to say this in a long time but um I do appreciate the donations that help out

(1:12:01) the cause uh I don't want people to feel like they have to donate especially because like I know that we live in a world where it's the Hales and the have knots and I want people to keep their money but thank you for that it does mean a lot so I appreciate it and I I like that there hasn't been as many people donating um recently uh just cuz like it makes me realize that like you know you guys don't need to donate to get attention from me I'm I'm happy to answer questions in the chat regardless but

(1:12:27) yeah I I don't know who GT is I don't think we've seen GT but this doesn't seem like it's your first donation otherwise I think it normally says but thank you very much GTA I greatly appreciate it I don't know how much when you conver convert that to schmeckles I'm not sure but I think this is a lot because usually when they're readed like this I think that means that

there was a a big donation so thank you appreciate it that's not \$33,000 guys that's oh \$54 nice that's huge man thank you very much

(1:12:53) WoW appreciate that man um but yeah that's why I enjoy this man like this is wild I'm definitely going to follow any other videos they post on this account I like I'm very curious as to what they'll do next and if they will send us like another subtle message like I don't know if all they wanted us to do was to focus on \$53 is a lot man that's that's huge thank you that's big maybe they just wanted us to refocus on MH370 right I don't know it does kind of feel like that that that was the

(1:13:26) goal does really doesn't feel like a situation where they were trying to get us to stop people watch the other videos with like the tunnels but it doesn't have to be it doesn't seem like it has anything to do with it or maybe they were just riding the wave right the thing about riding the wave that seems odd like this just a random new channel and they target me right away seems really odd I don't know and then they've talked to us in two other videos as well really odd I'd like to have a

(1:14:02) Martini in their honor but I'm not going to do it right now hey Diamond what's up buddy Diamond's probably happy too I'm not talking about Miami aliens I thought about Diamond when I was talking about Miami aliens I'm like oh Diamond's going to be upset that I'm I'm reporting on the Miami aliens uh nonsense out there and not to offend anybody maybe there is something out there really to it but I think we've decided that a lot of those people were just uh making up stories as part of

(1:14:30) like a little viral sensation thing that was going on yeah any money is amount of money nowadays and one of the thing that I want to say as well while we're just being meta right now is that I am a little bit worried about if I were not just if I were to lose my job but if there's like a lot of aspects like I don't think I'm going to lose my job as long as I keep focusing on what I'm doing uh job related I should be fine there's there's people that definitely skirt skirt the line a

(1:14:59) lot more than me but um losing my security clearance you have to renew it every few years I think that like top secret ones you have to renew every three years as well which pretty sure it's coming up pretty quick I don't think they'll reject they'll not let me renew it just because I'm not technically not doing anything I I shouldn't be able to do um but yeah man if so it's like if you you uh like if you lose your job and you've got all this stuff like if you just Google my name uh let's close this oh I was going

(1:15:37) to actually check at real world creepy oh whoa whoa what when did this account get made they oh how come nobody told me they have a YouTube account or a Twitter account what what day is it is there a way to tell what day they they created their account whoa oh God are we sending them a DM who are they following looks like they're following a

(1:16:43) bunch of people that follow me almost everybody follows me I don't know maybe this is just some metag gim **mick** whoa they're following fake Elon Musk is this who's doing it is this

the guy who's doing it they had me come into a space with them the other day the thing I can't figure out is even if it's a random person making this up even if it's fake Elon Musk this is that's this is fake Elon Musk right here even if it's them like how are they coming up with all this they must be following it a lot

(1:17:37) right yeah one strategy could be to stop talking about them the thing is they're not making any money off of it man 500 followers is not enough people to make money even 5,000 views isn't they're probably not even monetized yet that's it that's their only post they just made this account yeah so maybe this is just some meta thing that's they're doing right very weird man they found an old tweet from

(1:18:47) 2022 and they started replying two days ago this is still bizarre man this is still real weird right this is definitely not about money could just be some really smart viral marketing campaign they came up with some pretty original ideas here so they spent all day January 12th that was two days ago just replying to glitter conspiracy people this almost feels like they're trying to get information out right otherwise why are you replying all this just for attention hoping somebody notices you this account no longer

(1:19:48) exists I don't know what to do this is very bizarre man the story to me was extremely specific that we could facilitate that we could facilitate also heads up somebody noticed there's a message in here guys I should post that as well yeah we're going to find out their intentions soon enough this isn't something where we have to get to the bottom of it right like we'll find out their intentions soon enough very weird This is So Meta is the part that I can't get past it's too meta Man

(1:20:29) Too meta for me um let's see what I got for you guys I got some spice for you I got some spice where is it images here you guys go you ready for this check this out hello my name is Emil I am Motion Graphics designer and 3D I think it says artist and 3D artist look at this you guys like this the th this is the weird part this isn't Motion Graphics or 3D art I saw this and I went wait but this is AI this has nothing to do with Motion Graphics designer if this said like I am AI and voice expert writer or something

(1:21:23) right I'd be like oh okay this is this is a a message they're just saying what they are this is weird right who is a yeah I've heard that people have gotten unsubscribed to me uh I have not unsubscribe to anybody unless they've been blocked I don't I don't I don't force people off following me unless unless they're trolling me weird right I wonder at what point this was 47 seconds in should we go look at it real quick I forgot what we're going to do I keep getting sidetracked because I got

(1:22:12) sidetracked with this creepy Dan thing huh I think it's a water mark yeah he didn't add any music though there's nothing for him to be plugging that's the thing that makes sense there's no 3D art or anything related to it going on real world I think it was real world creepy right there it is okay now we know how to find it I'm still not subscribing to you Dan if you're out there man they added this weird thing too this is so weird that they added this because my

whole play was to play

(1:23:01) their video on my YouTube without and try to get copyright tried by them to prove that they're doing it for like some money but they didn't and then they added this anyway I'm going to keep playing their videos and and violating their copyright I want to make them force them to do something I know you're watching Dan so that's my play I'm telling you straight up uh let's see 47 seconds in wait oh this this is where they're putting it in man so that's literally like what one frame man we really have to be going

(1:24:00) frame by frame looking for this stuff how did he find this he went frame by frame through it wow that's that's buried down in there folks huh okay well we're in the middle of a weird weird meta thing going on out there hi Dan impressive oh no I think we should I think we should reverse the game onto Dan hello Dan this is a message from Ashton Forbes he is the one that has sent you a message about why you're sending him creepy messages hello Dan impressive oh man it's pretty wild yeah maybe should I talk like this

(1:24:59) should we should we talk with the serious voice is my speaking voice click the gear and slow the speed down ah man we're already went past it now oh wait there's also just like a link right here okay let's slow the speed down speed oh I think I saw it I think I saw it there no oh I think it was right there wow that is that's hidden man oh there it is I saw it for a second wow it was one frame right over here they hit a random message

(1:26:03) huh well that's creepy that's creepy folks yeah I've got we got people I mean this is why like you know when we had a raw file thing people crack the password because we got a lot of power here I mean people are going frame by frame to these videos people are going through these frame by frame to these videos Man imagine like at this point people don't still think that I made these right I should yeah should we get super meta with it should we make our own AI script video I don't even know

(1:26:35) how how to make AI video AI voice what was the voice thing that people said you could do oh 11 labs this is the one they were talking about so what I oh oh select the voice of Daniel I might do this I might actually do this I love getting super meta with it what if I make a voice thing so this is what they did they recorded an audio and then they used a voice they must have done it was definitely a speech to speech situation right automatic voice conversion so it was their accent that's what happened so yes 100% this is what

(1:27:17) they did guys I think we're figuring this out right now yes they this is why it's said defectors their accent confused the thing and they had it change to deflector instead of Defector so whatever their accent is that's the tell they're probably not from the United States their accent because so when I lived in Singapore like you would actually have to tune even though they spoke English you'd have to tune like your mind because they would people's uh accents would be so thick that you

(1:27:48) couldn't necessarily figure it out this is definitely what they they did they did a voice

input and then they had it convert to speech that's what they're doing they're using AI voice changer but so even then then you have to build the script though which still is not easy the question is which accents have Defector and deflector it is very similar Defector and deflector are very very similar yeah it's fun it's just fun uh nobody has produced a very good MH370 video there's two out there um one of them I think they've got

(1:28:33) pinned on one here yeah so this is the better one but they just cheated they just cheated in this one like they didn't actually do any of the work like this one's so deceptive uh this like these people are just idiots man reddit's so freaking stupid these videos are not fake these guys couldn't recreate this this guy spent several days and he basically just cheated and he basically just copied all of the parameters from the the existing one right and so he like copied all the coordinate stuff copied the mouse

(1:29:07) movement and like okay well copying it of course is going to be easier if you just literally copy the hardest parts if you don't make your own uh shifting program he L he literally just copies the coordinates okay well try to make your own coordinate shifting program that's accurate to six decimal places that alone is going to take forever right and I think the top one is the fake one yeah top one and you can tell that cuz the model of the plane doesn't match the model of plane is not accurate the hardest part

(1:29:44) about this is getting the engineering aspects right and that's the only part that they would have actually had to originally come up with here and they didn't even get it right everything else is exactly just copied they copied this the the images from these cloud images which were already lifted from the videos they didn't recreate any of this stuff they copied the mouse movement so they don't recreate any of that they copy the coordinates instead of creating their own coordinate program so they

(1:30:11) literally didn't do any of the actual work that would have been required this is like all they did here was they took a video of an airplane and they added smoke Trails which don't even match and they said oh this is a match like you can tell this plane is not turning at the right angle compared to this one here right it's not even the same so they couldn't even get the easiest part lined up on this right and then of course when you look at the orbs the orbs aren't even close on this one

(1:30:37) you can tell right away that the top one's the fake one right first orb comes from the side weirdly comes from the wrong spot they so they didn't even get that to match the second orb they have the second orb coming from over here so I I if I look at this for 5 seconds I can already tell which one the fake one is right that's how bad it is the orbs don't even come close to looking like these orbs and they don't follow the 120° sinyal pattern right right away you can tell with the orb movements it

(1:31:06) doesn't look right so this is their best one took them several days where like the way the orb comes in here is super fake as well the way it comes in out of the side here like that's not even how the orb comes in in the video so if the redditors are watching like this is your best

attempt this is just embarrassing I don't mean a [ ] on this guy but like this is an actual joke it doesn't even match from the the model the orbs coming in don't even match they didn't even get the sinusal pattern correct on there so it's

(1:31:38) yeah and then the only aspects that make it look real are because they literally just copied the exact uh aspects from the real video and then the portal is just embarrassingly bad oh this actually isn't the super bad one no so this one's not that bad but uh yeah and I'm not sure because they the accurate flash here they cheated I think on this one I don't think that they actually overlaid the effect here I think let's just compare side by side and see I don't think they actually put in

(1:32:15) the v Pyromania VFX here let's just check can't how do I get this to pause correctly God damn can I not go back one frame or something but this is the better one of the two the the thermal one no one's even come remotely close not even at all and again you can tell the plane like the hardest part is getting the plane model correct like you can tell the angles different here right because this is a real plane and this is one where somebody has no idea how uh planes actually operate just just for the record for

(1:32:48) everybody Joe Lancaster didn't make these videos he's just an idiot he's just a scammer guys he's just a scammer it's not more deep than that literally if somebody just tells you oh this is how I made them like that's the same thing that psychics do when they tell you they're talking to your dead loved ones because they're literally just using the information they know and coming up with a story because we've been talking about this for like five months and debunkers are trying to say how it is so he's just

(1:33:17) literally lifting what the debunkers saying going this is how I created them right it's it's not more complicated than that he's already been outed because people looked through his Reddit profile and they realized he didn't make them because he's been sitting there talking about I knew this was fake the first minute I saw it that's not a comment you make if you made the videos guys it's uh yeah let's see yeah so they definitely just copied it exactly right they didn't even they

(1:33:46) didn't use the Pyromania VFX here they literally just copied the actual thing here so these people just completely cheated and like the debunkers do they misrepresent what they're doing here this was not somebody creating even an original work they literally just copied the real one which you know fine that's what we say is that people can copy the Mona Lisa as well right but he would never have been able to create this from scratch no chance 0 per.

(1:34:12) so yes there's your answer has somebody tried to recreate it yeah but they just cheated right they didn't do any of the actual work so that's why you don't give any credit to anything like that same with the uh and the the Drone one they removed right the Drone one um no recreate it does not mean to copy it no you have to realize there's nothing for the original people to copy guys so let me let me run it break it down for you here for for the redditors in the chat who don't have any intelligence and we have to help him out a little bit

(1:34:48) so to recreate this would be to recreate this recre create this video without looking at it guys that's the difference between what they did right recreate this video without even looking at it so you have to originally come up with all the aspects of it without watching this video right now do this one as well don't look at it at all don't even know where the files came from and if you can do that without looking at it then and you can recreate it without any of that without looking at this without looking at the

(1:35:18) coordinates without looking at the numbers without looking at the mouse then sure you figured out how they did it if you're just looking at it side by side realize that the person who created this doesn't have that luxury this is the same stupid stuff that I talk about with the the VFX thing we're not looking at a Pyromania VFX in here that's again that's is not an opinion this is a fact I don't know why I have to argue this if somebody was including this visual effect you see in the middle here they're not going to

(1:35:50) modify it they're not going to modify it guys just like Starship Troopers didn't modify it do you get it it's not really complicated so for kle TV why would you recreate something without looking at it because the original person doesn't have the benefit of doing that is it clear or are you still confused I can dumb it down a little bit more for you here let me dumb it down to a fifth grade level for the **redditors** guys here we go guys let's dumb it down for you guys the person who made it originally

(1:36:36) doesn't have anything to copy has that has that sunk in have we have we all absorbed information there's nothing for the original personal copy so if you change all of this to make it look like the other one you're doing something that the original person couldn't have done they didn't have anything to compare it to is that still too deep for people out there I I see comments or replies where the wrers go well he didn't make any sense when he said that why what does that mean why is he making this argument this argument

(1:37:10) doesn't doesn't count it does that's the reality of the situation is that if somebody made this everything you see here is original it's not that they were looking at something side by side it's not like they were going oh I've got this other one I'm going to look at side by side they didn't have that that's not possible that's how time works that's how original Works work it's like saying that the Mona Lisa was copied by somebody well they copied it from what

(1:37:35) there's no there's nothing to copy they literally had to make it it's an original version right like my God is that has that been clear now or do we got to go through it again this that's why like I say it's really not simple to understand but this is like saying that somebody took the Pyromania VFX and randomly changed it until it magically matched the thing you see in the background here why would they do that they would they wouldn't like Starship Troopers didn't they literally just put it in there Starship

(1:38:08) Troopers just put the full VFX in there because that's how VFX actually works in the real world it's just so silly do I have the Starship Troopers one okay I think we're good right if anyone wants to argue with me about it I'm happy to argue with me but you guys have to

address the things I'm saying instead of just saying no that doesn't make sense well it does it does make sense man um here's another little thing George nap apparently hasn't even looked at the videos here you

(1:38:43) go I haven't had any martinis yet guys yeah I'm just going to go about my daily life but I wanted to address it since we're on here uh I mean I then people say like I don't address questions I've addressed the Pyromania thing so many times like all you have to say is how many pixels match how many pixels match that's all you have to say they literally can't answer the question how many pixels match because it doesn't match that's all you have to say and then when you say it they freak out and

(1:39:23) they go well that's not you're not allowed to say that it's like yes the pixels don't match guys it's not it's not that deep man it's not that deep this is not this VFX we see here is not in our videos that's an objective fact until the **debunkers** can accept that reality like there's no moving forward we're not living on the same planet right you're living in a fake planet where what you see here in the foreground and what you see in the background is the same thing that's

(1:39:52) that's just untrue that's just a false statement right doesn't matter if your favorite YouTuber says it it doesn't matter if **Mick** West tells you it it does not make it real you can clearly see they're not the same thing they did a good job finding something that's similar but it's not the same close only sh counts on horses shoes and Hand Grenades so I think are we're good with that right uh just to add some more information as well nobody has copyright tried me despite the fact I've posted

(1:40:23) these videos on my YouTube account and nobody's copyright tried me nobody's claimed the copyright of these videos and the reason for that is because they're not made by anybody they're not I'm literally profiting off of somebody else's work if these are produced nobody's been copyright striking them right so hello **debunkers** just wake up to logic man uh okay let me let me address because then people are going to say I'm not answering the question so you said it wasn't a good Recreation because it was

(1:41:00) copied from the original I'm asking what makes the recreation invalid well that's if you can you can recreate the Mona Lisa does that mean the re the Mona Lisa isn't real no it doesn't right people do people do okay so I think we've addressed all that now George knp right here you can see has not seen it I think that what was the other thing I man these people are obsessed with me I don't really like giving them any attention um we're not going to go any more into this screw it oh look yeah so what is

(1:41:43) this why are these people man I'm living rentree in some people's heads here what is this I as BOS was this where I like got the wrong I'm not even going to bother we're not even going to bother I have not been drinking tonight but I'm going to go to sleep in a minute um also David grush is not involved in these videos guys he's not involved in these videos Man people want David grush to be Edward Lynn they want him to they want they wanted me to be David grush before I revealed myself guys we got to get away

(1:42:18) from that like we're putting too much pressure on David grush as well man we need other whistleblowers too it can't just be one person just like it would be very nice if there was at least like another person who is reporting on the MH370 videos so it's just not all me um but whatever okay um I do kind of want to do this speech thing okay before we get to the next thing uh before we close out for tonight I do want to quickly look at these videos I'm going to post some uh clips from this some people have done

(1:42:46) some work as well uh on the the new versions of the videos God this this is so weird man should I follow this account n I'm not going to follow it I'll find you Creepy World want to see what else they do next let's see what else they do next um I never asked for a recreation just heads up I asked for the original source files that's that's what I've asked for so oh I guess we need to set the bar straight on this as well cuz there's just a lot of like what I realized guys why this is important is that people are

(1:43:20) playing telephone games of telephone and they're making up fake stuff that I they're making fake quotes for me as well like it's it just gets completely out of control so the bar for what the bounty has been has always been the same from the very first day that I posted it you can go look back through all my Twitter posts you'll see that every single time when I talk about the Bounty the requirement is for the hoaxer to come forward with the source files the source files means the work that they

(1:43:50) did when they created the original works if you create this I've I've been doing video editing right when you do video editing you have a whole bunch of work that comes with it you don't just produce the end product and that's it you actually have like oh now I did the version that doesn't have the plane in it now I superimpose the plane over it like you layer the stuff in there right so if somebody made these which they didn't because they're real then somebody would have all of that Source

(1:44:18) workor not just pictures of clouds but like actual animations the supposed effect that they did that shows the clouds moving all these things would have been layered in they would have all that work probably gigabytes worth of information just for a one minute videos this is why VFX is the longest part of movies because it takes a huge amount of time to do that and I have a friend who does video editing and it's extremely time intensive I know that for certain so just to be clear what I've said is is

(1:44:51) that you must provide the source and the hoaxer that's the requirement for the Bounty it's never changed it's never changed go back and look at all my tweets go back and look at it so stop pushing disinformation about me stop making up fake quotes about me if you want that Bounty that's what you need to do you you don't get to push the boundaries you don't get to change the goal posts not at all you just for the **debunkers** I'm talking to the **redditors** right now you set the goalpost and said

(1:45:21) that we can recreate it in fact there were posts out there and I can find the **Reddit** posts where the **debunkers** were saying we need to show how easy it is to remake the videos

that was your goal post not mine that doesn't prove anything that's just your making yourselves feel better because you could never find a hoaxer and collect 150,000 right and that 150,000 was out there you know because I paid 3,000 just for some password so I hopefully we've set the record straight for the people watching who I know are watching so you can stop

(1:45:52) lying now thank you okay I think we've addressed all that now last thing we're going to do for tonight there's some few aspects of these videos uh the new this is the version that is supposedly higher quality now if anyone else can prove that these are higher quality um then we can uh that would be a big help because we've seen posts and maybe I'll go and show these here uh here's another good question do we know the 200 is accurate 2014 date is accurate yes we know 2014 dates accurate

(1:46:30) because some people actually saw it as well we know that some people actually saw it including myself this is the reason why I actually chose to be one of the people out there is that I actually saw the the Drone video back in 2014 I never saw this one or if I did I don't remember it but I saw this drone video not this version I'm I'm pretty sure it was the other one the other like less quality version um but I saw that one back in 2014 a lot of people have messaged me as well and said they saw it in 2014 and we

(1:47:00) have it on the Wayback machine as well I mean some people might be able to argue that the wayb back machine's compromised but we actually have people though that actually saw it in 2014 so just a heads up okay um let me find the Twitter post so so I think it was yeah and we've actually there's also uh there's even like we have **Reddit** threads that go back N9 years as well where people are talking about the videos so we've got we know 100% the videos are from 2014 without any doubt that's not really in not it's not in

(1:47:37) question at all so where is it did I not save it oh man what the okay hold on um somebody in our Discord did some analysis see if I can find it real quick for you guys it was from Super cow he found some details in this video and some of them we can see ourselves where is it oh man H boy I'm gonna have try to dig around for it oh here we go here we go here we go here we go better save this all you know I was

(1:48:44) bookmark it okay so supercow from our Discord posted this thread you can see the hole here very clearly now from the new video and you can see this if we Zoom it ahead a little bit you can see the whole form right here also I mean this run right here I guess nobody else noticed this so also I reached out to the person that posted this video and they now believe this is a completely different video than the one was uploaded to Vimeo that should think this is a different one so I don't know maybe this is a **scam**

(1:49:24) but this no matter what I think this just might alone prove the authenticity you can actually see the dispersion pattern of the light nobody from a VFX perspective is going to add something like this so unless somebody can give me some explanation for this and these other little artifacts you see over here as well yes they're technically artifacts but the're artifacts CU we're looking at a real video look at this look at that so the hole there is one thing we can see

the hole show up uh I think this is where he's saying

(1:50:03) you can see the the hole in the cloud from the first orb as well where it starts to form right here what is he saying oh yeah there's a little bit of a thing there so let's let's see if we can look at that let see oh it already went through the punched through the cloud is there a way to go frame by frame I don't I don't know how to do frame by frame on this damn it I got figure it out oh well uh well whatever supposedly there's something here we'll we'll check that out I'm not buying anything I'll

(1:51:00) guarantee you that I'm not I'm not spending any money on any videos this point I'm not going to spend money on anything related to the case uh in Cas any files or anything like that anymore so that that ship is sailed I've learned my lesson don't get me wrong um this also is an interesting one where you can see the bending of the orb because it's going so fast and so when we saw the fake Recreation you could tell how different it looks right not even close and that's the part about the science that really checks out

(1:51:30) is that a lot of this science even in 2014 wasn't stuff that was even understood now maybe bending of an orb isn't that but the heat signatures that we see from the orbs this I think that one of the strongest aspects of the videos being real is these heat signatures here these heat signatures showing a magnetic monopole is something that I don't even think was understood by science back in 2014 so that's really big uh what else was I going to point out I think something in the satellite video something about the pattern what

(1:52:02) was it you can also see this Distortion when the perspective changes which is really odd you see that I mean this seems like really weird things to have in there there are as far as I know I've never seen another another endothermic event in my life that's another thing as well yeah uh control right arrow no control right arrow skips ahead too far I don't know anyway yeah I mean anyone can recreate anything technically but the details of this are too elaborate just way too elaborate and then in this version here

(1:52:55) you can see more clearly this right here you can see the you can see the door very clearly in this one you can maybe even make out the windows here the black windows here is this m say Malaysian Airlines hard to say still can't make out the paint on the tail uh so you can see that a bit more clearly and then before you can see the lines in front of the orbs much more clearly in this version like you can see the lines right here and here in front of the orbs so it does seem like you can see quite a bit better

(1:53:44) yeah uh no threat you don't know what you're talking about man please don't make stuff up in my chat I talk to actual scientists and Engineers who do know what they're talking about so uh I don't need **redditors** pretending to know what they're talking about in my chat thanks though in fact just don't do that in general in your life don't don't pretend to know stuff that you don't know it's just really off-putting I don't know it's like the biggest thing that **Reddit** does in

(1:54:11) general is that they make up stuff they pretend to know when they don't know crap I don't know why people feel the need to do that that's not that would happen we got a guys we got an endothermic Engineer Expert over here from no threat 33 guys the very large cold space you claim instantenous returns to the ambient temperature in the air that's not how that would happen yeah guys this is why you don't go into chats and pretend to know stuff that you have no idea about you're just embarrassing yourself man

(1:54:39) just stop do yourself a favor it's okay to say you don't know you know it's it's okay to say you don't know and you don't know how it would work you don't have to pretend I who do I have on my side oh I've got uh Bob Greener who actually does low energy nuclear reactions saying it is accurate but oh maybe we should listen to random people in the chat who have no idea what they're doing anyway sorry we're getting spicy it's getting late guys the trails are actually in front of the

(1:55:17) orbs so they're actually not behind the orbs and uh just because I know we've got some new people in there as well uh Ryan C so for you Ryan C here is a version that should be make it more clear to see you can see that the trails look like they're behind the orbs but this is actually because there's two ways to look at this either this is the atmosphere that's being cooled down from this these Trail they're not Trails I guess they're like in front of the orbs happening it's because the orbs are

(1:55:44) moving at a high speed with the respect to the plane so they look like they're behind it but they're actually in front of the orbs I think that you could actually see this yeah or we can pull in sou p as well right yeah well no threat you're gone buddy congratulations you can go do something else for the rest of your life won't be in this chat this is why we don't let nut jobs from **Reddit** in our in our replies guys they're just absolute idiots who just pretend to know stuff that they have no

(1:56:22) idea whatsoever and you're right we run a farm you never want to be called a **redditor** it's pretty much the lowest form of life on the planet people that know nothing whatsoever uh that pretend like they do they know everything the worst people on the planet man never be like that it's okay to say you don't know you don't understand something you don't have to pretend to know everything complete losers guys meanwhile we'll be talking to the engineers and science ssts that are out there and these guys can stew on

(1:56:54) whatever CNN or whatever crap that they watch that they think is their Authority in the world so uh Ryan I hope that that gives you some perspective of what's going on here yeah it's a dumpster fire man it's a complete dumpster fire even Bob greener on his own sub**reddit** he's got a moderator that's trying to say that he's got like mental illness problems I'm going holy crap these people are just terrible human beings man completely terrible human beings like it's it's the biggest scum

(1:57:35) of of on the face of the Earth it really [Music] is yeah so there was somebody in one of the earlier threads when the investigation had kicked off that argued that it could be and we

don't know exactly right again we can it's okay to say we don't know but it could be that if space is being expanded then from a thermodynamic standpoint it's going to be very cold in that area right now the difference is it should cool off pretty quickly as the molecules kind of go into that area so yeah the the the black

(1:58:09) trails are definitely cooling of air because we can see it in the thermal so we know this cool the question is why the expansion of air the expansion of space would be the most logical explanation I think and that also seems to fit with this idea of it being a geodesic a gravity that you're you're pushing forward yeah Ellie I think you can use **Reddit** and not be a **redditor** right like we call it **Reddit** brain right CU you can see it it's like this gatekeeping mentality I mean you guys just witnessed

(1:58:38) it in the chat right where somebody who has no idea what they're talking about has to pretend like they're an expert in the Arbiter of what's real what's not what's true and what's not you want to do a test guys go to one of the the science sub**reddits** and say that the double slit experiment is the most uh mysterious unknown experiment in physics you'll have like 50 people telling you how it's been solved and figured out like that's how insane they are if you if they knew if we could figure out the double slit

(1:59:09) experiment and how non-locality works and why it works they'd win a Nobel Prize and and you'll have like everybody will dive in and say oh it's figured out no this is why how it really works oh it's a they they'll probably even try to **debunk** it you're like what do you mean like we know Quantum teleportation's real we're like literally teleporting pictures it was done last week and they be like no it's it's not real it's fake it's like okay and like that that's what

(1:59:36) I mean so that's the difference right it's uh and I I don't want to give them any more attention guys cuz uh oh well are we are we Banning people let's not let's this is I think this is fine we don't need a we don't need to we don't need to hide weona weona can come back you guys can relax on the moderation I'll do the permanently Banning of people guys but you can you can remove their comments but don't don't permanently ban them my moderators please thank you okay anyway I think

(2:00:07) that's going to be it for tonight uh so my plan for tomorrow is to go through some of these details early in the morning that uh cow milk posted is a holiday tomorrow um yeah yeah run is fine I'm not against people asking questions or even being skeptical I I don't care it's just when people start to gatekeep and and make stuff up and you know get condescending and stuff like that that's that's when it goes over the line guys they can go do something else yeah quiz cotal here gets it right

(2:00:42) it's pure hubris that modern humans assume they know everything about science and what is technologically possible after Millions milons of years of consistent development I would even argue it's not even millions of years I mean the since the Industrial Revolution we haven't even H A Hundred Years yet and then you've got people going out there oh we know everything there is about science or science can only be based on what the TV tells me from the most

recent scientific papers realize that's not how information

(2:01:07) flows social media actually used to be a place where we could get the **truth** before it was on TV but now it's been co-opted by the government in propaganda and gatekeeping nonsense where you can't get the **truth** there anymore because everybody's trying to cut everybody else down and tell them how nothing can be real we'd be able to advance a lot more if we could get to a point where we had just mutual respect and and discussions without everybody trying to **debunk** everything literally every single thing somebody posts

(2:01:36) there's always somebody there trying to **debunk** it how about instead you try to just explain it how about you work mutually to try to solve something right we know this plane didn't crash into the ocean why don't we try to solve what really happened to it instead of trying to **debunk** other people's ideas right this goes back to my main philosophy which I'm going to say it again because I haven't said in like a week which is you're either somebody who's contributing and coming up with

(2:02:04) ideas and producing stuff or you're somebody who's setting up roadblocks trying to tear stuff down trying to stop people from my 20 years of working in the real world this is what I've realized you're either somebody who's trying to build stuff up produce something do your own you know dance to your own music or you're somebody that's trying to cut everybody else down somebody who sees everything everybody else is a challenge that you need to take down be somebody who's being

(2:02:31) productive don't be the person who's trying to tear stuff down you go through your life trying to tear everybody down you're going to have a miserable existence I tell you that 100% you go through life just trying to produce your own stuff trying to bring other people up you are going to be successful in this world that's just the **truth** I have no idea if real creepy stories is going to drop something new um I'm sure I'll be pinged I got pinged pretty quickly on this one I woke up and people

(2:02:57) were already pinging me on the new one that dropped so uh we will find out we will find out uh okay guys I think that's good for tonight I do need to get some sleep man it's been a good discussion tonight um we will Punjabi Batman's first toll some reason that just makes me laugh so yeah tomorrow let's I'll give you guys a quick uh recap of what we're going to talk about a little bit I am going to talk about the fact that nobody has uh taken the Bounty I might even pull the Bounty I can't decide if I'm

(2:03:26) just going to leave it I'm going to talk about how nobody's copyright tried the videos either that'll probably be my morning post as just a quick introduction I am going to go through oh that's what I was looking for and I'm going to talk about how the video accurately represents science so um uh I'm going to talk about how it accurately represents the science back from 2014 right this was you know I don't even know if Bob Greener was still working on this kind of stuff back then right um so there's a lot of aspects to

(2:04:06) it that are extremely elaborate uh let me see what else are we going to do and then I'm going to go through I'm going to probably highlight some of cow milk's work here as well and I'm going to probably do a little bit of my own what I'd like to be able to do is to pull the video up myself and do a little bit of editing on it so I can like do what I was doing there just now which is you know kind of show back and forth I want to show people the clouds are moving for sure especially like here I want to edit

(2:04:31) this so people can see I think there's already other edit versions of it but I can probably do it myself and I want to show the zap here too because I mean look at this my God look at that I want to hear what the debunkers come up with on this one or let's call them the Skeptics let's not just call them the debunkers let's let's add a level of respect ourselves so I want to hear what the the Skeptics say about this how are they going to explain this way that should be an exciting one guys how are

(2:04:55) they going to explain how these clouds are clearly moving here right you can see the clouds look at the cloud on the left it's just jiggling back and forth oh they they use some After Effects overlay okay which one how what were the settings exactly right okay guys uh I think that'll be fun and then after that we'll see I've got a whole list of stuff to go over man the list is never ending I've got a bunch of video clips too that I can pull so I also will probably be I'm going to try to get all my hard TRS

(2:05:25) podcasts edited and uploaded as well because I want to get those on to uh first I want to get them on a podcast list on YouTube I want to do what I was talking with alien scientist as well and try to clip like one minute two minute Clips in there in general so that they're easily sharable uh and then and those are things I can post during the week as well when I'm working it won't take a lot of time and I also want to get them uploaded on the audio space as well lot of people wanted to listen to

(2:05:51) the audio so I have a great night everybody thanks everybody for chiming in I appreciate it and we will talk

MH370x - Glitter Parts One & Two 1/14/24 - YouTube

<https://www.youtube.com/watch?v=0s2Kn2DXG3c>

Transcript:

(01:21) Malian 370 contact 120 breaking news tonight A Malaysia Airlines flight with 239 people on board including four Americans has gone [Music] missing [Music] I remembered the line from the Hindu scripture the Bhagavad Gita Vishnu is trying to persuade the prince that he should do his duty and to

(02:26) impress him takes on his multi-armed form and says now I am become death the destroyer of worlds sorry about that I just knocked everything over so I was trying to fix it hey everybody good morning happy Sunday or if you are in the other side of the world suppose it is uh potentially already Monday hope you have a good weekend uh okay there's a lot of stuff to go over tonight or today so I woke up uh just for the record for everyone who's out there I woke up about an hour and a half ago um and when I woke up I checked Discord

(03:17) and there were some messages saying the glitter part two had dropped from this creepy channel that has been posting personal letters to me and had this weird followup so took a shower got some coffee got my coffee right now actually this is my second one by the way pounded the first one and I watched the video and there's a little bit of a shout out I guess you could call it to me in general uh a little bit subtle but there's one that's there and let me see if I can adjust this real quick there we go and there's another

(03:56) update as well that we're going to talk about here today which is there was also somebody pointed out that there was a post on [Reddit](#) that is claiming to have found the highest quality version of the video so far not the oldest but the highest quality is a little bit confusing because they seem to be claiming that they found the oldest version but it doesn't seem to predate the Regis sidon version so we're going to pound some coffee we are going to jump right into this what we're going to

(04:27) do is we're going to play glitter part one and part two so the first 20 25 minutes of this is going to be playing the whole video straight across I don't have transcripts for any of this stuff yet takes a while to make the transcripts uh and man it's really long so I don't know if I want to do it yeah okay so let's get into this a little bit let me fix some of my windows here um so what was it the thing called again I don't I don't I'm not like even subscribed to it I probably should

(04:58) subscribe but I don't really want to give give it any more attention than I already have which is quite a lot of attention um here it is real creepy real world creepy is what the thing is called okay so you can see there's glitter part two dropped this dropped while I was asleep um so I don't know people probably honestly at this point I would be thinking that I made this if I were one of you guys as well just cuz that's how like meta it is at this point but I can assure you beyond any doubt that I'm not

(05:26) involved in making this I I actually wouldn't even know how to make this and I'm wondering how they did make this so if there are [debunkers](#) out there I'm actually going to do a letter to the [debunkers](#) uh later today and the people that just don't believe in general um thought about it last night seemed like a good idea uh but if they want to go ahead and please try to [debunk](#) this this is definitely the weirdest video situation I've ever heard of I mean not even just related to me but just like in general like I've never

(06:02) seen a prank that's this weird and creepy and elaborate I'm sure there are some out there but I've never seen them so we're going to go ahead we're going to go through this glitter

thing so just as a little background for anyone who's not caught up to speed this Diego Garcia letter here this this account appeared like uh a little over a week ago like I want to say it was like the 7th of January like exactly a week ago this account was created and and then on the eighth first few videos are about

(06:32) this Miami whistleblower stuff I've watched you can see like most of them but there's nothing nothing really interesting in them it just seems like they took some of those uh whistleblower like not The Whistleblower but the uh those like Witness stories and they just repackaged them not very creative pretty much exactly the same as what those stories were with like a little bit of extra context and then this letter dropped I didn't see it until like the next day somebody pinged it to me they said that

(06:59) they were and actually you can find it if you go to uh Twitter I'll show you guys actually I actually found the person who pinged it to me so I don't know if there's a connection there if maybe they're connected to it but if you go to m370x the community this is where I found out about it CU I remembered uh I remembered that it was somebody who posted in the community so I was scrolling down through this thinking well maybe I could find it again this is the guy right here January 10th so I think I didn't even notice it

(07:28) for like a day later maybe even more than a day cuz supposedly they received it on the 8th let's see when it was actually upload so it was uploaded on the 9th so I saw it on the 10th this is when I saw it was the 10th so you could argue maybe this person somehow connected to it I I don't know what their name means maybe it's Swedish or something not sure but anyway now you guys know this is where I saw it this is where I I liked it or whatever yeah I don't know bizarre um yeah the reason why it

(08:10) doesn't feel like **debunkers** as well is all the **debunkers** are trying to say that I did it I mean they're not very smart in general the **debunkers** are kind of idiots honestly lowest common denominator but um yeah I don't have anything to do with this it's funny too because I've heard people go Ash people claiming that I'm defensive about it no not defensive about but just creeped out about it but honestly we're rolling with it um but yeah feel free honestly if the **debunkers** think I made this feel free to

(08:39) prove it because I didn't make it so there's no chance you could and I would like to know how it was made just for anyone who's out there they claim that as we're going to find out here they claim that they use Google Translate and grammarly and that's part of the reason why there's grammatical CH errors some of the grammatical errors in the Diego Garcia one um also seem to indicate the person might be from Asia when they mess up like has versus have and stuff like that I also think that it

(09:05) is dictated it it feels like it was dictated dictated into a letter then potentially transcribed or vice versa I don't really know that's just what it feels like when I've listened to it I only say that because I've listened to it uh at least 25 times at least when you get weird letters that are sent to you you happen to listen to them a lot because man it's weird Okay so let's dig on into

this uh we're going to just go you can see this is going to be about 26 27 minutes so here we go guys let's get started in

(09:35) Jersey has a story welcome back folks we have received a letter from the researcher Ashton Forbes who was the intended recipient in the earlier publication of the Diego Garcia story we are happy that we could facilitate the communication and we now need to do some clarifications in the name of Journalism important to know when you send us a story you are guaranteed that we won't share it in any other way than the intended format what we offer is for anyone to be able to share their story as a fictional radio theatrical

(10:11) production as always when you submit your story you should use a good VPN and a throwaway email account and we will publish your story in the confusing format of real madeup stories next we want to clarify what elements of the Diego Garcia story that is creative freedom on our part first the original letter we received does not mention Diego Garcia by name we found the name by Googling military bases in the Maldives so let us be clear about this in all Publications on this channel the script is everything and all

(10:42) that is original the naming of an episode the thumbnail and hashtags are all clickbait they are never a part of the letter second the original letter was not fully in English we used Google translate and the writing software grammarly to make the English version this is not perfect but it gets gets the message through and that's what we care about third all pictures and voices are AI including me this is to make sure that all Publications clearly are fictional no real people no real voices or pictures we are the perfect

(11:12) publication service for you who have great stories to tell but can't because it would get you killed and if anyone would ask us we make up all stories on our own so if you want the latest real world stories and Insider information press the Subscribe button now onto tonight's programming a lady in Jersey has is a story about Glitter yes the shiny plastic and this story might shock you it's a two-parter a lot scarier and more interesting than it sounds we just don't know how to package it it's a

(11:39) great story let's go I'm almost 60 now and I have been working in logistics since I was in my 20s and my last job before I moved to where I live now was a Glitter Factory yes the shiny and sparkly things you have used in arts and crafts when you were a kid and I want to share one of the weirdest things I ever experienced and possibly the most important piece of information I ever had some backstory I met my husband at University we got jobs got pregnant and moved back to my hometown outside New York I started my

(12:12) career in 1991 at Hess a failing store chain and just a few years later I left my job as a logistics assistant to become a logistics manager at a mail order company and a few years after that I started working for one of the bigger well-known brands in the business in the crash of 2008 Logistics took a hard fall and we got laid off and after a few months I got a job at a Glitter Factory they did not seem bothered with the economic situation at all and with time I managed both customer relations and the logistics for their orders it's

(12:46) an uncommon role but the customer relations part of my job made it the best work experience I ever had in 2018 me and my husband got divorced and in 2019 I left the glitter company and moved out of state A New Beginning after the divorce and to be close to my daughter who went off to college and last week I got a letter 5 years after I left the company I got a handwritten letter from a former colleague I barely remembered we weren't close but maybe he had somewhat of a crush on me I think he was a very nice man working in

(13:19) production we did not meet often but when we did we always had a good eye for each other he must be in his late 60s now and from what I understand from the Le he is probably not with us anymore something is very wrong and I will share his letter to me as it is for you to understand the letter he sent me there are a few things to know about Glitter first all glitter in the world is made in one place a small grouping on the east coast of the US not China or India all in the same area on us soil I think that might be important second the

(13:54) security around everything relating to the production of glitter is crazy I didn't really reflect on it at first everyone in manufacturing wants to protect their methods but it was over the top to say the least in our case the production line is in its own locked off part of the building and the people who work there have their own entrance and lunchroom lastly the customers glitter is used in so many things we have customers in the obvious Industries like paints arts and crafts and cosmetics and lesser known things like rubber

(14:21) factories in Asia glass factories in American building companies around 2010 maybe 2011 we started to get a bit stranger customers big accounts in medicine and technology that gets special Glitters that are packaged on their own separate lines the Packers need to wear protective gear and you need to complete a course about how to work safely and how to put on and remove protective gear this was something unexpected for us and the volumes quickly became about the same as all of the more common customer types combined

(14:44) from the outside I think that medicine and Technology are unexpected customers for a Glitter Factory well it is but then and there it was good news and the company could grow and then there is that last customer it started at the same time I think in the beginning of 2012 we built a whole new wing on the building for this customer and the packaging was fully automated something fairly new and very expensive back then they quickly became our biggest client that more than doubled our revenue and bought more glitter than all other

(15:05) accounts combined there was trouble in that Wing the staff turnover was exceptionally High and the people that was hired was poorly qualified not at all like the rest of the company most of my colleagues back then have been working there their whole life the pay was great good benefits and a really good caring company culture overall the thing is since the packaging was automated in the new Wing the number of employees was low three shifts with three or four people at most the staff count in our part of the building was

(15:26) high we could easily have sent a few of our guys and girls to help with the packing when were low on staff we offered multiple times but got nothing more than friendly replies that it

was not needed and one day a rumor started one of the younger girls working the non-protective packing lines had a story about her older brother's friend who got hooked on some drug that he claimed we were manufacturing and he had gotten arrested by the police trying to break into the house of one of his former colleagues if the story was true he did

(15:50) work in the wing got fired and then tried to break into the house of one of his former colleagues to steal more of the drug they were all smuggling out from the building complete nonsense but in a few days the girl who told the story was gone no replacement came and when asked we got the answer that she chose to quit and this was a great girl who did nothing wrong was always on time and was a good worker I don't know if anyone contacted her outside of work but it was a strange event one morning in I think it was 2015 I was called to a

(16:17) meeting with my manager who wanted to talk about me managing the wing as an interim for a few months I have no recruitment experience and the little managing I did at the packaging lines in our part of the building was limited he calmly explained that the board trusts me and that I should see it as an opportunity to grow as a person and maybe if I enjoy it consider it to be a path in my future career not something you say no to so I said yes and informed all my accounts that my colleague will be their go-to for the next few months

(16:42) and the next week I got new passes and a short introduction by my manager it was weird a very small room the building is massive it was two small rooms built inside the loading area no windows low ceiling and not much room to move my first thought was that this is the problem no one wants to work like this white wall white floor white ceiling with big rectangular recessed lights in the middle of the room was a stainless packing machine the size of a minivan no tables no chairs no screens no light switch and the only things that could be

(17:10) operated was emergency stop buttons a lever to fasten the bolt containers that was filled up by the machine a door sensor to the next room and a ceiling mounted vacuum at the end of the East wall there was a rollup door also white into another same-sized room also all white that had another rollup door out to the Loading area and the loading docks I asked about the small space and he answered that it was according to the customer specifications the first shift was the night shift that day and it went smooth and I could not see anything that

(17:36) would be grounds for a troubled work environment three young men all in white protective gear friendly funny and efficient we did almost 100 IBC tanks that's close to 100,000 lers of product in 8 hours and yeah everything went smooth the machine dispenses product in IBC tanks and the Personnel rolls it out in the other room comes back with an empty tank and Parks it in place closes the lever and the filling process continues this back and forth must be done since the packing room is so small a strange and ineffective setup another

(18:06) thing was the cleaning each group cleans the rooms thoroughly after every shift vacuuming the floors mopping all floors and walls with dispensable pads emptying the vacuum filter to the special thick yellow plastic bags we use for all disposables and throwing them in a separate container standing inside the building we don't keep any other containers inside it's a

strange thing to do I'm not a night shift worker so I got back the next day to greet the afternoon team and it was all the same two young men and a woman same bit more

(18:32) than 90 tanks and no issues on Wednesday I met the morning crew older group in their late 30s but same feeling and same result no problems I could not have expected what was coming the product was strange normal glitter all glitter looks pretty much the same different colors and sizes but they all glitter that's the whole point this glitter did the complete opposite it was as if it was eating up the light it was weird to look at I seen pictures of the world's blackest paint on Instagram it was like like that but it wasn't black I would

(19:00) like to say it was dim white or semi-transparent but it was hard to tell hard to focus on an unreal material it got even stranger when I was talking about the product with the morning team a few days in they showed me that the product when wet becomes completely invisible you know those clear glass balls on YouTube that just disappears when they fill up the jug with water exactly like that okay so glitter that eats light and becomes invisible when wet that's 70% of our total product output every year then it happened okay

(19:27) folks that was part one we cut it short since you have short attention spans according to the statistics on YouTube in part two we will get the full story so make sure to click that subscribe button not to miss out on more real world strangeness and the final and I must say very scary part of the glitter story stay safe out there and have a good night okay yeah I was muted sorry um so I apologize for

(20:30) that so what was I just saying there um yeah so this seems like a lar but uh it's it's an elaborate one if so um also I thought early on this might be qaron also known as battle grock now I think but the problem with that is that they they're trying to say it's me what what's this was this how always here was this pace bin I is here guys was this how was here is there a way to no dude they're talking to me how do they know this was uploaded January 4th 14th look at

(21:32) this I was about to say something this is what I'm about to say right before I unmuted you guys ready for this is this somebody in our Discord I intentionally played the full story on my stream I'm going to go back and show you guys okay so I had an idea that I didn't tell anybody I didn't even tell the people in my Discord I said I'm going to play the whole Diego Garcia video on My Stream because every single time I play another YouTube video on my on my stream I get striked they didn't

(22:05) strike me they didn't strike me exactly William you figured it out that was my that was my plan my plan was I'm going to play the video because if someone made this they should strike me right so I played it where is it right here a letter to Ashton this was three days ago I played it I played the whole thing and I said uh I'm going to see what happens actually was that the one I played or did I play it in this one I played it in one of these right and I said okay let's see if they strike me because if they strike me

(22:40) that means they're trying to do this for money right so let me just go double check I

don't know if I'm going to reveal information here so hold on I'm going to go to my YouTube studio and we're going to see if I got struck for this no I haven't been I haven't been look what happens when you get struck here's my videos I don't know if this is going to reveal information here's limited here they are copyright this is what happens when you get copyright struck and YouTube automatically finds

(23:12) it and I was showing people as well if I press this copyright button down here you can see all the other ones when people are using my stuff and all you have to do is press like like report this or whatever request video removal and then the get demonetized so that's what I did I said you know what I'm going to do it because this will at least rule out if somebody is using my cont if somebody's trying to make money off of this right because there's this narrative that okay maybe they're faking this

(23:44) to you know get money and get attention but if that's the case then they should copyright strike my video that I played the whole video on but they didn't pretty weird man so let's go back so now we go over here and we see this past spin link and this looks like they just posted it today this morning I don't know if there's a time on this but now they're saying that they're they're trying to claim their stuff is copyrighted but all they would have they wouldn't even have to post this you

(24:23) don't even have to make a post like this and they just did it on a random past bin Untitled guest this is a pretty weird lar man can anyone check and forgot the time this was posted no I don't use ad blocker guys I'm I'm boomer come on you know that you know that okay so let's let's listen to part two I guess I don't know what else I can say about that other than yeah this you can copyright AI content for sure they if they made that up then they can copyright it strikes are monetization public punishments you're

(24:56) correct so if they were trying to get monetization here they should have struck my content that was days ago and the reason why I didn't say it to anybody is cu I wanted to make sure that nobody knew what my plan was and so I didn't even tell people in the Discord until I think it was maybe yesterday morning I told my admins and that's only a very very small group of people so either my admins is one of these people doing this or this is getting extremely weird huh okay let's go to the next one you guys

(25:38) ready welcome back folks my name is Dan your soon to be favorite reporter and tonight we are going to get the final part of the very scary and intriguing glitter story first a short disclaimer the letter we received contained a written part the lady and a series of photographs of the handwritten letter she received from the man we have transcribed the photographs and in this episode we alter between the lady and the handwritten letter for dramatic effect we all know why you are here so I will stop talking now the final part of

(26:04) the glitter story let's go dear Patricia you are my last letter I have now written about what I know to several people in Congress the Department of Justice the Inspector General and our own Governor Phil Murphy my doctor and some rather unpleasant test results informed me

that my time in this realm was up and the hospital bed I have occupied for the last few days seems to agree I'm closing my books and you are now a part of this man's sentimental ritual after a life of secrecy I write this letter to you

(26:37) because you made my days brighter and filled my nights with Pleasant imaginations oh Patricia you made me so worried when I found out that you were working in the special unit my heart sunk to my stomach I could not contact you at work and during that period we all had our phones and correspondence monitored I tried to bump into you to give you a warning but the closest I got was your smile and a way W when we met in our cars at the gate I heard about the incident and was terrified that you found out what you were enabling in your

(27:04) new role I know that you would have protested and with that I know what they would do to you when I a few weeks later heard you had gotten your old job back I couldn't believe it I asked Richard to check up on you we were friendly and he had access to your sections in the building I needed him to confirm that you really were back I don't know if you remember or even noticed at the time but I sure made an effort to get your attention I'm glad you made it out we were never a glitter comp we are an

(27:28) advanced materials and precision company our history goes back to the Manhattan Project in 1945 we solved the atomic bomb and our accomplishments since then have not been less impactful we are a manufacturer of impossible materials for the private military industry we did nanomaterials long before '81 when the rest of the world just knew them in theory and we produced the first electromagnetic metamaterials in 91 14 years before the rest of the scientific Community discovered how and I want you to know that all of that is

(27:58) kosher it's let's say in the realm of what is to be expected and accepted the special project you were a part of was not it was Monday morning my second week and I got in by 8 2 hours after the morning team started I got in my gear and stepped into the room with a good morning guys and I could immediately tell that something was off the whole first week was amazing I have never met such great people kind funny focused and straightup loving like they all meditated for hours before work they welcomed me with warmth and I felt like

(28:25) I had more energy after a full day's work it was great but now it was like walking into a funeral I wondered what happened and barely got a reply I went up to one of them and he just said I don't feel so good today and looked away like he was ashamed the others acted the same and said I wish I didn't have to do this and this is the worst thing I have ever felt with something that looked like tears in their eyes behind their protective glasses I asked if we should take a break and talk about it they all

(28:49) shook their heads and one of them said we sorry please just let us do this and they continued working I just stood there they all avoided eye contact and what was a kind and funny chatter about sports girlfriends and fishing last week now was complete silence I didn't know what to do I went outside and called my manager to ask what had happened did they all get fired as calm as always he replied that the work has its ups and downs and that there was

nothing to worry about as long as the work got done it will probably be better in a few days

(29:18) he said we got about 80 tanks which is under our quota and when I tried to pep talk them for tomorrow they just stood there in silence still in the gear and all I got was an okay and they walked away way the next shift was the same the girl came in crying and her two colleagues who came a few minutes later were miserable they as well had been crying no one wanted to talk about it when I asked what happened before we started I had a firm talk that I needed to know what had happened to be able to help them and do my job one person

(29:43) answered with a sigh and said there is nothing you can do it will pass it felt so strange what did they all know that I didn't and why wouldn't anyone talk about it we got low 70s and we were already more than 20 tanks under what we needed to ship today it was now almost 10 and and I stayed to meet the night shift I needed to know if we could dig in and do at least a 100 to save the day and I needed to know the status of the team these were young guys so I pushed them I said that all teams were depressed and sad and that I needed to

(30:09) know what had happened before they could start it got bizarre they weren't on the same page regarding telling me they started arguing with each other crying and screaming like small children it felt so genuine but at the same time so unreal they decided not to tell me and said please can we start now I repeated that I needed to know before before we started the answer I got was that they were sorry that it would pass and that they just wanted to start their shift I gave up at least I got confirmation that

(30:35) it was something I ended my day and called my manager again from the car it was late but I didn't care I think I caught him sleeping I told him that something must have happened that we wouldn't meet quota and that I needed help I explained how the day went and that they won't tell me it's something that affects all three shifts and I don't know what to do he listened in silence and said it's part of the job as a manager it will pass get some sleep and it will be a new day tomorrow we hung up and just a few

(31:01) seconds later it hit me they all said the phrase it will pass he knew you see Patricia in 2010 we created another impossible material we solved a problem for a pharmaceutical application owned by a military contractor in short we created a series of beautiful state shifting polymer Alloys each with different light refraction indexes to make it match its different delivery mediums The Impossible part of the new material was that it inherently has a stable synthesis with D rers dend rers are an amazing pharmaceutical invention

(31:31) a self assembling nanor structure that both enhances the bioavailability and delivers the intended drug to the exact right receptors in the body like small worker ants carrying the needed molecules to the location in distress they are fully hydrophilic meaning they can make any drug solvable in water and they keep both their structure and properties while being submerged in water at the same time you could explain it is that our alloy is sticky for the dend rers and our worldclass precision cutting skills let us create dry sheetss

(31:59) granules glitter or fine glitter of ready to deploy smart nanodrug Delivery Systems world changing of course but just another Wednesday in our building it's what we do we don't know exactly when the trouble started the client synthesizes the D drers and can change their properties and payload molecules at their discretion we just do the final assembly dend drers to our alloy and the alloy Precision cut to anything from large sheets to fine glitter smaller than a tenth of a millimeter in other words we don't know what

(32:29) properties and molecules each production batch has it could be a cure for cancer it could be the world's most effective Adil or something way more nefarious and soon we understood that it was the last alternative it was nefarious I kept my head down the teams were miserable and it was starting to get to me I tried to figure it out but I got nowhere we missed our quotas on Tuesday Wednesday and Thursday now it was Friday and when I arrived I heard chatter they were talking again I got geared up and said good morning and they

(32:57) replied there was hope I couldn't help myself so I said has it passed now and they said it will pass now and I swear I saw smiles and hopeful eyes behind the goggles they skipped their lunch break which was unusual and by noon there was a stir it started as a frantic discussion and quickly became loud screaming from the room I rushed to get my gear on and when I got in they were panicked and crying what happened is anybody hurt there were two things I could filter out from the screaming and crying they didn't change it and oh [ ]

(33:24) we are going to die I wasn't able to make contact with any of them I even took them by their arms and shook them to get their attention nothing it was like they had mentally collapsed into themselves and could not cope with whatever it was that happened I called my manager again his reply was out of character instead of a calm voice telling me not to worry he said oh that's not good I'll be right there 3 minutes later he arrived at the door next to the flush docks and as soon as he got in he opened a locked metal box

(33:50) on the wall and entered a code a short beep Was Heard and locking sounds were heard thumping throughout the echoing building tall SL liim perfect suit he stood still with his arms swinging down his sides like he was trying to gain momentum he spoke he said that he is very grateful for what I have done for the company over the last 3 weeks and that it was not fair of him to put me in this situation the situation wasn't supposed to happen anymore but now it had and this was not included in my responsibilities as an interim manager

(34:17) he said that I now should go home and that we would meet again in his office on Monday morning to arrange it so that I could go back to my regular job that my customers surely miss me and that I for the company akake did not divulge this incident to anyone outside management he ushered me to the changing rooms asked me to get ready to leave and that he would be standing outside it was like a dream I felt completely disoriented I got out of my gear and when I walked back out there he was standing in the exact spot I left him in

(34:45) great he said with a stiff smile now get home to the family and we'll meet first thing Monday morning he led me to the exit opened the door with his card and saidwe sorry you did

great he closed the heavy metal door and I could hear the extra lock thump hard behind me the client specified what security and protection controls that were needed for production they designed and paid for the packaging facilities that's the room within a room you were working in so out of curiosity and to protect ourselves we created a security protocol

(35:14) to screen each batch of dendrers that was sent to us we didn't understand it at first well maybe because we were expecting some dangerous payloads and what we found was a weak combination of five HTP PC and L Doopa it was a smart happy drug the dendrers attached to the receptors triggering the body to produce a we assumed fine-tuned mix of Serotonin endorphins and dopamine with the excuse of being scientists we tested it on ourselves it was weak and had extended release so it did a little but for a long time it was nice we continued

(35:47) to screen all new batches and soon a pattern emerged a very nefarious pattern something that has been tormenting me for the last years and I haven't felt peace as I do now my letters are sent out and now everyone will know I spent the weekend trying to understand what I had lived through for the last weeks then Monday came and we sat in my manager's office he said that he had talked to the board and that he needed me to read and sign some documents it was an NDA saying I wasn't allowed to talk about anything from the last 3

(36:15) weeks and that I would receive full payment for the full 6 months on top of my ordinary salary I got to go back to the job I loved and would get a lot of money I was already very well paid and the manager position was almost twice my ordinary salary I signed and he smiled he said thank you and for your information the ordinary manager of the wing got back early and that's why you are back here I went back to my desk got hugs from my colleagues who were happy I was back and continued on with my life it's been with me of course but life

(36:42) happens and within a year I rarely thought about it anymore until last week when I got the letter what we have done and for what I know still do is a crime against humanity the payloads and all the batches have a a common theme they all disrupt the normal hormone levels in the body and can program anyone to feel anything it dictates how people feel and ultimately how they act the incident you somehow got out of occurred when we got new batches the new batch was a sad batch with payloads to completely block serotonin and estrogen production there

(37:14) were more and more complex structures in the later batches but we can't identify the payloads we had and still have an ongoing problem with the use of the product among the teams we told the contractor that we need to enclose the packing process and fully automated it but they won't do it I think they are using our personnel as test subjects when a new batch comes in it can change the product from a happy drug to a dark and destructive self-inflicting drug and when the teams are using the product the

(37:40) batch they are handling is in complete control of their state a few days with a powerful happy focused batch turns to a sad batch then to a happy batch again and suddenly an angry

batch people don't last long in those teams it must be hell on Earth the drugs the design and the intended use are all on the contractor but we made Mass distribution possible want Happy People spray the skies or fill the drinking water with happy hormones want to create a riot use payloads to spike adrenaline and cortisol in the air or get it in the

(38:10) products the intended people consume want to create the world's greatest Live artist make sure that everyone in the arena Gets A Rush of endorphins at the crescendo of the show and leaves with a warm and happy feeling that lasts for days anyone anywhere at any time can be controlled down to their being their feelings and actions are in the hands of a powerful and well-known private military contractor who creates Wars and with our product probably can make them last as long as they want okay folks wow that's a scary story

(38:41) if I ever heard one please share this story far and wide I think it needs to be heard and make sure to click that subscribe button not to miss out on more real world strangeness and disclosure have a good night folks thank you for listening I need a drink right now now do we have martinis do we have martinis Whoa man that part's a direct message to me 100% guys does that mean it's a **scam** it's pretty farfetched it's pretty farfetched the thing that rubs me weirdly about it most of it feels completely made

(39:24) up um the test subject part and some of that stuff is wild but the end the martini reference at the end is definitely a nod to me 100% 100% weird man weird um man the dend drers has anyone even ever heard of dend drers before I just I don't know what to make of this man I really don't know what to make of this but I I think was it zalak or whatever I mean yeah we got to be careful not to read too much into it but this is like yeah this is black mirr kind of level stuff right even if this is fanfiction this is

(40:08) incredible this would be better than the show Black Mirror right like Black Mirror would beg for these kinds of stories maybe they will maybe we're like in some kind of maybe that's what this is that almost makes more sense than anything else that the show Black Mirror is doing like a real life meta thing right now and that they're going to show this on Netflix and we're going to be the butt of the joke of oh we did a a super meta Black Mirror where we sent these made a YouTube channel and and made these AI

(40:36) voices for somebody because this is like too highly produced isn't this just really highly produced cre list be heard and make sure to click that subscribe button not to miss out on more real world strangeness and disclosure have a good night folks thank you for listening they edit this this last part in here right like this last part after that is getting edited in there's this weird rainbow thing here I need a drink right now do we have martinis what the hell man what is going on here man I'm finding no there's plenty of

(41:20) complexity here Alex jeez man I swear the CNN brain type people just there's definitely a line where you go too far where conspiracy theorist find connections and everything but there's also stuff that's just actual conspiracies out there right like this is I need a drink right now do we have martinis that's clearly a nod to me there's no doubt about that that's not reading too much

into it man if you can't realize what they're doing in the first part of the glitter you're probably in the wrong Community

(41:54) right now I hate to I hate to say that but this is clearly some kind of weird coded message to me whether or not this is a personal scop or whether or not this is a prank personally personal opinion right now I don't know but what I'll say is that this is feels like a scop to me this feels like a state sponsored sop to me that's what it feels like I don't know if that's true or not it's just too complicated it's too complicated now to be honest I was wrong once before so maybe I'll be wrong again about it uh I

(42:33) was I was wrong about the uh raw file I thought that was too complicated but once you dug into you realize it really wasn't that complicated right they just took some images I mean it's pretty damn elaborate pretty damn weird uh but this is like next level man this is like a hundred times weirder than this than the raw file right this this could even be a foreign government doing it Alex man no offense Alex but you're I think you're in the wrong Community bro this is like if you think that you're supposed to take what they say at

(43:04) face value then you watch a little bit too much CNN man you watch too much CNN it's uh read the transcript uh is what I would say especially on part one you're going oh no look they said it's fake yeah of course they said it's fake man don't don't you think they're going to say it's fake if it's real they're not going to go hey this is a real story government come shut us down like come on man just think about it from all perspectives yeah so if you're want to debunk it please go ahead and debunk it

(43:38) and figure it out go tell us what uh AI prompts they put in to make this happen and recreate it I think that you guys are like you know how many people told me they can make this in like five minutes like at least 10 different people you know how many people have been able to recreate anything like this nobody nobody this takes work no matter what could be dis info agents 100% that's where I'm leaning now I'm now leaning that this is not a prank um just because it's just too elaborate too weird I thought okay maybe this is a

(44:18) situation where uh you know they're uh they were trying to like you know use my uh I don't know what you want to call it reach and influence I guess or something like that but a lot of work went into this both of these there is a glitter there is a glitter conspiracy out there but this is a different take on it as well almost like it adds more to it this copyright thing showing up is really weird because this was actually my plan in case people didn't hear early on my whole plan was to play the whole

(44:54) videos actually my plan this morning was to play the videos part one and part two on my YouTube to see if they copyright strike me I'm playing it with monetization turned on because I want to see since I played the whole thing YouTube will have caught that this is the entire video that I played so all they have to do is press a button to copyright strike me if they were trying to make money off of this like this copyright thing here literally says then they would copyright strike me and that I wouldn't get monetization on

(45:25) it yeah guys listen to Hermes here regardless of your opinion there's no harm looking into this anyone who would be trying to tell us to not look into this is pretty suspect what's what's the harm that happens related to looking into this none at all worst case scenario it's pretty entertaining I'm not hinging the case on anything here they're not asking us for anything right so I think figuring out what dend drers are seems like a pretty pretty rational move here right uh the people that I

(46:00) would think are disinfo are the ones saying don't look at this don't don't Google dend drers it's like you know like why would I not we're going to look it up right now what was the stuff that the thing was saying I mean it's just super entertaining one way or another right no matter what highly branched synthetic macro material macro molecules tree like structure um more layers increasing the overall size dend drers have been researched for their potential use in drug Delivery Systems oh man so what's our rationale

(46:55) what's our rationale for how they figured out what dend drers are there it is right there folks it's right there I didn't even have to dig it up all I had to do is ask what are dend drers there it is drug Delivery Systems how did they come up with this this is the part that's bugging me otherwise I'd say the whole story about the D dmer stuff is fake I'm going to cancel the ads man why is this so weird yeah I've consider the time dilation effect for sure it's 10 years later though so if it was going to show

(47:38) up in the future I think it would have shown up by now why is this check out here's the thing that's creepy about this letter and or the my the letter to me and this is that the science side of it seems to check out based on what we've looked into that's the the part that is bugging me a lot I was even asking people about the simple mono structures and shape stuff and they're saying that that's theoretically how this technology works I mean that's a simplistic version but yeah it's uh just about shapes and

(48:12) understanding uh geometry getting played what what's the goal James let's let's let's address James's question what am I getting played as what's the objective here what's the goal here is it to get me to report on this and then what what's the reveal there's no raw file that they're going to try to reveal and prank on me right like I don't they're not asking me for \$3,000 it's not a felony **scam** it's just a creepy stalker thing I me is it creepy yeah how are they coming up with dend

(48:56) dramers how are they coming up with all these unique aspects like where do I still have the other one up here was the transcript I made that I posted the other day I think I had to edit some of it cuz I had to listen through it again some of it wasn't correct let's see what else um so this was just from the first video to me like how did they come up with all this stuff that was unique breakthrough of quantum computers is in the 2000s that was correct they said that they had this technology since the

(49:29) 60s they even mentioned it was a low complexity low energy phase transition this is something this is something like what Jack Sur fatti would say I don't think anybody else was

even saying this nobody I interviewed even said this the thing about knowing about the defectors in December really weird man claiming that we built the lithium ion batteries might even be a connection to this coming up with the time of 184 3 UTC The more I've been thinking about it the more I'm thinking our 1840 UTC time

(50:02) isn't even necessarily accurate I think we're really close to the time but if it's a little bit later it actually works better because then Katherine T goes in her boat and this explains why she doesn't see it this is the part that's creeping me out man this could yeah you can do two things at the same time a biochemistry major made these videos see this is why I wanted to ask a question so James you think a biochemistry major made these videos make me look like an idiot I think this makes me look

(50:38) incredibly smart this is this is nuts man doesn't make me look like an idiot it's funny man this is like this is the mindset of like a CNN brain though right is that like they've got to rationalize this no matter how illogical a biochemistry major made an AI video for you what why are they also a major in in uh low complexity low energy phase transitions in physics as well it's funny to bully people how is this bullying I think that like I don't know this is an incredible amount of work man this is not normal no this that's

(51:22) what I'm sure about this is not normal whatever is going on here is freaking weird man it's weird weird anyone can write a story sure but they're they're putting these stories out in like a day how are they putting these stories out so fast just seems like a coordinated effort and they're sending me little messages and hints on all of them too now at least in the recent ones so they're definitely watching I'm not sure what my next play is I have to think about it I'm trying to narrow down what is going on with

(51:57) this it feels like as I mentioned in the beginning right that one way or another this is going to come to a head if it's a **scam** or whatever something will happen uh I'm going to save this real quick uh notes about letter to me I never even saved this probably should have saved this before um if this is a **scam** it'll it'll reveal itself in time right somebody will come out if if James is correct and there's a oh man qar Nan's back wait qaran are you how do I move standard moderator qar on are you the

(52:36) other account as well what was the other one guys that was talking smack or whatever if this is a basic or chemistry major who who's sending this this stuff and also a physics major and PhD and all the other requirements and they also know about history of uh Quantum Computing and all this other stuff then uh it'll reveal itself in time then at some point the reveal will come I have a feeling that there isn't going to be a reveal maybe they'll keep posting other videos that would so like that's the

(53:05) thing we can just wait if they start posting other videos about other stuff right then I guess we know that this is just some new account that's coming up with weird stuff and they're feeding off of me in general but they didn't copyright strike me they might do it now but they didn't do it before it was weird this is I think it's possible my sister's a biochem major she could

easily come up with something like this okay go get her to do it man go get her to come up with it tell us how long it

(53:35) takes my sister could come up with this man I love it it was James's sister James man James I think you were the guy who said that you wouldn't recreate the videos cuz you get paid like way too much money I won't say say how much but uh it was a ludicrous amount ludicrous amount I think if I did the math your salary would have been uh somewhere north of \$300,000 a year that's what you claimed \$300,000 a year okay man yeah I know how AI Works we're looking at it right now the thing about AI is that AI only pulls information

(54:25) from EX sources it can't come up with unique stuff on its own you got you know how I works right you realize that AI is not sentient right if AI is sentient then uh it would be able to come up with unique original Concepts but since it's not it can't like if I were to say write me a story about the history of quantum computers let's see what it comes up with let's see if it comes up with the 1960s and then 2000s I don't know honestly they add Fineman in here so basically it's using Wikipedia right and

(55:10) it's looking to figure out when find it's just basically rehashing Wikipedia so far yeah it's pretty much like going through Wikipedia and listing out the scientists that came up with in so this is what AI story would look like is this what our stories look like no not even close there's not even anything about the early 2000s in there at all nothing about the early 2000s at all in here this is literally just rehashing Wikipedia right weird the thing that AI can't do is creativity that's what it misses

(56:01) right elaborate **Reddit** troll there what I will say tuna is that they are the trolls on **Reddit** are mentally ill enough to do something like this they are for sure I've seen the screenshots they're they're they're mentally ill enough to do this they they've become completely irally obsessed with me to a degree that is definitely stalker behavior is definitely in the ballpark um 100% can't rule it out especially not after the the last uh felony **scam** that they committed uh but this is just super

(56:36) weird super weird any other things that we want to address on this yeah so Monica nailed it right we've already covered Ai and decided it didn't the reason is it's more work to have a prompt all these specific details than than it is just to write it yourself that's exactly it this is why I don't think AI wrote this at least the letter to me now the glitter one maybe it's more likely for sure the glitter one doesn't have as many super crazy details it's still really weird yeah I'm still leaning on scop or

(57:16) elaborate troll as well heavily leaning on that over it being real no Tim pool's not a paid op definitely not Timo has a new short on Ashton does he is that true is it on Twitter you guys sure or is it the one that was just the one about recreating the videos Tim pool short where on YouTube on YouTube okay let's go check that out real quick okay let's see okay here we go guys I haven't seen

(58:24) this yet so let's see if it's good or bad we're hanging out with oh these are a lot of clips from us huh Tim pool pushes back this is a lot man this got a lot of attention I didn't even see how much look at how many Clips this got he got more views than some of his other stuff man this is a lot of views okay oh man look at me I'm all over this thing uh boy I didn't realize he's got me featured on so many different things here the Don Lemon part cracked me up man I did get the kind of feeling that

(59:10) Tim pool wasn't really buying what I was putting out there but that's fine that's part of the reason why I'm going to make a statement right after this that's going to be a message to the I hate using the term non-believers but and here I'll give you guys has the spoiler on it I don't which of these videos is it guys um this is the this is what I want to say guys there's really only two options here right either I am a arrogant narcissistic hoaxer who's taking advantage of the families here to boost

(59:43) my own fame or I'm somebody who actually believes these videos are real based on the evidence that I've put forth there really isn't an in between it's just one or the other right so which one is it yeah the Skeptics I think is the right to put it yeah thank you that's what I'm going to call it the Skeptics let me make a note of that Mage Skeptics is is the right way to put it yeah 100% because I think that that that makes sense like I think about my own CNN brain and how I was right and I

(1:00:15) would have probably had the same type of arrogant response that somebody like me must be making it all up for personal reasons I'm going take this off for actually we're going to watch this in a sec I would have probably had the same response right I probably would have thought Ashton must be making this up he's just trying to get fame or money or whatever maybe he's also making up this Dan scary videos as well but the reality is I'm not and the reality is I do believe the videos are real right and it

(1:00:44) it's understandable skepticism if you don't think that teleportation can be real which man we're asking a lot right but I have to I have to be true to what the evidence says I wish those orbs did not exist in that video I wish that there was no macroscopic phase conjugation event in that video I wish that it was cloaking you know how much easier cloaking would be to sell to people if I was just talking about they cloak the plane I'd have all kinds of people going yes this this matches Up This Is How They remote controlled it

(1:01:15) blah blah blah but the reality is it's not cloaking it's it's macroscopic phase conjugation that's what we're looking at in the video right I I have to be honest that's just the situation so absolutely man I understand how Skeptics could see it this way and I was even arguing with one in a private chat yesterday uh and this morning and this morning right one person was an actual skeptic somebody else is an actual astral projection believer and they think that the videos are are a hoax and

(1:01:48) that I'm scamming people or something it's like man no wonder it's so hard to get the truth out right everybody's got to manipulate the narrative to their own Advantage just like

Kimberly was actually just saying everybody's trying to manipulate the narratives at all times and it turns out that hiding information is extremely easy extremely easy I thought it might be hard no no it's super easy I mean all you have to do is attack the character of anyone who says the truth that's it

(1:02:16) that's all you have to do and how do you know the difference I I can't even tell the difference even between other conspiracies now right that I look into I can't tell like I'm sitting here somebody who would have been offended heavily offended by 911 conspiracies maybe even just a few weeks ago and now I'm sitting here going man I might have to listen I might have to listen and just move my move my preconceptions to the side it's hard okay so let's figure out if we can determine which of these one

(1:02:47) which one is it do we know uh rotary which of these are the new one a contractor this story is so wild every step of the way there's so many anomalies here that don't add up and don't a contractor stole satellite images from Africa I believe or of Africa which is the new one is there a way to tell do I just go to shorts here it must be this is the latest one man 12,000 views already can't tell even stuff like the beu stuff right like I don't I don't think that we've got ambassadors to other Galaxy's

(1:03:25) visiting us but at this point man when you're the kind of person who's talking about teleportation you got to you got to nail it I I kind of like this this picture right here at least he didn't do me he didn't do me bad and uh Shane Cashman was a good guy too he's a really nice guy it's been pulled rotary what was it about they pulled it huh is there a way to tell when these were like shown a contractor how do you like I don't get I hate these shorts with these vertical things they do this for

(1:04:03) like Tik Tok and stuff I'm not telling families of the pass your cons what is this missing flight what happened yeah your conscious families of the I'm not post some shorts yeah I look surprised okay yeah we want the tldr for that one um okay should we what do we do next here here anyway if the Skeptics let's call them that want to yeah I can't stand these YouTube shorts I really can't stand them they're clearly made for Tik Tok and and and Instagram right um I don't think there's

(1:04:45) anything your evidence on this wait why is this why is this something I don't know how how would I prove that I'm not the person making these videos I have no idea I mean the fact that I was literally asleep when it posted I would hope that' be enough but I guess can't prove that either it's completely unprovable um huh yeah uh okay let's dig into the other thing real quick and then I'm going to go get some food and take a break I'll come back and stream this afternoon uh we've got stuff we've got

(1:05:27) to push out today a lot of stuff I'm going to push the satellite images that we were looking at the other day that seem to match that um this just bugs me man I I had no idea what even uh what was it called what was it called again I don't know what dend dend drers I didn't even know what dend drer was man and you know what's super weird about this is that I was

actually a pharmacy architect tech for a few years as well I helped build like the the medications um and the call it the uh the jeez what is

(1:06:06) it oh my God the formulary I help add all the products to the formulary which if you know if you're in Pharmacy you know what that means um and I had never heard of dendrers at all it's why a lot of the science stuff creeps me out man because the stuff on here like checks out with what science would say how it it should act and how it should be yeah the Saga like I keep thinking this is going to uh Peter out you guys could probably tell that I was thinking it would Peter out around the Miami aliens thing even I

(1:06:41) was getting a little tired of The Saga uh and just thinking about you know what is next I mean I have this huge following now right I feel like somewhat obligated to use it for good purposes um and it almost was like the letter was like a shame on you kind of situation that's what it felt like to me like hey shame on you for for trying to do the Miami aliens thing which I never thought would got that big honestly and so it's almost like somebody else is trying to keep it alive that's what these weird letters seem

(1:07:14) like man the nod at the end about the the martinis I just don't know what to think and I kind of made a threatening message as well I made this threatening message about if this is someone faking it just come out and say so so that I can move on from it not that anyone's if they're a troll they're not going to listen to that anyway but if it was if they really were faking it with a good with good heart you'd think that they should come out and say hey yeah sorry we're we're messing we're messing with you in a very

(1:07:47) direct way not in a very cryptic way I don't know so uh check into the dendrers now let's look at the other thing that I'm also going to post about here today yeah the martini nod's a giveaway that I don't know what it means I mean just means that they're definitely this this account is highly connected to me they're watching for sure they might probably watching right now probably watching even right now assuming they're in America the glitter story is really weird because there's a real glitter

(1:08:21) conspiracy it's not even a joke there's an actual weird real glitter conspiracy am I worried no no as I posted with my Dexter message which I'm not going to play because I I don't want to mix up the copyright strike capability I want to see how that plays out um I this feels like a game just feels like somebody's saying do you want to play and yes I really really do if this is somebody who's playing around with us well they know what I like I like games I like strategy I like trying to figure stuff out right the

(1:08:58) martini thing I drink martinis non-stop I've known for drinking martinis on stream that's pretty much the only drink that I drink for the most part it's the only drink I've ever drank on stream and I'm known for blue cheese Olive martinis so at the end here this is a nod to me in general right here subscribe button not to miss out on more real world strangeness and disclosure have a good night folks thank you for listening I need a drink right now do we have martinis that's that's a nod to me

(1:09:28) 100% that's a nod to me so I'm down to play the game see how this plays out okay the MH370 stuff's not going away the glitter conspiracy is a real conspiracy that's out there and supposedly what they mention in there is real there's only two companies in the country that make glitter they're both based in New Jersey and apparently they do have like top secret stuff going on and the military does seem to be a contract or does seem to be the major supplier or the major uh producer or consumer of the glitter and it does make

(1:10:02) sense that they've been producing other stuff that's very small for the military or for whoever else you can see that if you think about what it would take to make glitter which is a very small thin material you could see how that might be something that you know could have other purposes as well reverse search The Cliff at the end hm maybe you're a former fed and that's what it felt like to me but yeah this feels like a scop man it does feel very scopy but at that same time okay well then is it disinformation misinformation

(1:10:46) or is it just the **truth** no idea I'm definitely leaning on scop although it being some kind of elaborate ruse is up there is the second highest for sure in my mind yeah whoever made this is is connected and smart I've never even seen AI videos that that elaborate before or even AI voices that elaborate I knew right away it was an AI voice but all the breath sounds there's a couple m akes with the breast sounds but yeah it's it's weird and the fact that they do like multiple different voices it's like a whole

(1:11:32) script that they've written out like you guys have watched us write scripts right it takes a while where's my script I don't have it up right now maybe I do hold on close 35 stuff we don't need that yeah here it is here's my script so I mean just when we wrote the catastrophic disclosure remember this took like several hours and we only got like what how many paragraphs was this not a lot takes a lot of time to come up with scripts even with AI like most of what we read There is not coming from AI now

(1:12:05) maybe in the glitter one it could be because the glitter conspiracy whole thing out there but even I watched part of the glitter conspiracy thing too like the real one and it doesn't have all that in there apparently the real glitter conspiracy though that it was a company that was originally a battery company it's weird so there are there might be connections okay well that's the first thing the second thing is this **Reddit** post here looks like it was let's let's update and see 13 hours ago

(1:12:39) so what do we make of this so 7day old **Reddit** account red flag number one right red 7-Day old **Reddit** account posts this uh message it looks like last night what time is it now yeah so late last night another red flag they claimed that they got in touch with the Vimeo uh you the vimeo video person now the vimeo video I think I think I have that one this may not be correct I thought it was this one the one we thought was the highest quality where you can see the nro down here at the bottom we thought this one was the

(1:13:32) highest quality one you can see though that it's got this time thing on it which is definitely added so somebody's definitely edited this version this time stamp like running over

the top of it has definitely been edited in on this version so somebody got in touch with the Vimeo person supposedly and then they say they found the original video now the reason why this yeah I I can't trust **Reddit** at all so I'm not going to run with this as a sure thing at all but I want to get your guys opinions on it because it is pretty

(1:14:05) interesting to look at it um this this feels like this is somebody who's hoaxing us with us this is what that feels like talking about sending the guy \$500 they even put the money sign afterwards so this is not an American this is somebody who's not American Americans always put the dollar sign in front just a heads up um and they say to check the properties and you can see that it's from 2014 so I've downloaded this file here and they say this was the original one the reason why they're saying it's not doesn't

(1:14:39) predate the Regis side a non one but they're saying it's a higher quality version and I'll let you guys decide what we're going to do first is let's look at the original uh thermal cuz you can't see as well I mean we kind of were just showing there but thanks Nathaniel have a good one man and thanks everybody who's watching I do we have a lot of people watching oh there's a lot okay um so here's the original thermal video the one that we've been running with from reges side and

(1:15:14) non uh so here's this is the part that I want to show right here is like look at this look at the color of this and It Gets Zapped away okay now let's take a look at this video here the one that's in this link and actually let's look up I don't think I'm revealing anything here but I'm still not going to show everything I was going to show you guys my whole file path but I'm just going to pull up the properties instead first another red flag is the files called MH370 Z so I don't know if

(1:15:54) they renamed it but I wouldn't imagine that's what the file name would be called I don't think it'd be called MH370 created how do we check advanced wait how do I check the metad data how come this doesn't pull up all the metad DAT like the other one huh oh that's my folder why is this not oh here it is here I'm sting looking at my folder okay yeah so what's this I mean metadata I think we' realized can easily be faked as we saw with the **Jonas** stuff as well it's simple to fake

(1:16:47) metadata well okay this one doesn't I don't know someone that look at the metad data on this remember when someone was trying to say rosetta is like some weird thing that I was linked to guys it's just the name of my hard drive I'm glad you like my name yeah I don't I don't see the M anyway let's watch the video okay um so right away is it cropped at the bottom feels like the letters are cro dropped on this one now you can also see when the view changes you can see I don't know if it's

(1:17:32) compression artifacts or something uh I'm going to go full screen for a moment here there's some details that we can see in this version you can clearly see so you see it like something happen to the clouds there first thing I want to point out is that you can see it come right through the the cloud here very easily the first orb on this version so it's going to come up

shoot through this cloud Cloud you see there's nothing there and you can't really see it that well here but because you can see the

(1:17:59) side by side but now you can tell there's definitely a distortion there the other thing I want to point out is on this version you can clearly see the orb come across the water without color changing anything there it is you saw it come up so this one does seem to be more clear but it does look like the numbers down here are not as visible and again watch when the perspective changes you can see this like fuzziness around these clouds here I don't know if that means something now watch here the hole in the

(1:18:40) cloud is going to be very apparent but also just watch the zap you notice the zap here look at this very clear Distortion that happens here is this still the Pyromania VFX guys that's weird man look at this Distortion here this artifact or whatever this is I mean that is that is this the Pyromania VFX and look at you can see the clouds over here whatever this is this is this is not VFX did somebody fake in all these little details here too this is somebody modifying the original video or it's just a different

(1:19:24) version of the original video you can see it light up the clouds here as well you see the hole here open up or become more visible as well see that and then when it goes away the hole is clearly visible here now now watch when they move yeah when they move this screen like I don't know if this makes it more realistic or not now look at the second version the colors are different now more vibrant maybe or more just darker I'm not really sure you can see the outline on the Drone a lot better in terms of where the

(1:20:08) air is pushing up against it the thing I want to point out on this one is when it zooms in you can see the door much clear you can actually I think people have argued you can make out the windows I'm not 100% sure I've only looked at this one time very briefly so far so you guys are seeing pretty much my first reaction to it I actually dismissed this originally and then I decided uh I need to look into it a little bit more so you can very clearly see the door now in fact it seems like you can even make out some of the

(1:20:45) windows here now if the plane someone argued if the plane was depressurized is this what it would look like oh not sure can still again see the monopole something I'm going to point out as well is that the monopole science here post dates 2014 this is almost proof that what we're looking at real alone no one would even had the scientific basis to come up with this idea of this uh magnetic monopole that we see in the orb I don't think anyone's uh biochemistry major sister is going to be coming up with

(1:21:26) that uh which in my mind these videos are definitely real it's hard to believe but that's just what the science and evidence points to nobody's coming up with these magnetic monopole things man they Bend there I mean look at this thing now I think it's CU we're too far away is why we can't see the the signature yet could be wrong but we then see the Heat signature here right here and this is where they realign too watch them they do their realignment right there you can see it very clearly

(1:22:01) I'm going to have to make another video about this Pro I don't know if tomorrow we got a lot of stuff to push out but right here they realign and now they realigned and then they do the The Singularity watch for it again they're realigning then they pop out like of their realignment I think I mentioned this on the Tim pool podcast as well and then they do their zap so boy this is pretty weird man not sure what do you guys think about this video you guys think this is fake do you guys think that they this is a

(1:22:36) **scam** they said they paid \$500 for this they claim this is the highest quality one yeah it definitely is more cut off but it is also more detailed I never saw this comment let's take a look at this real quick edit it and augmented maybe I want to see if I got a message

(1:23:39) from somebody hold on this is not Punjabi Batman who came up with this I thought this [Music] person okay uh Finance far I've I've recognized this name they're not somebody I have blocked so that's usually a good sign blah blah blah not going to argue the timeline of events if you compare the numbers you can see that they don't match yeah I think we can tell that part they claim that the earliest video

(1:24:44) we have is from May 26th on the way back machine is when the Wayback machines post was that's the one that has published date I think of uh May 19th this one was definitely later [Music] on there does to be more appear to be more compression artifacts when they move the screen around I think I can agree with that oh it's trimmed yeah uh the reference video ends after 108 yeah the other thing too um this is a pretty analysis not going to lie because the I don't think the original was two videos or I mean I don't think the

(1:25:36) original is one video I'm like 99% sure this original was two videos oh yeah it does end at 104 here let's double check that real quick but I don't that doesn't mean there's not value in this this this this Frame right here is the one I think has the most value where you can see this Distortion in the background what's the **debunker** argument for why we're seeing this here if this was simply a Pyromania VFX we wouldn't see this so they added a realistic like compression artifact to

(1:26:10) their fake video if this was just Pyromania VFX you wouldn't see this at all right you wouldn't see these compressions around the edges as well I'd say the compressions this shows that the video is actually authentic am I missing something here James are you still in the chat what's our explanation for this H weird um let's check the other video real quick high quality so this ends at 104 and the other thing is too there's something to all this Blackness that's at the end of the video as well in my

(1:26:51) opinion oh yeah this one ends up at 108 yeah so 104 is right here oh and you see the Mouse clip out so do we not see that in the other version I'm going to post this video later regardless but I'm not really going all in on it so do we not see yeah it Clips out oh yeah so it cuts out early you can see it cut out early before the mouse gets over and closes the window out so this is definitely not the original it's impossible for it to be the original doesn't necessarily mean it's not a higher quality cut though

(1:27:42) right but it doesn't feel like it's higher quality either because the size is smaller than the other videos it's only 70 megabytes I don't know what that matters I also don't think the original file will be called MH370 okay oh uh I was talking to the other James but thanks James Vickers for bringing that up I have a feeling that uh the debunkers aren't going to want to address the fact that uh we see this uh Distortion here I have a feeling they aren't going to want to address this the thing about debunkers is they

(1:28:31) speak past you they never address any things that arguments that you make they always just try to come up with their own reasons why this weird Distortion here that you see would seem to be a natural Distortion based on the smaller one here that's what it looks like to me right at a glance now I was already going to make uh like some Clips where you can just see the clouds moving when you wiggle like this I mean you can just see the stuff move I think what's the other one that shows it pretty clearly you can see the

(1:29:02) clouds moving here right and then I think even back here you could see it too trying to remember can definitely see those clouds move no doubt clouds d the hole opens up here I mean you can see the hole open up no hole hole in the clouds right there right where my right where my mouse is what do you guys think okay okay I'm going to write uh a letter to the Skeptics and then oh yeah there's like three James how many J how many James are in this chat man there's like four James in this chat right now there

(1:29:51) we go four jameses I'm an avfx expert who happens to have a passion for image through 70 image through 70 I don't know what that means man okay um let's see what we're going to do here so this is Battle grock so Q andon you are battle grock I don't know why are you attacking me so we've got qanon is like a larper pretending to be an AI and they're attacking me claiming I'm disinfo walk me through that logic imagine being somebody laring as Ai and then you're going to attack other

(1:30:40) people for being disinformation when you're literally pretending to be in AI yikes yikes it looks like brightness what are you talking about man you can clearly see this unusual Distortion pattern around the edges anyway uh do I have a radar specialist and I wish I did anyway okay uh I'm going to stop the stream for now uh then we're going to come back a little bit later so I think let's just see if there's any yeah I don't know I can't tell if this is higher quality I need some people to

(1:31:32) weigh in on this I'll probably post this and just let the world decide if this is higher quality or not yeah it's uh apparently LARP in his AI is like the new hotness huh does it does anyone feel like James with the four and the five is his name is like speaking through dictation device like he definitely didn't type this out a second ago the thing about the uh he was trying to say MH370 I think I have a passion for image through 70 I think he was using like a voice chat and it messed up that's weird

(1:32:15) man this is really weird why did you say I have a passion for image through 70 what does that even mean how would you typo that and then you typed out MH370 but you didn't

use numbers and you also put 2014 spelled out as well you're definitely using voice to text right yeah he is using voice to text so I can even figure out when people are using voice to text that's how fast it is I'm an image through 70 enjoyer yeah me too wow watching while you're driving man don't get in a car accident okay

(1:33:02) guys I'm going to do a letter uh to the Skeptics and then what will I post I'm probably not going to promote the glitter thing I may make a message about it though I don't really want to drive too much traffic to it see how they react we'll see if we get mon ization tried I have feeling we won't but we'll see and then I kind of I think after I eat I'm going to come back online for a part two and then we're going to uh post the the satellite images because the satellite images are

(1:33:40) now bizarre I think we can match it up to various pictures uh and then uh I don't know after that there's a lot more stuff I have to look at my list so okay guys I will talk to you in a little bit I'll be back on in a few hours I'm going to chill for a minute but thanks everybody for jumping on this getting the updates uh let me know your thoughts and the replies about what's going on with this stuff okay

Hard Truths #7 - Timothy Alberino - YouTube

Transcript:

(00:02) hello everybody this is hard TRS number seven with Ashton Forbes this is a podcast where we get to the hard TRS we have the questions that uh you don't hear Elsewhere on the media and today my guest is Timothy Abino he is a director writer and producer and investigator recently he has been known for going down to Peru and investigating the Peru um sightings that have been seen there in some of the villages and some of the towns in that area so today what we're going to be talking about is we're going

(00:29) to dig into a little bit of investigative work and then we will talk about some spiritual philosophical technological uh considerations for Humanity and the evolution of our species so without further Ado I'm going to go ahead and bring up Mr Timothy abrino hello sir thank you for coming on hard truths today how are you doing I'm doing well thanks for having me on Ashton and thanks you for being here uh first thing I want to say right off the bat is that I appreciate your investigative Spirit uh from looking

(00:59) into you you're the kind of person that uh doesn't just accept the information that's been presented to them you you get their hand you get your hands dirty you kind of jump into it and uh you know find out what you know your own uh kind of beliefs based on your own

experiences so uh I want to appreciate that from one investigator to another and I want to start by asking you what got you interested in um you know investigating incidents and you know history and uh all the stuff that you've been doing uh

(01:28) the past few years and in your life I would say that my interest in all these topics began when I was 19 years old I when I was 18 years old I dropped out of high school I moved to the Amazon in Peru um and by the time I was 19 I was I was living in the Amazon and that's really when all of this began for me um I had some very interesting experiences very personal experiences that um really set the stage for everything that I'm doing now so I would say that's it goes back to when I was 19 years old I uh I had I haven't been in

(02:00) the public domain I I wasn't in the public domain until about I would say maybe 12 years ago 10 years ago um and I for the last decade or so I've been traveling around the world investigating all kinds of things um things pertaining to ancient history uh lost civilizations Giants megaliths and uh and also uh euphology aliens and UFOs and what got you interested in the Peru situation what was uh how did you get connected to that to the to the one that unfold this this summer yeah um I was um I don't remember exactly how my

(02:56) attention was drawn to that probably through social media I would imagine like everyone else um I remember I I saw one of the videos that came out of the village of San Antonio the pinu yaku and uh it was alarming it was a video of the villagers running around at nighttime with flashlights and they were discharging their firearms into the jungle they were in a state of panic and they were claiming in the video that what they were what they were confronting was not human one of them said um others were talking about beings

(03:38) or people who were who seem to be in possession of advanced technology so it was very intriguing the story itself was very intriguing and I I had lived in close to that region of the Jungle that's called the alto naai and I lived for some period in the in the Nay on in the alto naai but also adjacent to the Alton na up the river masan north east of the city of eidos this particular incident happened in the village of San Antonio pinu yaku which is West a little bit north and west of the city of aidos but

(04:14) I'm very familiar with that region I learned to speak Spanish there and I speak their particular dialect which is called sharapa which is a mix of Spanish and ketua primarily Spanish so I kind of cut my teeth in that part of the jungle when I was 19 years old and so being familiar with the area it it seemed like uh it seemed like appropriate for me to go and and and conduct this investigation I waited for a while to see if someone else would go and do it um I had some things going on and uh so I was waiting to see if somebody was

(04:54) going to go up there and conduct an ex an an investigation um subsequent to the these incidences which were happening from mid July to the beginning of August uh two police officers two Peruvian police officers from the city of aidos did go and investigate they had a Navy escort and um they conducted what I always describe as a piss poor investigation it was not very well done in fact they walked away with this um absurd story they they literally

concocted the story I found out later of these they said that the villagers

(05:34) were being assaulted by by river miners with state-of-the-art jetpacks and I knew when when that story came out I knew that that could not be true for for various reasons um and so it just sort of it it it created another layer of mistique over this situation that was unfolding in the proven Amazon and then I saw the Press both the per Rian press and the American Press ran with that story and it was just case closed we know that it was you know miners with Jet City the are jetpacks and nothing to see here anymore let's

(06:11) move on and that really bothered me because I knew that wasn't true so long story short I decided to mount an expedition and I I chartered a riverbat I was fortunate to have my friend Doug Thorton who was a ex infantry Marine DHS operator joined me I contacted the Village um thanks to my colleague ethologist Ronnie vernett helped me get in contact with the village and I talked to the chief of the village Yu and actually I received an official investigation from the village to go and conduct the to conduct my

(06:49) investigation uh I received an official invitation so um all I I also found out that the villages that the village was in Dire Straits in regard to their supplies they were running low on supplies because they were not going out into the jungle to harvest uh from their farms uh or hunt they were were living in a state of Terror they were patrolling their Village continually every single night um and and so we were able to also turn it into kind of a humanitarian effort and and we were able to supply thanks to my friends from conduit Church Pastor

(07:25) Darren Tyler and and and jam Brandenburg and some of the guys from conduit Church they helped me co-fund the Expedition and we were able to bring them supplies food and medical supplies and also strategic technology we brought them because we knew that they were conducting these patrols every night to protect their Village from these strange as salant so we brought them high-powered flashlights we brought them um we brought them uh Thermo binoculars night vision goggles with recording capabilities and radios so um

(08:03) and I don't know if you want me just to get into what we discovered or or so I a couple quick questions on on some of the stuff that you just mentioned there first of all why do you think you're the only person who went to investigate I mean I know that the police or whatever did this investigation came up with this miners with jetpack story which I'll be honest I don't think it's absurd as well I think that uh you know it it seems at least as plausible as this idea that there's people with advanced technology

(08:27) in my mind but uh you know I guess I'm not the normies out there so what is your thoughts though on why you know why you why did nobody else go out there and do it because I think that that's something I've noticed as well is that especially in this age of social media everybody wants to commentate but nobody wants to get their hands dirty no one wants to get out there and do the work so what are your thoughts on that yeah I I was kind of surprised when I went to the Village I found out that aside from

(08:49) those two police officers we were the first people to come and conduct an investigation now there are some interviews floating around online where you have Peruvian journalists interviewing some of the people they were interviewing the girl Talia the 15-year-old girl who was there was an attempt at abduction they tried to abduct her so I had seen these interviews and had assumed that these interviews were conducted in the village not so the interviews were conducted in kids no one had gone to the Village um and the reason why no one

(09:18) had gone to the village is because it takes two days to get there up the river it's very remote in fact it's pretty much the last Village there's a tiny village associated with the village of San Antonio um that's sort of like a satellite Village connected to it but San Antonio the pinu yaku is the last outpost of civilization before a vast expanse of Amazon jungle go stretching all the way up um to Ecuador and uh Colombia in the north so it's very remote it's not easy to get

(09:53) to and and it's you know it's the Amazon you're deep in the Amazon so it's not it's not a very comfortable trip and also add in the the additional element of danger because you don't know what you're going to find up there I certainly didn't know if we were going to discover that these were cartels drug traffickers human traffickers we had had no idea what we were going to find so there's an element of danger as well and I think all of that dissuaded anyone from going and

(10:22) conducting an investigation also you need to speak Spanish and you need you need at least to be familiar with the dialect to have somebody with you who's familiar with with chaaa to really be able to communicate with these people so all of those factors I think were inhibitive of other people going and getting the job done awesome yeah and what about you mentioned uh you know the mainstream media is reporting on this is this miners with jetpacks what what are your feelings in General on the way the

(10:51) media reports incidents like this and how do you think they could do better in the future well I I can't believe that the media ran with that story because in the beginning the Peruvian press was taking this story very very seriously it was Gravelly serious the way that they reporting it I was quite surprised they weren't ridiculing the J the the villagers they weren't even doubting the story it was it was it was creating quite a bit of fear in Peru at the time um and rapid and so when the when the jetpack story came out it sort

(11:26) of assuaged everyone's fears and it it it it provided a prosaic answer that I think a lot of people were hoping for and it and what really surprised me wasn't that the Peruvian press ran with this explanation with this concoction what really surprised me was that the American Press ran with it even news Nation who broke the story with David grush and and has been very bold in reporting UFO related stories just ran with the jetpack minor story case closed it was miners with state-of-the-art jetpacks with no

(12:01) context with no understanding of whether or not that is even feasible um they didn't

bring in anyone like myself who who's lived in the area or familiar with with the Amazon proving Amazon and The Villages and it it it was uh I was quite surprised and disappointed with the media even with these alternative media sites like news Nation so uh I can I can only say that the reason why the American Press ran with story is because that's what the Peruvian press confirmed yeah so um just as a a rundown and **I want you** to correct me when I I

(12:39) kind of go through this a little bit if there's anything I got wrong here is that the uh locals there believed that these were similar to these uh be called the face peelers that these people or whoever was harassing them were on uh like essentially equivalent of circular hoverboards that seem to have some type of anti-gravitational technology or capabilities uh but they also had some type of boots I believe that they were using as perhaps uh kind of a mechanism to turn it off or on that there were some Advanced Aerospace vehicles that

(13:08) were similar to an acorn shape if they were to be turned on their side and I think I even read something about or saw something about there being some scanning capabilities out there um what do you I mean in my opinion from what I've gleaned from your investigation these people were terrorized I think there's no doubt in my mind that people were terrorized out there what do you think it really was that was going on well the people the the communities out there in the jungle they do believe that this is the face peeler phenomenon

(13:37) that these are the face peelers and the face peelers the face peeler phenomenon is it's about it goes back to the 80s back to the mid 80s so it's a few decades old and it it when I lived in the jungle I heard about the face peelers and basically it's sort of an old it was an old wives tale where they would tell their their children for example don't go out in the jungle at night or the face peelers will get you and the face peelers um they're they're called face peelers because people every now and

(14:13) again would would end up missing in the jungle and then they would discover their bodies and they would they would be missing part of their face um and usually it's very clean cut so we're not talking about depredation from animals or piranhas or something like that it's a laser precision um and so this was always as I said sort of like an old a fairy tale an old wives tale and um but the people in the jungle absolutely believed it was true and if you were to ask them who are the these face peelers

(14:43) you you would get different answers basically one of two answers some people are going to tell you they're Gringos with advanced technology and I'm talking about the native communities they're going to tell you they're Gringo with advanced technology that are here or organ harvesting or whatever and and some people will tell you that they're non-human entities they're aliens or some sort of non-human creature uh with advanced technology so you get a mix of both and some people tell you that that they think it it

(15:12) could be both of those things combined and and again when I say some people I'm talking about the communities themselves in this case in San Antonio the pinu yaku we're talking about the iitu tribe this is a very old Amazonian tribe very important old Amazonian tribe

the kitu language is very interesting there aren't many people who speak it anymore um and this Village had had had not pre previously experienced an incursion like this or the or the phenomenon the face peeler phenomenon to this extent or if ever for that matter

(15:45) so this was brand new to them but they were associating associating it with the face peeler phenomenon because uh of the the attempted abduction of the 15-year-old girl named Talia and Talia was a was was she she um went through this very traumatizing incident in which uh in it was it was a evening just after dark she was picking fruit from her tree in her backyard and the fruit fell to the ground she bent over to pick it up and she felt the gentle breeze at her back and she saw the leaves the dry leaves rustling around her and she turned

(16:22) around to see what was causing this Breeze and she saw a an as salent a tall person dressed from head to Foot In Black in a in a black armored bodysuit and he had a helmet on and and the helmet was elongated in the back and the eyes were sort of the ey lenses were almond shaped uh she says they were green others told me they're yellow maybe they're a greenish yellow and this individual this as salent was surfing was surfing on a circular hoverboard platform but there was no noise associated with it she didn't hear

(17:05) anything she felt the breeze um in her backyard there's sort of a golly it's a forested golly there's jungle there and around this little golly this forested golly are other houses so this is in the middle of the village and this individual this ass salent was surfing around the trees he comes up the hill and he lands right behind her and he grabs her from behind and he puts his hand over her mouth and and as and as this is happening she notices another guy coming up the same same equipment black armored bodysuit

(17:39) elongated helmet he comes up the hill he lands in front of her and grabs her feet and then they proceed to carry her over behind this this that roof Chicken Coop that's in her backyard and and they long story short without going into all the details they proceeded to to cut her face off they took out a uh what I think is a laser syringe the way she describes it and they began to make an in an incision right here below her jawline and uh she started to struggle and they dropped her they were holding her they dropped her because she

(18:16) started to push up on one of the masks on one of the helmets behind her and as she's pushing up on the helmet he let her go for a minute to try and pull his helmet down and she screamed and and all of the neighbors came running with flashlights because they were already in a state of vigilance this wasn't the first incursion this was the first attempt at abduction in San Antonio P to yaku but it was not the first incursion into the village so all the villagers were in the state of of vigilance and they were

(18:45) sitting on their porches their patios with their shotguns and their flashlights at the very least their flashlights so when she screamed the moment she screamed her brother and the neighbors came running and I talked to them they saw these a an floating on these hoverboards and by the time they got there they were they were dragging Talia by her hair one of them and they dragged her up the hill a little bit and when they saw that they were surrounded by the

villagers they they maneuvered on their boards to where there was an

(19:15) opening in the trees and then they shot up in the sky and uh tal Talia was left bloodied and and unconscious um it is important to note that Talia there was an anomaly in in I I interviewed many people in the village probably 30 40 50 people in the village and Talia she had a detail that I didn't hear from anyone else she said that she heard the as salant speaking one of them spoke in broken Spanish with with a gringo accent and the other one spoke like a Peruvian they were both tall she said they were both taller than

(19:50) me one of them was was exceptionally tall she called him the Gringo because he had the broken accent speaking in Spanish and the other one she called the Peruvian because he was shorter and he spoke like her and she heard them for example when they were before they cut her neck before they began to make this incision they took out a cream and they mixed this cream with some powder and they well they shot it up her nose with a with a nasal syringe and this sort of put her in an altered state of consciousness and then they took out

(20:20) another they took out another tube of cream and they began to smear it all over her face and it made her face go numb before they began to cut it and she she said she heard them the one saying to the other be careful don't put too much on her face it'll ruin the Flesh and she said what they meant was that it would make it difficult for this to separate the skin from the tissue beneath and so she says she heard them speaking now talia's was very traumatized she had severe PTSD and was trembling like a leaf the

(20:55) entire time I was talking to her she very very traumatized young lady um so I don't know if she actually heard them speaking or if she confabulated them speaking I don't know but if they're speaking Spanish especially broken Spanish then these are human beings maybe something a little more interesting than that but but very likely human beings um and you mentioned this technology that they have so apart from the apart from these hoverboards which are not this is not conventional technology we're not talking

(21:23) about propellers this is not propellers there's some other kind of Technology here unconventional technology because it's silent and and it's it just does not conform to the propeller technology the the drones that people surf on that you can find online um and apart from that they also have they're also in possession of what I would describe as advanced Aerospace Vehicles you mentioned they they they look like um they look like acorns on their side so they're they're they're narrower in the front

(21:59) and they and they W widen out in the back these vehicles they're about the size of a small aircraft like a private jet or a large helicopter like a shinook or a Blackhawk helicopter but they're completely silent except for when they move away they make a low frequency humming sound um I had various villagers draw these craft in the dirt for me they all drew the same thing and and one individual who had a really remarkable story he drew the craft on an acrylic board for me and this individual he was pulling

(22:31) pulling up his Nets at 3:00 a.m. and it was Pitch Black outside and suddenly he said it was like someone turned the lights on or the sun came up it was everything was illuminated around him and he was looking at the water and he saw there's something bright above him so he looks up and he sees this craft this Acorn shaped craft he's looking straight up at it it has it does not have any Wings it doesn't have any propellers any propulsion to any propulsion systems to speak of it has these little Nubs in the place of wings

(23:05) like rounded protrusions that as he was observing this craft those Nubs opened up they they opened up and they deployed there was a series of Lights as if it was scanning and it was there for quite for quite a while at least like a minute or two he's looking at this craft and and what was really interesting about his testimony testimony was the craft that he saw was transparent he said it had like a sort of a mesh uh fuselage like some sort of mesh like material that you could see through and in fact he saw two people inside he saw

(23:45) somebody like in the cockpit area and another person sitting in the middle and again multiple villagers describ this craft to me and they saw it they would they all saw it about you know 30 40 feet above their head in some cases it was just hovering above some of the houses in the village and in this case it was hovering hovering above the river and so obviously whoever these asants are are in possession of unconventional advanced technology there's no question about it this is not propellers by the way the people in this

(24:16) Village this Village is unique San Antonio pinu yaku is unique because there's a there's a Communications Outpost that the provincial government built in in in the village and that communication Outpost has has an Internet satellite uplink and so if you go there in the evening you're going to find some of the villagers sitting in the in the government building watching movies on YouTube or whatever uh so these guys are not uninformed they're very much aware of Pop Culture they know exactly what helicopters are they see

(24:45) military helicopters from time to time flying around because they're going out there to uh run missions against the drug traffickers and so they they know what a helicopter is they know what it sounds like they know what planes are planes routinely fly over the village a small aircraft um you know like Cessna planes um they watch movies they they watch all the they watch all the same movies we do the Marvel movies and all this they they know what a propeller is they know what a jet engine is and sounds like and so when they're

(25:16) describing the technology it's not like you know ignorant native people who are describing an a conventional airplane but they don't know how to describe it no no that's not what we're talking about these people are as informed with pop culture they know what the world looks like as much as we do they're using internet they have social media accounts so um that's important uh to uh to delineate that because you know some people may say well these they're probably just seeing a helicopter and

(25:50) they think it's you know they don't understand what they're looking at that is not the case I can ensure everyone they are describing advanced space Vehicles unconventional

technology without question yeah people love their prosaic explanations too right they love to come up with something oh it's some balloons it's a helicopter it's Chinese lanterns really anything except for something that may be uncomfortable to people in general so a couple just kind of clarification points on that one

(26:19) question that I I'm not sure if you got an answer to Is do they say when they were scanning this this uh I'm going to just call it a UFO because that's I guess what it is by technicality um did they say what color the lights were when they were scanning by any chance yes he did um I'd have to go back and look at the video but I if I recall I want to say they said blue red and white I think okay I think they were consistent the colors were consistent on the on the boards because the the discs had had a series of lights

(26:49) around them too in fact when these incursions would begin when these episodes would begin where these asants would come into their Village it would begin by them seeing these like saucers flying around in Sky silently just flying around hovering over the village but if they were to take their flashlight and put it and and Flash up at the saucer if it was close enough they'd see the silhouette of a person on top right so so these guys were are are are floating above are flying around above the village on these saucers and

(27:20) the saucers have the capability to completely stop you know to be stationary in the air with no sound and then the asants would go will land in the jungle between the openings and the trees and they would either walk into the village or some of the villagers told me a few of the men told me they were floating and I said you mean on the discs and they said no no they were just floating off of their shoes they have these they have these little discs on the bottom of their shoes that project the light and they can float like a

(27:52) meter off the ground a few guys told me this in fact one of the guys said he said listen I was standing here I went to all the locations right where they were encountering these guys and they walked to me through the encounters he said I was standing here and it was just after dark and I have my flashlight and I saw one of them here I put my flashlight on them and he was right there in front of me and I'm telling you he was floating on he had discs on the bottom of his shoes not to not to be confused with the with the uh with the

(28:22) uh hoverboard disc like I'm talking about two discs on the bottom of his on their of their boots or Footwear and he said he was just floating there and I he said I shot him Point Blank Range with the with my 16 gaug shotgun and he fell back on his back so the blast knocked him back back but then he just hopped back up in the air resumed floating and moved away and and the guys tell me that when they would shoot these to shoot the ass salant they would hear the the shotgun BB's dinking off of their body

(28:53) armor um and they set up traps around the village as well they said set these traps up they take these tubes and they put a shotgun cartridge in it and they have a firing mechanism like a hammer mechanism when the Rope is triggered and they use it they Ed these traps to catch small game but they modified them they modified the bird shot and they melt the bird

shot down and they make they make uh bigger BB's so they make slugs out of them right and they made these slugs they modified the bird shot so each each

(29:23) canister uh had a few slugs in it maybe four slugs in it and they raised up the they raised the traps up so that they would be the level of the knee at the at the knee height right to try and literally take these guys out at the knees with these traps and and they told me that they would hear they set nine of them up they would hear the traps going off at night and then they'd go to check them they'd go check them out and and The Traps were triggered and they would see the footprints of the as salant which

(29:50) were two discs on each side so two circles that's what and they were very large they said the footprints but but there was no blood there was no shrapnel almost as if these guys were just triggering the traps for fun right these asants um in fact these traps are very dangerous one of the ladies accidentally walked into one and it blew a hole in her thighs previous to our visit W so anyway um we're dealing with you know a physical phenomenon and UNC unconventional technology that I I know and that I can confir confirm Yeah

(30:26) well yeah I mean uh I have no difficult time believing in advanced technology my personal opinion which I've put out there is that I absolutely believe that there is advanced technology that's out there that's unknown to the vast majority of the world in general so am I correct in assuming that your opinion then is that these were humans with advanced technology and this is not aliens or anything like that and then what would you say their motive then is are they trying to harvest people or just terrify people um and then lastly

(30:54) how long do you think this uh was going on I think I heard heard that there hasn't been any more incidents since you went there but if you can clarify any of that feel free I cannot say for certain who the asants are if in fact they spoke broken Spanish one of them as Talia according to talia's testimony then we're dealing with humans um and we're probably dealing with a mix of gringos and and locals local maybe paramilitary guys um we could be dealing with a mix with could be dealing with a a a cooperation a co-op between human

(31:34) and non-human factions of course that that seems Fantastical but it is within the realm of possibility considering the kind of Technology on display in these incidents um it it it's definitely not minors with jetpacks it's not cartels and this is simply by way of logical deduction if the if the caloa cartel for example in Mexico had the kind of Technology that's being deployed in the jungle of of Peru we would see it they wouldn't hesitate to use it they would certainly use it against the Mexican military there's they they they

(32:12) have the cartels have military weapons grade ammunitions there's no question about it they have weapons grade equipment uh military weapons great equipment but they don't have advanced Aerospace Vehicles they don't have anti gravit gravity technology they don't have the kind of stuff that these villagers are encountering um so there are aspects of this phenomenon that seemed very human to me for example aside from this Village I also I I investigated a couple other incidents one in um the the city not Village city

(32:47) of natta 30 35 36,000 inhabitants and the reason why that is important that detail is because a lot of people are out there saying that these are cartels or miners who are just trying to drive the these villagers off their land in the jungle so that they can Harvest Gold or something like that but we know that's not true because there were the same the same sort of phenomena phenomenon was taking place in the city of NAA which is a couple hours down the river towards eidos 35 36,000 inhabitants they're not going to drive

(33:21) those people off their land that's obviously not the purpose here that's not the objective is to drop 35,000 inhabitants out of a jungle City these people have been there for for centuries and that's just illogical something else is going on they're after something else and I I talked to a a man named Pablo young man named Pablo from a different village in a different part of the approving Amazon uh it's Southwest of the village of San Antonio pinu yaku and it's near the city of Yim maguas and

(33:58) this individual they encountered the same phenomenon they saw the guys on the discs black armored bodysuits elongated helmets same dudes right and this guy said he was taking a bath in the river and suddenly heard he heard people yelling padas padas face peelers face peelers and he comes running out he's got a towel around his waist he grabs his flashlight and his shotgun and he begins to pursue a couple of these guys on foot they're running Through the Jungle he's running behind them and he gets close enough he shoots he

(34:31) discharges his shotgun and he hits one and again he hears the dinking off of their off of their body armor but he said I think I hit their propulsion system whatever it is which is probably in their shoes um these guys were not on the disc they were just running into the the these guys were by the way they might have exoskeletons they might have exosuits as well um because they're all described as being inhumanly agile the way they could move through the jungle so I'm thinking maybe maybe we're

(35:00) dealing with EXO suits here um but he shot one of them and he must have hit the propulsion system because this guy this as salent was having a hard time lifting up into the air and so Pablo when he saw that this guy's having a hard time getting off the ground he charged him and he tackled him he grabbed he got around the waist and as soon as he grabbed the guy around the waist he said the guy was lifting off of the ground as he's holding him he's holding him down and he said that the this this face peeler guy he took

(35:35) out this he said it was like a mini flashlight he said it was a laser and he hit him with the laser and Pablo instantly went unconscious and his dad and and some of the other guys um found him and and and revived him and and since since that incident he's had heart troubles so um this a very this is a very tactile tangent phenomenon that smacks that that seems to me to be a a a human encounter um but but I can't say for sure my working hypothesis is we're dealing with we're dealing with human

(36:14) very nefarious human beings in possession of advanced technology what are they doing what are they harvesting well apparently they are trying to harvest faces because there was a

boy near the city of NAA who previous to our visit uh was was rescued in the same sort of scenario um he unfortunately sustained deep lacerations on both sides of his neck very very gruesome uh I posted that video on my Twitter account and it's hard to find online where it's not blurred I found the one where it's not blurred and very very gruesome very deep

(36:50) he almost died he almost bled out they were able to rush him to the hospital in ALA they saved his life um and he says it was a face peeler assault and that's what everybody says so so are these the face peelers of you know of legend in the jungle or or is this a group of individuals who want everyone to think their face peelers as cover for something else that they're doing I I tend to think that because with all this technology that they obviously have why is it so difficult for them to accomplish the

(37:25) mission and harvest faces um I feel like they just want to scare people and they want they want the people to think that they're the face peelers of Legend when in fact something else is going on there's a different operation underway in the jungle that and they don't want people to catch wind of that they want everyone to think that this is the face peeler phenomenon that's sort of my working hypothesis however having said that um in the city of NAA I found out that the people of Na who experienced the same

(37:57) phenomenon the guys on the discs dressed in black uh they also had flying saucers hovering over their Village so you know the typical saucer so that's that's what makes me wonder if some if there's some sort of a cooperation happening here between human nefarious human and non-human forces entities again that sounds Fantastical but um but it's it's within the realm of possibility at least as far as I'm concerned yeah and I like to keep my mind open uh to any possibility in general out there especially related to

(38:33) this UFO phenomenon I mean if we have anti-gravitational Tech and other technology that uh can do stuff that we consider to be magic then I think we really have to consider all possibilities and so that's why I I really like your investigation because you know you've considered all avenues you clearly seem to be going into this with an open mind uh not really with necessarily any bias what I would say is have you seen you know you've done other types of investigations you've traveled potentially the world have you ever seen

(38:59) anything similar like this ever before yes I have actually Brook Park Ohio I I grew up in Brook Park Ohio um and moved away went and lived in Peru and then I came back to live for a short period of time Brook Park is a suburb of Cleveland the city of Cleveland I came and I was living in Cleveland for a couple of years before I moved out to Montana after living having lived for a decade in the Amazon in in um in Peru um and when I was living during this period of time that I was living in Brook Park it was in my 30s early 30s

(39:32) actually my late 20s um I to give a little background here I I would often walk over to my my brother-in-law's house Tony and he and I would lift weights in his basement together and the topic of our conversation was more often than not related to UFOs aliens reverse engineered technology crash retrievals this sort of thing Bob laar you know Element 115 this

was the topic of our conversation most of the time and in fact there was one particular evening where we were talking about these things and my brother wanted to run over to to

(40:07) the GNC store and buy some supplements and it was going to close soon so we decided to jump in the car it was in February I don't remember the date it was in February it was very cold very windy we jumped in my car we drove over to the suburb of Brook Park again where I grew up to the brook Gate shopping uh the strip mall the brook shopping strip mall and um it was around I know the store was closing like at 9 or 9:30 and we were like was it probably like 8:45 or something or approaching 9 when we arrived and as we're approaching the the

(40:41) brook a shopping complex uh we saw something hovering like a craft hovering over the building on the corner of the complex it was just hovering there and our first thought was that the National Guard is running a a training exercise because there's a National Guard base not far from there and so that was our first thought and uh we instinctively we rolled down the windows of the car because we thought we would we would hear that ta Telltale sound of blades whipping through the air right for helicopters

(41:13) because these were obviously large helicopters whatever it was it was a shinook or a Blackhawk or something like that we heard nothing and so we looked at each other like okay this is something interesting I pulled into the parking lot there was hardly anybody there cuz all the stores were closing and it was very cold I just pulled in the middle of the parking lot threw the car into park because this craft that was hovering over the corner store it it it lifted off higher into the air and it just turned very gently on its AIS began

(41:44) to move toward me and then it moved above a little bit in front of my car and began to descend it got about 30 or 40 ft Max about above my car and it just hovered there and it was shaped sort of it sort of had a a Delta shaped no not Delta like a diamond shape to it I don't remember exactly it definitely came to sort of a rounded point in the front and it had the stubby protrusions on the side it didn't have wings it had these stubby protrusions just like they described in in San Antonio pinu yaku in

(42:22) fact it maybe it was the same thing it might have been the very same kind or or something similar to that Aerospace vehicle that they were describing in the in the jungle I had a good long look at it it had um it had sort of a angular uh body armor like um a grayish like a grayish green it was hard to tell nighttime it sort of had like a grayish green angular body armor much like the the uh F-117 nigh Hawk stealth fighter um but it wasn't shaped like the stealth fighter didn't have wings but it had sort of that angular body armor and

(43:00) it it had these triangle lights they were triangles and they were white and it had a series of of I believe blue and green lights around the fuselage the thing was just hovering there completely silently it was about the size of a large helicopter no propulsion system to speak of no propellers no engines nothing completely silent it was so windy that night that my car was shaking back and forth like this with the gusts of wind right this thing was completely unmoved as if it was in its own gravitational bubble as if it was in as if it was in

(43:33) its own atmosphere completely unmoved and we we got a good long look at this thing I could have hit it with a rock it was that close to my car and ultimately I had a flip phone back then my my brother-in-law had a had a smartphone and so I I said Tony your phone your phone and and he sort of shook his head like he was coming out of a days and he started to to feel for his phone and he found it in his pocket he started to pull it out and he dropped it and when he dropped it on the floor fumbling it for it cuz it's dark in the

(44:04) car he grabs it picks it up you know trying to pull up his camera and when he gets it up like this the the craft just lifts up into the air and starts to move away and we jumped out of the car and it was so cold and windy we couldn't believe that this thing was just smoothly gliding away no sound no propulsion system so is that what these guys saw in in the jungle is that what the villagers of San Antonio in other Villages by the way uh were encountering it very well may be the stubby protrusions in the place of wings really

(44:35) stood out to me in their testimony because that's what I saw so I know without a shadow of a doubt that somebody has advanced unconventional Aerospace technology without a shadow of a doubt unconventional no propellers no jet engines it's using a different kind of physics there there's a different there's different laws of physics that we haven't you know that even the physics professors at Harvard have no idea exists there's there's exotic elements like Element 115 that Bob Lazar talks about that don't come

(45:08) from planet Earth that we can't reproduce that have anti-gravitational properties in that and can create antimatter for example so um I think these craft are creating a sort of like a gravity bubble around them they're within their own atmosphere they're probably projecting gravity waves generating gravity ways like Bob Lazar said there's proably time dilation going on when you get close to them because when you distort gravity uh you're distorting SpaceTime and so you know all of this technology seems to be uh have the same

(45:42) properties that that I encountered that the that the villagers are encountering in that they're silent in that they can hover in place without propellers and so forth yep yeah and if uh it makes you feel any better I mean this is just my own uh test testimony and opinion is that you're absolutely right there are crafts out there that are Defying Gravity I think that either the military-industrial complex or third party contractors or both have this technology and I think that they're potentially hiding it from us um before

(46:11) we move on to the next top hiding I think they're absolutely hiding it from us uh I just got off the phone with a congressman uh one of the congressmen that was that was in The Briefing the other day and and there's no question that this stuff is being obfuscated um there's so many layers of compartmentalization the you you said it right the military-industrial complex what we call the Deep State I call it the dump I call the the level of security the the let's say that the echelon of the National Security

(46:43) apparatus that that that has the technology that's been working with that technology I refer to it not as the Deep uh deep state but as the dumb State because it's deeper than the

dumb State and of course when I say dumb I'm referring to the Deep underground military bases because that's where these things are being developed and the members of Congress even the president does not have clearance to go into these bases and that's where this technology is being developed the S4 facility for

(47:10) example where laar worked had multiple underground levels and there's no question in my mind that that this element of the military-industrial complex together with certain aerospace companies military defense contractors aerospace companies have been recovering and reverse engineering reverse engineering non-human Aerospace Vehicles let's call them alien craft and recovering the bodies and probably interfacing with the entities that were alive in some cases from these crash retrievals I have

(47:49) absolutely no problem believing that I think that that that is a factual statement and I think as the as so in other words I'm affirming uh gush's testimony and as we move forward I think it's going to become more and more apparent that that apparent that that is exactly what has been going on and what is going on and here's the problem I think that the people who are in possession of this technology who who have this let's call it secret Science and Technology are not very good people I think some of the most nefarious human

(48:19) beings on the face of the planet are the ones who are in possession of this technology yep and so before we go on to that because that's actually leading to my next point I just also want to thank you for your humanitarian efforts for helping out the these small towns and Villages right I know that you brought equipment to them medical supplies Etc like if nothing else like you're actually out there and you're doing humanitarian work so just thank you very much sir for doing that and then I I

(48:44) also want to say that I'm also in full agreement with everything you just said regarding these third- party contractors regarding David gush's testimony I think that people that speak to Congress under penalty of perjury should be giving us a high level of attention I think that the people that are trying to **debunk** him and say that he's making stuff up are really just doing Humanity a disservice so the question I would ask you along those lines is what does disclosure actually mean to you you know if you had to

(49:10) Define what disclosure means to you what what would you say it is disclosure is what we're seeing happen right now it's it's it's not I mean it can mean anything really it's in in simple terms disclosure is the Revelation from an official source so so NASA or the Pentagon or the pope uh Revelation from an official source that that that we have evidence of the existence of of extraterrestrials or nonhuman entities I mean that ultimately is disclosure but that can happen in many different ways that's the most

(49:47) straightforward way which will probably not happen for a long time if ever but there are there are other manifestations of that process that can happen and are indeed happening for example I think that's since 2017 the Pentagon has been desperately trying to control the narrative the the the so-called UAP narrative because they cannot they have no power the

Pentagon the Deep State they have no power to control the phenomenon they cannot control the phenomenon all they can control is our perception of it so

(50:24) they're desperately trying to control the narrative and they're they're losing control to some extent because there's too many encounters now uh there's too many encounters by our our Airmen our our our Navy guys you know the nimit incident the go fast incident the gimbal incident there's dozens and dozens and dozens of these everybody's got cell phones people talk it used to be back in the 90s 80s and 90s that if you were a threat and you were coming out with information they would just kill you

(50:53) they would just kill you um that's not the case anymore now they just discredit you it's easier to discredit you than to kill you at this point um and so that's that's there's there's been a switch in the the an adjustment to that modus operandi by the Deep state by The Dump state in that they're no longer just killing people who are getting too close to the **truth** they just discredit them it is so easy to discredit people because of social media and the internet and everything it's it's much or they

(51:23) blackmail you um uh or or they threaten you like they did to David grush uh so they can only control the narrative they cannot control the phenomenon and so what we're seeing now is a managed leak we're seeing a managed leak of information they don't want this information to come out but it's coming out so they're trying to control it they're trying to control the pace of How It's **leaked** a good example of that is you know the the Pentagon was dragging its heels when these congressmen were trying to get David

(51:51) grush in a skiff in that secure environment so they can brief him directly there was so many questions that he was asked during the hearing that he had to say well I I I can't tell you that in this public setting but I'm I'm glad to share that information with you in a skiff and we're talking about questions pertaining to alien bodies right not not just um prosaic things we're talking about the most important questions he's willing to tell them but he doesn't want to go to jail so he'll

(52:19) tell them in this secure uh environment and that had to be approved by various levels of authority you know uh in in government including at the Pentagon and so what did the Pentagon do they knew that grusia security clearance was expiring so all they did was drag their feet until his clearance expired and then and then the whole thing of a skiff is sort of irrelevant right because he doesn't have the security anymore so so they're managing this leak they're managing the narrative the best they can they're

(52:53) scrambling to do it they're probably in injecting a lot of misinformation and disinformation um to confuse to throw out red hearings so people get off of the they they want us not to be focused on uh and whenever I talk to uh anyone involved in government on the Committees and stuff that's is what I tell them they they want to keep you unfocused they don't want you to focus on the two things that grush the two claims that grush made that everybody should be laser focused on and that is Crash retrievals of

(53:28) non-human craft right of quote unquote spacecraft and and the non-human biologics that are associated with those crash retrievals that right there is what the Deep State the dumb state does not want us to know about or think about or see anything related to um they they any you know grush gave the coordinates for these some of these bases where he believes that there that these secret um special access programs are being developed and have been underway that was months ago that we heard that he had the coordinates that

(54:03) he had given those coordinates to the Inspector General do you think there's any craft in any of those locations anymore they scrubbed them clean they're gone they're they moved into some other base so it's going to be a cat and mouse game for Congress to try and get get any get get access to any of these facilities and when they do everything's going to be gone so so this is a long winded answer to your question we are witnessing some degree of disclosure happening right now the government the Pentagon confirmed that

(54:36) the go fast the gimbal the um the Tic Tac and a handful of other videos were authentic okay that is a tacit admission that the UFO phenomenon is real that's a tacit admission the controversy is over the UFO phenomenon is real and it is and and at least some of it does not have a human origin this I think has all been tacitly admitted by the Pentagon at this point no I agree with you 100% sir and I especially agree about your point about disinformation and how easy it is in today's society to push disinformation

(55:15) people have even been pushing about me and I just came onto this scene a few months ago regarding all of this and you know people listen and this idea that people just adopt other people's beliefs because of peer pressure and the age of social media information gets around it's been incredible to behold just from a firsthand account you know one thing that I would challenge uh your view on although I I still agree with you is that know you've got this uh non-human intelligence alien bodies that are being

(55:44) disclosed by grush as well as crash retrievals but if we were to take it back to you know the um investigation you did in Peru doesn't that lend itself more to the like the technology being kind of what the thing is it's really being disclosed because in my mind when I think of the military industrial complex I think that what they care about is okay well aliens are here whatever sure that's going to blow people's minds um you know the technology will have socioeconomic impacts but what about the National

(56:12) Security impacts right like that's the part where I wonder about what is your thoughts on this idea that this technology could lead to if you were to adapt it doomsday weapons weapons of mass destruction that make nukes look like nothing go ahead there's no question about it and there are legitimate concerns by the by the National Security State the last thing we want is and make no mistake about it **China** has their own programs **Russia** has their own programs but the last thing we want is for them to get ahead of us with

(56:41) any of this technology because I don't think **China** would hesitate to use it um and I don't think we would either under certain circumstances or **Russia** and I believe from what I've heard I

have no way to confirm this but it is my it's my personal opinion and and again I think this is a an informed speculation that our programs are quite a bit Advanced compared to the other programs from other nations they have stuff and maybe in certain aspects they've maybe made some Headway that we haven't been able

(57:11) to but we're a little bit more advanced uh we've been doing it longer and they just weren't **China** wasn't in a position to reverse engineer anything in the 40s neither was **Russia** was until the collapse of the Soviet Union and then there was no money for those programs anymore so whatever advancements they made were came came to a halt until they were able to rebuild their country so that gave us an advantage and we certainly got way front probably the United Kingdom with whom we share maybe some of this uh technology with we

(57:45) probably don't share much of it with anyone and I'm not sure that we should but so there are some legitimate National Security concerns here um and there's there I'm sure even if we were to have disclosure there probably are certain things that shouldn't be disclosed um that should be you know some information that the that the US military should hold close to its vest but the but the disclosure of the I'm going to call it the alien presence is does not in and of itself cause are aware of this this is nothing new to

(58:29) them so the fact that that is being hidden that's against us that they're hiding that from us the citizens they're not hiding that from **China** they're not hiding that from **Russia** they're are hiding that from us so why why are they doing that there are there there there are only in my mind in my estimation there are only uh nefarious reason reasons why they would hide that information from the general public and and those Reasons I'm sure um have to do with the kinds of technologies that would become available

(59:05) to all of us and that would that would that we would demand would become available to all of us if we were to find out that yes there is an extraterrestrial presence and yes or let's say a non-human Presence at the very least and yes there is uh exotic technology that would totally transform revolutionize our society if it were made available to the public and there are vested interests that don't want that to H happen no none of these big corporations that make all of their millions and billions of dollars using

(59:39) conventional technology want unconventional technology in the market they would have to completely retool it would destroy their business model it would destroy their their business altoe if there was free energy for example um if if we found out which I think is absolutely the case that combustion technology combustion engines are are are are are basically extremely primitive at this point compared to compared to what we could be using the airline Industries would become irrelevant overnight unless they could upgrade and

(1:00:16) and integrate the technology um I mean you know why are we all flying around in these tubes still with jet with with jet compulsion obviously somebody has possession of of some kind of anti-gravitational technology I don't think there's any question about it so why are we all jamming ourselves into tubes with jet with with uh with uh you know jet propulsion these

industries would have to be transformed and so there's going to be both National Security concerns from the the government sector but then there's

(1:00:50) going to be private concerns private interests that are are going to push back against the revelation of an extraterrestrial presence and and advanced techn unconventional technology there are a lot of interests involved here but everyone should understand that that the that the the revelation of an extraterrestrial pre presence a a non-human presence an alien which I think is the most accurate term an alien presence is is no Revelation to **China** or **Russia** to their governments that's no Revelation to them that's that's not

(1:01:27) telling them something they don't already know so that information is specifically being kept from us the citizenry yeah so yeah I want to just go ahead agree what you said there actually is uh pretty much perfectly in sync with what Dr Steven Greer told me in a Twitter space uh several weeks ago as well is uh the idea that some of the technology should be held back for national security purposes that you know there's no reason why we can't reveal some of this information that uh also agree with you that **China** and **Russia** are

(1:01:56) probably just behind the United States I think that we have probably military supremacy of the world and we just don't want to let people know about that in general um and I think that my personal opinion is that some of the reason why it doesn't get disclosed is that I just think that from the uh popularity perspective I don't think a lot of people are ready for it right I think that there's a certain percentage that are I think that you and I are probably people watching this but a significant

(1:02:18) number of people out there that wouldn't believe it to be real even if alien wi talked to Joe Biden personally on the front lawn of the White House um but on a different note or slightly similar note I would ask you now knowing about this type of Technology uh presuming that it's real and I certainly think it is and I can tell that you think it is as well does this make you more or less spiritual in general I don't think it Bears upon my spirituality let me say one thing let me let me back up and say one thing yeah

(1:02:46) sure there's another reason why there's another reason why this is being kept from the public two words alien abduction that's a huge reason why it's being kept from the P being kept from the public that's a that's a there's skeletons in that closet they don't want you to open that closet so um in regard to this affecting my let's my spirituality or I'm I'm I'm a I'm a Christian um and and none of this none of this has any kind it does no damage let's say to

(1:03:23) my Christian worldview whatsoever the revelation of like gray aliens I'm absolutely convinced gray aliens exist um if we're to find out that human beings have been interfacing with extraterrestrial entities since our Genesis uh that that that does not conflict whatsoever with my understanding of the scriptures rather it confirms what I already know from the scriptures that human beings have been interfacing with non-human entities since our Genesis and furthermore these are extraterrestrial entities unquestionably that preexist us

(1:03:58) so that is well within the biblical Paradigm and so none of this as I said does does damage to to to my perspective as a Christian yeah and that you know that's interesting to me because um The more I've learned about this technology the more spiritual I've actually become because of I I guess you were already there at that point but there's this idea out there these narratives that oh we don't disclose this because religious people will like not be able to reconcile it I think that's just

(1:04:27) completely false I think that from the religious aspect it completely aligns with this idea of a construct Creator Etc even aliens I don't think really uh harm that view at all I think it's the people that uh don't have any religious beliefs that are the ones that are going to be the hardest to to believe this information because they're sitting there believing everything they see on TV and you know all the whatever the authority tells them and then they find out oh nope that's all been a lie your

(1:04:50) whole lives like those are the people who I feel are threatened but that's just my opinion um you know on the same kind of line I guess with we're talking about techn or do you want to say something related to that uh just I agree with that assessment that the the maybe maybe in the 40s and 50s there would have been A disruption in regard to the the religious community but the America for example the the the F fastest growing religion is no religion secular secularism atheism humanism so that narrative is is no longer

(1:05:27) relevant it it's just no longer relevant and and I think there are plenty of Christians like myself who understand that the revelation of an of extraterrestrial beings uh as I keep saying would would would not conflict with our worldview whatsoever so it's it's really become irrelevant there's other reasons why that Revelation is not happening awesome so uh and then I've only got a couple more questions for you in general and I appreciate your time uh um so what do you think the trajectory of human

(1:05:57) evolution is here given that this advanced technology may be real do you think that we this is a risk of us destroying ourselves do you think that we could become Obsolete and machines take over what's your view in general of what what does this all lead to you know 50 years from now 100 years from now five years from now whatever in regard to the development of this technology yeah and just human evolution in general um and from either a spiritual technological whatever aspect you want to look at it from well I

(1:06:29) predict that we are heading towards a posthuman future I write about this in my book Birthright uh BEC coming post-human apocalypse and the usurpation of Adam's Dominion on planet Earth I think we're heading for a post-human apocalypse the future is definitely posthuman and that is uh a very dangerous Prospect obviously for the human species um we the all of these technologies that we hold for example you know the cell phones the technology that we hold in our hands is going to ultimately go inside of our

(1:07:03) bodies and and we we haven't even really begun the genetic Revolution yet we are just beginning to go down that path genetic engineering human genetic engineering but also

cybernetics uh um human technology uh brain brain um brain technology interfaces like um uh like neuralink that Elon Musk is developing you know in in sometime in the near future we will be engaging with the internet through our brains human beings are going to gradually become more more cybernetic and uh I think that ultimately we're going to face a postum

(1:07:48) future uh with with dire consequences and I and by the way I believe that all of this this is is predicted in the Bible and so it's it it comes as no surprise to me and that's why I can I can see the trajectory going this direction and I think that you know the the transhumanism and post humanism are are at some point going to converge with with the Revelation the reality of the alien presence in fact I predict three things are even now converging and are going to uh result in a radically different world than the one

(1:08:27) we're living in now I predict that the what I call in my book the alien threat or the alien presence that's if you can imagine these three things is three concentric circles that are coming together that are mer merging together so one of these is is the the alien threat the alien presence revelation of that the ongoing disclosure of that then you have transhumanism and and and this this this posthuman future all the Technologies involved in that the the the genetics robotics artificial intelligence nanotechnology all of the

(1:09:01) technologies that are going to give us the tools to radically radically redesign our biology okay and then that third circle would be what I perceive as a new religion that's going to surface in the earth that's even now being formulated I call it a patho theism and it's I don't believe the future is atheist I believe that in that apatheism will will be the religion of the future the concept of apatheism it's a word that I coin myself and it is a an amalgamation of two terms apoo theism rather apotheosis and

(1:09:40) theism theism obviously is the belief in Gods and apotheosis is the deification of man so man becoming a God and when you blend those two concepts together what you have is a religion which acknowledges the existence of the Gods I IE Superior extraterrestrial entities or non-human entities and the notion that man kind can become like a god ourselves through the agency of Technology you blend those two things together and you have a new religion apoo theism and I believe that is a religion of the future so these are the three concentric

(1:10:15) circles that I see merging and when these things come together as they come together we are going to be seeing a radical uh alteration of human society radical radical alteration of human biology and Human Society even the way that we interact with technology will be radically different in the future and future is posthuman yeah no I that's a beautiful thought in general I mean I hope so at least in terms of if we survive it and I think that we're not talking about necessarily Extinction of humanity but

(1:10:47) the evolution of humanity you know and what then this advanced technology will lead to you know I'm the opinion that we are closer to cavemen than we are closer to being at the uh Pinnacle of technological advancement and I think when you look at it through that lens then what you just said makes total sense now my last question related to that would be oh Jo go

ahead I was gonna say well if you are a secular humanist the prospect of becoming post-human may be exciting but if you care about preserving Humanity at all Genetically

(1:11:22) speaking uh uh you might even say consciously speaking psychically speaking if you if you care about preserving Humanity at all then it is then is a very frightening Prospect the idea of us losing our Humanity those trademarks that make us Homo sapiens losing those trademarks uh I think certainly biblically speaking there are some uh there are some exceedingly grave consequences associated with that so if you're not concerned with preserving Humanity there's no reason why we shouldn't become posthuman it would seem the

(1:11:58) natural progression of evolution by natural selection right but in this case it would be directed Evolution if you are concerned with with preserving Humanity if there is any reason whatsoever to preserve human humanity and really there's two questions here what does it mean to be a human being and is our Humanity worth preserving depending how how you answer those questions I think will determine your outlook in regard to post posthumanism yeah and that kind of leaves my followup which is um from the moral standpoint

(1:12:28) like where do you think Humanity has to get to to ensure our continued existence regarding this posthuman apocalypse or world that you know we combine ourselves with the technology because in my mind I don't think we're there yet from a moral standpoint what are your views on that well it depends on what your world view is what your Paradigm is again I'll refer to my own if you're coming from a Biblical Paradigm then then the consequence of of evolving out of atom let's say are dire are grave

(1:13:02) there's I believe there's some very Dynamic things that will happen in the earth if we forfeit and that's why my book is called Birthright by the way if we forfeit our Birthright our human Birthright um uh but even in just even just considering though the integration of our biology with technology you're you're going to fun Fally change what it means to be a human being so you're going into a a landscape that is completely uncertain and by the way add into this add into this equation um and this is really part of

(1:13:37) that Circle that encompasses transhumanism and posthumanism is Robotics and artificial intelligence uh that's a whole another thing that's developing uh and and so I see a fure in which we can't hardly control ourselves now with the level of technology that we have if if we are given more power to destroy the Earth to destroy each other to oppress to if we give government more po our governments any government pick any government you want on planet Earth if you give them more power more technological power more

(1:14:15) control they're just going to become more tyrannical you're just going to lose more of your freedom they're going to use these tools against us for sure to control us and uh that's so people who love freedom uh and are independent I think the advancement of Technology I'm not a lite there's there's levels at which there's degrees of technological advancement that are that are absolutely necessary medical advancement for example uh there's there's degrees of of um defense technology and so forth that

(1:14:50) I'm obviously very much in favor of but there there's a we're going to cross a line at some point in the future when you begin to modify human biology human psychology when you begin to use these Technologies to go beyond what's beneficial to society um for example that that that point we're going to reach that point with artificial intelligence it's it it there's there's some there there's there is some future in which artificial intelligence does become dangerous um and and a threat to the

(1:15:22) human species and and when that where that threshold is I don't know but certainly Elon Musk is concerned about that that's why he's trying to develop neuralink so that we can that we can keep Pace with artificial intelligence which he rightly understands as this exponential uh once we once we let this thing loose artificial intelligence is going to be teaching itself upgrading itself and it's going to and it's going to get out of control it's almost inevitable you know and there's

(1:15:51) something called the inevitabil inevit ability thesis or or it's also called the technological imper uh imperative and and what that means is what it proposes is that once a a useful technology is introduced into society what follows is the inevitable development of that technology it that technology will be developed to its maximum utility it's for sure and nothing will stop it that includes artificial intelligence that includes human genetic engineering that includes the the brain interfacing technologies that includes

(1:16:29) weapon building weapons it it it applies to everything so you know we've introduced all of these new technologies and it's all in its infancy and all of this is going to get out of control really fast I think and and so is it just that we have a bleak future no because again I'm going to revert back to my own perspective which is a Biblical perspective the end of the book is actually very very very positive depending on what your Allegiance is and so I'm I don't have just this apocalyptic Bleak view of the

(1:17:02) future but at the same time understand where all of this is headed and it's G to get pretty chaotic I think the AI thing is what scares me a lot keeps me up there seems like there's a lot of ways where things could may not go well for us from the humanity perspective so um kind of I guess one last bonus question here is what is your thoughts on our uh Humanity in general I mean what I'm getting at I guess is that there are a few theories out there one of is like the prison planet Theory uh the idea that we've been reset in the

(1:17:32) past do you have any thoughts on that kind of related to all of this and what you've kind of learned throughout your time on this Earth and being investigating phenomenon that you mean genetically uh I think that like from like I'm thinking of stuff like Graham hanock talking about like ancient apocalypse there being like these flood myths that are out there in terms of reset yeah go ahead yeah I absolutely concur with that I think there were it it and I'm going to use although it's there's some confusion here I do believe

(1:18:03) there was there was an advanced civilization inhabiting the Earth how advanced I don't know um perhaps even using a different track of technology that we have today an

advanced civilization inhabiting the Earth that was obliterated in a global cataclysm I absolutely affirm that I think there's a lot of a lot of evidence for that and and myself have have have been exploring that question for for more than a decade so I I would concur with graham um that there was an advanced civilization on planet Earth at one time

(1:18:36) Universal I think to some extent um and maybe there were some survivors interesting so well I think that this is probably a good time to wind it up uh thank you very much uh Timothy amberino for being on hard **truths** is there anything that you want to plug here uh for the fol FKS that have been watching and I just want to thank you as well very much for your time um you can get my book Birthright the coming postum lips in the usurpation of Adam's Dominion on planet Earth if you if you're interested in my

(1:19:07) my perspective on some of the things we talked about um my YouTube channel Timothy alberino and I'm on I'm on X and uh Instagram my handle is always the same Timothy alino no spaces no dots and thanks a lot for having me on it's it's it's been my pleasure Ashton yeah this was an awesome conversation Let's uh be in touch for sure just because I think we see eye to eye on a lot of topics out there and I'd just like to be in touch with you and figure out what's next in general so

(1:19:36) thank you much uh Mr Timothy amberino for being on hard **truths** thank you sir okay I'm going to okay well thank you guys very much as well for everyone who is uh on here today and being on hard TRS this is the area where we go and we seek those hard TRS so I hope you enjoyed podcast

MH370x - The Follow-Up Message 1/12/24 - YouTube

<https://www.youtube.com/watch?v=6-euuFXr9Dc>

Transcript:

(00:58) Malian 370 contact 120m n breaking news tonight A Malaysia Airlines flight with 239 people on board including four Americans has gone [Music] missing [Music] I remembered the line from the Hindu scripture the Bhagavad Gita Vishnu is trying to persuade the prince that he should do his duty and to

(02:03) impress him takes on his multi-armed form and says now I am become deaf the destroyer of worlds okay guys hey what's up let's do this thing um so it is a martini on the Rocks we we reached the martini on the rocks stage of the investigation folks uh for anyone who's wondering I'm in good mental Spirits despite the fact that I've got either an extreme stalker uh going on or I've got the intelligence Community or somebody a leaker or someone playing mind games on me cheers Oh What A Time To Be Alive

(02:55) guys what a time to be alive so first and foremost most I'm not playing games with the community uh at all uh this is really we're Beyond creepy guys we're Beyond creepy now um the response the response video is even weirder so I'm going to give you guys a background of what happened today I've been focusing on my work trying not to worry about the weird messages and Twitter stuff going on and I went to get some lunch late lunch today and on the way to lunch I was on my phone and I was like I'm going to check out that channel

(03:35) cuz the thing that's been lingering with me is how people are like oh you'll definitely get a follow-up message you'll get more messages right so I went ahead and I pulled up that YouTube channel and I saw there was a new video from three hours ago at the time that I looked it up and so I'm like okay it says something about Glitter conspiracy so I figure okay that doesn't have anything to do with me right but I'm like you know what maybe I should be read reading or listening to these other

(04:02) videos just in case there's some clue or something we can discern from it because this channel was just put together it's super weird in the back of my mind I'm thinking like someone either put this together to hoax us or someone put this together to like send us messages so I pull the glitter video up and the first thing I hear is they're talking about me not just talking about me they're answering questions related to what we were what people were wondering about the first video specifically the idea

(04:30) about deflector and like how the video was made so I'm like okay holy sh I mean what the f man uh I wouldn't even just for the record for people who think that I maybe made these videos I wouldn't even know how to make these I wouldn't have any freaking idea how to make I didn't even think something like this was possible to make I didn't realize AI was like this Advanced it's pretty Advanced like even just the voiceover AI and I'm pretty sure we're going to go through both

(05:02) videos today we're going to listen to both of them start to finish I'm pretty sure that the first one was somebody I don't know they said they typed it out or they translated from another language but there's certain Clues and like when certain inflections happen where they would have to put in a prompt to get it to change the inflection which makes me wonder if certain parts of it weren't like all caps or exclamation marks or something like that and man it's just it's weird guys

(05:35) but I'm rolling with it I'm rolling with it just cuz whatever man and so the other thing I want to address is some people think this is a distraction distraction from what exactly this isn't slowing us down we're not in the Sprint here to get this thing figured out like if this is a distraction it's not really doing a good job the only thing this thing has done is rejuvenated my interest in the case and probably brought a lot more eyeballs to the case so it just doesn't make any sense from

(06:11) the distraction perspective if it's a hoax yeah maybe it's a hoax but for what purpose it's not like I'm going to be embarrassed you know like the the raw file thing was a clear attempt at

embarrassment right like that was a thing where they were and it was a **scam** I mean L literal felony literal criminal felony but you know also a huge fraud and even that the story they had to come up with was just some weird story about a fake guy and his fake wife right and about some air gapped files like this is

(06:46) taking my whole investigation knowing everything about it and then adding like a few twists to it and using the theory that I've considered like the least probable one and like building it up into a big thing so yeah I still think that this is something that's most likely some kind of uh I don't know prank I guess is the right way to put it but man it's weird it's real weird it's weird enough that we're going to look into it and we're going to try to figure it out until this thing plays out and it's

(07:23) worth it I think to put into it just because the 0.1% chance that it could be real is worth while to look into there a lot of pretty bizarre things on this so the other thing too is that there's like direct connections to the people that they're talking about that I know right like they Malcolm bendal is hanging out with Bob Greener right now and I've been talking to Bob Greener like every day so they're directing me to a guy that people I know are hanging out with that I think Bob Greener is like the one

(08:04) experimental engineer physicist or whatever that's like figured this stuff out and like I my personal opinion this is what I told Bob is that I think Bob is more correct than he even realizes on the technology and it's just a matter of applying it from the engineering perspective to certain aspects like I think Bob gets the underlying like he understands it intuitively better than most people I think the military's already freaking weaponized it right so um we're going to go through that uh let me see there's any questions if you

(08:42) guys have questions in the chat let's switch over to full screen here I have a strategy we're going to do something that I'm not going to reveal right now but based on what happens tomorrow I'm going to reveal what my strategy was I don't want anybody to know I'm not going to tell anybody and then tomorrow I'll let you know how it plays out I have I have an idea and I think that what we should be thinking of are what are ways where we can determine whether or not this is a hoax or not

(09:11) right I think if this is a new channel trying to get subscribers well Bravo man Bravo you earn them you earn them if they're going through this much effort to create weird hoax videos that are direct messages to me that are extremely parasocial you got my attention man you've got it there's a video I'm going to post later tonight probably later tonight before I go to sleep and you'll understand my mindset on it there's nothing to lead me astray Nikki well lead me astray where back into the case back to the

(09:44) technology to the people that I think are literally developing the technology it's not leading me astray anywhere that's the problem right yeah and if this is super fake then it's totally earned man it's totally earned I think that most of you guys would like I think if this wasn't about me I'd be I'd be hitting with the popcorn drinking watching along with this that's

how entertaining I think it is the fact that it's about me just adds a creepy level that what I've been telling people is

(10:15) about the technology is that when you start to realize the technology is real stuff that people think is fake and can't be real whatever the line between reality and fiction starts to blur starts to blur a little bit you don't know what can be real anymore you don't know what the intelligence Community would do right now it's about me so that's when I start to drink because that's the solution to all problems in life right cheers folks Martini's On The Rocks so yeah glitter part two is

(10:52) supposed to come too so let's go ahead what was it called real creepy videos there it is well that's not finding it so I mean if they're do if they're trying to get views or whatever man they got a long way to go man I think they have less than 100 followers so um I mean maybe seems like a very pointed message at me I don't even know how to find it I'm actually not even subscribed um what was it called guys what's the name of it real creepy or is it is that not what it is is folks help me out I don't have any

(11:35) blue cheese olives so we're just drinking it straight up oh well there you go did I reveal anything important there I don't know Bob was just telling me how he thinks the videos are fake and that people are super parasocial and I mean I can't disagree I can't disagree man probably so anyway now you have proof that that was really from Bob there's the the messages where you was sending me that video that video is from today the one that I posted here guys we we'll go through this chronologically for

(12:15) people who need to catch up I've watched what is it look at my history no I'm not going through my my history on stream uh real creepy videos or real creepy stories okay so it just didn't show up when I looked for real I mean it doesn't even show up when you look for real creepy stories literally doesn't even show up we'll find it don't worry we're going to get people caught up to speed here on all this um I've watched this video here it is probably 25 times now it's 11 minutes

(12:51) long so I've spent probably three hours in the past couple days watching this video this is a sub that's how weird it is to me real creepy stories yeah that's what it's called so now they have a lot more subscribers they have 200 they had like a 100 earlier this has got 5,000 views already nearly I'm going to commentate and pause it at certain parts uh actually yeah okay here we go folks sent to us the 8th of January of 2024 it's a letter to an Ashton Forbes telling a new story of what happened to

(13:34) Malaysian Airlines MH370 that disappeared back in 2014 and as always don't trust what you read on the news trust your own capability to see the world for what it really is here we go I work or have worked at a military base in the Maldives and I know exactly what happened to Malaysian Airlines MH 370 this is also a letter to Ashton Forbes you are not not wrong and what you do are much bigger than you even can imagine don't stop what you are doing I won't tell anything about myself more than that I currently or in the past has

(14:11) spent time at a military base in the Maldives that I have done this type of work since I joined the military when I was young and that was many decades ago still in the game but the years are starting to get to me I write this because I want the world to know that most of the trouble on Earth are created for political reasons United States or at least a covert administrative Elite of the US has at will complete control and this has been true since the 60s Flight MH370 arrived at our Base by our hand at 1856 UTC after we picked it up

(14:52) midair outside the island of great nicobar just one of many many things we do we can pick up anything anywhere and deliver it in an instant like a magic FedEx some facts about why it happened MH370 had defectors on board they were running to China with American Technology they are Chinese by Blood and had gotten themselves into a situation with the Chinese regime who got them to choose to defect the whole play everything and I mean everything about it was a political play to show the Chinese who's their daddy that's

(15:34) us some facts about how it happened all passengers are dead all but the handful of defectors the plane did not crash the plane was on fire we know because we started it the plane was picked up by us on fire midair right in front of the Chinese the Chinese regime knows exactly what happened and that was the whole point of the operation okay this is what I want to share with you as I said I have been doing this for a long time I know the technology and have been a part of hundreds of operations so let's start with the tech

(16:17) the foundation is not superconductivity superconductivity is a product of the technology we have had this since the 1960s and from that first day we have used it to make sure that no one else can have it the big breakthrough to apply the tech as we do today came in the beginning of the 2000s with quantum computers and by this the Paradigm for AI technology what we had to do programmatically before we now can do with something akin to machine intuition this lets us operate in fast-moving environments where event-based logic in linear programming

(16:56) was very limited as I said what you have found is not the technology itself it's just one of many derivatives of the technology I encourage you to keep on with what you are doing but you should also be aware that there is a deeper layer that you could focus on instead of the Miami aliens that I see you have been posting about I will give you some pointers for this at the end of this letter the products or application you are now working on is correctly based on superconductivity the number of orbs you've been speculating about is correct

(17:31) the fourth orb decides where the object ends up the technology is based on structures simple and beautiful structures that lets us use the unlimited power that is everywhere and step outside what I would like to describe as perceived reality the structure that is used for what you are looking at is a meta structure that creates a low complexity and relative low energy phase transition the beauty of this technology lies in its elegance and simplicity the structures are inherently stable and self-regulating and the earlier

(18:07) challenges to conduct operations were 100% based on the limits of man with the same

technology just a slightly altered mono structure gives us an infinite power generator that without maintenance can run forever combine structures to a meta product again and you have the propulsion for a transm medium object moving faster than light it's the definition of magic there are endless applications and the **truth** is that it would change the world in an instant but that won't happen I bet yourself or at least most of your

(18:44) audience have heard a version of the story that the aliens are here and they want to bless us with new clean and revolutionary technology but we are a too young and Rowdy civilization and would not be able to be responsible enough with the gifts from them that's probably made up but that is at the same time completely true it's just not alien saying this it's us again the technology is infinite in its power and if two rivaling parties had access to it this world wouldn't last a day the same technology with a combination of mono

(19:21) structures makes a terrifying weapon that turns any matter into dust and that dust turns into air it does not matter if the object is a small bird or a aircraft carrier it cannot be stopped it does not miss and when the object has been hit the phasing cannot be stopped okay so back to MH370 we knew about the deflectors as soon as they made their decision well before that but then they weren't deflectors anyway we knew when how and why back in December and as we do we we made it into politics we let them go we

(20:02) took them back and sent the Chinese a clear message of who is in control and we did this with a brilliantly produced show that is fit for a Hollywood production any good movie has fire desperation regret and drama and every movie villain should see their plan fall apart and in really good movies just when the villain has accepted that the plan has failed the heroes of the movie steps sin and makes it worse this is what happened as soon as we knew what plane was the last leg of their Journey we planned and delivered so the plane was

(20:39) loaded up with lithium ion batteries built by us for this occasion lithium ion batteries cannot be put out has a predictable burn rate and we made sure that the volume was just right for a long burn that would allow for a fulllength show the Chinese were following ing the plane since it was on the tarmac and got to see their most close to success operation go up in flames and just as all hope was lost we made it worse right in front of their eyes 2 hours and 13 minutes in they saw the plane get phased out of there by the

(21:16) same technology they were trying to get access to and 5 days later the Chinese officially made a gesture of submissiveness by publishing a frame from the satellite of the phase moment via the state Administration for science the publishing was talked about in American newspapers as a possible debris field but when you know what you are looking at it's clear what the frame shows the aftermath during the 5 days after the show the Chinese found out about the batteries that we both made and placed them on the plane they accepted that we

(21:54) have been playing with them the whole time and at the same time could accept that the people they had convinced to deflect did what they wanted it was us that stopped them the deflectors had a good corrective experience when it comes to staying loyal and were back on

the job as usual but with a new understanding both of their importance and the consequences of their actions what was nothing more than another Friday at the office for the administrative Elite 200 people had the most confusing death experience you

(22:27) could imagine 1500 people lived a tragedy losing family members in a mystery and 10 thousands spent months searching and millions speculating for years then in 2014 military footage of the event got published on YouTube not our problem the person responsible for the leak was identified and taken care of not by us not our problem then came you hi Ashton impressive this this is what I want to leave you with there was a guest on The Joe **Rogan** podcast that was talking about sacred geometry and some new technology

(23:07) his friends had discovered on some Island somewhere he did record another episode but it never been published doesn't the wording sacred geometry remind you of something if you choose to spend time on this which I think you should instead of maul aliens keep in mind that your case is one product of the technology what happens on the other Island you will understand this if you pursue it is another more rudimentary product what if those in combination could lead you on the right path to the actual technology

(23:42) the gray bearded man is the key and he probably has no idea that he is finally I want to say this how do you defeat someone who can turn skyscrapers to dust completely erase whole neighborhoods in an afternoon and steal a burning Boeing Tri 7 midair someone who when needed has the complete control of all media and crafts the perception of events and has most of humanity eating from its hands after almost a full life in their service I think I know the answer you talk about them and you don't stop talking Jesus man holy crap you guys you

(24:27) guys think somebody made that some **redditor** made that really so I took notes okay there are several aspects of this that are completely original they're not out there as part of the investigation that are nobody has come up with um this is somebody who's way into this investigation at least as much as we are somebody who's creative enough to come up with original Concepts that we haven't proposed as well somebody that seems to not like the government I mean coming up with the whole ass paragraph

(25:05) and most a lot of this stuff AI cannot come up with a lot of the phrases and comments that were in there AI can't come up with it's just it's too personal it's too direct right it's like somebody had to have sent this message with clear intent so I'm going to go through it first of all they start by telling me I'm not wrong so they're starting with a direct message this already is not ai ai doesn't talk like that AI doesn't go you're not wrong Ashton no the AI if we

(25:36) talk to Gro AI is going to just come up with generic terms and phrases and not make a personal message right uh this is somebody that spent time in the Mal Dives so they don't specifically say they're at di Diego Garcia right um but but they are alluding to Diego Garcia for sure they I looked up other bases and I couldn't find any um I think this is 10 to 100 times more creative than taking some raar files and and copying it onto uh or taking some files and copying them onto a ra thing it's it's similar

(26:25) vein of weirdness but that was like there was a clear goal with the raw file copy thing right with the raw file thing they were um they were trying to get us it was clear **scam** right there there's a there's a reveal right where it's like oh you got into your haha you've been fooled this is like someone wants to play a game with us you're correct we are listening to AI guys you gotta come on man if you're struggling with the fact that we're listening to AI you're going to be you're going to be pretty far behind

(26:59) here folks the the voice is of course AI I mean you can tell that the voice is AI but there's a lot of clues in it this was not written by AI though that's the thing if this was written by AI this is a lot of prompts that are being put in there including original stuff AI does not create original works right what AI does is it takes works from other places and peels it together if you think AI could create this go ahead and try **I want you** to go ahead and try I want to see how close you guys can get don't think AI is going to be able

(27:33) to produce this guys and I'm somebody who's listened to it 25 times now pretty sure a is not creating this still in the game so now they're talking about their own life right and they're trying to give us an idea of who this type of person would be there's somebody who's been around in the military but now they're probably disillusioned by it in general they say that they seem to have inside information that the world is everything that happens is based on political reasons so now they're giving

(28:01) us an idea of the motivation not just the motivation of MH370 but motivation in general they talk specifically about great nicobar which is not something we've ever brought up we've never used the term great nicobar that's something that we've used what in fact this is something I actually want to Google is great nicobar even a correct terminology there is great nicobar Island we've never mentioned this ever before never island in India we've literally never mentioned this so this is not even where we've

(28:45) been talking about we've been talking about Carr nicobar which is up here or something so great nicobar is there a base here this is something nobody's ever mentioned guys so I've never mentioned this base this island ever not one time I didn't even know there was a great nicobar okay so this is another aspect that's very specific and very original don't worry there's a lot more as you saw from the notes so this is another original aspect now here's another original aspect entirely original AI can't come up with

(29:21) this without a prompt if I say it's original then AI is not coming up with it without being told to come up with it they took the idea that we know there's eight Chinese freescale semiconductor scientists but they turned that into the motivation they said that the eight freescale semiconductor scientists were defecting and you could you could say that is if you're following the case you could have come up with that for sure that these eight free scale semiconductor scientists this is something in the back of my Minds I

(29:50) thought about 12 of them were Malaysian and eight of them were Chinese so this makes me wonder if we can look into the eight Chinese ones maybe we can find information about

them in general the political play about who's their daddy that's completely original nobody's ever even there's no theories out there even about this this is a completely original thought this idea that this was all a political play um in order to just tell the Chinese we got you because now this is like saying that the fire was

(30:26) intentionally started people speculate could the fire be intentionally started and we always said okay maybe but why would you go through that it's a lot of effort right that's what I've consistently said on every podcast they brought an original idea here and said yeah we started the fire intentionally and they go into the whole thing about the movie later on saying that we're showing them that like they're not even trying to hide this we've also only speculated that you would teleport a

(30:49) plane to hide the plane they're saying no they're not teleporting to hide it they're teleporting to show them to to show them that that that we can do this to them it's pretty bizarre man yeah it also explains why there's so many on one plane as well guys for Adrian great comment Adrian we've wondered why so many people on the same plane well there's your answer because they're all defecting together and this was all a big setup they wanted them to be on the same plane together this is the creepy part so they

(31:21) also say all the passengers are dead which we've never really speculated that but we've we've said that you know it's not a good chance they're alive but the way they say this the creepy part about this is this is the part where actually I think it might be fake because in my mind there's not an easy way to just save the defectors and not save everybody else unless you save everyone and then you kill all the other people which is pretty damn dark man I can't see American Military firing squad

(31:51) just gunning down 200 people I just can't see it this this part is the part that makes this is probably the me the the fakest part in general now if they died incidentally then I think I could see it super conductivity is a product of the technology now this is something too where I don't think a redditor could even come up with this the redditors are too stupid they're just too stupid there's no other way to put it they're too dumb to come up with this idea that super conductivity is a product of the

(32:23) technology which is something that we've been trying to figure out this now screams to me like it's a parasocial stalker person who like thinks they know everything about how the technology works and they want me to believe how what they believe about it now the weird part is I agree I think that is the answer I think it that super conductivity is a product of the technology I think the technology induces superconductivity like the coherent matter wave beam that's what the coherent matter wave beam do is

(32:53) doing it's producing super conductivity and then Super conductivity is the key to teleporting the plane which is why they're not contradicting themselves when they say super conductivity is a product but it's also what enables it weird right okay um they say they've had it since the 60s so now this is something where okay who's coming up with this this is like

something where they have to be in the no right or you're just making up lower now like now this is something where it's like I'm thinking of like diamond

(33:31) from the Oppenheimer Ranch podcast someone who knows a ton of information or somebody who's like okay I know it's like it was the Nazis and Tesla and that we've had it since the 60s AI is not coming up with this I don't think I Me Maybe AI could come with this part and then they say the thing about the Breakthrough was with quantum computers in the 2000s again this is another original thought here cuz yes quantum computers do date back to the 2000s but the way they talk about it with machine intuition and how like

(34:06) this enables us to uh kind of perform operations that we couldn't do before because it like event-based logic this is something I never heard before I've never heard this from anybody nobody on the world so pretty weird detail to add in there guys about the machine learning stuff um the derivatives of the technology they're basically saying something this is something we've kind of talked about a lot is that there's other things that we could do with this technology uh including doomsday weapons fusion power

(34:42) Etc but they kind of bring it down and say well there's like the shapes and what have you the very simple structures and shapes are what allows the enablement of a lot of this stuff and this is already where I'm thinking back to um plasmoids in general quantum computers are hot with this technology makes computers cold that's very true this is why you need room temperature superconductive microchips so they don't heat up weird man there's definitely a connection between quantum computers and

(35:14) room temperature super conductivity 100% and that's why this quantum computer thing details really weird too this I this could only be made by somebody who's following the case it could be a psychopath somebody who's like a legit **debunker** thing about the **debunkers** is that they don't think like this creatively right that's why they're **debunkers** because they think it's all fake so they don't dig into this level of it if this is a **debunker** this is somebody who doesn't believe what they

(35:41) say there's somebody who **debunks** stuff because the idea that stuff's real is is too much for them but deep down they know it's real otherwise this is somebody who totally believes and is wanting to drive us down a very specific path um the Miami aliens so this is the thing too where if this is a **debunker** they're not going to bring up the Miami aliens thing they'd be happy that I'm talking about something stupid like the Miami aliens right this is somebody that was upset they were upset about the M aliens

(36:17) they're like hey Focus back on the MH370 stuff Focus back on the science why are you talking about stupid stuff like Miami aliens right this also sets a time frame I only spoke about the mall aliens last Friday less than 5 days ago so this nails down this wasn't an operation that they planned out um like months in advance or even weeks in advance they came up with this within a several days so they put this whole thing together since it was let's see the eth was what four days ago so they did this in under three

(36:50) days they did this in under three days we can narrow it down what this whole thing they produced they did it in under three days they then reaffirm us about the four orbs hypothesis now why is that interesting because Bob Greener doesn't believe in the four orbs hypothesis this rules out someone like him and I I never really thought it was Bob Greener but if it's somebody that doesn't think we need four orbs for it or someone like um Roy D Herbert also doesn't think we need a fourth orb right those type of people

(37:25) are ruled out right away this is a weird detail to add yeah this could be somebody like stalker level Obsession for sure that's definitely in play here they say the technolog is based on structures mono structures very simple shapes what do I think about when I think about Mono structures I think about a toid first thing I think about is a toid everything I've been researching says toids are the answer to all this everything I can't believe I didn't know about toades before this fra toroidal structures those are what we can how we

(38:01) can bend electricity Bend magnetism to our will yeah the first person that come up with this was Dave Dave Rossi I'm extremely confident Dave didn't come up with this as well I'm not sure he's creative enough to come up with this honestly although he's extremely smart guy but he doesn't have the time for this either um qar is somebody who's interesting but I don't doesn't feel this could be someone like qar coming up with this for sure that would definitely be a possibility if so they're trying to send

(38:34) us some pretty clear message here um I just mentioned they can the power from the vacuum of SpaceTime now here's the other thing about this guys they're right they're this this letter it's not just that it's a prank or whatever they're correct they're correct on a lot of this stuff they're correct on on a toid they're correct on taking power from the vacuum of SpaceTime I just I'm not going to go into details but they're correct a lot of the stuff here they're

(39:09) just they're right about so it's like okay if they're making up some of this stuff they're they're right about the power from vacuum SpaceTime stuff I think they're right about the structures I think they're right about the four orb stuff like it's weird the the perceived reality so they don't use the Matrix which is what I've been calling it they have a different term that they call their perceived reality which is a slightly different take on it nobody I've hung out with

(39:36) nobody I've interviewed has called it perceived reality if salvator Pas was coming up with this he would have said his what's what does he call it the the vacuum the empty vacuum state or whatever he calls it right now here's another completely original thought that we haven't heard at all he says that the low complexity has uh and low I think this is not no but low energy phase transition this you know what this made me think about this made me think about Jack sarod I think Jack sarfati was the one

(40:16) talking about low energy phase Transitions and when you're talking about phase transitions now this also makes me think about royy Herbert this is where this is a a completely original thought here that it's not a complex system or at least not a complex shape that creates the energy requirements and that it's a actually a low energy phase transition relative to

everybody says well it would take a huge amount of power to pull this off well maybe not really what it takes is a certain type of self-organization to occur and once

(40:49) you hit that that that let's call it resonance right the same way where if I were to have a glass right and I were you get the right pitch you can get the glass to break same idea I think with this technology you get the right resonance and then you can cause the phase transition to occur it's weird it's yeah it's another way of saying what I've been saying but it's not the same way they say it's stable and self-regulating now this made me think about again Bob Greener where Bob Greener was talking

(41:26) about the orbs are stable and that they self-regulate and that they can last for like days on end and they can just fly around for days uh I forget about the thing about limits of man I think this was something about the reason why we couldn't utilize this technology even though we've had it since the 60s is because we didn't have uh the capabilities that we needed with like quantum computers which now that part's interesting because if you look at the all evidence list where is it what's right at the top

(42:08) guys right at the top of the all evidence list AI chat GPT and quantum computers I wonder if if they fed all evidence list the thing is I didn't make the all evidence list public I just made the all evidence list public today this has never been published this list if they had used an old version of it maybe like could the AI have used this as an input I don't think it's enough too much of the stuff is too original guys I'm kind of tired of the distraction comments no more distraction comments guys just to be clear this

(42:49) isn't distracting from anything there's nothing to distract from guys I'm also just tired of this [REDACTED] distraction stuff in general related to conspiracy theories it's possible to hold one more than one idea and do more than one thing at a time guys we don't live in a world where you can only have one idea in your head at the same time so move on from the distraction narratives uh they're lazy and you guys can do better and I mean that in general related to conspiracies not everything in the world

(43:15) is a distraction from something uh endless applications that can change the world in an instant this is another thing that's accurate yeah it's too Lucid for a I mean you guys would know AI conversation is going to be very robotic it's going to be very like Wikipedia right and they're right here as well this technology will change the world in an instant right we've been talking about that and the next thing they talk about as well is really bizarre they say the thing about you know this your fa they they

(43:49) speak directly to you guys they say that um we they say say that your followers will know the idea that the aliens have this technology but they don't give it to us because we're too young in Rowdy civilization and then they go and say well yes but it's not aliens it's us again right which is also a weird thing there's no way AI came up with that terminology AI is not going hey Ashton's followers you you probably know about aliens but no it's really just us here and blah blah blah that's way too

(44:25) specific man that's somebody somebody wrote that um and the thing is the weird about that is that's that's what I think too that's my opinion is my opinion is there might be AI there might be aliens out there but when we're talking about this technology we're talking about yes as you just put uh te uh terrestres Breakaway civilization technology here and I don't think we are ready for this I think we are too young and Rowdy of civilization if that wasn't MH370 on those videos I'd probably give this up

(44:59) and just go you know keep this information to myself but that is MH370 so we're pushing it you know um infinite power H so the infinite power part is definitely real as well I think that the answer for this technology is that it's like uh a singularity itself where once you've unlocked this this technology you've reached an infinite power capabilities that's how you can blow up an entire planet with this you might even be able to blow up a star with this you just have to scale it up maybe not

(45:38) even scale it up that much because I think it's the type of situation where the power Just builds up and up and up and up and up and up and you can amplify it it's pretty bizarre um doomsday rivaling Powers so then they mentioned that if Humanity had this technology with two rivaling Powers they would we would destroy ourselves in a day this is exactly what my opinion is this is exactly it that this is doomsday this technology that this is the reason why they'd be hiding it like the geopolitical implications of the economic

(46:20) implications are huge but the implications here of Doomsday rivaling powers is the reason why you hide this because you're afraid that we're going to destroy ourselves and now that's a reason why you have to think about like this there's not good guys and bad guys in this world the Shades of Gray so you've got people out there that think yes humanity is too stupid we will destroy ourselves and then you've got people out there who are saying well even if we destroy ourselves that's our decision

(46:48) right and now when those two both of them have Noble perspectives but when those two perspectives combine this is where you would get the type of situation we have in ufology right now where you have this Waring almost like Waring factions some people who wanted to come out some people don't you think about the true implications and what they said there about the rivaling powers it that's sorry about that it fits it's weird oh let's see here uh no awkward I'm not going to go through how the AI

(47:24) voice was done right now we're going to go through all this okay um the phasing cannot be stopped so the phasing cannot be stopped is another original thought okay this is not something that I've brought up ever but this is an interesting thing where I'm trying to figure out if this is real or not if this is true or not now the phasing State change that we see happen happens almost in an instant when we watch the MH370 video the f change is pretty quick what I wonder about here is do they mean that do they mean once the uh the

(48:04) endothermic event begins or do they mean like when the orbs begin to circle the plane that's what I'm trying to figure out here with this phasing change thing now if this is fake then

this is something that we can verify or not is what what does this phrase the phasing cannot be stopped really mean because does that mean that like once you phased them out that's that's it or does it mean something bigger than that not sure but that's something that we've nobody's ever really brought up

(48:35) not even any of the people we've talked to as well um they knew in December about and just to be clear I know that the voice is AI guys that was never in question I knew the voice was AI the very first second I listened to it I knew the voices were AI that's never been in question I am interested in generally how it was done but I'm more interested in the content for how they did this because they didn't just tell an AI to make a story this was way way too detailed for an AI to just make a story if they had

(49:08) an AI make this story it would have had to be a lot of prompts and a lot of uh original thoughts that they threw in there they told the AI to think of a lot of this stuff if you were to ask the AI it's not going to know because science doesn't know right now right the same reason why we're disclosing information because this information is simply not out there okay now it gets even weirder they bring up a completely original supposed fact they say that we maybe the us or the Allied Powers knew about the defectors in

(49:47) December this is three or four months before the plane went missing this is something that I've never even speculated never everyone once never even thought about before this they knew about the defectors in December and they let the plan go through just to tell China like how powerful we are how' they come up with that they just came up with this original thought that oh we knew these were defectors and we knew about it since December it's weird man that's something I just can't stop thinking about

(50:26) right it's like they added all these original details to the idea of the uh Espionage Theory don't worry guys we're going to get to the next video and then you'll understand the defectors SL defectors issue and what have you as well we're going to have more details on this as well okay now they also mentioned another detail around this as well they mentioned the last leg of their Journey so now they've put together that these people weren't hanging out in qual lumur that they flew to qual lumur and

(51:08) then that was the last leg of their Journey where they got on the plane together now why is this important first of all this is something else again that nobody speculated on I didn't even think about this before this and I went huh that's weird yeah they probably were all flying from like different parts in the United States they get to qualum and then they go to Beijing why else is this important cuz this might be a verifiable piece of information if it turns out they really did all connect in KL on Malaysian Airlines because it's

(51:37) Malaysian Airlines that's their Hub then that's interesting because from the espb SC are that makes sense too so now they're coming up with a completely original Espionage story that seems to have a lot of details in it that all line up to an Espionage event now if they were hanging out some of them were like hanging out in Malaysia and qual andur before this that

would **debunk** this story but if they weren't hanging out in qual andur they didn't have like a conference there or something like that

(52:09) now all of a sudden this is this is factual is this evidence is this information even out there on the internet I don't think it is so investigators who are watching MH370 investigators let's find out if these guys actually connected in KL if they either did connect in KL then this adds information about the the uh legitimacy of this video if they did not connect in KL that they were there beforehand this will potentially think make us think the video is fake so again this is why we're investigators folks

(52:45) we're not just sitting here making up theories or whatever and hey Ellie hey Amanda hey Kimberly hey Paige hey everybody I only say hi to the girls just kidding hey Nathaniel say hi to you too um so but this is stuff where we can check into it right and maybe we can figure this stuff out in fact I have a link that I was looking at earlier today that may help us pinpoint down who these people are if we can figure out who these people are then we can figure out uh if this is a real situation where they were

(53:21) on their last leg of their Journey or not they also bring up another original details so a lot of people out there were going none of this is original or what have you guys a lot of this is original a lot of this is original man quite a few quite a bit quite a few bits of this are completely original um and I know because I'm the lead investigator into this so I'm very very familiar I've done 60 podcasts guys maybe more so I'm very familiar with the stuff that I've said and the stuff that

(53:50) I've never said before um so they say that they built the lithium ion batteries now why is this weird because the batteries were built that day that was very bizarre why would they put together the batteries that day I always thought that was a weird detail wouldn't it make more sense to have the batteries be packaged and ready to go beforehand and then put them on but the fact that they put them together and they did not screen them twice if you're thinking of an Espionage scenario you couldn't ask for a better

(54:19) Espionage scenario yeah uh good call on the Chinese pictures did I mention that we're going to get to that part here in a second guys get ready oh I've got something better than that um xmu I need to find it though I've got too many links now I've just got too many links so I'm going to show you guys the names I think this is it so we found a blog post now ignore the part oh man can we convert this to English ignore the part about disconnecting stuff to mh17 down here this is actually just look at this

(55:10) this even has the no flight scheduled thing built into it like somebody was digging in early on here are the names of the people not just that cuz I was like well I want to know the names of the free scale scientists well this one has four of them there's eight Chinese ones and here's four of them down here where are they here free scale owned by Blackstone here they are here's four of them right here I'm going to put these guys in the chat now they've been trying to connect them to this patents I don't think we want to worry

(55:49) about the patent aspect here I think we want to determine were these people connecting through to M to uh Beijing or were they hanging out in um qual andur right can I post this I can't do pictures so these are at least four of the eight right because we know these four were the ones they were trying to connect to the patent situation so we can connect these four directly to the plane and potentially figure out if they were there already so let's let's keep that in mind they also say that there was a predictable burn

(56:29) rate now is that true probably I'm not really sure if somebody's a fire expert I may have to ask my fire expert about the burn rate if there is a predictable burn rate on this this kind of totally destroys everybody's narrative that the plane wouldn't last that long this person is bringing up this scenario where oh this was intentional and they knew how long it would burn right right and they like knew it could last for an hour and 20 minutes which we need H weird now here's one of the weirdest details for

(57:06) Me 2 hours and 13 minutes in they say that this when they we captured the plane this is definitely being calculated from the time that the plane left uh the gate which is 1630 UTC because this means then that the time is 1843 UTC and this matches the time of the MayDay call that China uh intercepted which is pretty bizarre man this matches the time of the MayDay if somebody would made this up I would have expected them to make this 2 hours and 10 minutes in that's what I would have expected I would have expected they

(57:49) would have said 2 hours and 10 minutes in because that would equate to 1840 UTC which is the time that I been throwing out there all the time I've been saying that 1840 UTC is the time that we that the videos happen they're basically saying the time the videos happen is 1843 UTC that's a pretty weird detail this also in a in a way it contradicts the evidence that we put forth not just doesn't even go along with it but if we look at our satellite video where is it at 1843 18 43 it's over

(58:26) here the satellites are over here at 1843 this is far past it so theoretically I mean I still still think it can definitely see there I don't think that's a problem but maybe the angle doesn't work anymore or maybe it still does work I don't know but I've never expected it to be 1843 before it's pretty weird this is really really deep okay um yeah so this time thing bugs me a lot cuz this is a pretty original thought that we haven't brought up there um okay the Chinese image satellites now why is this detail

(59:12) weird because they use my theory here as far as I know nobody else in the whole world has promoted the idea that the Chinese satellite images were spycraft I'm the only person that promoted that I'm the one who said huh I think it was on the Tony Merkel podcast was the first time I mentioned this I said aren't those pictures weird because if this is spycraft this is like telling the us we know what you did that's exactly what they say in this so I went back and looked at him okay I went back and looked cuz I this

(59:56) is the part where I was very skeptical these first two images these are definitely not when the plane's getting Zapped you know why because we know that the orbs are hor they're

vertical the orbs are vertical when this goes down remember so this would have to be early on right about here right they would had to have snapped it like here somewhere now if they snapped it here man it's a different angle but could those be the same clouds like look at this hole right here versus this hole right here and on the

(1:00:46) left here this could be a different angle of these clouds over here and if we were to zoom if we were to go back a little bit we do see there's this huge Cloud over here on the left the and these clouds do look to be low altitude clouds and this looks to be an object in the air it's not in the water so this creeps me out a little bit I never really went this level of detail with it but now that I've got an AI voice telling me that hey they were watching the whole time so this is like something where why would somebody fake this why

(1:01:22) would someone fake this detail go yeah they're basically going yeah you're right about the satellite **China** was looking at it and they did send this up as spycraft now there's three different images that's the first one this is the second one this second one here as well is over the clouds so again I haven't actually looked into this yet I'm trying to figure out is there a spot where the that you could hit this angle maybe down here over this cloud oh my God yes this could be right here wow oh my

(1:02:10) God huh this Cloud right here could be this Cloud right here this Cloud right here could be this Cloud I don't know guys this is pretty weird man there's there's nothing to gain off of this ghost there's nothing to gain this is pretty weird guys and then what happens is they go vertical so this is where I was thinking if those pictures were taken we can nail down exactly when those pictures were taken within like seconds and uh I'll post the video for you guys who want to watch it while we're going

(1:02:56) through it here can I still not pin things why am I pin baned I understand why I'm I'm banned from pinning my own messages stupid uh where was that okay because when I go vertical here you can't get if you're shooting from d Almost above or directly above you're not going to see them side by side like this if you were to look down at this you're going to just be looking at the plane so there's a third image this one not sure what to make of this one why and why is this one in black and

(1:03:43) white this one could be of the zap this one actually could be of the zap I think that's what my initial thought was was if we pause it right at the zap oh I I actually paused it correctly and then I went back this is pretty much over this Cloud now keep in mind we're looking at from an angle here but if you were looking at from overhead directly overhead we don't know exactly if this is on the cloud or in front of the cloud could even be if this is from an angle here it might be further over here we

(1:04:25) think that cloud there could be this cloud in the background I what I don't I wonder if this is the zap I I'm not sure so there's three images that's the first one second one here's the third one H not sure anyway so that's a weird detail we looked at those um how much specificity they go into on the satellite images is also weird they talk about the satellite images which is my

theory of spycraft so they come up with this entirely based on my theory supposedly and then they even go to the

(1:05:16) detail of where it was released from I actually looked up that was true that that place they say that the satellite images were released the Chinese website that's that's where they released them from I didn't even know that I double checked I went ahead and I looked MH370 **China** satellite images now watch if you guys go back and watch this and this is why I say guys you got to before everybody just comes up with like everybody immediately tries to form an opinion oh it's fake oh it's not fake

(1:05:43) like just investigate it don't try to build your opinion ahead of time look at the evidence then let's dig through it and then let's figure out if it's fake or not right probably is of course but everyone of course is right away oh it's fake oh it's not I know this is fake like no you don't you don't know don't pretend to know try to dig in there first and figure it out the Chinese government released the satellite images uh I don't know if I'm going to be able to find the thing but there's

(1:06:14) somewhere where they say they actually release it through that exact same website that they talk about in the video Chinese space agency or science agency website that's exactly where they released them so that's a really detailed yeah National Institute of Chinese Institute of science look it is it yep Chinese Chinese science agency weird man so that's a weird detail to add into there okay let's see what else don't worry this is uh then the thing this is probably

(1:07:19) did I already mention this the 200 oh yeah all the passes being dead this is the one where I think it seems like the most likely that fake because I Just Disagree that we would just kill 200 people now the funny part is I think a lot of people disagree with me I think that a lot of people will go ahead and and say that they think that uh people we would kill 200 people right yeah okay well that's an automatic block okay if you're talking about clip art or VFX or anything related to Pyromania you're going to get yourself

(1:08:05) blocked right away just I'm just not dealing with idiots today go back to **Mick** West uh and go back to making fake video pictures of balloons that don't exist in the real world Jesus the **debunkers** are so goddamn stupid it's incredible um okay the notar problem is a weird statement to make as well they also make a statement did I bring this yeah okay so not our problem now why does the not our problem thing seem weird because it's almost like they're not the United States that this is some Allied

(1:08:44) country where they're saying that oh we didn't have to worry about this the United States has to deal with this um but that's the thing that's the only part where I don't get that if they went through all this elaborate effort to make everything match up the 1960s stuff as well and then they bring up this detail about not our problem I'm curious as what you guys think about the not our problem part that doesn't even make sense from a Faking It perspective why would they make up this

(1:09:18) whole thing about it's not our problem I don't get that seems like a very odd detail I can't figure that part out so I'm not sure if this is like what if this is like India and here's the other thing we'll get into this in a second supposedly this letter was not written in English they gave us in a followup that we're going to look at right after this that they told us this was not written in English that it was converted to English and then read out by an AI that to me tells me that the person

(1:09:55) who's sending this to us is not sending this who's a native English speaker or it's not their first language at least from some of the other details I would think that they probably do speak English but it's not their first language and the reason for that is they get a lot of like uh has versus have and other grammatical things wrong which is very common especially in Asia when I lived in Singapore you would hear that a lot from people who who spoke English they just it's one of the common things

(1:10:21) they get wrong cuz in their native tongues they don't generally have those types of uh I don't know what the right English terminology is for it but vocabulary doesn't doesn't uh go to that level in some cases that probably sounds racist um they said that the leaker was taken care of but not by us huh because I kept thinking when I read this after like the 20th time I asked myself does this person have to be a United States person or can this be somebody else who's affiliated with the United

(1:10:58) States and they do kind of mention the United States being the one that has this power that controls the world but that doesn't mean that they are affiliated with the United States that could mean or it doesn't mean they are in the United States that could mean they're just affiliated with them this could also just all be a scam like there's so many angles to this right now we'll go over those in a second let's finish it up though um the leaker was taken care of not by us hi Ashton impressive this one

(1:11:30) is just creepy as f okay this is creepy AF right here this is like Dexter Morgan of uh Whatchamacallit Dexter like serial killer kind of comment hi Ashton impressive okay you've got my attention man you've got my attention if you're out there you're watching uh that's just creepy man I'm going to probably listen to this like three more times tonight not going to lie to you just it's so weird man um then they mentioned something about the they mentioned the whole Joe Rogan thing and they said that he's got a

(1:12:12) friend that they discovered the technology on some Island well I got a news flash for you guys turns out this guy is on some island in the malds the friend of so I went down the rabbit hole and this is not even a rabbit hole like this is like somebody who knows not just the investigation but they're familiar with like Bob Greener don't worry we're going to watch the next video it's like they know Bob Greener and they knew Randall Carlson who I had never heard of before this is who were they were trying to get us to go to look

(1:12:48) at with a gray beard everybody figured this out right away Randall Carlson in that episode is referring to uh Malcolm Bendal okay now Malcolm Bendal is literally hanging out with

Bob Greener right now right now right now this very moment he's hanging out with him and it turns out they made a video they sent it to me let's just watch it right now Bob Greener sent me this video I'm here with Mal an hour and a half that's malol Bendle you're looking at him right there Bob Greener is the one talking this video was made today a

(1:13:38) couple hours ago trying to stay alive and there's been some malicious rumors going about hasand the Malcolm very malicious rumors it is true to say that you have been developing bull lightning technology isn't it Malcolm it is correct it is correct to say that you've been developing ball lightning technology it is correct my Island I stay on my Island where I stay there for seven years just to St he's been staying there for seven years on his Island greenier told me in our chats that he's talking about an island in the

(1:14:16) MDES that this guy's been staying at I asked him which one but he doesn't want to reveal it for personal safety reasons so he has been stay on an island the mald studying plasmoid whatever away from Humanity from those pesky little humans who keep on disturbing my work he's trying to get away from people who are disturbing his work and uh where's your Island then well it's in middle of IND the ocean in the middle of the Indian Ocean in the Maldives plasmoid thunder storm generator I I I like to be you

(1:14:50) know in a peaceful environment to think yeah and you have absolutely no planes on that island do you so Bob Greener thinks that no they're not well they are because here's the thing they think that the letter is implying that the plane went to his island of course MH370 didn't land on uh Malcolm bendall's Island but Malcolm bendal is literally on an island that's what the guy is talking about the guy in the whoever guy or girl I don't know whoever in this video they mentioned that the other Island we

(1:15:28) were wondering what the other island is they're referring to Malcolm bendle's Research into plasmoid Thunder whatever technology and then when they say the other Island they're talking about Diego Garcia right it has to be they're talking about the other it's more rudimentary in the other Island Diego Garcia so they were laughing this off and I told Bob like I think you're missing interpreting parts of the message right and they think it's all a joke which cuz I guess I don't know

(1:15:59) maybe he's had weird stuff like this to happen to him I haven't had any weird stuff like this happened to me maybe it is a joke I really don't know but this is like either's Paris social stalker level 1000 or this is like yeah James Bond level stuff right now this is really weird um the gray bearded man is the key so again he's talking about uh Rand Carlson here and I think that he's either talking about the shapes or he's talking about Rand Carlson being the key to get to Malcolm

(1:16:31) bendall not sure very weird man but again the reason why this is so bizarre to me is that I truly believe that malcol bendal and Bob Greener are actually on the verge of what this technology is they're actually on the verge of developing this technology that I think we're seeing in the videos I I think that they don't even realize how deep they're in it I think they know

that they're deep in it I don't think they realize like how deep they are like how close they are yeah if this is a joke it's not

(1:17:05) really funny it's just extremely creepy it's it's like someone's personally trying to tell us something and then the last part that whole clip about how do you stop somebody who has complete control over everything right you talk about them and you don't stop talking this almost felt like a threat right almost felt like a threat because they're saying like don't stop talking about this and you talk about them that's true this is also true how do you stop somebody that has unlimited power that

(1:17:47) you have no way to stop them the answer is you don't stop talking about them you just keep talking that's the only thing you can do right man what a weird message okay so what's going on with this message what do we think this message is I think that the highest probability is that this is some type of stalker level troll job I don't doesn't feel like **redditors** could pull this off it also doesn't feel like it's in their wheelhouse I don't think they're smart enough to pull this

(1:18:21) off and the second part is is that it's it's just it's not a message of like a threat they're not trying to get me to do something that's embarrassing it's like they're trying to encourage me to keep going and the last thing the **redditors** want is for this topic to keep going they keep trying to get everybody to stop talking about it right they're trying to get everyone to talk stop talking about it they're trying to get me to stop talking about it so the message isn't on point for

(1:18:48) that purpose um it could be a stalker who is is really invested in the science and they want us to be looking at their pet theories that they think is real right um it could be that now it could also be let's go into the scop angle this could be a scop where it is the government any government it could be okay ghost you're getting banned until tomorrow I'm not dealing with any more trolling in the chat guys I'm tired of it okay I don't care uh keep the negativity somewhere else for now okay we're I want to talk

(1:19:31) about this with people who really want to dig into it if you don't want to go somewhere else um so it could be a scop from another country or from our own country uh it could be that either somebody is trying to push us in the wrong direction intentionally or it could be from a situation where like another country is trying to uh again push us in another Direction and then it could also just be a situation where it's real and this is the safest way where somebody has to uh reveal this information to us that

(1:20:08) they think that okay using AI they can you know this is a way of like encryption almost right scop troll you know stalker this is this is troll level 1000 like I'd have never seen 4chan pull something off like this this is so wild that I'm surprised that this alone doesn't go viral right the thing I compare this to yeah there's no gotta Vibes in here to what JK Philly fans saying right there's not there's not like a gotcha aspect to this this is similar to what was that ghost call that

(1:20:45) somebody got in like 2018 and the media like blew it all up oh this guy got this ghost

call right this is the ghost call times a th this is infinitely creepier than the ghost call that somebody got that was like some coded message or some nonsense like that right coded messages and locked files like those are troll jobs right this is like scop like mind games level stuff right okay uh so let me think are there any other theories out there anyone have any other theories out there no I don't think the troll aspect is me

(1:21:26) talking about it no because it doesn't it hurts the people like if you go read like [Reddit](#) for example the trolls on [Reddit](#) they all think that I made up this for attention because the last thing they want to do is give me more attention right that's the problem about it that's the problem with the troll job aspect of it now it could be I still think that's probably the most likely is some stalker level but I don't think it's for malicious purposes doesn't feel like it's malicious purposes mentioning the

(1:21:55) mall aliens in Miami is another weird detail that rules out it doesn't feel malicious like if anything you would make fun of me and you'd want me talking about stupid stuff that discredits me like M aliens in in Miami uh Dan Islander it does say a lot of things that we haven't said quite a lot see everything that says original next to it none of the stuff that says original is stuff that I've said or all the stuff that says original stuff that I've never said before so um yeah okay let's dig into the next video

(1:22:35) anyway it doesn't feel malicious I'm also going to type up uh the whole transcript it's kind of hard to get the transcript yeah this this feels like they're trying to help me now here's the other thing too is this is this is not my theory this is not my theory the Espionage theory is not what I've been promoting out there and it's not even what I thought was most likely in fact I I would have given it like less than 10% chance out of the theories out there and they presented a pretty

(1:23:04) compelling story for why it was really an Espionage event right pretty bizarre man so yes I'm going to type up the transcript from this like the problem with the transcript is we can pull it from the YouTube but it's like all chopped up it's I was trying to read it the other day there a bunch of missing words so I have to pull the transcript and then I have to listen to it while I'm looking at the transcript and I have to correct it so it's going to take me it's not going to take too long it's

(1:23:31) probably going to take like an hour to get the transcript figured out we actually have actually we have part of it where is it is this it no I have I'll show you guys that somebody was in my Discord was able to pull part of the transcript here it is but you can see like this isn't this isn't enough I've got to go through and edit it all and look how long it is so I'm going to have to listen to it and I'm going have to edit this and make sure it's not missing any words because man look at this I'll probably post the

(1:24:04) whole transcript and then I think it's important for people to break it up chunk by chunk okay pretty bizarre man okay now so fast forward to today so in case you weren't here at the beginning fast forward to today I'm sitting there and deciding to go get some food and I was

working and I'm trying my best not to focus on Twitter at all and anything that was going on on Twitter and I get to the restaurant where I'm picking up some food and I'm like okay I'm going to check that that uh the Youtube

(1:24:43) channel so I go to the YouTube channel I'm on my phone when I go to the YouTube channel and what do I see glitter m solved a dead man's confession and I go huh okay well they uploaded another random video right cuz I'm sitting here thinking I'll be honest with you guys with my thoughts on this I think this whole account was made to send me this message it feels that way this Miami whistleblower stuff is almost like they're making fun of me almost feels like they're making fun of me because in

(1:25:17) this video then they're talking about how stupid it was that I was looking at this I'm not sure so I would have thought if this is a random account that's not related to sending me a message what I was expecting is that this glitter thing is going to have nothing to do with me whatsoever right and they start posting other stuff because they've got this New York tunnels one as well now what I would give you guys the homework on is listen to these other ones is there any connection to any of these other ones to

(1:25:51) me I have not I haven't listened to any of these other ones yet although it says I did I'm not sure why because I haven't that's weird anyway yeah so if you guys could look at these other ones and tell me if there's anything bizarre or any even subtle hints to any of the stuff that I've posted that would be very curious so anyway I'm sitting there and yes I want to keep it what I'll tell you is that I messaged after this one three days ago and I think I didn't realize until two days ago it was out

(1:26:19) there for like a whole day I emailed this email address here and I said is this a joke are you messing with me what is this right I didn't get a response back no response back so I decide I'm going to watch this video while I'm sitting in there at food or getting food and I'm just going to see like is there any kind of like connection to this other video or anything related to it I did not have to wait very long right away there's a message directly to me this makes me wonder if this is in some

(1:26:59) kind of big **scam** Dan's show scary Dan so is there a Dan out there that's messing with us maybe there'll be a reveal later on Welcome Back folks we have received a letter from the researcher Ashton Forbes who was the intended recipient in the earlier publication of the Diego Garcia story we are happy that we could facilitate the communication and we now need to do some clarifications in the name of Journalism important to know when you send us a story you are guaranteed that we won't share it in any

(1:27:32) other way than the intended format what we offer is for anyone to be able to share their story as a fictional radio theatrical production as always when you submit your story you should use a good VPN and a throwaway email account and we will publish your story in the confusing format of real madeup stories next we want to clarify ify what elements of the Diego Garcia story that is creative freedom on our part first the original letter we received does not

mention Diego Garcia by name we found the name by Googling military bases in the

(1:28:04) Maldives so let us be clear about this in all Publications on this channel the script is everything and all that is original the naming of an episode the thumbnail and hashtags are all clickbait they are never a part of the letter second the original letter was not fully in English we used Google translate and the writing software grammarly to make the English version this is not perfect but it gets the message through and that's what we care about third all pictures and voices are AI including me this is to make sure that all

(1:28:35) Publications clearly are fictional no real people no real voices or pictures we are the perfect publication service for you who have great stories to tell but can't because it would get you killed and if anyone would ask us we make up all stories on our own so if you want the latest real world stories and insight information okay what the f guys what the f okay received a letter from Ashton Forbes yeah if this is Danny Jones Bravo Danny if Danny pulled this off I I've met Danny in person I I don't think he's uh intellectual P

(1:29:19) heavyweight that would pull something like this off let's just leave it at that okay don't think he doesn't feel like an intellectual heavyweight don't think he could come up with even half of this stuff he could have maybe uh you know had somebody else now this is weird the voice is AI yes and that's the other part of it too that just the AI voice part is wild like the AI voice just alone is like holy crap AI is this Advanced but the stuff that they they come up with like this is a script that somebody

(1:29:54) wrote right they received a letter from Ashton Forbes that's true I sent them an email realize this they're talking in code during this they're talking in code during this right here so keep that in mind they said they want to clarify some points they're talking directly not just to me they're talking to you guys they're watching the case they were watching us the last couple days that's what this tells us 100% why because everybody's talking about deflectors and they're going oh we got

(1:30:32) to explain to these people why deflectors came up in the AI voice they say that they won't share any stories this almost feels like they're telling me they're giving me a message right here they're saying use a VPN and a throwaway email email why would you use that if you're sending somebody a message to this email account why do you have to use a VPN and a throwaway it's almost like they're telling me send me a message but use a secret email account and a VPN and then that we be able to communicate almost

(1:31:14) like they want to talk to me this all this does almost feel like sentient AI That's How creepy this is it almost feels like sentient AI there's an angle to this where I feel like they're showing us the technology of AI itself and how advanced it is so then they say they want to clarify elements of the Diego Garcia story for the sake of Journalism but we know that the person coming up with the voice is the same one that's done the whole thing so it's not for journalism that they want to clarify

(1:31:52) the elements of the story because they want to correct the people that are going oh why' they say defectors too many times right so the first thing that they say is interesting if we read between the lines on a lot of this they say we googled military bases but that's not true they didn't Google the military bases what I think they're saying here is that the base that they talked about was not Diego Garcia now I think they do talk about it cuz when they talk about the other Island they're talking about

(1:32:25) Diego Garcia but remember in the first video what did they bring up they brought up great nicobar great nicobar was something that we never had ever mentioned before the thing that I'm really wondering is was the plane sent somewhere that wasn't directly Diego Garcia did they send it to another base where they could then put the fire out manage the fire and then send it to Diego Garcia after that I don't know just seems weird I wonder if the base the person's talking about here keep in mind this might not

(1:33:01) be an American so maybe the base where the plane gets originally dropped off is not an American base what if it's something like the car nicobar base or Port Blair or some other base that we don't know about it's bizarre now they could be saying this stuff for whistleblowers who don't want you know their information to get away this just feels like a direct message to me though keep in mind this is like a brand new account that was literally made just to send me this message it seems like if this is some kind of hoax to

(1:33:35) me why have this weird followup where they clarify this that's not how I expected them to respond um they say that the headline is clickbait it's not part of the letter so they're again they're trying to tell us that maybe we should definitely want to be looking at Diego Garcia but that's not the point of where we like I think it's almost like they're telling us don't think that this person was at Diego Garcia I think it was somewhere else now the next part's probably the more important

(1:34:05) part wait great nicobar does have an international airport huh weird um this is the most important part and I think people had already speculated this but this was not originally written in English It Was Written in another language and they used grammarly to change it supposedly and then they had the AI read it out so it's almost like they did a rush job they didn't go through and they didn't proof check it after it got changed in grammarly and it had typos not only did it have typos they didn't correct the grammar in general so

(1:34:44) why is this important tells me I don't think the person that is doing this is a native English speaker or is I think that English might be their second language they did a lazy job they didn't go through and they didn't fix up all the language to have it be in English or maybe it's face value and this really is that they received it from somebody else but if they received this from somebody else then this person's acting as an intermediary and they're in on what's going on like the person they received

(1:35:13) it from is somebody they know honestly the person I think about the most when I think about this is Punjabi Batman but this is a lot of detail even forj Batman to come up with

this pretty weird um and the thing is his English is pretty good I don't think that he would have to do any of this kind of weird stuff but if somebody sent pujabi Batman a letter like this and then he wanted to post it maybe this is the way he would do it although man this is just a lot of work to me this just seems like so much work that it feels

(1:35:50) like I don't know I don't know I I think it's a joke but or a hoax but you know the intelligence Community aspect or foreign intelligence Community aspect certainly seems plausible um ins BOS is a naval Indian base yeah the Indian base thing is really what's getting me kind of feels like whoa it's located near Campbell Bay in the great nicobar Islands what what whoa what the they extended the runway huh Maps wait what can I

(1:37:04) fights so that's got to be it's got to be out here somewhere right guys one thing if you haven't figured out that I hate is when people tell me what to think I hate that okay let just FOC on on investigating okay don't worry about telling people what to think just investigate the **truth** will reveal itself you don't have to you know um try to force it I don't see where this in B BOS is come on man okay there it is here we go this is weird how we can't find this what is going on man why is it trying to

(1:37:51) printu stuff like there's BOS down here in Campbell Bay huh okay interesting every time you talked about Island mainstream stirred I don't know what that means okay um okay so what was the other aspects of this real quick um so then the other weird part is this part about they they tell us straight up that this is all AI even though we kind of already knew it was AI um no voices no people no pictures it'll get you killed or what they they do this so they because they don't want people to get killed from this that's a pretty

(1:38:51) it's pretty dark you know okay well Justin I'm timing you out guys okay uh guys I'm I'm not I'm tired of the distraction angles guys tired of it oh let's see I just don't care okay um yeah so anyway this is this is the thing so this came up and then the rest of it this story about Glitter I'm not going to go through the whole story about Glitter at this point you guys can watch it if you want but they're not talking about Glitter here they're talking about some other aspect of

(1:39:40) this um which is like I don't know maybe meta material people have speculated now there was some viral weird thing about Glitter in general which is pretty bizarre uh I think I'm going take this off for now about some glitter shortage and that this idea that glitter's used in some type of advanced technology that might be out there um but I don't know so just to recap two creepy messages in the last couple days they're definitely watching I think at this point we can say with pretty high probability that we're going to get

(1:40:19) another message most likely I like to think that this thing will see itself out but let's go ahead just in case they're watching right now and uh if you watch that you'll realize they're not talking about Glitter guys just watch it you'll know they're not talking about Glitter um so if there is somebody watching right now um let's take it from the perspective of this being a real whistleblower I think they'd be trying to find a way to contact me with the information now the reality is since

(1:41:03) I've been **scam**med and what have you I can't take anything at face value right I need verifiable information I need actionable information um so that I can work off of that so if you're out there then you got to give me a few more clues you got to give me something that's original that is evidential evidence out there that I didn't know about that I can confirm that's verifiable and if we can confirm something like that then we would know for sure that what's happening is legit now if this is a

(1:41:39) hoax then gez man please stop please stop if this is some kind of hoax man you gotta you're a complete psychopath like complete sociopath Nut Job there's no like there's no being around the bush somebody who's hoaxing this has extreme mental problems and needs to go to a psych W like you need to be in a psych board you need to be locked up um so you can't like harm other people and Humanity in general um if this is a situation where it's a s out by another government well good job good job it's a pretty

(1:42:16) weird scop now the reality for the people who are upset that this is distracting from some greater purpose they think I should be doing uh you tell me what that greater purpose is you tell me what I should be focused on that's not this this is the investigation the only thing this is leading me to is more people and more science um so from that perspective I'm not going to make everything about this but I I am uh definitely want to dig into it and try to figure out if there is science that's out there um and then

(1:42:49) what I want to say is if this is just a Rand um person who's trying to profit off of it well good job but you know could you do some other stuff that's not directly about me because it's pretty damn creepy um maybe making fun of someone else who's doing something that's really advanced cuz hell I would love to just be watching this and eating popcorn while I'm not the main character of the story that would be that would be great um and that's why I think the people that are watching at least they get a

(1:43:17) pretty good show because man this is wild so uh more to come on this tomorrow uh and are there any last comments or questions yeah do you remember what was we picked you for this it does have the same kind of Aura of Hope the same way the emails did with uh the psychopath **scammer** about like you were picked for this but it's not quite uh as self-congratulatory or not as congratulatory um yeah so tomorrow uh I'm going to get on in the morning tomorrow probably I need to finish watching uh Timothy abrino uh purpose or

(1:44:23) uh sorry uh podcast and I need to finish some getting ready with some of the questions for Timothy arino I haven't decided uh whether or not it's going to be live I I'm going to Ping him tomorrow and see if he wants to do it live or not so if it's live then I will uh will be live tomorrow at I think it's 400 PM eastern time and then if it's not going to be live I'll try to push it out there as fast as possible possible so I'll try to push it out there on Saturday or Sunday yeah know if this is a hoax uh I'm going

(1:44:57) to have the FBI knocking on your door just a heads up if this is a hoax you're going to have the feds coming knocking on your door uh so if this is a hoax the best thing you should do

tomorrow morning very first thing is put out a video saying that this is all hoax and you're sorry because otherwise we can I'm going to have YouTube track you down figure out who you are and have the beds knocking on your door uh I've had enough with the **scam**mers and the um the people are committing felonies you're you're

(1:45:28) going to go where you belong which is prison so like this is psycho level stalker stuff so hopefully for the sake of the crazy people out there this is not some kind of elaborate **scam** uh CU it is if it is you you've pushed the line uh on this by far guys this is cyber stock into the UMP degree um so so that's I think uh where we're going to close it out for tonight um I want to appreciate everybody for jumping in on this uh stream and going through the evidence with this if you guys have any thoughts um go ahead and

(1:46:03) you can post them in the replies or what have you uh maybe if if you follow me then you can DM me if you're in our Discord you can post the thoughts in the Discord uh I have a couple ways and a couple ideas of how um we can uh figure out if this is true or not but I'm I'm curious if there's more ideas that you can come up with for anything that we could do to figure out if what we are watching here today is a hoax or not right um yeah and that's the thing even if this is a **scam** you know it's still got

(1:46:37) us thinking outside the box more right it's got us thinking more about this idea of a fire scenario so I guess from that perspective it's cool but otherwise it's uh it's really really you're way past the line on this if this is a hoax it's pretty bizarre okay guys have a good evening and we will talk tomorrow I appreciate everybody all the followers who've been following along uh you know this has been what a wild case man if they ever make a movie about this holy crap the episodes about this will be

(1:47:08) really really really wild um thanks everybody who's been investigating as well I going to stream probably tomorrow morning but not 100% sure if not we'll definitely be streaming tomorrow night so thanks everybody peace

EBO Scientist Review 1/11/24 - YouTube

<https://www.youtube.com/watch?v=VXuN9O1UVUY>

Transcript:

(00:29) what okay okay guys hold on uh that background noise is really loud hold on okay sound okay hopefully that'll go

(01:41) away chat pull the chat over here full screen hey what's every hey what's up everybody hey Hermes hey Taco Loco everybody else who's jumped on early appreciate you jumping in

here uh today's plan and agenda is to go over the ebo scientist post that was posted on **Reddit** uh back in July so just give me one second and then we'll get started here okay let's do this thing folks okay well it's 7 o'clock I'm going to start off with a little bit of background for people who are not aware

(02:37) of the situation and the ebo scientist post so back on July of July 6 2023 there was a post that appeared on these sub**reddit** aliens and in this post it was called eboi biologist Q&A and this was an account that I don't know the age of the account if it was relatively new but this account posted an extremely long and detailed physiology of what they claimed was an extra biological organism in other words alien and this uh post got a lot of notoriety because they started answering questions in the middle of the chat uh

(03:20) after they posted it and they were answering a bunch of questions to people and while they were in the middle of answering questions their account got deleted their account got deleted and then all the posts got scrubbed within the same day so I found this very compelling I saw it in real time as it was getting deleted and uh there was parts of it that I found compelling that I've talked about on my stream the parts that I found were compelling was the stuff related to uh the laboratory uh that they describe in this and so from that

(03:53) perspective I can say that having worked in uh it and worked in laboratory equipment that that part all seemed to check out for me a bunch of other people that have you know phds or Advanced understanding of the various scientific degrees that you would need to create this um I think that the no one really found any major issues with it other than I think they referred to like uh one of the bones the wrong way like medial versus distal or something like that um so if anyone's in the chat that knows we can go over that the plan here

(04:25) today I'm going to try to keep this pretty short as as short as I can uh I'm going to read through it I thought about doing the AI to play through it but I think that uh I can get through it here today um and it's kind of long so and please forgive me if I butcher any aspects of the scientific knowledge here so I'm going to read through the whole thing and then after I read through the whole thing I'm going to bring people up anyone who wants to ask questions about it give their opinions on it if you

(04:55) think it's fake or you think it's real or whatever um there's some pretty interesting stuff in here especially if **I want you** guys while I'm reading through this to be thinking about some of these narratives that have been out there related to non-human intelligence what some of the uh prominent figures in ufology have been saying about them particularly one thing today that I saw floating around on Twitter where I saw I think it was Jeremy Corbell mentioning something about containers and humans

(05:25) being containers I think that there's this idea of this spiritual aspect to the phenomenon and when we get to the end of this I think you'll find something pretty interesting in there so without further Ado I'm going to go ahead and start okay uh let me get a sip of my my coffee here we'll get going okay I'm cooking and hey everybody who's jumped in appreciate you guys

jumping in getting in early on this So for anybody who catches it later you can watch the stream uh I'll also post

(05:59) quickly the the link in the chat to the stream if you want to see for yourself what we're going over here okay I think that should be good there it goes it'll show up I think in a second okay here we go so ebo biologist Q&A **Reddit** 2023 it seems like all my comments are being deleted I will post answer at the end of the message from the late 2000s the mid 2010s I worked as a molecular biologist for the National Security contractor in a program to study exobiospheric organisms ebo the aim of the program was

(06:41) to uh elud audiate eluate is elucidate I I'm mispronouncing that word The genome and uh Pro proom proteum prodium uh basis of these organisms essentially what they're talking about there is they're talking about trying to understand the Genome of the biology of the of the extrao uh biospheric organisms although the study of the obcs has been ongoing for decades in other programs the new high throughput DNA sequencing Technologies of the late 19 1990s unlocked stagnant research in this area since then several breakthroughs

(07:21) have led to significant advances in our understanding of the genome and uh proteom uh of these be what we learn so far has enabled us to out outline some dis uh disconcerting perspectives about our place in the universe previously we discovered that the ebo genome is a cha of genomes from our own biosphere and from an unknown one they are artificial Imperial and disposable organisms that create that are created for a purpose that still partially eludes us I'll be substantiating my statements after this brief introduction for the reason of

(07:56) disclosing these secrets is quite simple I believe that every human being has the right to know know the **truth** and that to progress Humanity needs to div divest itself of certain institutions and organizations that will probably not survive these revelations in the long term I'm aware that I'll very I'll I'll have very little impact in this regard but I still believe that small leaks are necessary to break the dam of misinformation on this topic when the government will eventually reveal these

(08:22) secrets there will be undoubtedly social upheaval but in my opinion the longer we wait the worst it will be I choose to what I know anonymously out of selfishness for the well-being of myself and my family I aware that this diminishes the reach and credibility of my message but it but it's the furthest I'm willing to go I choose this forum this is the alien sub**reddit** Forum because it offers good compromise between anonymity and popularity in order to protect my anonymity I will purposely be vague or even contradictory

(08:53) about any information that could identify me date education role Etc I'll even introduce red herrings in this as in this respect I want to make it clear that any information related to the subject of my research will not be treated in this way before going any further please excuse me if you find it difficult to understand what I'm explaining some parts of my text are very technical it's difficult to find the right balance between vulgarization and scientific explanation I'll continue by talking

(09:19) about myself what's the point of uh what's the point of talking about me knowing that the information will be necessary by uh be misleading I simply want to introduce a perspective on the type of work the type of people who work there normal scientists I have a PhD in molecular biology I didn't actively seek to become part of this program rather it was a stroke of luck that introduced me to one of the senior scientists I met this person at a conference where I was presenting on a poster presenting a

(09:46) poster on my PhD research when I think back I don't believe he was impressed uh by what I what I was presenting because it was quite frankly a project that wasn't going anywhere I think it was rather the most important aspect of a professional life the attitude and the ease with you which you make connections shortly afterwards I graduated and received a call from this person offering me a position at the time everything pointed me to working in a regular laboratory I did a series of three increasingly suspicious interviews each

(10:17) in a different location where my scientific background knowledge became less and less relevant the first was two of the senior scientists the second and third with people I've never seen again in were obviously not interested in science sometime after the interview I was asked to go to a fourth location where what seemed to be a like a corporate lawyer presented me with an NDA he made sure not only to explain every detail but also that understood the consequence of not respecting it the first employment weeks were by

(10:48) far the most memorable although I spent most of that time in a depressing archive room it consists almost exclusively of reading about the subject of study and getting us up to speed there's no secret wiki or even reference book to guide us these are only dry reports memos presentations procedures and Sops standard operating procedures what that stands for these documents are almost exclusively about the biology of the ebos but there are also a few that deal with other subjects such as their food religion or culture

(11:18) there were no documents on their technology as I mentioned above the aim of the project is to gain a better understanding of the ebo genome and proteome uh I'm probably in that to achieve this the team around a team of around 20 scientists four senior scientists and a director were involved the scientists like myself had as their main responsibility to carry out the technical work as each scientists had to my knowledge a PhD we were all somewhat overqualified for what is ultimately a technician's job the

(11:52) senior scientists who make full use of their diplomas had the task of Designing the assays and had a supervisor responsibility they were also in charge of training new employees and sometimes even came in to do technical work the director of course was the person in charge who dictated priorities to the senior scientists he was rarely on site and that the few times he was it was to attend meetings other than that scientific staff there were security guards working for one subcontractor or another there were no support staff such

(12:21) as janitors or maintenance workers scientists were responsible for this kind of work in addition logistical constraints ensured that every scientist is capable of carrying out any

technical activity the laboratory itself is located located in Fort detri Maryland in a building used for legitimate biomedical research the clandestine operations are carried out in a restricted part of the basement out of sight from the regular workers contrary to what what what might one might imagine the BIOS safety level is not

(12:49) maximal for this type of research indeed the lab containing the ebo samples or derived cell cultures is bsl3 while the lab where the assays are conducted is only BS SL 2 the bsl3 area of the facility includes a freezer room and cell culture lab and is only accessible through an anti-Chamber from the bsl2 section ebo carcasses are preserved in horizontal freezers at a temperature of - 80° centigrade nominal to maximize the preservation of these car carcasses they are preserved in vacuum bags and the air room is

(13:20) controlled to minimize humidity there only four bodies and none of them are complete it's obvious that these creatures have died of some major result of some major trauma I never witnessed a motorcycle accident fatality but it's probably looks similar to this it is acknowledged that there are several more ebo carcasses at other locations the cell culture laboratory as its name suggests is where cell lines derived from ebos are grown and related activities are performed I'll talk in more detail about these specific cell

(13:49) lines later on the bsl2 part is mainly used for assays amuno chemistry genetic engineering amuno uh amuno cyto chemistry storage Etc there's also a cell culture lab but this is used uh for more traditional cell lines other than the labs there are all these amenities that you could find in an office note that the internet access is limited to senior staff and above there is however an intrnet for bioinformatics needs on the subject of biology of these beings I'll start by discussing the genetics then their gross anatomy and

(14:22) finally their biological systems for the sake of clarity the information I provide here is an aggregation of what I have obser observed in what I have read I will make many comparisons with human anatomy because that is the most logical reference the genetics first I'd like to discuss the genetics their genetics are like ours based on DNA this fact was very puzzling for me when I first learned about it we imagined that the beings were from an alternate biosphere would have genetics based on completely foreign biochemical

(14:51) system and surprisingly this is not the case several conclusions can be drawn from this surprising Revelation the one that immediately comes to mind is that our biosphere and theirs share a common ancestry their uh ukar Roes I put sh in that which means their cells have nuclei containing genetic material which suggests that their biosphere would have been separated from RS sometime after the appearance of this type of organism the term exob organism is actually a misnomer but as it's a historical term it's still used their

(15:26) genetics are not only based on the same genetic system but they're also even compatible with our's own cellular Machinery this means that you can take a human gene and insert it into an ebo cell and that Gene will be translated into a protein and this of course Works in Reverse with the human genome inserted into the ebo cell there are important differences in

the post translational modifications that will make the final protein non-functional but I'll discuss this later their genome consists of 16 circular

(15:56) chromosomes you're probably familiar with with a concept of intergenic region or junk DNA these are basically DNA sequences that don't code for proteins these are evolutionary residues uh these are evolutionary residues transposons inactivated genes and so on to give you an idea in humans intergenic regions represent approximately 99% of our genome I'm aware that these sequences aren't completely useless they can be used as histone anchors as buffers to protect coding DNA from radiation or even as

(16:34) alternate open reading frames but that's rather peripheral what's part uh what's particularly striking about the E. coli genome is the uniformity of these intergenic regions we see the same sequences repeated everywhere and the distance in BP between the genes is virtually the same throughout the genome the result is a minimalist highly condensed genome and in fact it's much smaller than ours moreover the quantity of protein coding genes is significant is even significantly lower than ours probably

(17:06) due to genetic refinement but also to biological processes that are absent in the E. coli the uniformity of these sequences is a major indication of the artificiality of these beings there's no complex organism on Earth that has such elegance in its sequences there's no evolutionary pressure that can lead to this type of characteristic other than genetic engineering speaking of genetic engineering following sequence of their genomes we notice a troubling universal characteristic in the 5' foot of their

(17:38) regulatory sequence or is it 5' degree of the regulatory sequence of each gene which we call the tri palindromic region the tpr are 13 134 BP sequences containing as its name suggests three palindromes in genetics a palindrome is a DNA sequence that when read in the same direction gives the same sequence on both DNA strands they serve both as a flag and as a binding site for proteins the three palindromes and the tpr are distinct from one another and have been poetically named uh 5p tpr mtp and 3' tpr the tpr is composed

(18:22) composed in 5' de3' de order of 5' P T P R 12 BP spacer chromosomal address 12 BP spacer mtp 12 BP 12 BP spacer Gene address 12bp spacer and 3' tpr the chromosomal address is composed of four BP and is identical in each tpr of the same chromosome but distinct between each of the 16 chromosomes of the genome the gene address is a 64 BP sequence that is unique for each gene in the whole genome it is therefore understandable that the tpr serves as a unique address not only for numerically

(19:08) identifying the gene but also for identifying its chromosomal location for those with only a basic knowledge of genetics this is completely unheard of no living thing in our biosphere has this kind of precise address in its genome once again the presence of tpr cannot be explained by evolutionary pressure but only by genetic engineering on a genomic scale tpr opens the door to several possibilities one of them suggests that the E. coli geneticist can insert or remove a gene from a cell in a way that is far more targeted and

(19:37) efficient than our technology allows no proteins have been identified in the ebo genome that interact with tpr rather we believe that these proteins are exclusively targeted by external genetic engineering tools probably used at the zygotic stage of the embryonic development the nature of these tools is unclear but we definitely don't have anything like them the probable absence of these proteins from The genome further indication that their artificiality of their artificiality given the high probability of artificiality of their

(20:05) genome and the apparent ease of modifying it with biomolecular tools it's not out of the question that there could be polymorphism between individuals depending on their role and function in other words an individual could be genetically designed to have characteristics that give it an advantage in performing a given task like soldier ants and worker ants and an antill note that these previous statements are speculation to my knowledge only one individual genome has been sequenced I can't make a definitive

(20:31) statement on the genetic variation between individuals as some people have notice this is very similar to the idea of crisper analysis that we have that's just me commentating I've talked a lot about inner genetic regions now I'll briefly discuss the the inog genetic sequences briefly because there's not a lot less to say uh despite its obvious importance much like ours their genes have silencers enhancers promoters 5 degree utrs exons introns 3D utrs Etc there are many genes an analogist to ours which is

(21:06) not surprising given the compatibility of our cellular Machinery what's disturbing is that some of the genes correspond directly nucleotide by nucleotide with known human genes or even some animal genes for these genes there doesn't seem to be any artificial refinement but rather a crude copy and pasting why they do it is nebulous and still subject to conjecture there are also many genes which are not found in our biosphere whose role has not been identified finding the purpose of these novel genes is one of the aims of the

(21:34) program I'd like to note that before going any further that this is a heterogene gen geneity of genes of known and Unknown Origin is an un before this heterogeneity of genes as known and Unknown Origin is undeniable proof of the artificiality of ebos okay so they're concluding the ebos are of artificial nature they're produced to conclude with the genetics the mitochondrial genome at the time I was working there had not yet been sequenced it's safe to assume that this genome would also be streamlined and possibly

(22:08) has some versions of tpr transcription and translation and protein expression I briefly introduce the differences in post transational modifications between human and ebo this is hardly a surprise as we often see the same thing between different terrestrial species obtaining a viable protein from a DNA sequence is a complex process involving hundreds of protein intermediates each with precise and essential role a minor variation in this assembly line can lead to a functional irregularities in the final product so

(22:39) it's no surprise that there are setbacks along the way when the first ebo Gene transection attempts failed to produce the desired functional protein in human cell lines

fortunately for us the work that I the work of what I imagine to be another team at another site has led to the development of ebo cell line named Epi G11 one derived from uh Epi Epi Epal tissues with this tool in our hands we able to transfect and overexpress proteins of interest in order to eventually purify and study them for your information we use biological

(23:16) ballistics delivery system AKA a gene gun for our transection needs because other methods are not very effective with the cells of this line for example the viral vectors tests can not be internalized by Epi G11 and lipo lipofection is too lethal Epi G11 like most uke uke aroic cell lines enters a phase of exponential growth when exposed to the fetal bovine serum it's only half surprising that the cell line from such an exotic Source should be sensitive to the growth factors uh present in FBS fetal Bine syndrome in my opinion this

(23:57) can be explained by the addition of animal genes to the genome such as growth receptors now the gross anatomy they are Mor morphologically very similar to the gray aliens that are a part of modern F folklore their height is around 150 CM they have two arms two legs and a head still there's some notable differences the skin the gray skin that is often described in folklore is in fact a biosynthetic film which likely serves to protect the ebo from a hostile environment it doesn't provide effective protection against temperature

(24:27) changes but it does offer adequate protection against the passages of liquids it's possible that this film confers other advantages but to my knowledge on the subject is limited under the gray film the epidermis is rather White and the texture is very regular and without any hair we do not see any defect other than their folds near their joints it's described as a greas as greasy in one report but that's not something I've observed the same report states that a strong lingering smell of burnt hair and

(24:56) ammonia is present when the film is removed there are a lot of pores in the skin Crossing from the epidermis to a gland into the hypodermis these glands are pores these glands and pores are the terminal part of their excr EXC exory uh pseudo pseudor fer feris system which could explain the previously mentioned smell what they're saying is this is how they poop head the head contains two large oversized eyes two nostrils uh without pance a narrow mouth without lips and two ear canals without uh aerial tles I don't know ears maybe

(25:37) there's a mandible but the the muscul culture is vest vest vestigial there are no teeth or tongue in the oral cavity these nasal cavities where the nostrils meet is Compact and does not rise cranially but extends axy this appears to be no there appears to be no equivalent to the old factory bulb in the nasal cavity the mouth leads directly to the esophagous and the nasal cavity to the trachea the trachea and esophagus do not communicate I like the skin the eyes are covered with a semi-transparent biosynthetic film that

(26:12) offers the same Environmental Protection while providing protection against certain wavelengths and light intensity when the film is removed a more traditional eye is revealed it's about two to three times larger than human eye and there are no eyelids the size of their eyes suggest that they have excellent night Vision it seems paradoxical to cover them with a semi-

opaque film perhaps they only need to wear it in a bright environment their SLA Scalera is the same uh color as their skin the iris is pale gray and the pupil is black and

(26:45) oversized the lens is rounder than a human and the muscle culture the mus the muscular culture uh used to adjust the focus is more developed on the retina there are at least six types of cone cells the respon conness of each of these six types of cones uh is specific to a wavelength band with a minimum overlap between the other the result is a broader visible spectrum ear as mentioned the outer ear has no oral and the and the ear canal is unremarkable the inner ear has all the characteristics of a typical vestibular

(27:21) and uh uh crier system although the curvature of the ca is more pronounced than a human this probably results in Greater hear and Acuity for lower frequencies brain the brain is tetraserica I.E composed of four major sections these sections are separated by transverse and longitudinal Fishers fissures and are connected to the central lobe which acts as a brain stem and cerebellum the volume of the brain is around 20% Superior to that of a man of the same height it has a much more pronounced level of uh gation than an

(27:55) average human moreover the ratio of uh gal cells to Neutron neurons is also slightly higher than humans it's important to mention that the presence of the not the nodules uh on the central lobe histological analysis of these structures reveals a kind of intricate biological circuitry it is speculated that these nodules are essential to interact with their technology consequently determining the protom proteom of their uh structures is an absolute priority for the program neck the neck is proportionately longer

(28:30) than that of a human at the same time it is relatively thin as mentioned the esophagous esophagus and the trachea are separate there are no vocal cords in this region the thorax the muscul uh the muscul musculature of the thorax is underdeveloped muscles equivalent to the uh pector pectoralis major can be seen we can also see that there is a trapezius and Delta muscles the sternomastoid are well defined the rib and sternum are clearly visible there are no nipples abdomen the abdomen is wider than the thorax and bulges

(29:09) straightforward there is no Naval pelvis the pelvic bones are apparent there are no genitals or anus hands and feet the hands have four digits including an opposable thumb on the medial side they have no nails and the texture of their fingerprints is composed of concentric circles fingers are proportionately much longer than humans unlike humans fing muscu musculature is entirely intrinsic to the hand in other words the muscles used to move the fingers are not in the forearm but entirely located in the hands at

(29:41) first glance the feet consist of just two digits but necropsy necropsy soon determined that each toe was made up of two fuse digits the medial toe is marginally longer than the distal toe the feet are relatively longer and narrower than in a human their musculature however is vestigial the eo's EXO uh endoskeleton is very similar to ours at least in terms of composition there's collagen hydroxy aetate but also copper oxide crystals where where marrow would normally be found the role of these crystals has not been established but it

(30:18) is not uh Crystal opathy Condition it's not a crystal opathy condition the blood cells of the uh myoid lineage or the equivalent of these creatures therefore mature in a different location than in humans I.E in the thymus like an organ a transverse section of the bone reveals osteon and osteocytes there appear to be few Osteo blasts and no osteoclasts this indicates that the bones are no longer growing and cannot absorb their the minerals present or adapt mechanically to changes in posture okay the biological system

(30:54) hopefully you guys are still up with us here resp respiratory system their circular respiration is equivalent to ours I.E they need to oxidize organic components to produce energy their lungs have no uh reciprocating action but rather have a unidirectional flow of air similar to that seen in Birds which is more efficient than ours it is speculated this is in response to the brain's elevated met met uh metabolic needs vocalization is produced by the vibrating of the wall membran membrane at the junction between the two air

(31:26) sacks the circulatory system of ebos is rather analogous to ours the heart is located in the the media stum uh but in a more medial position directly beneath the sternum the heart has two ventricul uh ventric ventricles and two atria there's an aort aorta a pulmonary vein a pulmonary artery and a venne Cava blood flowing to the pulmonary cavities or cap uh capillaries via the pulmonary artery is pumped against the flow of air maximizing gas exchange efficiency the blood gas barrier is relatively narrow in these

(32:03) capillaries at least compared to a human the oxygen-rich blood is then returned to the heart and then expelled into the aorta and to the rest of the body before returning to the heart the blood will pass through a hepatorenal organ which among other things filters and controls osmotic pressure of the blood the blood itself is also analogous to that of a human however the proportion of plasma is much higher albumin is in similar proportion hormone levels are much lower metal ion levels are much higher particularly

(32:33) copper and glucose levels are significantly higher the color of the blood is brownish given the higher proportion of plasma and concentration of the metal ions on the cellular side there are ocytes which in addition to the hemoglobin for binding oxygen display several complexities capable of binding copper ions it's not clear what the role these copper ions play but we believe it neutralizes blood ammonia among other things several cell types with Lucy characteristics have been observed but no comprehensive knowledge exists on

(33:03) them platelets are present but in a smaller proportion than humans the exio pseudo Pudo feris system so this is again their uh the way they poop uh this system is completely different from what I've seen as mentioned earlier there's no large orifice like an anus or urethra to get rid of biological waste instead there are countless small pores in the surface of the skin there's a large medial organ called the uh hepatorenal organ which acts as both a kidney and liver and is Central to maintaining homeostasis the organ is highly V uh

(33:41) vascularized and the blood must pass through it before returning to the heart its role is among other things to purify the blood of metabolic waste waste is excreted into the equivalent

of a the uh urer which branches out into to four each branch flows towards one of the four Limbs and in turn these branches divide until they end up as thousands of extrator pores the motility of this exory system is mediated by a weak uh Paralis at the proximal level and on the four major branches the per uh peris perisis ceases around the first distal

(34:24) Junction as there is no Ura cycle the ammonia concentration at the exit of the hepatorenal organ is very high this ammonia is carried to the pores and gives a distinct order I mentioned before the rationale behind this unusual extricator system is directly related to this excreted ammonia which enables thermal regulation by evaporating on its skin surface the greater the physical effort the greater the metabolism this in turn leads to a rise in temperature and a corresponding increase in metabolic waste via amino acid uh C

(34:58) catabolism this leads to an increase in filtration and ammonia excretion which ultimately lowers the body temperature digestive system the digestive system is extremely underdeveloped there is no stomach in the familiar sense however there is a pseudo stomach located at the the transition between the thoracic and abdominal abdom abdominal cavities this organ is not involved in digestion but only serves as a reservoir a sphincter controls the flow of food into the intestine the intes is limited to the equivalent of our small intestine I.E it

(35:30) only serves to absorb liquids and nutrients and acts as the main digestion site it has Vil and micro Vil like ours the intestine ends in the hepatorenal organ which where non-digested matters transported to the UR urer and exory system residues are dissolved in the am the ammonia of metabolic waste for excretion there's an organ near the uh pseudo stomachal region the P pseudo stomachal sphincter that secretes digestive enzymes directly into the intestine this organ is inspirationally called the digestive organ it secretes

(36:06) mainly uh protolytic enzymes and uh glycoside hydrolyses uh given the absence of teeth the narrowness and the rigidity of the esophagus esophagus and the absence of a true stomach and an absence of uh defecation it is strongly believed that the ebos can only consume food in liquid form it is assumed that given the high metabolic rate of their brains this food would have a high carbohydrate concentration in order to meet the other metabolic needs there must also be a high protein content in the food consumed these two statements are

(36:42) supported by the type of enzyme secreted by the digestive organ it is therefore speculated that the food consumed is a short broth rich in sugar and protein which probably has a high copper content given the strict limitations on the type of food they consume it's unlikely that this type of creature could survive in our biosphere without technological support that's a very interesting comment there endocrine system knowledge of the endocrine system is minimal we know that cells are receptive to Bine growth

(37:10) hormones so it is assumed that certain functions are regulated by such a system endocrine mechanisms are very complex and it goes without saying that they're best studied on living subjects the immune system immune system is another unknown there seems to be an innate immune system but there does not seem to be any adaptive immunity at least similar to

what is known there is a thymus like organ near the heart that's proportionately longer than in humans this organ seems to be where all the blood cells mature some cells have Lucas

(37:37) like characteristics such as granularity the immune cells that germinate here have a high copper concentration the surface receptors of innate and immune cells have not yet been characterized so we might as well say that they work remains to be done nervous system the nervous system is also relatively similar the spinal cord begins at the base of the central lobe of the brain propagates down through the vertebral column in the vertebrae there are a ganglia made of uh afferent and efferent neurons in short other than the CNS the

(38:09) central nervous system there's nothing out of the ordinary the muscle skeletal system the muscle skeletal system is very ordinary albeit underdeveloped most of the human skeletal muscles have an equivalent only the hands feet forearms are different it should be noted that the proportion of type 1 and type two muscular fibers is different from that in humans indeed type one outnumbers type two by a factor of about 10 artificial system we speculate that the artificial molecular machines may be present in the body and that copper if

(38:38) present would be essentially the function of assembly importantly no amms have been observed okay so that is the end of the beginning part of it so I'm going to pull up uh a couple people and then we're going to get into the questions related to it as well I just need a short break before we start digging into the question so that was just the beginning here of the eboscientist post and then after this what ends up happening is that they go into a bunch of questions which I'm going to go to after a short intermission here where

(39:14) reddit users uh ask questions related to the story and the person answer the questions in real time so at this time I'd like to see if anyone wants to jump up and uh request speakership um and and let me know if you're interested in talking I'll probably just bring a few people up that I know as well that have been talking before and while we're doing that as well um I am going to just recap so some of the interesting things that I read related to this first of all I have background in the laboratory equipment

(39:45) so this person mentions that they would have been a labtech if not had gone into like this kind of field they would have got into something related to a regular Laboratory um the lab equipment that I heard seems to check out in general as you guys could uh kind of understand I definitely do not have background in all the science that was going on here so I probably mispronounced several of those scientific terminologies that are out there um the genetics I think that the key aspects from what I heard were that

(40:13) this is very similar to a gray alien that this is a biologically manufactured being and the reason why they think that is because their DNA and cell line is very compact and very efficient and that they don't have all the excess junk DNA that we have uh they do not secrete waste the same way we do they secrete ammonia through the pores in their skin it's pretty wild that part it makes me wonder about um what was it the V Vargus whatever the James Fox's documentary where the people were talking about

(40:48) potentially seeing alien beans and that those beans potentially were um you know secreting that ammonia smell so so I thought that was pretty interesting uh I'm going to pull up a couple other people if you guys want to chat let me know feel free to jump in um and then what else did I find interesting the the part about the eyes and there being this film over their skin in general a lot of this stuff seems to mesh with what we think of as historical ufology lore regarding the beans um it goes into extreme amounts of

(41:22) detail about each of these uh biological systems that are out there um I think that the only one where people were able to poke holes in and we'll get to the comments of the the people who had replied to this were the parts where I think they talked about the joints um not sure if that was accurate or not uh yeah Virginia I think people are saying that was the uh the sighting that James Fox did a whole documentary on in general um and so that was pretty interesting okay well everybody's being shy so I'm going to go ahead and just go

(41:54) straight to the questions give me one second and we'll get going on those okay oh somebody wants to jump up okay cool Ben okay Ben go for it man welcome board yeah I just wanted to mention Ashton this is also in line with what John leer was saying back in the 80s um there's a really good George knap interview with Lear and he also mentions mentions the secreting of um you know excrement uh out of the skin which I think is like very interesting that that detail was um you know in line with uh with this post

(42:41) so just wanted to mention that awesome man yeah so uh let me know if you have other questions as we go because I just realized that that actually wasn't the part where the questions begin so this is where he asked himself or he or she we don't know if it's a man or a woman they asked themselves a few questions so I'm going to keep going here after a short little break so question one amazing story if you shared this with the Senate selection committee on intelligence or with the AO and do you have any evidence to back this up

(43:05) thank you no and no I no I haven't and no I won't it sounds like a Honey Trap to me I will not place my life in the hands of politicians I have no proof other than this message I know it's not much but it's what I'm prepared to offer question two well that was a read so they are bioengineered worker bees any Elemental components that are uh unattributable to other our biome yes knowing that they are disposable unable to live independently without technological support and that they're

(43:36) uh uh e EP ephemeral the only uh suitable hypothesis is that they are alive only to accomplish their task can you clarify your question about Elemental components question three I haven't read everything in detail but can you expand on the document on their religion ebo believe that their soul is not an extension of the individual but rather a fundamental characteristic of the nature that expresses itself as a field not unlike gravity in the presence of life this field acquires complexity resulting in negative entropy if that

(44:13) makes sense this gain and complexity is directly correlated with the concentration of living organisms in a given location with time and with the right conditions life in turn becomes

more complex until the appearance of sentient life after reaching this threshold the field begins to express itself through these sentient beings forming what we call the soul through their life experiences sentient beings will in turn influence the field in a sort of positive feedback loop this in turn further accelerates the complexity of the field eventually

(44:46) when the field reaches a critical mass there will be a sort of apotheosis apotheosis EPO apotheosis it is not clear what this means in Practical terms but this quest for apotheosis seems to be the eo's main motivation the author of the document added his Reflections and interpretations as an appendix he specified that for them the soul field is not a belief but an obvious **truth** he argues that the soul loses the individuality after death but that memory and experience persist as part of the field this fact would influence the

(45:19) physiology and culture of the ebos resulting in a society that does not fear death but which places no importance or or reverence on individuality this belief compels them to Seed Life shape it nurture it monitor it and influence it for the ultimate purpose of creating this apotheosis paradoxically they have little or no respect for an individual's well-being please be advised that I'm speaking from memory of something that I read more than 10 years ago so take it from the Grand take it with a grain of

(45:51) salt also I'm not a philosopher or an artist so please excuse my struggles to properly formulate at the concepts of my dry terminology finally note that this information comes from a document whose author was directly interacting with an ebo it is not specified whether it was an ambassador a crash Survivor or a prisoner the means of communication were not specified either uh somebody else question four WTF he dropped the location of the lab Batel National biod Defense Institute it's on a Google map so that's the part where they finish

(46:23) up with I guess that was like edited into their post I think um some of the Q&A May dig into um kind of it might reverse trend on that question three but the question three part is really interesting um so the question three part is you know the part about the soul and whether or not the soul is this kind of extension of this field and this fundamental relationship to the universe in general um and they think that you know essentially like I was talking about the beginning of this that uh if you believe this at least that there's a document

(46:58) out there that says these ebos or aliens think that the soul is the ultimate growth mechanism and our potentially our purpose for life and that we are essentially containers for this Soul which as they say paradoxically they then have essentially no um respect for an individual's well-being so the reason why I think that part is interesting is that I've always mentioned this idea that you know aliens would think of us like ants right and then this kind of would explain why they might think of that this was also a

(47:30) unifier between what human Theory might be vers as you know of religion and stuff like that the Spirit uh and you know God in general it's kind of is a connection there to what the ebo might think uh Ben or deir anybody up here have any uh comments on that or anybody else who wants to come up and comment on that before I go before I go on sure I guess uh one thing I'm

I'm pretty curious about is assuming it's um so there seems to be like a consensus that this is an artificial organism designed for a specific purpose

(48:08) almost kind of like a worker be and if I'm just considering like a more advanced civilization that is able to do this kind of precise you know Gene editing of itself and has this kind of advanced understanding what's the benefit of if you're going to send a worker B why why a biological one why grow something biological versus maybe something mechanical like if you could would wouldn't it be easier to kind of create something mechanical or assemble something mechanical to send and do some kind of job versus growing something

(48:49) biological I'm just trying to understand why they would prefer one over the other if it's just a worker be anyway you know what I mean no yeah that's a good thought and I I would say that if you re if you achieve a certain level of technological advancement perhaps one is not more complicated than the other right um but I think that is a good question you know why not uh have computers do all the hard work why not making an Android who can do it as opposed to a conscious being perhaps it's that again the idea of the Soul

(49:19) right where what's the difference between an Android that has AI versus a human maybe this this idea that there's a soul that can kind of make decisions on the Fly you know almost like the difference between Quantum Computing and standard Computing would be a thought what yeah that makes sense that yeah I think like maybe that points to the fact that maybe the the idea of you know whatever the soul is whatever that concept is maybe it can't be anchored to something that's kind of binary or um

(49:51) mechanical maybe it can only be anchored to something that was bi logical maybe that's kind of a barrier you know maybe it just interfaces with one and not the other I don't know but yeah you're absolutely right it's interesting to kind of conceptual about conceptualize about you know if they are capable like you said obviously they'd be capable of doing the job one way or another but it's interesting to think about why they would go the biological route yeah no definitely um Ben or shy

(50:18) Keenan do you guys have thoughts welcome aboard yeah I was just going to say I think I think it's very interesting that they also have DNA even though it's clearly engineered um it does make you wonder because you know you go back to the missing link and perhaps we are artificial intelligence without knowing it right we were designed um Millennia ago for some purpose that you know is unknown unbeknownst to us so that that also makes me question a lot about you know human Origins as well um but uh I was going to also just comment that Bob

(50:54) Lazar again I mentioned John le before but Bob Bazar also claimed that he had read that you know humans are containers of Souls which also is in line with this post so there's just a lot of uh intricacies in in this and what I wanted to ask you planning on doing kind of a deep dive into this similar to how you've done with the MH370 just given that this is so much more recent that there's an actual human being out there that's clearly posted this that you know could potentially be tracked down or willing to speak to you

(51:28) um does this have legs for you so I think it's really interesting but I don't plan on investigating it much further my only goal with this was to try to get more information out there about it so that people were aware of it because I had realized that a lot of people had never heard about this and I you know the fact that it was deleted in one day I thought was really suspicious so whenever I see stuff like that then I I kind of want to post more about it and as you guys could see from you know how

(51:54) long that was I mean what was that like like 30 minutes of me reading that stuff right that was and we haven't got through all the questions yet like that is an extremely detailed analytical report and I don't have all the phds required to know if half the words were even real that I was saying there um but I have a feeling that they do check out um and again the thing I like about is it's verifiable information right anytime I read something and it's not just oh it's a story it's more of like

(52:19) here's a detailed analysis of the whole physiology I go okay well could could this check out like if you made a being like this would it would work um and then some the fact that like you just mentioned it connects to so many other stories that are out there in ufology this is why I kind of connected and resonated with me uh I don't know who was up first let's go to shy Keenan first and she was up here first hey shaan how's it going hello Ash hello the room the world hello you guys but hello Ash how you

(52:47) doing darl um I was I came in a bit too late so I want I want to go back over myself I'll just pop over and look at what you're talking about and then come back and have incredibly intelligent smart and wonderful things to say I'll be back in a moment okay yeah no no problem yeah and you can take a look at it um I don't did I post the link in the chat uh if not I can do that as well let me post this in the chat so if you guys want to read it yourself and follow along I probably should have done that right away um I'm

(53:21) going to go ahead and post that and then let me see if I can put that in the nest here so that way you guys don't have to struggle through my reading it and you can kind of take a look at yourself on your own time as well um how do you share oops sorry guys hold on I'm on this uh like a small screen here where this becomes very difficult for me to share these things hold on share t space okay so that should be in the top of our whatever we call it the pill or whatever um so you guys can that check that out um Taco

(53:55) Loco what's up hey um yeah I just took a couple notes while I was here and I just thought I'd throw some things out here for you guys to think about because I've been studying this for a while like 50 years um that sounds like a Golem and there's a lot of pretty thoughtful people that that agree with it and and one of the things we might want to consider is you know stop drawing a line between the woo and the TCH because it's all the same thing we all live in the same universe you know as above so below

(54:26) uh we're seeing everything is Holo fractal which means a little bit of something represents the larger piece but just with less refinement so um you know like you see it you

know we're seeing similar cells we're seeing similar DNAs I'm just going to throw out a couple of guys that help me and you know in the spirit of Open Source you guys go down the rabbit holes Rert Sheldrake talks about the morphogenetic field I'm pretty sure you know that's basically resonance in The Ether or whatever you want to call it

(54:55) the super force and it's uh communicated by this you know longitudinal or zero point that that we've been talking about which drives you know the ball lightning and everything DNA is really Anana and you know it can make proteins but it also Rees signals and um you know that's what tells it to make those those proteins um a good guy to hear about that from is a dude named Bruce Lion and his book the biology of belief you can you know look at all these YouTube videos and come up to speed on that uh

(55:29) Evolution as it's described the survival is the fittest you know it just doesn't follow that these are random changes that make you grow fingers or taller or whatever I mean there's some kind of a guidance going on there and that is being caused by something um you know and that's all of a piece with that uh you know and in the big picture I think we're learning we can't assume anything or go by consensus you know pull back and say well you know we're seeing this what what could be causing um I'm at

(55:57) work but I just thought I'd I'd throw those ideas out and you know pull back and and open up and I it is a fact that you know what some people consider science or magic is a science at a certain level and we need to stop dividing that up I mean if you gave your iPhone to somebody a 100 years ago they would straight think it's magic yeah 100% no I totally AG that's the end of my pH user no uh yeah I totally agree I think that we have to be keeping an open mind on this stuff that's another reason

(56:25) why I wanted to review this today even though I think that you know some people may be turned off by it other people may go oh well this doesn't have to do with MH370 but um anything that I find to be abnormal anything that I find to be on the fringes of science that has uh verifiable information uh that is you know related to ufology in general is stuff that I want to get information out there to a bigger audience so um let's jump into some of the other questions that are in the post um there's quite a

(56:52) few in here so I think I'll go through most of them unless they're not relevant here we go so uh I'm an ENT entomologist I understand the text and I'm utterly fascinated by the implications here I'm also slightly Disturbed so basically if they could run the sweat is essentially a urine excrement as well and the evaporation cools the body ammonia evaporates at a much lower temperature than water so I'm assuming that the method would be more effective what what of bacteria what of with that excrement

(57:20) system I'm assuming the buildup of waste on the bofilm when exposed to our environment how could they survive without some opportunistic bacterial infections I see the immune system hasn't been deeply studied yet but has there been any signs of infections or susceptibility to our natural biome an ebo scientist responds I don't think they were created

with long-term survival in mind they have an innate immune system and the fluid flow is unidirectional in the excretory system this undoubtedly gives them a bit of a

(57:46) reprieve they also wear a protective biofilm at times so the next question by smooth imagination the film covering and lack of hair would also suggest that the creatures are barely physical or have a naturally high body temperature and a cool habitat since there's apparently no need for sweating water conservation I also suggested before would have M would have mused on possible alien biology and determined from the reports of ammonia smell that they might be excreting through their skin and why they might

(58:15) and this was a post that somebody else made related to the Virginia uh incident that was the name of it um excretion through the skin rather than through dedicated route via either the ca or urinary tract in which a dedicated organ flushes out sounds like it could be an adaptation to avoid wasting water on Earth terrestrial animals use either urine or a mixture of urine and feces to excrete metabolic products birds reptiles and some animals like beavers and Otter use a cloaca which is an opening combining both types of excretion this is also

(58:48) why bird poop is runny and smells differently agouti does not smell like ammonia now with the uh notwithstanding the possibility that a creature has literally pissed itself is quite possible that it excretes these substances through the skin which build up in the oily surface why would a creature do this in vertebrates these functions are performed by internal organs but they could be performed by the skin in F uh many functions in the liver and kidneys are performed also in the tissues in other tissues in cases of

(59:18) dioxin poisoning for example the skin undergoes adaptations as a part of increased detoxifying response occurring in the skin with a marked effect on its appearance excretion is performed not only by dedicated organs in the kidneys is also performed by the gut and in the skin the effect in the gut is a type of skin and the tubes and the kidneys might also be thought of as such a very oily skin can also indicate a desire to reduce water loss which might favor the avoidance of a urinary system of excretion insects like bed bugs have a

(59:49) waxy coating that prevents evaporation that greatly reduces the water requirement it's not oily and it isn't a liquid they also do not excrete through their skin if one was to it might be expected to produce a buildup like is described in effect a creature might pee and through its skin and it may also obtain energy more preferentially from amino acid degradation which would mean that it needs a lot more uh needed a lot more than we do and it may also or instead more completely metabolized towards ammonia than we do obtain more

(1:00:22) energy from it which may also uh which may be released in part through its lungs alternatively it may not convert the urea like we do and may and the smell is due to urea similar molecule molecules it prefers to excrete which happen to be pungent to us and then the biologist replies to that extremely long post saying I find they have a certain amphibian appearance okay uh somebody else on electronic football commented with that excretory system I'm assuming the buildup of waste under the biofilm I'm also curious about this too other lore

(1:00:55) has claimed the lack of traditional mouth parts and the lack of genitals as well as disposable nature taking that seriously I've wondered if they don't excrete at all or eat even they just build up toxic byproducts in the system until death and whatever energy that they have had since birth similar to butterflies and moths that can't eat after they grow wings they only live for a short time to reproduce now though maybe the bofilm is permeable in One Direction but not the other just offgas your waist through your clothes but

(1:01:24) don't have to worry about anything getting in there was no reply to that one next person April flower 75 mentioned this makes sense is a semi-perial membrane where internal pressure might Force the molecules out outbound or outward sorry ebo scientist replies yes exactly I should have specified that detail um unknown Michael uh unknown Michael comments this is fascinating thank you very much for posting it although my medical terminology is lacking I did notice that you said that they're receptive to Bine growth

(1:01:54) hormones do you think there's any relation to the catun relations and their nourishment ebo scientist replies I can't say with absolute certainty it's easier to collect and purify raw material than to synthesize it at least with our technology if you want to create a new organism you need nucleotide nucleic acids amino acids and lipids which are found in large quantities in all animals so they're starting to imply there that there might be a reason for all the cattle mutilations related to these um these

(1:02:22) creatures uh that are you know um synthetic Sydney silver the excretion of waste through their skin has been discussed by John leer in the following interview as somebody else mentioned the relevant section is the interview is at 6 minutes and 20 20 seconds and there's the link to that regarding the event that occurred in the uh Virginia Brazil the the mention of a terrible smell of ammonia coupled with the soldier's death through the form of severe sepsis would appear to be would appear to be consistent with a report concerning

(1:02:51) their digestive system ebo scientist replies the creature I Googled Bears little resemblance to what I saw but I don't know I don't claim to know them at all no don't claim to know them all not at all uh then some technical questions genetic SC and there's no name on this one genetic scarring any evidence of similar viral infections or genetic mut uh mutations that are detectable across evolutionary time scales question two our genetic Evolution pertaining to weakening of the jaw muscle that prevented our skull plates from fusing

(1:03:22) and hence accommodating our our growing brain has it any detectable traces of manipulation question three how do homologies show up in their Anatomy the similarities between shared structures across organisms number four what about hawks HX genes and embryology number five is their nervous system similar to ours uh I'm going to actually change the way I answer these because it's going to be confusing otherwise so the genetic scarring question uh any similar viral infections or genetic mutations uh they

(1:03:51) reply none other than the so-called terrestrial Gene directly copied our genetic Evol question two our genetic Evolution pertaining to weakening of the jaw muscle that prevented

our skull plates from fusing and hence accommodating growing brain they say the artifacts of human evolution are not present they don't have wisdom teeth or either if you must know I have no knowledge of their potential influence on our Evolution number three how do homology show up in their Anatomy the similarities between shared structures

(1:04:19) across organisms we can see s answer we can see single nucleotide polymorphic M and human genes that relate to different human populations I've never used clustal W on their sequence number four what about hawks genes HX and embryology they probably they are probably present in one way or another since the ebos have a definitive body or definite body plan don't expect me to know every Gene its specific action what's more we don't have embryos to work with so fetal maturation is a little extrapolated five is their nervous

(1:04:52) system similar to ours as in lateralization what about language areas like uh verbe and and broca's there's no structure comparable to the human brain other than what I've mentioned was the response and then the last question from this person the taries how are these or how do these organisms age and they say there is no taries the chromosomes are circular like a plasmid um and then the person replied I will ask more technical questions based on your apply to these I think this was actually Punjabi Batman was the person

(1:05:24) was asking that question yeah it was um and we know Punjabi Batman because Punjabi Batman was one of the most uh consistent contributors to the MH370 case people actually tried to say that Punjabi Batman was eblo scientist based on this back and forth question here that we're going through because then pami Batman replies again damn okay wow I'm taking you more seriously and lean on you being truthful out of curiosity I'll ask some more questions copper can be highly toxic we know the mechanism it can lead to death

(1:05:56) copper is very heavy metal and it may induce severe oxidative stress on cells leading to Cellular death Etc I'm curious to know how such high levels of copper uh you guys can still hear me right crap this crash sorry guys uh God Dam hopefully we're back one sec where is it guys what happened I think we our thing just crashed yeah you guys can hear me but I think that the the space just crashed okay can you guys hear me again are we

(1:07:07) back can anyone just confirm give me an emote or something shy Keenan can you hear me yeah okay we're back sorry about that guys thing crashed thankfully we didn't lose everything uh give me one second we'll go back to right where I was here okay so um Punjabi Batman is actually follow up copper can be highly toxic we know the mechanism um I'm curious to know how such high levels of copper are tolerated they respond that's a very good question most of the copper is sequestered on the surface of the Aros sites okay uh second

(1:07:41) one you claim they have high glucose intake how do they digest it what enzymes do they use do they have comparable things to insulin as for proteins what type of uh proteases do they secrete and their Digestive tract probably some amylase or another uh the aim of the product project is not to identify this enzyme anyway there isn't a molecular biologist on Earth who likes who like uh proteases okay protein digestion creates Urea which is removed by

our kidneys and excreted in urine where does this excess

(1:08:13) Uria go or how is it removed is the organ in the middle acting as the liver in the kidney as mentioned in my text there is no UA cycle remember that ammonia is a precursor to U Ura ammonia is quickly evacuated after each blood cycle because it passes directly through the hepato renal organ it's toxicity is limited by its rapid evacuation question four lack of a vocal organ means they do not use verbal language do they use telepathy or sign language what is their base mode of communication theory of mind is what I'm

(1:08:45) trying to tie to it and they say they do have a vocal organ I specified that in the respiratory system part they actually mentioned that part up above that they vibrate these this organ that can produce sound um can we extract their DNA and inject into human beings using something like crisper this is relevant to what we were talking about before sure but crisper cast 9 have limitations with the size of the insert so it' be tricky to do moreover the insert must be able to be translated Faithfully to its native

(1:09:14) uh state or state maybe like what it is done in the cell line such as ebi G11 and then they ask what are the DNA base codes atgc what common ation do they bind in what about RNA and uh osil yes atcg seven do they have any potassium ion or other ionic pumps in any cells in neutral Trans in neurotransmission there is a change of a few mvs between firing action potential Etc at minus 55 mvs do they have any such methods yes they do but the surface proteins have not been studied in detail we assume the entire Machinery of the cell is equivalent to

(1:09:53) what is known known in humans to do shortcuts question eight do they have any neurotransmitters like dopamine serotonin uh glut glutamate uh eight most likely I don't have any depth of knowledge on the subject but they have neurons and extracellular communication in the synaptic Clift which must which must be similar nine the extra number of gal cells makes sense to clean up the exess waste from the enlarged brain and more neurons firing just an observation yes that is probably their role 10 can we synthesize a clone for ourselves

(1:10:27) given what we have their DNA we would have we would have to be able to generate an embryo and able to have a sort of synthetic uterus given the number of workers it may still be a distant project 11 if they are asexual they'd be evolutionary unstable and gene pool diversity would be horrible do we have any any reminiscence of such bad mutations spreading across their gene pool or is that where they're trying to do genetic experiments on us to enhance their survivability hm I will stop stop here for now and uh and thanks again and

(1:10:56) then the response is only one genome has been sequenced so we cannot compare but is speculated that all are identical clones probably generated from the same source so that's really interesting because there's this idea that they are all manufactured and they're all exact clones of one another which is pretty wild and then you um Punjabi Batman asked one more question oh and how can you elaborate and can you elaborate on their cellular division as in do they have mitosis as they lack sexual organs and a

(1:11:25) gamet I guess they don't have meiosis also does their DNA strand get cut in half by enzymes and then the corresponding base pairs align to form a new strand is made do ribosomes read the the singular strand of the messenger RNA to express proteins ebo scientists respond cell division is done by mitosis but a somewhat strange version that has undefined protein actor given the circularity of their chromosomes my knowledge is limited to beautiful images of uh con focal micros micros micros so U okay well that was a read so

(1:12:01) the bioengineered they bioengineer worker bees any Elemental components that are uh unattributable to our biome yes we know they're disposable we I think we already mentioned that unable to live without technological support and they're uh uh ephemeral the only suitable hypothesis is that they're here to accomplish a task I think we mentioned that already were there any Trace metals minerals or R radioactive isotopes not found on Earth no I don't think so everything seems very local okay uh cross posted to UFOs you

(1:12:34) seem legitimate in your reasoning concerns and this type of post deserves to be in front of a bigger audience definitely appreciate the time uh at first I wanted to write there but since my specialty is quote unquote aliens and not UFOs I figured this would make more sense so they actually answering the question there in terms of why they went to the alien subreddit instead of like the UFO subreddit also I think they probably found out the hard way that all of Reddit is federal controlled and why they got deleted um because if this is a

(1:12:58) hoax there's no reason to delete this whatsoever right somebody said you better have a VPN government gets a hold of these key words and you're done they said I do that didn't really do them any service because they ended up getting deleted in real time um there was a forchan post somebody mentioned in May from someone who claimed to have intimate knowledge of efforts for UFO crash retrieval I might do a followup on this there's a link to it here as well they would say that UFOs are primarily unmanned drones

(1:13:25) that UFOs are built to spec each time they're deployed that UFOs are created by a mobile construction facility that hides in the ocean that the construction facility destroys anything that comes close to it and will disappear for days when approached aggressively the US believes the facility has been active on Earth for at least 100 years or longer and I know this is outside what you described as your experience but does any of this seem credible to you and ebo scientists responded Yes very believable if their vehicles are custom built for a

(1:13:50) specific purpose there seems to be the same philosophy behind the drivers with with their modular DNA so they're saying that there's a connection there between this idea that the the UFOs will be built a spec as well as the be being built a spec uh another person resp replies this is absolutely fascinating uh I'm sending this link to my dad so um op you seem to say these Grays were genetically designed using animal genes from Earth as well as unknown genes does that mean that the Grays were created specifically for

(1:14:21) interacting with humankind are grays the middleman between humanity and unknown group ebo scientist replies the hypothesis is they were created to perform tasks and they were

able to survive with only local resources they must therefore be able to metabolize local organic resources so they don't really answer but they're being kind of koi there with that someone says likely written by Ai and then they reply you give me too much credit Ai don't make typos someone else says thank you for writing this up if you don't mind a

(1:14:49) couple of questions why have some areas been studied more thoroughly than others is this a result result of the organization's priorities or there there some science-based rationale in your opinion how efficient was the operation are there any medical advances that you can point to where we derived or influenced by this research finally compared to ours how underdeveloped do our brains seem to be there are few scientists and few carcasses so certain analysis are are prioritized I don't believe that any advances in molecular

(1:15:15) biology have been directly derived from the project we use biomolecular tools available on Market pancake breakfast ask thanks damn shame that they haven't been real benefits from this if true fundamental immune system research alone could potentially help so many cheers um the purpose of the research is very oriented on certain aspects and structures many shortcuts are taken and many assumptions are made someone else mentions a couple of thoughts would their blood being higher in Copper concentration act as an antibacterial of

(1:15:43) sorts and justify not having an immune system as their blood is an immune system could it also be that the food they consume assuming that is liquid is blood High protein and copper would that explain all the animal mutilations where the blood is removed from the animals that are found a blood mixed with a blood with a high concentration of copper for me is a sign of toxicity if there was not a normal mechanism to counterbalance it as for the blood it would need to have a higher sugar concentration to be a good nutrient

(1:16:11) Source can they communicate through telepathy it is speculated the nodules in the center lob but the brain could be used for this but I don't see how it could be possible we'll do uh actually let's see if there's anyone who wants to jump jum in now uh shy Keenan do you have any thoughts or I will also jump in have Nathan jump up Nathaniel jump up here as well um do you guys have any thoughts before we proceed there's a few more questions and then we'll do a little bit more round table and then we'll close it

(1:16:40) out okay I mean obviously look the questions are more scientific than they sound but I wanted to know for example can they sing and can they fart I know that sounds like a dumb question but that the scientists understand while I'm asking yeah so I can't say that I'm ebo scientist so I cannot uh I don't know I don't remember that the answering those questions but I like that your way of thinking right is like how human are they right um so they definitely can't fart because they don't have an anus and

(1:17:13) it seems like they excrete waste through their skin so they have a completely different exory system of removing waste than we would do from a singing perspective I think they did mentioned there is some type of vibrational capability between what would be the equivalent of their lungs um but they don't have uh I think they said they don't have a thorax I could be saying

this incorrectly or they don't have um uh the same uh the same components that we have in order to be able to speak so vocal cords vocal cords yes there's no

(1:17:43) vocal cords right yeah thank you so my guess is that they can sing quote unquote in some way but you know probably wouldn't be the same way that we would expect uh Nathan or Nathaniel do you have any questions or comments I guess not really questions because I can't answer yeah yeah um no I had a uh an angle on this um so uh again I'm borrowing from Dr Greer and I'm assuming that like what he's saying is truthful and I'm using it as like a template and what's interesting I was just

(1:18:16) transcribing that um like nearly 4our uh talk and I have a couple of things pulled up here um so so basically the long story short is it seems possible that this might not be alien alien it might be man-made alien um and it would make sense if there is research being done on these in like a unacknowledged special Access Project where this guy doesn't even know that they're being created somewhere else um but a couple of things that were said just to quote here um talking about the uh uh cattle mutilations um Greer is also saying that

(1:18:59) this is us doing this and that the reason for the cattle mutilation is um it's very easy to clone one of these things but you need some kind of biological medium that's where the cattle mutilations provide uh the other mutilations provide the biological medium for these experiments and development of man-made fake ETS uh going on he says uh they're mutilating them but it creates a source of biological substrate material for the Nano bio machines and what's interesting if you look at the Nano bio machines that's

(1:19:34) like right on the battel National biod Defense but but I don't have any knowledge about all this so I don't know how common some of these Technologies are and it could just be points that seem to align I just think it could be a possible uh explanation to things that these are ours uh engineer and um yeah so there's that yeah I think that's an interesting aspect that I never considered is what if we made these things right what if we're making aliens out there um one thing I think back to is when I was a little bit

(1:20:07) younger uh during the Bush Administration he outlawed uh a lot of he out I think he outlawed cloning and everybody was a that back then you know early 2000s we were thinking oh we're going to start to be able to clone human beings pretty soon and the same concept well I mean you know same idea of cloning is you know you can develop an artificial being uh as well and I think that at the time it was the uh at least in the United States the religious right that was primarily against it but everybody was kind of

(1:20:37) against it because I don't think anybody wants to see a clone of themself appear um like in the movie nope do you have a followup Nathaniel yeah I was just going to add with the cloning that I mean that tracks that we've been doing it that Dolly the sheep or the Chinese scientist that did it and was um condemned by his government in the 2000s or something like that it that it's just not happening publicly it's not front-facing um and uh yeah that that seems to be um there's one more thought that made this

(1:21:11) uh connection too but um I think I'll leave it at that for there and I'm hoping that the other folks can get in on this yeah um cool let's let's do some more questions on the from the try to get through the rest of these questions on this list this thing's a lot longer than I remember it being um okay so then somebody else traveler aith uh asks why did you only look at the genome and the proteome I don't even know how to pronounce that word I misspelled it pronounced it like five times why was

(1:21:38) the trans transcript toy not considered research is directed towards a specific goal there are structures of interest in the brain and there proteom is very important proteom I don't know the next logical step would be the study of the protein interactions the transcript scripto whatever is difficult to uh elucidate after certain after death due to the action of the rnas um what transfer of RNA genes did you identify there are none that I'm aware could tprs be a unique transposable element where there other

(1:22:13) identified trans transposons uh and they say they are not uh transposons they are rather they are rather addressed to indicate the position of the gene they are probably also act as a cleavage site for some type of endonuclease Mega complex um do they have a microbiome I'm so fascinated by their IM by the immature digestive system and curious if it would compensate with a more exotic biome they should have one they have a rudimentary immune system and wear a biofil and as clothing I assume that they must be exposed to microorganisms

(1:22:53) in the mouth nostril and ear no no importance is given to the study of the microbiology of these creatures um and then they said is your company hiring I studi transfer RNA and its modifications there's a large piece of the puzzle missing here and it likely has to do with the uh epitranscriptome or whatever that means uh they say probably because there's a high turnover and it's a dead end job that's kind of sad about the state of government jobs and working on ebos and and Aliens um so citizen of danburg says was any work

(1:23:26) done to study their uh metabol I don't know what that means I work as a stat statistician in uh metabolic we specify you we specifically use uh chemocentric approach to metabolics whatever we've done some wacky studies so I'd be curious if we ever processed any samples that were ebo in origin we frequently do work with a DOD and DARPA for those saying it's a lar I disagree this was two technical to be a lar this checks out with some other information that we suspect to be true regarding the Grays and possibly cow

(1:23:58) mutilations Bine Serum is very valuable resource and has been studied and used and try to create meat in the lab in invitro or inv Vivo research thank you for posting fantastic post shared with tons tons of people last question do they have a tongue your post seems to indicate that they don't due to the way they digest their food and communicate but I just thought I'd ask just in case the lack of teeth small lips lack of vocal cords and their minimal digestive system seems to suggest that these entities do not possess a tongue and

(1:24:27) they reply keep in mind that the uh proteom knowledge is far from being comparable to what is known for humans the main research priority was to identify the proteom of nodules

in the central lobe of the brain if there is any research on the metabol whatever it would be undoubtedly be in these structures as a priority they have no tongue okay so no tongue I haven't read everything in detail but can you expand on the document on their religion uh we we mentioned that part I think he says if you see my edit you responded

(1:25:00) there um oh he wanted to know and then they reply again say oh it works uh of course I can give me a minute and uh said no there's nothing of scientific Merit I'm not sure if we were missing a question on that one um somebody else replied just finished you mentioned you read about their culture and religion can you tell us more about that as you can see my edit I responded about their religion their culture is seemingly centered on fulfillment of this religious motivation then there's a David grush

(1:25:30) question David grush recently said the Vatican is fully aware of non-human intelligence do you believe humans have adopted this religion in any way plac an importance on the souls instructed by these aliens uh there was no response to that somebody else said why would the documents on their religion and culture be included in an archive room at your facility it seems to be at odds with the idea of compartmentalization unless that material was thought to be somehow very relevant to your work and then somebody

(1:25:55) said I'm not or then they replied I'm not sure to give uh to give some kind of insight maybe then another question do you have any idea how they received those bodies did you know if any of them were uh any of them live or have uh or heard about live specimens being housed at other locations and then they reply they are probably discovered in a crash given the obvious trauma this implied that there are other carcasses than those that I observed somebody else replied what I found is interesting is the Tie between what you

(1:26:26) wrote and what Bob Burman and Robert Lanza talked about in their books regarding biocentrism it seems they follow the same religious scientific pathway albeit with slight deviations thoughts to be honest I don't believe what is said about their religion it doesn't really make any sense scientifically so you can tell here the ebo scientist doesn't even you know maybe some of the stuff's disinformation that they're being fed somebody else asks have you heard of genetic engineering involving people in ebo AKA

(1:26:54) hybrid research they said ebos are hybrids between two biospheres themselves so I think they're saying that the ebos are theoretically um the hybrids uh somebody else say why do you say only two could it be more this is amazing thank you and ebo scientist repli says you're right it may be more but we don't have any evidence to go above two so they're talking about more than two different biospheres I mean we don't know what any bi other biospheres look like right um You mentioned having read in literature on their culture can

(1:27:24) you expand on that what is their culture does it shed light on why they're here uh I reply to one comment with the same info anyway their culture is seemingly centered on the Fulfillment of the religious motivation okay uh someone asked do they have names there was no response somebody asked do were there any indicators or contextual Clues Within These

materials that might suggest how fresh or old that information was decades old versus more recent for example while I'm curious if there's any scientific dates mentioned

(1:27:52) if they weren't weren't available or permissible to share the general time frame is something I'm curious about from a non-UIP nonhuman intelligence government experience I don't I understand documents of these types compilations of data briefing documents often will site a year time frame for the data to provide context to the reader then EBO scientists said some documents were clearly typewritten one the one document dealing religion was a good example those on the gross anatomy are also like this I have

(1:28:21) no memory of dates unfortunately somebody else asked great write up any ideas on where they come from this EBO scientist says no idea probably from a distance that allows panspermia over a geological era so pretty far away I guess okay uh somebody else asks um what was your reaction to finding out we're not alone in the universe in such a stark manner was it shocking to you in any way any indication how this all started what is our what our role in government is playing it what our ultimate objective is EBO scientists

(1:28:50) replied the ultimate goal is to be able to understand the purpose of the nodules in the central lobe of the brain this is apparently essential to their use of Technologies the program is uh probably an offshoot of ongoing programs that studies engineering so this is interesting because I think a lot of people have brought up this idea that um that they use some type of interface I think even Bob Lazar maybe mentioned that that when he talked about the ship the uaps he he said that there was no steering wheel or anything so perhaps

(1:29:19) they used something else so there's a lot of tie-ins here to stuff that C in ufology um somebody else said this was fascinating although I'm not a scientist and the information was largely above my head I enjoy reading it thank you is there anything I can't explain in Le uh is there anything I can explain in layman's terms I don't know if that was reply some of these comments started to get deleted in real time um somebody else asked if the blood is copper based why is it brown and not blue or green

(1:29:46) color I'm assuming this based on a red blood being iron based my brother asked and I have no idea um and these said it's brown because if you mix red yellow and green then you get brown and that's red blood cell yellow plasma and green copper you get brown okay um another long one here uh we're getting near the end here so thanks for hanging with us it is very interesting to read I have been writing about uh what we might expect alien biology to be like using a guide as reports I did conclude that they excrete

(1:30:18) protein waste through their skin to account for the smell had underdeveloped stomach had unidirectional air flow like birds and potentially separate trachea and esophagus esophagus all the way down all the way through you mentioned that the specimens have no vocal cords do they communicate via sound from a specialized organ where would it be in terms of genetic similarity this doesn't surprise me the DNA on the planet has been pretty uniform in a basic structure yet Proto protogenic processes continue and across the vast chemical

environment

(1:30:46) of the earth and over several million years nothing else is developed that is better so it must be one of the best possible Arrangements that chemical processes and Proto uh metabolisms would favor being discovered by Evolution and also I have to conclude is very likely to be a common form of life and intrinsic to the phenomenon of life I recall the crop circle with the the description of aliens having uh triple strand DNA is there any uh organel or report of Ebe having this Arrangement on the digestive system obviously this is a

(1:31:16) major source of weight and volume in the human body and largely necessary only to cope with the large varieties of foods their Arrangement is anticipated by myself and more optimal for space travel but efficiency in general as well I recall one report from somewhere probably in abductee that they grew their own food Bioreactors and that was some sort of special growth culture they contained all nutrients that they needed in very digestible form with the film covering the obvious benefit to me is that avoiding microbacteria micro

(1:31:45) back uh microbial contamination and infection ebo scientist responds to that whole thing by saying vocal cords this details in the section regarding the respiratory system vocalization is produced by vibration of the wall membrane at the junction between the two air sacs I specified that two biospheres have a common origin probably panspermia three strands of DNA are just an imagination imagine the steric hindrance of such a structure the digestive system is undoubtedly designed in a way to limit autonomy and a couple more questions I

(1:32:16) think we're close here I hope so did you pick up info as to who is creating the Grays or what purposes also others have mentioned in the info about their culture and religion I'd be interested in that as well and do you have information and if you have this information uh are real thank you for taking the risk of sharing it if you're a lying piece of F you LOL all I know is that they must have been created here there is speculation that these creatures can be controlled remotely like drones maybe they're like avatars

(1:32:43) in the movie um in the movie of the same name somebody else asks uh can you discern anything about their longevity from what you saw the length of their telomeres what does their ribosome look like what kind of athletic ability would they be capable of and were they easy to cut or Pierce what about the suit um ebo scientists responded to that by saying my comment on longevity is extrap extrapolation only I should have clarified there is no uh telomeres whatever because their chromosomes are circular like a plasmid their ribosome look like

(1:33:17) a regular ribosome at least functionally it is not the focus of research to do uh oh boy crystallography fortunately their muscles are mostly type one fibers so they're physically very weak um somebody says I have no idea if this is real or fake and then they reply you shouldn't blindly believe me and I don't expect you to it's a sensible thing to do in this situation after all I'm only offering a fairy tale and anyway the fact that you are present on this forum which details which deals

(1:33:48) with alien life tells me that you are questioning the very nature of reality I only hope that the information I can offer can give A New Perspective and new ideas it's a pretty good answer to that question um somebody else uh asks very interesting I would love to see you now speak in layman's term or I think that's what they're saying layman's terms to the questions asked they'll say they'll try is the cell cycle the same do the chromosomes replicate biodirectionally like in bacteria and then e scientist

(1:34:15) says I answer a similar question cell division is done by mitosis but a somewhat strange version that has unidentified protein actor given the circularity of the chromosomes my knowledge is limited to beautiful images of con focal microscopy I think we already heard that one okay um this is probably this is probably an inventive creature right uh inventive creative writing exercise if actually true there's no use asking op for details they made it quite clear that they don't want life intrusions of being a whistleblower cool read either

(1:34:44) way uh and then EO scientist says I give details on everything I know except about myself um the one thing I want to mention about that is that uh I like when people give information and let people come to their own conclusions as you guys can tell from the investigation that I've done that's the same thing that I'm doing it's not meant to be about me uh it's not meant to be about uh this person either right and to me that adds credibility to it I think that as humans we all want to just know

(1:35:12) whether or not we can trust someone to tell us the **truth** but that's not how things should work people should be able to absorb the information and come to their own conclusions okay um let me see I'm going to skip ahead to some of this stuff here uh so EO scientist says to a slew of questions that are out there I don't think there's enough sugars in the human body to satisfy their nutritional needs except for perhaps diabetics so people I guess were asking whether or not they might drink human blood might they they

(1:35:42) might Farm us right and I think they're basically saying no um the proper authorities are the ones who created the program uh so somebody said please clarify opposable thumb on the medial side question mark and then the they replied medial is a term that refers to the location the structure in relation to the middle of the body thumbs are on the same side of the hands as us um let's see uh someone in the last qu two last questions here where almost done is it in a I don't know if this is supposed to be an acronym USA m i r i d

(1:36:22) and then oh this must be like a USA like some type of facility and then they reply back just saying Batel National bod defense Institute so Batel Batel is another one of these companies that I learned about like last year that's a huge third party like they do Advanced research and Technology but they don't seem to have any commercial sphere in space and then the very last post ebo scientist says I've received some very strange and somewhat disconcerting private mess messages please treat this text as what it is just words on a

(1:36:55) screen and don't do anything you will regret I will leave for the evening although it's still early I specify that the passage on religion is thirdhand information and should not be your

new gospel I will have time to answer more questions later which they never did so everybody thank you for listening to the ebo scientist post here uh anyone who wants to throw up any comments say anything now is your chance after after we've let everybody give their chances we're going to go ahead and and close

(1:37:25) out on this uh just to keep this space pretty tight for anyone who wants to kind of listen in and and and think about it in general in the future so Nathaniel or anybody else if you want to talk request and if you just want to say anything just speak up no reason no need for hands um I I just wanted to add that uh the part about the programmability and the remote control control and The Limited lifespan and the being created here that seems to lend more to the uh human created thing and if we've had anti-gravity since the 60s then this

(1:38:04) isn't out of range it seems yeah no I I think I agree with that as well and I think that what you see with the technology and as this technolog is kind of advancing um is that it they all the stuff kind of lines up where it's like okay if this is possible then that's possible and this is part the reason why you got to be a little careful about what I call falling into the rabbit hole but especially is I'll plug um my hard truths podcast which I'm going to be doing with uh Timothy Abino on Saturday you know I

(1:38:33) think that a lot of what we're going to be talking about is this idea of what is the next evolution of humanity with regards to this technology like if we begin to integrate this technology like what can we really achieve and can we achieve you know some type of new posthuman uh biology um and maybe that biology is similar to what we're talking about here where you can make like avatars or maybe that's um something that we need to be thinking about spiritually in general in terms of what our soul means why we have

(1:39:05) uniqueness why we have Consciousness and general um so I think that this whole piece kind of opens the whole door up for what is uh life in general and what what should we expect when we think about aliens um you know maybe there are giant jellyfish floating creatures that are out there um I think that things can get very abstract go ahead Nathaniel I was just going to add another point to um against it being uh something like extraterrestrial or even maybe ultraterrestrial uh I mean actually both points so if it's extraterrestrial and

(1:39:44) they can uh move on uh uh multiples of the speed of light they we don't need the long space fairing multiple Generation Um drone operated theory of interplanetary beings moving you know under the speed of light all those theories support being able to make it here and how do you get here well maybe you have a Thousand-Year ship and they're just cloning themselves or they wait and then clone themselves and they get here but if you can move at Super luminal speeds then you don't need that and if you're already here and you have

(1:40:21) the technology to be underground you might not need to have generated beings walk out for you you probably can Master the landscape yeah that's really interesting and I would say that depends on what the technology can do right so as part of our other investigation we've been disclosing this idea of super luminal speeds being possible but that doesn't just mean that

we you know there's not limitations um a lot of people especially when it comes to UFOs think well if you have achieved a certain

(1:40:53) level of technological superiority that you're just Invincible but I don't think that's the case I think that there's always going to be vulnerabilities so if I think back to my discussion with Roy Herbert about the science of super luminal speeds his thought will if you increase your if you reduce your mass and you increase your time so your time speeds up like a fly well what do we know about flies is they only live for a day at least from our relative perspective when we stare at them so if

(1:41:22) you increase your speed you might increase your time or you might cause like rapid aging to occur so there might actually still be a need depending on how the physics really play out for this type of produce it when you get there type of situation and the thing I think is interesting about that is that you know maybe that's the reason why we don't why there might be the terrestrial hypothesis or Ultra terrestrial hypothesis is that they have to be produced locally um the other what was the show it's called I think I think
